No doubt Stalin knows it is a risky maneuver. The lightning is still essentially anti-Soviet and may strike his fortress of power. But the mounting discontents are driving him to extreme and dangerous measures. From the outset he has needed some internal enemy to focus the people's angers and explain their endless miseries—kulaks, saboteurs, Trotzkyites, Fascist agents, to mention a few. Now it is the turn of the Jews, the rootless cosmopolites. His subjects, schooled in reading between the lines, have no difficulty in identifying the target.

The development marks the lowest point in the moral degradation of the Soviet regime. The last difference between Stalin's national bolshevism and Hitler's national socialism is being erased.

Address of Dr. L. P. Nelligan

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Dr. L. P. Nelligan in New York, April 17, 1949:

Mr. Chairman, distinguished guests, ladies and gentlemen, my first duty upon rising, is to thank you, Mr. Chairman, for the great honor of being with you this evening, and the privilege of addressing this audience, and for your kind introduction. In a strange land there is always a stranger, and even though I come from another country, I feel at home in front of an Irish-American audience. All Canadians, especially Irish Canadians, feel that the imaginary boundary line dividing us, is very imaginary indeed. On this historic occasion, I bring you friendly, fraternal greetings from all Canada, and especially from the officials and citizens of Montreal.

Many of you know, I am sure, that Montreal is a city and a home of Irish welcome. For all Irishmen it is a place of pilgrimage as well. For it was to Montreal in one year alone, over a hundred thousand Irishmen came in the black forties, over a hundred years ago, seeking succor and, alas! many to find sepulchre. From Montreal they spread over Canada to the west. Their axes rang in our forests! their anvils turned our plough shares! and their sturdy teams broke our prairies to their primal yield. There, Irish shipwrights built the prows and shaped the shipmasts, and Irish sailors trimmed the sails, and bore our trade by prospering winds, like a golden argosy to all parts of the world. And it was in Montreal that an Irishman, in classic Irish eloquence, which strikes across the century, as it struck across the Canada of that day, greatly glimpsed the glory of a dominion from sea to sea, and one great nationality bound like the shield of Achilles, by the blue rim of ocean. The graves of Irish-fever victims dot the banks of the St. Lawrence, from its rise in the Great Lakes, to where it empties into the sea. Notable among these cemeteries is that one on Grosse Isle, Kingston, and Montreal. The one in Montreal is looked upon as a national shrine, for it serves to keep alive the memory of those heroic men and women who dared the dangers of the broad Atlantic, rather than become the slaves of tyrants in their own land.

It also serves, sir, as a constant reminder of the warm-hearted sympathy and generous Christian charity of our French-Canadian copatriots. For since that day to this there has never been a time or an occasion when some eloquent French-Canadian was not always willing to raise his voice in praise of, and on behalf of, the Irish cause. In the generation that has gone it was a Laurier, a Lavergne, or a Bourassa, and in this generation it is a Heroux, a Pouliot, a Chaloult, and even our Prime Minister, the Right Honorable Louis St. Laurent, with an Irish twinkle in his eye, boasts of his Irish mother. Our French-Canadian mayor of Montreal, Camilien Houde, as guest speaker following the monster St. Patrick parade on March 20, referred in glowing terms to Ireland as the champion of minorities, as a valorous determined race that kept the light of freedom burning.

Yes, indeed, Montreal is a city of Irish memories. The memorial stone, marking the burial place of over 6,000 ship-fever victims, is revered by all, as well as those who are linked to the dead by ties of kinship. Because it symbolizes in the ruggedness of its gray Laurentian granite, the stability, the solidarity, and the determination of an unconquerable race. Those people sleep there within the shadow of Mount Royal on the banks of the St. Lawrence in their last long sleep, unmindful alike of sunshine or of storm. Tyrants cannot affect their sleep, but as long as that mountain stands, as long as that river flows, they will never be forgotten by their people nor the causes which drove them into exile.

It is under these circumstances, and from that city that I come to you tonight, to join

UNIVERSITY OF MICHIGAN LIBRARIES

with you in commemorating Easter week 1916. I believe what I have said has a certain relation to the event you are commemorating. You may, if you wish, think of it as something apart. But we will, I feel sure, miss most, if not all of the full significance of Easter week, if we regard it is an isolated episode, for I think, Mr. Chairman, Easter week 1916, glorious as it is in itself, becomes transfigured again in the light of the larger context, to which it belongs, and assumes its full signifiance in the long and expanding perspective of the story of our race throughout the ages and throughout the world. The miracle of Easter week 1916 only parallels the miracle of Grosse Isle and Montreal. For the soil of Grosse Isle was not the first on this continent to became a cemetery of the veterans of the Irish War of Independence. But it seemed, a century ago to be the sepulchre of all the hopes that had mounted in the heart then broken in the breast of Ireland. A people bludgeoned, generation after generation, for its beliefs, tortured for its traditions, traduced for its refusal to turn traitor. Despoiled of its possessions and then called destitute, denied education and then called ignorant, raped of its civilization and then called unclean, could not, on any human calculation, survive a seventh plague, this time of enforced starvation and disease.

But, Mr. Chairman, ladies and gentlemen, a hundred years have passed, the funerals across the ocean are long since over. The dirge of death no longer rises from the holds of derelic ships, Easter week 1916 has come and gone, leaving its page of shining glory in the history in the halls of fame. Tonight we stand around no sepulcher. Tonight we chant no requiem. Instead, we lift our voices in a loud Te Deum of solemn praise, deep thanksgiving and abounding joy. For the nation, decreed by man to die, was destined by God to live. And, in a few hours, the rising sun shall shine triumphantly on her unfolded banners of freedom for the first time in over 750 years. Seven and a half centuries is a long time in the annals of any nation. It is a history of sunshine and of shadow, of smiles, and of tears. The story of Ireland carries the mind back into the twilight of fable. Her vast literature stands beside that of Greece and Rome. Alone among the nations of Europe she carried the lamp of faith and learning in the wreck of the storm in which the Roman Empire fell. All through her long history, beaten again and again to her knees, again and again she rose and fought on.

Century after century it was the same old story. I do not propose to dwell upon that. I want you to stand back and ask yourself the question, What has been the bond of Irish unity? The guaranty of Irish continuity? Throughout all that period of illustrious and tragic episodes in the long course of her colorful and purposeful history the bond was this, their inflexible and indestructible belief, as a race and a nation, in the great abiding truths; that alone sufficiently explains the origin and the object of human life. If I were to weave for you tonight the whole pattern of their character and life as a people, that unbroken strand would flash along its knit or raveled texture, giving it form, unity, and design. They have been slandered, and caricatured, and cartooned as a race cursed with the destructive genius, but against all the calculated criticism their contribution to the civilization of four continents bears testimony to the contrary. And that whole contribution was derived solely from their fervor and persistence of their faith in the doctrine of the Divine origin, the Divine redemption, and the great supernatural destiny of all mankind. That is the doctrine which has given that people the special stamp or character, which has distinguished them, and by which, to a large extent, the course of their history has been determined at home and abroad for more than a thousand years.

You see, Mr. Chairman, on what a modern, controversial issue I have touched. But I feel I am now ready to pay a brief tribute to the men of Easter Week. How could Irishmen, steeped in the history and the tradition of their country, do less than what they did? What mortal man has ever dared more? Greece can boast of her Marathon and her Miltiades, of her Thermopylae and her Leonidas. Well might Byron ask for three to make a new Thermopylae. Dublin in 1916 could have supplied him with a thousand times three. Poets sang of the valor of the ancient Greeks and the glory forever departed. But the poets of the future can draw their inspiration from the glorious deeds and the matchless heroism of Easter Week. When some future historian will write the tale of heroic deeds, and will cause to be inscribed in their proper places, the names of great men, high on that golden scroll of honor, if not above the names of Miltiades and Leonidas, at least along side, will be found those of Patrick Pearse, Tom Clarke, Sean MacDermott, and their comrades of Easter Week. They revived the heroism that a cold world had forgotten, and recreated the soul of Ireland. Phoenix-like, she rose from the ashes of her lethargy, and proclaimed to all the world that "man cannot die better than facing fearful odds, for the ashes of his fathers, and the temples of his gods." Words that have seared themselves into the centuries were hurled by the doomed gladiators of ancient Rome to the Caesars of their day. "Ave Caesar moritum te salutamus." The men of Easter Week hurled the self-same words at the sawdust Caesars of their day, "We hail death, Caesar, but not thee." They knew the tremendous odds against them, but were not daunted. They took the only course open to brave men and patriots. They rose, "the young, the gifted, the gallant and the daring" with noble hearts and valiant hands, rekindled anew the sacred fire of liberty, which will burn in Irish hearts until the end of time. With faith unshaken in God's justice, they struck a resounding blow for their sireland. And she remembers them tonight. And will, forever and ever, as those who fought to save her honor, and died to save her soul.

And now, ladies and gentlemen, I am going to say something that may at this moment seem a bit superfluous, something that you undoubtedly have realized for yourselves by now, and that is, that I cannot bring anything new to the subjects under discussion tonight, nor speak of them in the eloquent terms in which you have heard them discussed on many previous occasions. When your chairman extended the invitation to me to speak here this evening, he said that I would be expected to say something about partition. I believe that several prominent Irishmen from both North and South delivered very able and exhaustive addresses on this subject in New York about this time last year. The most I can hope to do is to bring a new point of view, a Canadian point of view, to the discussion of this old and most vexatious question. When I say a Canadian point of view, I mean the opinion, or point of view, of at least 75 to 80 percent of the peoples comprising the Canadian Nation. And that I believe to be a conservative estimate.

There are over a million and a half of our people in Canada, another million and a half of Scotch and Welsh descent; another couple of millions who fled from central Europe to get away from domination by strangers, and, of course, we have the great French Canadian people of over three and half millions, not only in Quebec, but scattered all over Canada, who will certainly have nothing to do with imperialism, or imperialistic design. The Canadian reaction to the partition of Ireland I think I can best describe by giving you my own personal reaction. I was 18 years of age when the First World War broke out in August 1914, and I can well remember how my imagination was stirred, and my indignation aroused upon reading the address of Mr. Asquith, the then Prime Minister of England, on the occasion of the declaration of war on Germany, when he said, "We will never sheath the sword that we have drawn not lightly, until France is restored, Belgium liberated, and the rights of smaller nations guaranteed forever." It was about 3 years later that I joined the Canadian Army and did what I could in that supposedly noble cause. By the grace of God, and the American Nation, the Allies won that war, and hence if we were to believe what we were told, the rights of smaller nations would henceforth be held sacred.

You can imagine my indignation and surprise as a youthful idealist when, just 2 years after victory was secured, I witnessed the dismemberment of a small nation, who had done her utmost, and spilled her blood freely in World War I, by one of the great powers who was supposed to protect small nations. Ireland's effort in that First World War was paid eloquent tribute to, by no less an authority than the British Commander in Chief who wrote, "When the true history of the Great War comes to be written and understood, the part taken by the soldiers of Ireland will stand out in brilliant relief." The Irish soldiers were always to be found where the strife was hottest. Irish regiments stood their ground against terrific odds, with a tenacity which has never been surpassed in war. Ireland paid a bitter price to establish the principle of self-determination, freedom, and democracy. And, instead of the liberty she fought for, she herself got the torch, and the bullet, and the convict cell. All the terror and brutality of the infamous Black and Tans. But Irish courage and the will to freedom did not quail before this terrific storm. The chalice of suffering and of sacrifice had to be drained by Ireland. Her sons had to mount the scaffold. They had to die in the convict cells, or by the roadside, when overwhelmed by superior numbers. But the courage and the resolve of the people never faltered.

Here, in America, massed public opinion played its part in supporting and upholding the cause of liberty in that little isle across the sea. The sympathy of America, the sympathy of Canada, the good will and sympathy of the whole decent democratic world, was on the side of that little nation which was but struggling to have applied within her borders, the principles for which the first Great War had supposedly been fought, and for which so many Irish soldiers had shed their blood. There is no need for me to go into details about the horrors which were enacted in Ireland in those black and bitter years, but we remember with sorrow and with pride, some of the noble men who fell in that terrific struggle. We remember the indomitable McSweeney, the noble Kevin Barry. We remember the murdered mayors of Limerick and of Cork, and their names shall forever beckon like stars of hope to all who struggle against odds, for justice, humanity, and liberty.

Canadians saw all this and marveled at Irish courage and tenacity. Canadians knew of and deprecated all the atrocities inflicted on that defenseless people by the Black and Tans, and wondered how they could ever belong to a race, one of which had written, "The quality of mercy is not strained." Canada cannot, and will not, endorse such actions.

Being a visitor in your country, I would not dare speak for you. But I can assure you that the great majority of Canadians believe in the four freedoms, with all the strength and vigor which that belief implies, and that must certainly include the national integrity and sovereignty of small nations. They do not believe in ex-

pensive imperialistic design, on either side of the iron curtain. We are not stupid enough to accept as valid the shallow reasons given for the continuance of that running sore, or ditch of hate, that has been dug across a portion of Ireland. And, I can assure you that I speak for the vast majority of my countrymen when I say that we will hold the perpetrator of that infamous act and her statesmen, whether Tory or Socialist, suspect, while that monstrosity, begot in bigotry and hate, and brought forth in stupidity, sits howling its illegitimate days out on the doorstep of the British House of Commons. Canadians feel that stupidity has reached an all-time high, and statesmanship an all-time low, when they are unable or unwilling to right such an evident, grievous wrong.

The people of Canada, having engaged in two world wars, first, to undo the rape of Belgium, and, second, to undo the rape of Poland, would like to see Ireland, the ancient mother of many of them, have that gunshot separation annulled. Having contributed our utmost in men and money, we feel, in a sense, as citizens of the world, and that evils and abuses in government, wherever they exist, is our affair. To a Canadian, the issue between Ireland and Britain, is after all, quite simple. The latter is guilty of continued aggression by maintaining an armed force in a section of Ireland. She has no more claim in equity there, than Russia would have to occupy and retain the six northern counties of England. By maintaining partition in Ireland, the British Socialist Government is helping Moscow directly by keeping Ireland out of the Atlantic Pact. Every thinking Canadian feels that it is the height of stupidity to expect Ireland, or the Irish people, to enter into a military alliance, dedicated to the freedom and territorial integrity of democratic nations, with the power responsible for the dismemberment of Ireland, and the continuance in present world circumstances of that international crime. Could any international work be more important, or statesmanlike, than that of ending partition now, so that a United Ireland can take her rightful place among the free nations of the world, and play her full part in the defense of the West. If England hasn't got the statesmen with the brains and ability, and the proper dispositions to bring about the abolition of partition in the interest of justice and of peace, I cannot speak for your country, but I can for Canada, and we will be glad to let her have them on a lend-lease basis. I stress the lend-lease part of the offer, because the Canadian taxpayer is getting tired and has given up all hope of recovering any of the $2,000,000,000 we have given her. Having said all this, I hope you have some idea now of the Canadian point of view.

In conclusion, I would like to say, Ireland was a great nation. She fell into evil days and underwent travail and suffering, humiliation, and sorrow, but because through it all she placed her trust in God, and walked close to Him, with her hand in His, tonight she stands on the hilltop awaiting tomorrow's glorious dawn. And thus, she justifies the faith of her martyrs, of Emmet, Tone, McSweeney, Pearse, MacDermott, and their comrades, and those who died that she might glory in tomorrow's sunrise. I feel that her destiny is assured. Trials she may still have, clouds may obscure her path, but Hope, a poising eagle, burns above the unrisen morrow.

My closing wish then, for Ireland, in this communistic materialistic world of ours is that Ireland and Irishmen will hold fast to their traditions, will always remember that not all the power of the world can deflect the providence of God, nor all the malice in the world efface from their souls, the eternal print of baptism, and may they never allow any force to strike from their skies the sign of their salvation.

The American Legion and the American Merchant Marine

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement in behalf of the American Legion by Mr. Albert B. Stapp, national chairman of the Merchant Marine Committee of the American Legion, before the Merchant Marine and Fisheries Committee of the House of Representatives, on May 31, 1949, made in connection with the hearings on H. R. 3289 and H. R. 3337:

My name is Albert B. Stapp. I am chairman of the National Merchant Marine Committee, National Security Commission, the American Legion. The American Legion represents more than 3,000,000 veterans and 1,000,000 women of the American Legion Auxiliary.

I am appearing in support of proposed legislation now before this committee.

The American merchant marine is no new-found love of ours. The American Legion for many years has given attention to American shipping, realizing that it is an essential military auxiliary as well as a guaranty of economic security. When war came upon us in 1917, our Nation was unable to provide an adequate merchant fleet for military auxiliary purposes. We were dependent upon the merchant ships of other nations, but even these were not available in sufficient quantities for our commercial purposes alone. Only through a superexpensive shipbuilding program could we meet our own demands. As a result of this lesson, Legionnaires throughout the years have urged upon the Congress the necessity for adopting a sound, well-rounded program of replacement in our merchant fleet.

Beginning with our national convention at Kansas City in 1921, and at 27 national American Legion conventions thereafter, we have continuously advocated the building, operation, and maintenance of a United States merchant marine adequate to meet the needs of the armed forces in time of war or national emergency, and to serve the commercial requirements of our Nation in time of peace.

It is noteworthy to look back over these national American Legion conventions to see how our recommendations have been consistent with the verdict of history.

The 1922 convention at New Orleans urged enactment of legislation to provide subsidies to the American merchant marine to overcome the disparity in operating costs with foreign competitors, as well as asking that at least 50 percent of the trade of this Nation be carried in American ships flying the American flag and manned by American officers and men.

The 1923 convention urged that all practical steps be taken to build up the American merchant marine to a size commensurate with the size of the Navy and proportionate to the size and wealth of this Nation.

The 1927 convention in Paris, France, urged enactment of legislation to provide a merchant marine of proper strength to serve the requirements of our industry and agriculture and at the same time be an auxiliary to our armed forces as a guaranty of peace.

In Boston in 1930, at Detroit in 1931, in St. Louis in 1935, the American Legion kept repeating its plea for a strong American merchant marine, as well as to urge all of its members to patronize ships of the United States merchant marine for the purpose of travel and trade.

The American Legion's continuous advocacy of a strong American merchant marine helped to bring into being the Merchant Marine Act of 1936, often called the Magna Carta of the merchant marine. We have since continuously supported that act, feeling it to be the basis for our present-day modern merchant fleet.

At the end of the war with Germany, and again after the defeat of Japan, the American Legion again recognized the indispensability and vital necessity of a strong merchant marine, and our organization declared:

"We demand the preservation of our American merchant marine as a vital arm of our national defense, to serve adequately the domestic and foreign commerce of the United States, and as a necessity in sustaining our greatly enlarged world responsibilities."

By 1946 it was apparent to the American Legion that all Americans should be made aware of the necessity for a strong American merchant marine. The national convention in 1946 at San Francisco instructed the national organization to carry on an informational program relative to the merchant marine and its importance to our national welfare.

Since that time by means of radio programs, booklets, and other media of information, the national headquarters of the American Legion has carried out an extensive educational campaign to acquaint not only Legionnaires but all segments of the American public with the importance of our merchant marine. We think this informational and educational program has been outstandingly successful. We are proud to have been of such important service to our great Nation which, today, more than ever before depends upon a strong and adequate American merchant marine.

By the time of our national convention held October 1948 in Miami, Fla., the following facts had become alarmingly apparent to the American Legion.

1. We are dangerously short of passenger ships, convertible to troop transports in event of emergency. Assuming another emergency of World War II proportions, it appears with the reconversion of all existing passenger and combination passenger-cargo ships, and with the utilization of the transports held by the armed services, our combined troop-lifting capacity would fall short of the estimated military requirements by about one-half.

As an emergency measure this shortage could be partially met by the conversion of cargo ships. To those of us in the American Legion who were transported in World War II on slow and hastily converted vessels of this type, such a makeshift method is entirely unacceptable. The increased effectiveness of the latest submarines in itself would dictate against such utilizations in event of emergency.

2. Our domestic privately owned dry cargo fleet, more than 400 ships in 1939, and always near at hand so they can be pressed into emergency service at once, has declined to about 75 such vessels today.

3. The amount of our own foreign trade carried in American merchant ships has been constantly decreasing since the end of World War II. The number of active merchant vessels have also decreased alarmingly. Until Congress acted with dispatch and emphasis, our Government appeared to be more

UNIVERSITY OF MICHIGAN LIBRARIES

desirous of sending ECA cargoes in foreign ships than in our own.

4. We have permitted our shipbuilding facilities to become depleted to the extent that a valuable nucleus of management and skills may not be available in event a major world emergency should bring its sudden and tremendous shipbuilding demands. Even with the order or construction of six new passenger vessels and a number of tankers, employees in our shipyards are below the minimum number estimated by our military forces as necessary for the nucleus which can be expanded in event of need.

5. Since the end of World War II, and until Congress prohibited, our Government sold more than 1,100 of our war-built ships to foreign nations to help them rehabilitate their merchant fleets. At the same time our generosity in providing large quantities of our resources has enabled many of these same nations to carry on the large and expensive shipbuilding programs they now have under way.

6. We fought a World War and spent billions of dollars and thousands of lives to defeat our enemies, and yet we find an apparent willingness on the part of our Government to help reestablish the merchant fleets of our former enemies.

It has seemed to us in the American Legion that a Congress which has been so quick and so generous in helping foreign nations reestablish their merchant fleets, will not lose sight of the necessity for helping our own American merchant marine.

Cognizant of these and other detrimental factors to a strong and adequate merchant marine, the American Legion has put itself on record that our merchant marine be immediately developed to sustain the position of the United States in order that we may discharge our responsibility in world leadership.

We are confident that the present inadequacies in our merchant fleet can be corrected by a program of sufficient farsightedness, effectively designed to support in time of national emergency our armed forces, and to maintain our efforts to keep the peace.

The National Merchant Marine Committee of the American Legion has examined the various long-range programs submitted to this committee in the form of proposed legislation. We are in accord with any program designed in the public interest. We have advocated such programs by resolutions adopted at many of the past national American Legion conventions.

The American Legion is not submitting a specific legislative program. It is our feeling that such a task is properly the responsibility of this committee of Congress, in whom we have the utmost confidence. We do believe in, however, and support the legislative proposal now before you as being in the best interests of this Nation.

We feel this committee should approve this legislation. Upon enactment it will encourage private capital to enter into the construction, maintenance, and operation of United States merchant ships in both domestic and foreign commerce. We can then meet the national defense and economic security requirements of our Nation.

The American Legion has profited by the experiences of two great wars. We want no more taking of chances with our American merchant marine. We want the American flag to fly at the mastheads of the world's largest and finest fleet of merchant ships. We want a fleet of merchant ships to be used for commerce, and ready in time of national emergency to be auxiliary to our armed services. Nothing short of that is safe.

The American Legion relies upon this committee of Congress to approve legislation enabling this Nation to possess, operate, and maintain such an American merchant marine.

Can We Afford Free Medicine?

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. HARVEY. Mr. Speaker, under unanimous consent, I am inserting in the RECORD a speech delivered by the Honorable CECIL M. HARDEN, Representative in Congress from the Sixth Indiana District, to the Indiana Federation of Clubs in South Bend, Ind., on May 27, 1949:

CAN WE AFFORD FREE MEDICINE?

I want to talk to you tonight about one of the most important, and most controversial, legislative proposals of our time—the President's proposal for a compulsory national health insurance program. I shall attempt to be as nonpartisan as the subject allows.

Permit me to go on record early by stating my personal opposition to compulsory health insurance. I am not for it, because I do not believe in it. But, it would be only fair to point out that neither the Republican Party nor the Democratic Party is in full agreement on the issue.

My personal opposition is based upon the belief that the national health insurance proposal could not help but result in socialized medicine; that it is, in fact, socialized medicine in itself.

There are those who say that socialization of the medical profession would not necessarily endanger our traditional way of doing things in other fields. It is my firm conviction that you cannot socialize any substantial portion of our economy without sooner or later bowing completely to the socialistic doctrine.

Consequently, my opposition to socialized medicine or by whatever name you choose to identify the compulsory health insurance scheme, is based upon my belief, shared by the overwhelming majority of Americans, that we must not take any chance of destroying the American system of Government which has made us the greatest Nation of free people in the history of the world.

I do not propose tonight to defend the status quo in American medicine to the last stethoscope. I believe there are some real problems to be faced in American medicine, some challenges we must meet if we are to avoid eventual socialization.

We need more doctors. There is no argument on that point. We need more nurses, too, and more medical technicians. We need more clinics, more medical schools, and more hospitals. We must make the benefits of medical science more available to all our people.

I hold that Government does have a responsibility in meeting these problems, but I do not agree that the problems are wholly the responsibility of Government. They must be shared with all of us as citizens, lest we wind up putting our complete dependence in an all-powerful and all-inclusive governmental bureaucracy.

In other words, the problems that face us in the field of public health must be solved by cooperative action of Government, the medical profession, and the public at large. No other solution can ever be completely satisfactory.

A great start has been made in recent years in the field of voluntary health insurance. More and more families are being covered by these voluntary systems.

The growth of clinics in our larger cities; the continued progress in the field of children's hospitals and specialized hospitals of all types, is encouraging, and it has been made possible by the cooperative action of the medical profession, of governmental units, and of the public itself.

I do not propose to say, nor do I believe, that the whole job has been done and that we can truthfully say that there is nothing left to do. Society has become too complex to deny the rightful responsibility of concerted action on the part of Government toward the solving of the problems of society.

To me, the compulsory health insurance program now being advocated is somewhat akin to tearing down the family house because the roof leaks, while it would be much more sensible simply to patch the roof. There are leaks in the roof of our present health structure, and they need to be patched.

I am hopeful that it will be possible to enact into law legislation designed to patch those leaks, but I can never conscientiously support any bill which would tear down the house of free American medicine and replace it with a governmental structure to house politically administered State medicine with all its accompanying evils.

Let us briefly consider what compulsory health insurance is and what it proposes.

Without going into intricate detail, the plan proposes that nearly every person in this Nation would be forced to participate, willingly or otherwise, in a Federal Government insurance system which would entitle him, after payment of a special tax which would be withheld from his earnings, to all the medical service he could get, but not, as I shall point out later, all he necessarily needs.

The cost of this program cannot be accurately estimated. In other nations, such as England and Germany, where similar plans have been tried out, the eventual cost has been far greater than the estimates, since there is no means of determining just how much medicine the people are going to demand. The English estimates for the first year of operation of the British socialized medicine program were 40 percent too low, and the cost is still rising.

Basically then, the compulsory health insurance plan establishes the premise that the Government, rather than a free society of free people, holds the complete responsibility for the health problems of its citizens.

If this be true, why limit socialization to the medical field? Doesn't the principle apply equally well to the food we eat, the clothes we wear, the houses in which we live, or the wages we earn?

If we are to socialize doctors or dentists, is it not just as reasonable to socialize lawyers, newspapermen, engineers or teachers? Does not the rule apply as well to farmers, to laborers, to every single person who does any kind of work at all?

Where is the stopping place?

Personally, I do not believe there is one. It hasn't worked out that way in England. England started out to socialize just a few of its economic elements and found that there was no drawing of the line, no stopping place—that socialism, once started, must continue to expand.

And, that is the inherent danger in the present proposal to take socialistic liberties with American health.

Let us, for a few moments, take a look at the British experiment in socialized medicine. It has, of course, met some of the problems which had to be met. For, it cannot be denied that more Britishers are receiving medical and dental attention than heretofore.

Nor can it be denied that it is politically popular. Any plan which provides free false teeth, free glasses, free wigs, and even free girdles cannot help but win votes.

But, be that as it may, let us look at another side of the socialized-medicine picture in England. What is it doing to the people?

Here is the opinion of Dr. H. A. H. Harris, a British consulting surgeon, as contained in a letter written to Dr. Wemple Dodds, of Crawfordsville, Ind. Dr. Harris wrote:

"We have now had nearly 4 years of socialism and its dismal doctrines, and it has brought our country to the brink of ruin from every point of view * * * spiritually, morally, and economically. The average workingman has been debauched and emasculated by this government of ours.

"Formerly, he was willing to have only what he paid for and to pay for what he had. Now, he looks to the all-powerful state to provide him with all his needs. He does not think he has to work for them. * * * The possession of low cunning has become more profitable than the possession of character."

And a little later on in his letter to Dr. Dodds the English surgeon says this:

"Our Socialists, as is so typical of left-wingers the world over, prefer revolution to evolution."

In other words, England's Socialists preferred to tear down the house of English medicine, whereas all that was needed was to patch the leaks in the roof.

And, with the destruction of the doctor-patient relationship, with the destruction of individual responsibility, there has come a corresponding reduction in individual initiative and moral character.

The purpose of socialism is, of course, to share the wealth. Its result is more akin to a sharing of the misery.

Here in America we have taken some halting steps along the road to state socialism. But we have not yet accepted the doctrine that traditional American liberties and freedoms must be surrendered to a super state, and I pray God we shall never accept such a doctrine.

Socialized medicine is not free medicine. It is expensive medicine, expensive in every way. For example, the tax money which must be collected to support a compulsory health insurance program would not be used for medical bills alone.

It would have to pay the salaries of a horde of Federal employees who would be hired to administer the scheme. Consequently, the cost to the user of so-called free medical service would of necessity be higher than the cost of the services he buys today.

What is needed in addition to the expansion of medical facilities which I noted previously, is some means of avoiding, insofar as possible, the crippling economic effect which major accidents or illnesses inflict upon American families.

The socializers make much of this point. They cite case after case to prove that many average, hard-working American families are ruined financially by unexpected accidents or illnesses which result in medical bills beyond their ability to pay. I do not deny that this is true, for I have seen families virtually ruined by such tragic events.

But I believe that this problem must be met through expansion and improvement of the voluntary insurance programs now available, programs such as Blue Cross and Blue Shield. And, too, while the average American family can meet its usual health bills, there are many of our people who cannot.

Government always has and always must share the responsibility of caring for those people. The principle of community action to help the unfortunate is as old as society itself.

Isn't it true that here in Indiana our townships and our counties pay the medical bills for those people who are not financially able to pay their own? Why exchange a tried and working American principle for a socialistic one? It would be far, far better to supplement that system.

Socialism, by whatever name you choose to describe it, is a cold, impersonal doctrine, reducing everything to a common denominator. Its effect upon individual responsibility is paralyzing.

America can remain strong only so long as the individual is in himself and by himself strong and independent. The more independence of action you take away from the individual, the less strong will America be as a nation. For, as a nation, we are only as strong as our collective strength as individuals.

Socialized medicine is not new. Quite the contrary. Germany adopted the theory of free medicine in 1885 under Bismarck. Let us briefly consider the consequences.

In 1885, the average German worker who became ill returned to work in 14 days. But, by 1930, after 45 years of politically administered state medicine, this same average German needed 29 days of treatment before he returned to work. In other words, as the government made it easier for him to be sick, the German worker found sickness more and more attractive as individual responsibility was destroyed.

Incidentally, the greatest absenteeism because of illness occurred before and after holidays and weekends, which isn't surprising at that.

If socialized medicine improved the German worker's health, the figures fail to bear it out. After nearly a half century of socialization, the average German worker was ill and absent from work 70 percent more than his American counterpart.

Here is a concrete example, backed up by German medical statistics, of the effect of socialization of medicine. In 1930, Germany, along with the rest of the world, was wallowing in the trough of depression. Not enough tax money was coming in to the government to support the tremendous demands being made upon the medical service by German citizens.

Consequently, the government adopted a decree requiring each German to make a 12-cent payment for his first trip to a doctor during the month of September.

The result speaks for itself and points up the glaring weakness of socialized medicine.

During the last week of August, before the 12-cent decree became effective, more than 30,000 Germans in a typical German community visited doctors. During the first week of September, when the 12-cent charge became effective, the number of visits in this same community dropped to less than 9,000.

One wonders how many of these people were really sick, and it is easy to see why so many German doctors frequently left their phones off the hook.

Such a system, and there is little difference between German or British socialized medicine and the proposal which confronts America today, such a system works against the person who is really ill and requires medical treatment. For, he becomes just another neurotic to the overworked government-paid physician who finds it harder and harder to distinguish the sick from the well in the long lines which form daily in his office.

And, here is another disturbing result of socialized medicine in Germany. By 1931, after 46 years of state medicine, Germany had more clerks and statisticians on the government medical payroll than it had doctors.

"Free medicine" in Germany became expensive medicine, just as it is becoming expensive medicine in England and just as it would become under a similar American plan.

In conclusion, it is impossible to temporize with socialism. There are no half-way measures.

If we do not defeat the socialistic concept, it will defeat us.

American health must remain in the hands of a free American people.

We cannot afford to pay the price of "free medicine."

Thank you.

Vivisection

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. LEMKE. Mr. Speaker, under leave to extend my remarks, I desire to include an editorial from the Washington Times-Herald of April 17, 1949, by Evie Robert on vivisection.

I am glad to learn that the District of Columbia Committee does not intend to take up the bills providing institutions with dogs for so-called scientific experimentation.

This should give the Members of Congress time to study this problem, sign petition No. 1 at the Speaker's desk, and finally pass my bill, H. R. 857, prohibiting experiments upon living dogs in the District of Columbia.

In this way we can set an example for our State legislatures and finally abolish this vicious practice throughout the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EVE'S RIB

(By Evie Robert)

So many people have written me to ask me to write to President Truman about vivisection, that I've decided to write him right here and now.

DEAR MR. PRESIDENT: You have the power to put a stop to this brutal business of vivisection. Though I don't believe you have a dog at the moment, I'm sure as a little boy you had many. Just turn back a few years and think how you would have felt if your dog strayed away and was picked up by some brilliant young "scientist" for experiment.

It's all too long to go into, and you haven't the time to read a lengthy letter * * * but for one example, the only thing that can be proved, for instance, by slowly boiling a dog to death, is that the poor creature died in torture. We know that anyway. Mr. Truman, you're a great fellow and I'm sure you're great enough to embrace every little cold-nosed pup in the country and see that they're protected against slow, horrible death.

The only thing dogs ask of you is to let them love you. Dogs were put on this earth to be man's best friend, unselfish, devoted. Please don't kick them in the teeth for the sake of some gruesome-minded sadistic students who would be better off locked up in a nuthouse.

As always, wishing you the best of health, luck, and all the good things in the world, I am thine,

EVIE ROBERT.

I haven't seen the charter of the dog pound, but I'll bet a good deal of money that there's nothing in it which says that dogs that have been picked up on the street can be turned over to laboratories for experimental purposes. The original purpose of the dog pound, I should think, would be to take off the streets dogs that have no licenses, that are ill, or that have been wounded somehow. Surely a quick and humane death for an injured dog, or an ill dog isn't too much to ask.

A dog with no license isn't a criminal, and in a few days the owner would come and get it. But let's suppose the owner doesn't come to get the dog. Maybe the dog

UNIVERSITY OF MICHIGAN LIBRARIES

is just a stray without an owner. Is that any reason to sentence the poor thing to a living hell? Even if we could be absolutely certain that animals were given proper anesthetics and used only once for an experiment, still, that experiment doesn't prove anything. Medical students have access to corpses for study, some persons with life sentences offer themselves for medical research.

A dog is a dog, and a human is a human, and even though there's a similarity in blood vessels, heart, lungs, and all the rest, still a dog is not a human and a human is not a dog. There can be little, if any, service rendered the medical profession by taking a dog and carving it up. I know that these creatures who call themselves research men have done some of the most horrifying acts of cruelty imaginable.

One little stunt I know of was a student who opened a dog from gullet to groin (without anesthetic, of course, the dog was strapped to the operating table). The first thing he did was to sever the animal's vocal cords so that he could proceed without the disturbance of the dog's agonized screams. He then took everything he could take out of the dog and still have the dog live. Then, instead of sewing him back up, he let the animal lie there to see how long it would take him to die, exposed, as he was, to the air. An awfully interesting and useful experiment, I call it.

So there you have it. Let the world know where you stand in this case. Write your President, your Senator, your Congressman. Get your friends to do the same thing. Let's start a pyramid club to do something, for once, that is unselfish and shows that we have some heart. Residents of the District who have no Senator or Congressmen can write the Commissioners. Thank God, we all have the same President.

This is a Sunday column, but I don't think the following is sacrilegious. When I was a little girl we had what we called a yardman. He was almost an Uncle Remus, and we children adored him. His name was Uncle Frank, and he was very black, with no teeth in the front.

One day he had us all gathered together when he should have been cutting the grass, and he asked us if we knew where the name "dog" came from. Of course, we wiggled around and made ourselves comfortable on the lawn, because, though we'd heard it many times before, Uncle Frank cast a spell over us with his stories.

"Well, it was like dis," he began, as we squealed with anticipation. "De Lord, He made all de animals first, and den He made menfolks an' womenfolks. He sho' started sompin' dat time. Anyhow, He was stayin' on de earth long enough to show man how to git along good. You chillun know how to churn de butter an' sweep off de front po'ch an' all de likes o' dat. He learned man to milk de cows, an' to ride de ponies, an' how to jes naturally live right widout Him, de Lord, to show him how.

"De Lord was real good an' kin', He was lovin' an' patient! Mercy! When I think what de po' Lord had to put up wid!

"So, in movin' around, man noticed a li'l ol' animal wid fo' legs an' a tail an' a haid an' all, but man forgotten to ast de Lord what was de name of dat li'l animal. De li'l ol' thing he went everywhere man went. He slep' in de caves an' de houses, an' he went huntin' wid man, an' lotsa times he offered up his whole life for man.

"So one day de Lord He say to man, 'I'se goin' on up yonder. You-all kin make it now wifout me. You all knows de names of all de beasts, an' you-all remember now, what I done tole you. You'll make out all right, an' even though I ain't right at your side, I'll be a-watchin' over y'all. So I'll be goin' along now. 'Bye.'

"Well, after de Lord went off to de heavens, man he 'membered he had forgot to ask de Lord what was de name of dat l'il ol' animal what was always right wif him wherever he went. So when he couldn't work out nothin' at all, man he went to his wife an' he said 'Dis here li'l animal is a real nice li'l beast. He's always around, an' he's so good an' kind. It ain't right dat he ain't got no name.'

"So de wife she thought an' thought. One mornin' she got up an' she hollered, 'I got it! I got it!' 'You got what?' say de man, concerned-like. He think maybe she got a snake or some o' de varmints. 'I got de name for dat li'l animal. He so good, an' he love us so much, an we loves him, an' he always aroun', let's us spell de name o' de Lord backwards. De Lord's name is God, ain't it? Well we gonna call dat li'l animal dog.' "

Wisconsin Committee on Hoover Commission Findings Favors H. R. 782, To Create a Department of Welfare

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. BIEMILLER. Mr. Speaker, a number of distinguished citizens of the great State of Wisconsin have banded themselves together to help inform the public on the findings of the Hoover Commission.

Operating under the name, the Wisconsin Committee on Hoover Commission Findings, these citizens recently adopted two resolutions which, under leave to extend my remarks, I am inserting in the RECORD.

The membership of the committee consists of the following: Mrs. E. D. Bixby, Rhinelander, treasurer, Wisconsin Federation of Women's Clubs; Dr. Carey Croneis, Beloit, president, Beloit College; Joseph Cutler, Milwaukee, president, Johnson Service Co.; Mrs. R. J. Douglas, Juda, leader in women's agricultural organizations; Jerome Fox, Chilton, mayor, former member, State legislature; George H. Haberman, Milwaukee, president, Wisconsin State Federation of Labor; Walter J. Kohler, Jr., president, Volrath Co., Sheboygan; John A. Lawton, Madison, executive, secretary and general counsel, Wisconsin State Federation of County and Municipal Employees; John P. McGalloway, Fond du Lac, president, Wisconsin Bar Association; Gavin W. McKerrow, Pewaukee, president, Golden Guernsey Dairy Cooperative; Alex L. Nicol, Sparta, speaker, Wisconsin State Assembly; Frank L. Panzer, Oakfield, president pro tempore, Wisconsin State Senate; G. V. Rork, Eau Claire, president, Northern States Power Co.; Herman Steffes, Milwaukee, president, State CIO Council; Robert E. Tehan, Milwaukee, State Senate.

The resolutions follow:

Resolution favoring H. R. 782 to create a Department of Welfare in the Cabinet

Whereas there is a growing concern over the problems of social security, welfare, and health and indications of a lack of coordination and central direction in administering these activities; and

Whereas the Hoover Commission has expressed concern in its report on social security over the lack of efficiency and economical organization of the numerous Federal agencies now administering these activities; and

Whereas there is now before Congress, bill (H. R. 782) which would constitute the Federal Security Agency as a department of welfare giving it Cabinet representation and providing for an orderly administrative organization in the performance of social security, health, and welfare functions; Now, therefore, be it

Resolved, That the Wisconsin Committee on Hoover Commission Findings does hereby go on record as favoring H. R. 782 which provides for the creation of a Federal department of welfare to replace and assume the duties and responsibilities of the existing Federal Security Agency; and be it further

Resolved, That copies of this resolution be sent to all Members of Congress from the State of Wisconsin.

Adopted, Madison, May 5, 1949.

Resolution urging reorganization of the Postal Department

Whereas the Hoover Commission has recommended that while some increases in certain classes of postal rates may be necessary in order to make the postal service self-supporting, it did suggest that final determination of these rates should be made by Congress after study had been made of present budgeting and cost control systems to form the basis upon which Congress could act with more assurance in determining rates; and

Whereas it is believed that more efficiency and economy in the postal system still could be achieved through adoption of the recommendations made by the Hoover Commission in its report on the post office: Now, therefore, be it

Resolved, That the members of the Wisconsin Committee on Hoover Commission Findings go on record as urging the adoption of improved budgetary and administrative practices—the primary objective of the Hoover Commission—through recognizing at the same time that ways of making the Post Office Department self-supporting must be found; and be it further

Resolved, That if increases in postal rates are made that final determination of these rates be made by Congress in line with the Hoover Commission's recommendations but that such increases be not excessive;

Resolved, That copies of this resolution be sent to all members of Congress from the State of Wisconsin.

Adopted, Madison, May 5, 1949.

Truman Dam on Kootenai River Probably Will Be Most Perfect Example of Multipurpose Project in Entire World

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. WHITE of Idaho. Mr. Speaker, I have today introduced a bill to authorize the construction of a multipurpose reservoir on the Kootenai River near Jennings, Mont., to be known on completion as the Truman Dam.

This is not just another dam, but in all probability the most perfect example of

a multipurpose project in the entire world. Its primary purpose is for flood control—not merely flood control for the Kootenai Valley of Montana and Idaho, but flood control along the entire length of the Kootenai and Columbia Rivers from the Rocky Mountains to the Pacific Ocean—a distance of more than 1,000 miles—and beneficially affecting the States of Montana, Idaho, Washington, Oregon, and the Province of British Columbia. This dam will do much to alleviate the future danger of such disastrous floods as that of 1948 which destroyed the city of Vanport, Oreg., located midway between the cities of Portland, Oreg., and Vancouver, Wash.; and brought death and destruction to many parts of the Pacific Northwest.

A MULTIPURPOSE, SELF-LIQUIDATING PROJECT

But the usefulness of this dam would not end with flood control. It would contribute mightily to navigation, irrigation, reclamation, and the development of hydroelectric energy. Although the production of hydroelectric energy is a byproduct of secondary consideration, yet this byproduct alone will retire the entire cost in 50 years with 3 percent interest, so that all other benefits to flood control, irrigation, navigation, and reclamation—worth hundreds of millions of dollars—will be free of cost.

While the hydroelectric power developed at the dam site will be very considerable, yet one of the many phenomena of the Columbia River and its tributaries is that this dam, by regulating the orderly release of water, will so smooth out the flow of the Kootenai and Columbia Rivers that more additional firm power will be developed at downstream sites, like Grand Coulee and Bonneville, than is developed at the project itself, thereby relieving the power shortage at Spokane, Seattle, and Portland, where it is most acute. This process can go on almost indefinitely for the more sites developed, the lower will be the over-all cost. For confirmation of above, see report of the United States Army engineers, subject: Columbia River and Tributaries, Northwestern United States, February 21, 1949, file 800.92, Columbia River Basin.

MORE AMERICANS SHOULD VISIT PACIFIC NORTHWEST

It is unfortunate that the great majority of the American people and the Congress are not aware of the magnitude and resources of this great Northwest area—the old Oregon Territory—which is traversed by the Columbia River and its tributaries.

Nature, in one of her philanthropic moods, fashioned this land so nearly perfect that only the puniest efforts of man are required to bring it to perfection. Within its borders is 40 percent of the potential water power that can ever be developed within the continental United States, and in comparison, Tennessee Valley—TVA—and the proposed St. Lawrence waterway are relatively small projects.

The TVA is a power and flood-control project; the St. Lawrence, a navigation and power project; while the Columbia River and its tributaries combine flood control, power, navigation, and irrigation—and has a power potential five times as great as TVA and the St. Lawrence combined.

Nature did not stop with power. With lavish hand, she placed millions of acres of the choicest land adjacent to these dam sites, which need only irrigation to make them blossom like the rose. This area also contains the largest stand of merchantable timber on the continent, and the greatest undeveloped mineral resources within the United States. All that is needed to open this vast treasure house is transportation and power, much of which will be contributed by this Kootenai River project.

We are supplying the money to harness the power of the upper Nile which is to be used for the development of the mines of east Africa in direct competition with our own mines. Surely the development of our own natural resources are of equal importance.

An older generation of Americans who made the United States the greatest industrial Nation on earth and brought to our people the highest standard of living the world has ever known, believed that charity begins at home. How naive and old-fashioned they were.

FASTEST GROWING AREA IN THE UNITED STATES

Despite the fact that approximately 3,000,000 people reside in this area, much of it is still primitive, and the resources have scarcely been scratched. That is why it is the fastest growing section of the United States, and why this dam must be built to keep pace with increases in population and industry.

Many of the tributaries of the Columbia are major rivers in their own right. The Snake, largest of these tributaries, rises in northwestern Wyoming and traverses the entire width of Idaho, irrigating some 2,000,000 acres on the way; and just before joining the Columbia is joined by the Salmon and Clearwater Rivers of Idaho; and together they contribute slightly more than one-fifth of the mean annual run-off of the Columbia River.

The Kootenai and the Clark Fork-Pend Orielle Rivers drain the northeastern section of this basin in Canada, Montana, and northern Idaho; and contribute an annual run-off about equal to that of the Snake River. While coming up from near the California line on the south, the Willamette River drains the famous Willamette River Valley and empties into the Columbia at a point close to Portland, Oreg., and Vancouver, Wash.

FINEST FRESH-WATER HARBOR IN THE WORLD

At the mouth of the Columbia, where the river attains a width of about 7 miles is the finest fresh-water harbor in the world, with a ship channel more than 40 feet in depth and a mile in width at low tide, and a tide of 8 feet, which assures a minimum depth of 48 feet at high tide, 10 feet more than is required to permit safe entry of the largest ship afloat. A ship channel for ocean-going vessels is maintained for more than 100 miles inland and there are some 500 miles of navigable river for smaller craft.

At the headwaters of this great river system are huge natural reservoirs, greater than any ever constructed by man, such as Jackson Lake, Wyo.; Flathead Lake, Mont.; Pend Orielle and Coeur d'Alene Lakes in Idaho; and Kootenay and Arrow Lakes in Canada; while in addition, and of vast proportion, is the natural water storage in the deep snows of the mountains extending from Utah to the Selkirks, far into Canada.

TRUMAN DAM APPROPRIATE NAME

It is particularly fitting that one of the key projects in this vast domain should be named the Truman Dam, because it was at the President's home town of Independence, Mo., that the covered wagon trains were outfitted which, in a brief decade, 1843 to 1853, carried 300,000 people on the greatest migration in history, to win for us the Oregon Territory, now known as the Columbia River Basin.

These hardy pioneers, whose self-reliance might well be emulated today, dared this trek through 2,000 miles of savage wilderness, carrying our flag, our customs, laws, and language—not for conquest—but to carve for themselves and their children homes in a new land. It took courage, fortitude, and faith to dare that trip, for many people thought it a fanciful land, or figment of the imagination, existing only in the lines of William Cullen Bryant's Thanatopsis:

Or lose thyself in the continuous woods
where rolls the Oregon, and hears no sound
save his own dashing.

And but a few years before the migration started, Daniel Webster had thundered from the floor of the United States Senate:

The Rocky Mountains must forever be our western boundary, beyond it are but howling wolves and drifting sands.

But there were others like Senator Thomas Hart Benton, of Missouri, who demanded that the Oregon Territory be brought into the Union with the cry of "fifty-four-forty or fight"; and the great migration began.

This was an army of peace, of home builders and home lovers, but the casualties of this great trek were as great as those of war, for it is estimated that an average of 17 persons perished for every one of those 2,000 long, hazardous miles. The hardships suffered by these pioneers was vividly described by Joaquin Miller in the following verse:

Then dust arose, a long, thin line like smoke
From out of riven earth, the wheels went
groaning by.
Ten thousand feet in harness and in yoke,
They rent the ways of ashen alkali,
And desert winds blew sudden, swift and dry.
The dust it laid upon and filled the train,
It seemed to fill and fret the very sky,
Lo, dust upon the beast, the tent, and plain,
And dust alas, on breasts that rose not up
again.

Years later, when a crew of engineers were making the Burlington Railway survey along the Platte River in Nebraska, they stumbled upon the grave of one of these pioneers who had died on the trail, and marked on a rusty wagon tire was "Rebecca Winters, aged 50 years."

UNIVERSITY OF MICHIGAN LIBRARIES

Boys, said the leader, we'll turn aside,
Here, close by the trail, her grave shall stay,
For she came first in this desert wide,
Rebecca Winters holds right-of-way.

A touching bit of sentiment in a hard-boiled world, where the line of a great railroad was turned aside that she might rest in peace.

MAGIC OF WATER AND IRRIGATION

The old Oregon Trail followed the Snake River through Idaho and was described by Washington Irving in his account of the Hunt expedition as—

A dreary waste of sand and gravel extends from the Snake River almost to the Columbia. Here and there is thin and scanty herbage, insufficient for the pasture of horse or buffalo. Indeed these trackless wastes between the Rocky Mountains and the Pacific are even more desolate and barren than the naked, upper prairies on the Atlantic side—they present vast dreary and thirsty wilds between the habitations of man, in traversing which the wanderer will often be in danger of perishing.

But today, 2,000,000 acres of that land are among the richest and most productive that lie out of doors—the land of the big Idaho baked potato, if you please—all because of the magic of water and irrigation. Millions of additional acres in the Columbia River Basin will soon come under irrigation and the proposed Kootenai River Dam will supply much of the water at the proper season of the year.

The people who reside in the region and who have pioneered the way know and appreciate the help they have received from a wise and provident Government that has come to their assistance and made it possible to more fully develop and utilize the matchless resources in the upbuilding of their communities in the great Northwest.

A copy of my bill is appended hereto:

A bill authorizing the construction of a multipurpose reservoir on the Kootenai River near Jennings, Mont., for flood control, and other beneficial purposes; to be named, upon completion, Truman Dam

Be it enacted, etc., That the project, now designated as the Libby Dam project, for flood control and other beneficial purposes on the Kootenai River in Montana, recommended in the report of the Chief of Engineers, United States Army, in House Document No. —, Eighty-first Congress, first session, is hereby adopted and authorized and shall be prosecuted under the direction of the Secretary of the Army and the supervision of the Chief of Engineers substantially in accordance with the plan recommended in that report. Upon completion, this project shall be named Truman Dam.

SEC. 2. There is hereby authorized to be appropriated such sums as shall be needed to carry out the provisions of the act.

Kremlin's Cold War on Jews

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. DOLLINGER. Mr. Speaker, on May 26 I spoke in this House on the subject of the Kremlin's Cold War on Jews, and called attention to the articles written by Frederick Woltman. At that time I asked permission to have the articles inserted in the CONGRESSIONAL RECORD. Since then, the last two articles of the series have been published, and in order that the picture may be complete I should like to have these published in the RECORD also.

The articles follow:

SATELLITES JOIN MOSCOW'S COLD WAR ON JEWS

(By Frederick Woltman)

The Communists' extermination of Jewish life within the U. S. S. R. has now spread to the Soviet-dominated satellite countries behind the Iron Curtain.

In Poland, Rumania, Hungary, Czechoslovakia and Yugoslavia all of which displayed a postwar tolerance toward their Jewish population—the drive to smash Jewish cultural and religious activities and to wipe out Zionism is in full swing.

It follows strictly the Moscow model.

So today, the Jewish communities in the satellites "are dying a slow death as the screws are being turned on their schools, languages, and traditions," according to the American Jewish Committee which recently completed a series of studies.

ACTIONS REFUTE WORDS

The Communist-dominated regimes, "though loudly claiming to be the enemy of all anti-Semitism, have actually tolerated anti-Semitism among large sections of the population and within the state administration," according to a 56-page report of the Jewish Labor Committee, composed of leading non-Communist Jewish trade unionists.

This same report, "Jews Behind the Iron Curtain," charges that the satellite governments "have sabotaged every decision aiming at the restoration of looted property to the original Jewish owners."

In Rumania and Hungary the chief rabbis were forced to flee. Zionist headquarters were raided and their leaders exiled.

After a "systematic purge * * * conducted most ruthlessly by Jewish Communists" last year, the Jewish community in Rumania "is on the verge of extinction," the Jewish Labor Committee found.

SCHOOLS LIQUIDATED

Following a declaration laid down by the Rumanian Workers (Communist) Party, Jewish schools were liquidated. Nineteen Jewish hospitals, built largely with American funds, were nationalized.

All Jewish sports clubs with names such as Maccabees, Asmoneans, and Hakoah were ordered to change them to Rumanian or Russian appellations within 24 hours.

Chevra Kadisha, a religious funeral society, was dissolved.

In Hungary, said the JLC report, the Communists competed with their former foes, the Shareholders party, to win over the "anti-Semitic masses. Everybody understood that the best way for a Hungarian pro-Nazi war criminal to escape punishment was to sign up in the Communist party."

By the first of this year the Communists had succeeded in cutting off all emigration to Israel from Rumania and Hungary.

CAMPAIGN VIOLENT

An ideological campaign, even more violent than that in Russia itself, was directed against Zionism and Jewish nationalism in Rumania.

Unirea, organ of the Rumanian Communist-controlled Jewish Democratic Committee, even accused Zionists of collaborating with Fascists. The newspaper scoffed at the contention that all Jews were necessarily anti-Fascist because of the experience of European Jews under fascism.

"That would lead to the absurd conclusion," said Unirea, according to the American Jewish Committee study, "that such people as Henry Morgenthau, Leon Blum, * * * and Bernard Baruch are anti-Fascists, although it is well known that they are doing everything to save the Fascists and their lackeys."

In Poland, Bulgaria, Czechoslovakia, the propaganda warfare is scarcely as incendiary. But here, too, "events followed substantially the same pattern of drastic Communist coordination of Jewish communal life," reported the American Jewish Committee. Bulgaria and Yugoslavia, however, still permit mass emigration to Israel.

Thus far, the satellites have been spared the one final step taken by the U. S. S. R.—liquidation of Communist-controlled Jewish groups and organizations of Jewish Communists themselves. "But all signs point to it," the AJC concluded, "as the goal toward which Communist policy is aiming."

JEWISH LEADERS PURGED

The pattern is the same everywhere behind the iron curtain, reported the AJC. Independent Jewish organizations are being dissolved; Jewish religious and civic leaders are being purged, arrested or forced to flee; religious education is being abolished; Jewish cultural life is being destroyed, and the remaining Jewish organizations are being used for Communist purposes. * * *

"Whether the victims be Zionists, Jewish community leaders, priests, ministers, or rabbis, the offense is the same: Failure to satisfy the requirements of Soviet fanaticism."

STALIN DERIDED NEW YORK JEWS 20 YEARS AGO—REDS BACKED 1929 POGROMS BY ARABS

(By Frederick Woltman)

Indignant Jewish citizens were infuriated when a series of inflammatory, anti-Semitic cartoons suddenly flooded the streets of the lower East Side 20 years ago.

Aimed at deriding the Jews, the cartoons utilized the scurrilous racist stereotypes later popularized by the Nazis. They showed the skull cap, the long beard and the hooked nose, greatly exagerated, and money bags stamped with the Star of Zion that bore the dollar sign.

But these cartoons came not from the Nazis, for Hitler had not yet seized power, nor from native Fascists. They were distributed by the Communist Party in its official Yiddish newspaper, the Freiheit.

DEFENDED PROGRAM

They were the American Communists' slavish contribution to Josef Stalin's defense of the 1929 Arab pogroms against the Jews of Palestine.

By the device of anti-Semitism, the Communists hoped to discredit the ideal of a Jewish homeland, now the State of Israel.

And to sell the American people on Stalin's fantastic claim that the pogroms were a war of liberation by the Arab masses against their Zionist Fascist exploiters.

The Kremlin's campaign today to make political scapegoats of the Jews behind the Iron Curtain has a precedent. The Communists always have used Zionism and the aspirations for a Jewish homeland as a political football in their master contest for world domination.

A SURPRISE DEFENDER

When he thought it had served his purpose—to weaken Britain in the Near East—Stalin unexpectedly became a United Nations champion of Zionism 2 years ago, while suppressing it in Russia. The only real friends of Israel, said the Communist propaganda organs, were the U. S. S. R. and Communists throughout the world.

Yet while Jewish workers were being murdered in Palestine in 1929 the Daily Worker, official Communist mouthpiece, declared:

"There are no pogroms being made in Palestine by the Arabs. When the expropriated Arabs rebel against the rape of their country the Fascist Zionists know how to speak of pogroms.

CARTOONS OF HATE

"The Jewish workers * * * must not fall under the influence of Jewish bankers, pillars of world imperialism. * * * They must continue to fight on the side of the Arab population."

In a cartoon by William Gropper the Freiheit, Yiddish version of the Worker, depicted on September 4, 1929, a high-hatted, heavily armed John Bull shooting two pistols through the long beard of a caricatured elderly Jew. At the latter's feet lay a huge money bag with the six-pointed star and the dollar mark. The Yiddish caption meant: "The Mask Behind Which He Shoots."

Another Gropper cartoon of September 19 featured a gross caricature of a Jewish boss, swinging a whip over a row of sewing machine operators. Under his vest he wore a Jewish religious garment, stamped with the Star of Zion and the dollar mark; in his hand he carried a contribution box bearing the same marks. The caption, "The Zionist Charity Giver."

Since Stalin was then playing ball with the Arabs, the Communist Party declared in favor of "an independent Arabian republic" to rule Palestine. Its excursion into anti-Semitism, of course, fell flat and Communists today do not like to be reminded of it.

Again, in the 1936 Arab uprisings, the Soviet press hailed them as "the beginning of the end of the Zionist bluff," according to Louis Jay Herman, whose documented article, "The Communist Record on Palestine," appeared in the January 1949 issue of the magazine Plain Talk.

HOPELESS PHANTOM

"The hopeless phantom of a Jewish state must be abandoned," asserted the Daily Worker of April 28, 1936.

Then came Stalin's brief 1947-48 honeymoon with Zionism. It ended abruptly on October 21, 1948, when Ilya Ehrenberg, Kremlin spokesman and Soviet journalist, attacked Israel and Zionism in Pravda. Israel's leaders, he said, would sell out their people for the sake of the dollar.

The Ehrenberg article set off an ideological war against Zionism within the whole Russian orbit. Shortly afterward, the entire Soviet press commenced the current officially inspired drive to rid Russia's cultural life of its Jewish intellectuals.

The Communist Freiheit, ardently pro-Israel for political reasons, somehow missed the boat. Its Zionist writer, Moshe Katz, challenged the Ehrenberg article.

BACK TO THE BASTION

He quickly recanted, however, after discovering that Zionist leaders actually were trying to transform Israel into a bastion of Jewish reaction and a prop of Anglo-American imperialism.

The Freiheit, itself, apologized, attributing its error to the constant pressure of bourgeois nationalism on Jewish life in America.

Refusal of the Israeli Government to oppose the Atlantic Pact and the Marshall plan and the Communists' poor showing in the Israeli election (less than 4 percent of the vote) were important factors in the change of line dictated by Moscow.

Now the Communists' propaganda weapon has been turned against Israel. Its President, Chaim Weizmann, is an Anglophile, an ingrate to the truest friend of Israel, the U. S. S. R. Its leaders are helping the United States enslave Israel and make it a prey of American capital.

The new party line is clear. Only as a Russian satellite, subservient to the Soviet masters, will the new Jewish state be acceptable to world communism.

Secretary Krug

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. TRIMBLE. Mr. Speaker, the question of public power is one that has engaged the attention of the Nation for many years. The other day my attention was called to a very interesting address by Hon. J. A. Krug, Secretary of the Interior, which was delivered at a banquet of the sixth annual convention of the American Public-Power Association, at the Ambassador Hotel, Los Angeles, Calif., on Thursday, May 12, 1949.

Whether you agree with the Secretary or not, you will find the address very informative. I include that address by Secretary Krug as a part of my remarks:

BENEFITS OF FEDERAL PUBLIC POWER

To paraphrase President Truman's inaugural address, the state of public power is good. There have been some very encouraging developments in the last 12 months.

First and foremost, the widespread recognition of the public power issue in the 1948 campaign helped to elect the candidate who stood forthrightly for an expanded public-power program.

President Truman has vigorously and consistently supported a public-power policy in recommending appropriation measures to Congress, covering not only hydroelectric facilities, but also the necessary transmission lines and back-up steam-plant facilities.

The Congress voted to approve the New Johnsonville steam plant for the Tennessee Valley Authority, thus giving congressional backing to the principle that, in an area where Uncle Sam has become the dominant power supplier, the Federal Government has a responsibility to keep ahead of demand by providing facilities to assure an adequate power supply.

The House has already approved the important transmission facilities requested in this year's Interior Department appropriation. These include very substantial additions to the Bonneville system in the Pacific Northwest and the West Side lines in the Central Valley of California and the transmission system required by the Southwestern Power Administration. Nearly all of these were approved over the hottest opposition that private-utility agents could invoke.

The House of Representatives also voted to rescind the prohibition on construction of the powerhouse for Canyon Ferry Dam in Montana. The opposition to this installation came from the Montana Power Co. which had a small plant to be replaced and hoped to obtain a windfall of cheap water power.

The Congress has taken the first steps to repeal the rider which prevents Reclamation Commissioner Straus and Regional Director Boke from being paid and the rider has been omitted from the 1950 appropriation bill. One of the major reasons for this pay-stop rider was the firm advocacy of public power by Straus and Boke.

A private power company plan to use the Hoover Commission to front for private utility policies was thwarted.

Hydroelectric plants operated by the Bureau of Reclamation also made very substantial progress during the year. The Shasta power plant is now complete and Keswick, also in California, will be finished late this year. Completion of the right powerhouse at Grand Coulee is being pushed as well and we are also making fine progress in the construction of the Hungry Horse project in Montana. Davis Dam and power plant is coming along very well and should be ready by July 1951. Two large units at Hoover Dam are on order for use by Arizona and will be on the line in November 1951 and January 1952. A number of power plants are moving forward on schedule in the Missouri River Basin States.

There has been a significant renewal of interest in public power in New England and New York State. A six-State conference of New England governors recently urged comprehensive, organized development of New England's river basin resources. Although I understand that some of the New England legislatures have not received this proposal with open arms, the step taken signifies the growing interest in river valley development in the East. The need for the St. Lawrence power potential for developing this area is receiving more and more consideration. Local communities are showing interest in low-cost power as the most effective means of maintaining and increasing their industrial activity.

Finally, in the most important public power move of the decade, President Truman has recommended to Congress the creation of a Columbia Valley Administration, to develop the potential resources of the mighty Columbia River—a river second only to the Mississippi in volume of flow and second to none in water power.

From the great Columbia Basin can come 30,000,000 kilowatts of hydroelectric power. Today, even with our great dams of Grand Coulee and Bonneville, we are only taking out 1,500,000 kilowatts, and in the whole system only 3,000,000 kilowatts.

This is a discussion of public power and I won't take your time to go into the other advantages of developing the resources of the Pacific Northwest by a regional body located in the area. I do want to point out that the Pacific Northwest, like the TVA, is another good example of the truth that private enterprise flourishes where low cost Federal power becomes available. The industry and agriculture of the Northwest have boomed since development of the Columbia began 15 years ago. There is a manifold increase in public power yet to come in the Columbia and we can fairly begin to think in terms of the enormous increase in activity which can be brought about speedily if a Columbia Valley Administration is authorized by Congress.

It has been amply demonstrated in all the resource work of the Federal Government that full regional resource development brings great economic benefit to the Nation as a whole. In the Tennessee area multiple new industries have been established with heavy and steady pay rolls. Farming is changing from a mere subsistence basis to advanced cropping with the best methods. Naturally family income and tax payments have risen substantially.

In the Pacific Northwest with the beginnings of full development based on Grand Coulee and Bonneville, we find the same experience. A Columbia Valley Administration means more than economic improvement for the Pacific Northwest alone. The products and pay rolls and tax payments which will come from Northwest development will spread through and to the whole Nation.

I have mentioned national issues and controversial issues, because it is over these that the battles have been fought. These victories for public power will have their effect all through the electric-power field. They represent a new direction in the production and distribution of electric energy and a righting of the balance which was beginning to swing too far to the reactionary side.

These advances have not gone unnoticed by the opponents of public power. They are redoubling their opposition, starting with

UNIVERSITY OF MICHIGAN LIBRARIES

the bogeyman cry in the current issue of a business magazine that public-power advocates want to nationalize the electric industry by weakening private utilities. They ignore the fact that private electric utilities have never been more prosperous than they are today under the benefits of increased electric consumption stimulated by low-cost public power which has helped to keep utility rates down where the average citizen as well as industry could afford to use more and more electricity.

This continuing opposition and attack by the private-power industry makes it essential that those of us who recognize the benefits of Federal public power, know and state clearly the principles on which a sound power policy is based. In my opinion they are as follows:

1. The resources of our rivers belong to all of the people of the United States. The water resources of America belong to all of us. They belong to us, whether we are working for wages and salaries, or drawing dividends, including those on stocks of privately owned public utilities. For many years, under both Republican and Democratic administrations, our Federal policy has been to preserve these resources from monopoly and to develop them for the benefit of the people.

2. It is a responsibility of the Federal Government to help develop the resources of our rivers. For years, the development of our rivers through the construction of great multiple-purpose dams by the Federal Government was fought by certain interests in every conceivable way, hopelessly beclouding our urgent needs for irrigation, flood control, navigation, and low-cost power, and for all the other purposes which they serve so well. The development of power at such projects has been characterized again and again as unnecessary and wasteful and as providing surpluses which could not be absorbed by the market. We saw these statements disproved in most places almost before the plants were ready to run and I can say from first-hand experience that the winning of World War II would have been extremely difficult, if not impossible, without the great Federal hydro plants. The power-industry spokesmen who made those charges were men of little faith in the future of their own business. Electric power is the fiber of our advancing economy. The power market will absorb all of the efficient generating capacity that we can build.

3. The electric power generated at Federal projects should be marketed at cost for the benefit of the people. Even power-industry spokesmen now agree that more river development is on the way and that hydroelectric power should be produced at the great multiple-purpose projects which are needed to do the job. But the argument continues on whether this power should be sold at cost by the Government with the preferences for public agencies and rural cooperatives as now required under Federal law, or whether the power should be sold at the dam to privately owned companies, and distributed by them to their financial gain. We cannot accept this kind of a monopoly by private interest of a great resource of the people of the United States. No person or corporation can be permitted to stand at the gate and levy toll on the product of our common public wealth.

4. The hydro power produced and marketed by public bodies is needed to maintain our growing economy. If we expect the future to hold a limited power market—a promise that I do not hold—then it is possible to conclude that further development of hydroelectric power by the Federal Government might duplicate some investment which has already been made by private power companies. If, however, we foresee an expanding power market, Federal Government hydro will not displace existing capacity and, in fact, will satisfy only a portion of the total additional supply which is needed. You and I, who have real confidence in the future of our country, know that this is a more reliable projection of the future, just as it has been more accurate in the past. We know that it will require the best efforts of all of us to meet the growing power needs of America.

5. The criteria for measuring performance of public versus private power are not identical. The various arguments which are made concerning the financial policies and results of public and private agencies in the power business usually fail to reflect the real reason why these operations are not comparable. That reason is: The managers of privately owned electric utilities are judged by their stockholder bosses in terms of the profits earned for the owners and "the soundness" of their public relations in retaining these profits. The managers of public power enterprises are judged, that is, you and I are judged, on the other hand, on the basis of the contributions which our operations make to the improvement of life in the community for the average citizen. This difference, which is an inevitable and entirely proper one, must necessarily be reflected in financial policies, management policies, and in the day-to-day operations of the systems. A public power system tries to do more than just keep operations efficient—it tries to boost the net income of the community or region it serves.

The power business being what it is, your organizations, as well as ours in the Federal Government, must do the best possible job in rendering electric service to our customers, if we are to stay in business.

Exactly the same test applies in measuring the management of private companies. Progressive management, consideration for the public and real interest in the place which power plays in community development is necessary to preserve any organization, be it public or private, and if management fails to meet that acid test, whether private or public, it will be displaced, and will deserve it.

6. Low rates for electricity are in the public interest. Low-cost electric power is an important asset in any area, whether rural or urban. Abundant use of electric power lightens the burden of the housewife and the farmer, provides opportunities for the tradesmen and the industrialist, and, literally, lights the path of progress. The price of the service has a lot to do with how much of it is used. As we move further into the power age it becomes more and more apparent that it is unwise to add unnecessarily to the rates which the consumer has to pay. There are some members of this association whose power systems yield large profits to the municipalities which own them. I believe that these communities would be better off if they would limit the tax contributions of their electric systems to a fair share of local taxes and apply the difference to reducing rates for service. There are other members of this association who have for many years followed the policy of lower and lower electric rates. I think they will testify to the soundness of that position.

Private companies have, by and large, resisted policies, whether they be Federal, State, or local, designed to encourage reductions in rates for power. They make large claims that they have been reducing rates as rapidly as they could afford to. They say that the regulation by State and local government assures the public that rate reductions will be made as they are justified. In many areas public power developments have assisted State and local regulation in encouraging a trend toward lower rates on the part of private management. This system, combining regulation with a number of examples of public operation, is the best we have yet been able to devise to provide incentives to private management to establish the policies with respect to power rates which are necessary for real progress. Public power development has been an integral part of this system, and will continue to be.

7. There is room for both public and private power enterprise in America. The progressive private management today is the one which says public power is here to stay. It says: "We should be able to do a good enough job in providing an adequate supply at low rates, so that our customers will be satisfied with our service. The public-power developments in our service area ought to be used by us, to the extent consistent with the law, to achieve economies in power supply. The communities we serve have the right to go into the power business for themselves. If they choose to do so, they will have our cooperation. We support the development of the water-power resources of the rivers of our area by the Federal Government where the projects involved are integral parts of a multiple-purpose river-control job, or where their cost is beyond our financial capacity, because that brings efficiently generated power, which the Nation needs."

This attitude on the part of private management does exist in this country. It is constructive. It should be encouraged. It is in sharp contrast with the demands of other elements of the industry that they be permitted to monopolize the water-power resources of the United States with a bus-bar policy in return for withdrawal of their opposition to further hydroelectric power development by the Federal Government.

As a democratic Nation, our strength depends on our ability to decide questions of public policy in the interest of all people for the future. We can make these decisions with confidence, knowing that the expanding power requirements of America will leave a place for public and private development so long as they both discharge adequately this vital public responsibility. We must make and keep electric power the best buy for your money in every American market. With adequate and low-cost power as a sound base, we will assure a prosperous and secure future.

German Vote Should Inspire Other Red-Controlled Peoples

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. MADDEN. Mr. Speaker, the recent plebiscite in Germany reveals that the expenditures our country is making to curtail communism across the Atlantic are bringing desired results.

The following editorial by H. B. Snyder of the Gary Post-Tribune in Gary, Ind., reveals some factual information concerning our progress in the cold war:

GERMAN VOTE SHOULD INSPIRE OTHER RED-CONTROLLED PEOPLES

The Germans in the Soviet zone of Germany have delivered a damaging Sunday punch to the plans of their Russian overseers. They may well have wrecked the whole original strategy devised by the Russians for the meeting of the Council of Foreign Ministers now in progress at Paris.

What was this rude setback? By Soviet admission, 34 percent of the German voters in the Russian zone turned down a Communist-rigged list of delegates to a proposed nationwide people's congress.

The ballot also stood as an expression for or against German unity, a speedy peace treaty and withdrawal of all occupation troops. Hence, the Russians concede that a third of the voters recorded themselves against the Soviet version of these objectives.

The Russians plainly had counted on a favorable vote of perhaps 85 to 95 percent. Following the pattern of totalitarian elections, the ballots gave voters no choice between candidates, but merely a chance to say "Yes" or "No" to a single, hand-picked list.

Confident of heavy German support gained through this dubious democratic procedure, the Soviet Union expected to appear at Paris as the champion of German unity, strong central government, and removal of occupation armies. It wanted this eastern zone backing as a trump card against the new government being set up in western Germany.

The resounding defeat of these hopes was a bitter pill. Said one German Communist: "This is the greatest bankruptcy in the history of the party."

It was clear from the start of voting that matters were not going well for the Russians. First scattered returns showed that out of 7,000 votes cast a comfortable majority had voted "No." Promptly the lid was clamped down on these embarrassing statistics and silence was observed for 20 hours.

Finally, the official results were announced. It is impossible to check them independently, but high German and western sources say that probably more than half the voters, instead of a third, voted "No." There are signs the Communists threw out many "No" votes and counted numerous blank ballots as favorable.

But even the Russian account means 4,090,280 Germans had the courage to say "No." They said it in an atmosphere of terror. They said it despite the fact that they undoubtedly want national unity and withdrawal of foreign troops at the earliest moment.

One can only regret that courage of this high order was not put to better use in the earlier Germany which submitted to Hitler's yoke.

One can only hope that this stout-hearted demonstration is, indeed, as General Clay believes, a sign that Germans slowly are finding their way back toward the democratic fold, and one may wish that fear-ridden peoples in other lands under Russian domination take new heart from this example.

Spain Contrasted With the Police States

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. GARMATZ. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a clipping from the Baltimore Evening Sun of May 20, regarding an interview of Dr. Valentine De Balla, professor of political science and geopolitics in the College of Notre Dame of Maryland, as well as in the Loyola College evening school.

One of Maryland's outstanding scholars, Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs, advises me that he considers Professor De Balla's exposition to be an important contribution to our knowledge of the international position of Spain.

DR. DE BALLA EXPLAINS HIS VIEWS ON SPAIN

From the relative quiet of his classroom, Dr. Valentine De Balla is following the current conflicts over aid and recognition for Spain and the activities of Communists here and abroad with more than casual interest.

Dr. De Balla, Hungarian by birth but American by citizenship, holds the position of professor of political science at both the College of Notre Dame and the Loyola College evening school.

PERSONAL INTEREST

White-haired, tall and slender, he speaks with a pleasing trace of accent and positive assertions. On occasion he leaves his classroom to lecture publicly on Spain or communism. At intervals he writes on these topics in the letter columns of the Sunpapers.

Dr. De Balla keeps abreast of these topics not merely because an efficient teacher of political science must. He also has a personal interest in them, having lived formerly in both Spain under Franco and Hungary during Nazi and Communist domination.

From personal experience he has formed his own definition of the word "fascism."

"A Fascist regime," he says, "just like the Communist, is totalitarian, where everything, such as the individual, religion, justice, art, family, are only here to serve the state. Not only are there no political rights, like the right to form an opposition party, but there are no private rights either.

CONDITIONS IN SOVIET

"I saw how under Soviet rule anybody can be expelled from their home if they displease the rulers. You have to work where they tell you and if you leave your job without permission you land in a forced labor camp. If you want to take a train you must have a travel permit."

A military dictatorship like those of Spain or Latin America is slightly different, according to Dr. De Balla.

"You have no political rights, but you have freedom in your private life. You are the master in your home. You can take a job or leave it as you please. You can move around freely. Spain never had a real democracy, but history shows very few democracies.

SPAIN "MORE HUMAN"

"The authoritarian regime in Spain has many faults, but it is incomparably more human than the totalitarian Soviet regime. I know them both from personal experience. Spain, besides, did not gobble up its neighbors and does not menace the rest of the world.

"It seems to me sheer hypocrisy not to send an Ambassador to Spain while we have one in Soviet Russia. It is a policy catering to leftists, to prejudiced groups, and to a systematically misinformed public opinion."

Dr. De Balla admits that Franco is a dictator. But, he says, "so was Getulio Vargas. He was dictator of Brazil, when it was our wartime ally. Some dictators can be found in Latin America, with whom we recently concluded a defense pact. All these are not necessarily Fascist."

REPLY TO ACHESON

To a statement by Secretary of State Dean Acheson that Spain is Fascist, Dr. De Balla answers:

"These words 'Fascist' and 'Communist' are being thrown around irresponsibly. It is just as wild to call Franco a Fascist at a certain period he accepted help from the Nazis as it is to call Mr. Acheson a Communist because at a certain period he represented the pro-Soviet faction in the State Department."

Dr. De Balla answers a second statement by Mr. Acheson that full diplomatic recognition of Spain is not granted because there are no basic rights such as religious freedom and trial by jury.

"In Spain," he explained, "there is some discrimination against the infinitesimal Protestant minority, as in Norway and Sweden there is some discrimination against the tiny Catholic minority. These are regrettable European phenomena.

"Trial by jury is nonexistent in most parts of the world. Even in some countries where it exists, it's a sham jury trial, the judge having preponderant powers. I was told that in the United States less than 10 percent of the criminal cases are judged by jury, the defendant having more confidence in a judge. In Spain the judges are independent of the Government."

M. Vishinsky's Default

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann from the Washington Post of May 31, 1949:

TODAY AND TOMORROW—M. VISHINSKY'S DEFAULT

(By Walter Lippmann)

Contrary to what was expected, M. Vishinsky has not seized the initiative at Paris by offering the Warsaw declaration. He has not come forward as the champion of German political unity, a strong central German Government, a peace treaty, and withdrawal of the troops.

Something has happened to make the Kremlin shrink from the bold line of their propaganda during the past year, which was to bid for the support of German nationalism with a view to another Rapallo—that is to say, a Russian-German combination. M. Vishinsky could hardly have done more than he has to repel rather than to attract German nationalism, or indeed to stultify the German Communists.

For the net result of his proposals would be to perpetuate military government and the military occupation. No one knows what caused the Kremlin to alter its line, changing so unexpectedly and so abruptly from an exceedingly attractive pro-German policy to a crudely anti-German. Is it that the Poles and the Czechs have been awakened by the world-wide discussion to a realization of where the new Rapallo policy was leading? And has the Kremlin shrunk from the line of the Warsaw declaration, fearing to lose the Poles and the Czechs while it was wooing the Germans?

One can only speculate. But, whatever the explanation, M. Vishinsky's default has proved to be the opportunity of the western powers, enabling them to come forward as the opponents of partition and of military government and of the exclusion of Germany from the European community. Morally and politically, the western position is ever so much better than it promised to be—ever so much better, indeed, than many of the western experts planned to have it be.

But our advantage, though real and important, can easily be overestimated, and if

UNIVERSITY OF MICHIGAN LIBRARIES

it is not successfully exploited, may be temporary. The western world, including Germany, is almost certainly entering a period of recession in which trade is contracting and the struggle for markets is becoming severe. This will not be a favorable environment for the German state of which we are the sponsors and promoters.

For it is one thing to draft a constitution, to get it ratified, and to set up a government. It is another and much more difficult thing to enable that government to govern successfully. The critical test of whether the western German politicians can raise the German standard of life and avert unemployment lies ahead. If they cannot meet that test, their own position will be insecure, and the western influence in Germany will be undermined. A free Germany with democratic institutions will have to be a reasonably prosperous Germany working and trading in a prosperous world. The Weimar Republic was not able to withstand the great depression, and the Bonn Republic is confronted with far graver issues than its predecessor.

The storm signals of impending trouble in the world economy are now unmistakable—in Great Britain, in Belgium, in Italy, in France, in Germany, and not least of all the United States. Thanks to a great deal of hard and honest work and to good harvests, and with the stimulus provided by American aid, the recovery in production has been remarkable, as compared with what happened after the First World War, sensational.

But the very success in production is now disclosing how little has been accomplished to restore to solvency the prewar world economy or to create a new and solvent postwar economy. We are entering the second year of the Marshall plan with problems and with conflicts, known to the responsible insiders that have not yet been explained to the general public.

They are the problems posed by the fact that in the effort to achieve solvency and monetary equilibrium, the world economy is contracting, is deflating, whereas the ravages of the war and the social discontent it produced cannot be dealt with except in an expanding economy and by a rising standard of of life.

Unadvertised but momentous discussions are now taking place in London and Washington which deal in the last analysis with the fact that the European recovery program, as conceived abroad, rests on an extraordinary postulate. It is that European exports can capture half the American markets in South America and that, as the London Economist put it some months ago, the American export industry "will reconcile itself to the permanent loss of its European markets" and will "permit discrimination against itself."

That was all very well while the American inflationary boom was running. But with the onset of the American recession, it is ceasing to be practical politics in the United States.

There is, therefore, no very good reason, if one looks at the developing situation, for the complacency and self-satisfaction with which some of the correspondents in Paris are describing the condition of things. The Russians are obviously in trouble, and have been made extraordinarily cautious by their trouble. But the western position, though it is morally and politically fairly good, is in respect to the economic outlook far from brilliant.

There is little to justify the idea that the great game, apart from taking a few tricks, can be won by standing pat—that it can be won by anything less than bold and concerted measures to counteract the threat of depression with an expansion of trade and the opening up of the markets.

The New Immigrants Make Progress

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. MULTER. Mr. Speaker, the following series of articles which appeared in the New York Herald Tribune are of considerable interest in connection with the new displaced-persons bill which we are now considering. I commend these articles to the attention of my colleagues:

THE NEW IMMIGRANTS MAKE PROGRESS—DP QUOTA IS FILLING UP AS THEY SPREAD TO THE 48 STATES

(By Robert S. Bird)

After a tardy start on this country's displaced-persons program, the Government now is processing the preliminary clearances for DP immigrants at such a stepped-up rate that it appears likely the 202,000 quota authorized under existing law will be filled by August.

As of May 10, the United States Displaced Persons Commission had accepted from sponsoring groups the necessary job and housing assurances for 195,000 immigrants, and the commission's statistical data now furnish an outline of the pattern the DP program is taking.

The new immigrants already are trickling into cities, towns and rural areas in every one of the 48 States. It will require at least a year to get them all screened out of the DP camps in Europe and shipped over to this country, but each month finds them arriving in greater numbers.

Meanwhile, as Congress debates new DP legislation which would bring into the country from 100,000 to 300,000 more DP's than are permitted under the present law, some important and perplexing questions are arising. For example, whatever the humanitarian motives which underlie the program, its labor recruitment aspects are beginning to assume importance.

Request for DP workers are pouring in from every section of the country, and some dissatisfaction already has been voiced at resettlement projects in some of the low-income areas of the Nation, where the need for cheap labor is acute.

The Commission's figures show that out of 80,886 DP families for which assurances already have been approved, only 36 percent were designated by name as personally known to the sponsors. Sixty-four percent were undesignated, and these will form the bulk of the new DP labor policy.

Up to the middle of May a total of 23,000 DP's had arrived here. An analysis of new arrivals up to April 1 shows that 61 percent of them settled in large cities, 20 percent in other urban centers, and 19 percent in rural areas of the Nation.

Virtually every kind of occupational class is represented by the new immigrants; everything from the professions through skilled, semiskilled, and unskilled workers. But a break-down of age groups indicates that an overwhelming majority of the immigrants still have their best productive years ahead of them.

Of those who had arrived up to April 1, 24 percent were children under 14, 17 percent were between fourteen and 24, 42 percent between 25 and 44, 15 percent between 45 and 64, and only 2 percent over 65. Fifty-five percent were males and 45 percent females.

Excluding the DP orphans who are being admitted under separate arrangements, 78 percent of the arrived immigrants came in family groups.

More than 80 percent of the job and housing assurances which the law requires must be furnished by the DP sponsors in this country have been supplied by the church and voluntary agencies. Since the DP Commission does not require the immigrants to state their religion, exact figures on this are not available. However, an analysis of assurances received from avowedly sectarian agencies indicates that approximately 60 percent were furnished by Roman Catholic groups, 26 percent by Jewish and 14 percent by Protestant and Orthodox Church organizations.

The best figures available on the religious affiliations of the DP population in camps in Europe indicate that about 49 percent are Roman Catholic, 18 percent Jewish, and 33 percent Protestant or members of the orthodox churches.

Of the 23,000 immigrants arrived in this country up to May 12, the largest number settled in New York State. New York accounted for 36 percent, and New Jersey followed with 7.4 percent. The rest were scattered through all parts of the country, with some significant variations in income opportunities.

It will not be until July that the DP Commission will have any significant reports on how the DP immigrants are making out in terms of occupation and income. Lacking facilities for making field investigations, the commission must rely on the semiannual reports which the law requires each DP head of family to make.

The last reporting period was in January, and not enough DP's had arrived by then to furnish information of value. In July, the next reporting period, the commission will receive reports from at least 80,000 families. But on the basis of information already on hand in the commission offices, it is known that some States with the lowest average per capita income payments in the country have absorbed a disproportionately large number of DP's, while others in the high-income areas have resettled relatively few of the new immigrants.

DP PROGRAM MADE COMPLICATED BY VARIED UNITED STATES LIVING STANDARDS—MOVE STARTED TO TRANSFER WORKERS FROM LOUISIANA TO A HIGHER-INCOME FARM AREA

(By Robert S. Bird)

A move is quietly afoot to transfer from sugarcane plantations in Louisiana to farms in Minnesota and Wisconsin a group of Polish and Lithuanian displaced person immigrants who recently arrived in this country under the current DP program.

While the project involves only several hundred immigrants, perhaps it poses a basic question of policy in the future resettlement here of many thousands of European DP's.

These canefield DP workers, thoroughly discouraged at their first attempt to make a new start in America, are being moved from one of the lowest per capital income areas in the Nation to regions of considerably better economic opportunity.

EXPLOITATION CHARGED

Charges that their labor was being exploited in the canefields and that they were living under substandard conditions are affirmed on one side and denied on another. In any case, Roman Catholic resettlement agencies investigating the situation have decided that these DP workers, who happen to be Catholics, do deserve a better start than the one they were getting. They are arranging for the shift.

In Mississippi, Lutheran clergymen are finding fault with conditions on a large cotton plantation where a group of Latvian Lutheran DP's were resettled last fall. Again charges are affirmed and denied.

The question posed is: To what extent is the immigration of several hundred thou-

sand DP's to be considered as a labor recruitment problem and to what extent as a humanitarian effort to give them the best possible opportunities to enjoy the American standard of living? The question directly relates to the widely varying range of economic standards which exist in different sections of the country, particularly in the rural areas.

ALL SECTIONS WANT LABORERS

It is complicated by the fact that in all these sections there is a shortage of farm and field labor, or at least a demand for DP farm workers. Already some DP administrators of both private and official agencies, in coping with the tremendous resettlement program, are finding themselves having to choose between the rival demands for DP's from labor-shortage areas in both low-income and high-income States.

Does a decision made one way entail discrimination against DP in his opportunity, and a decision made another way discriminate against a particular State in its opportunity?

The Department of Commerce's table of income per capita (1947) for seven regions of the Nation help to illustrate the problem. The figures follow:

New England	$1,444
Middle East	1,559
Southeast	883
Southwest	1,081
Central	1,391
Northwest	1,373
Far West	1,559

All these sections of the country need and want DP's in varying numbers. Louisiana needs cheap labor in its canefields, asserting that higher wages would dislocate its sugar-industry economy and cause substantially higher prices to sugar consumers.

NEGROES LEAVING FIELDS

Mississippi has suffered from a migration of Negro workers from the plantations to the industrial centers of the South, and seeks new labor geared economically to its peculiar cotton economy. Both of these are Southeastern States, in the lowest bracket of the Department of Commerce table.

In Minnesota and other Central States there has been a similar migration of farm workers to the industrial cities. There are calls for thousands of farm-experienced DP's from these States, which are in the higher income bracket. Maryland, Delaware and New Jersey—all Middle Eastern States—already have absorbed thousands of DP's on their produce and poultry farms, and they want more. North Carolina, another Middle Eastern State, has resettled substantial numbers of DP's on tobacco farms on a tenant basis which is working out satisfactorily. It can use more.

California, in the high far West income bracket, has asked for 2,000 DP's immediately to supplant Mexican migrant labor in the citrus grove areas. Citrus growers' associations are giving assurances that schools, housing and off-season employment for the DP men workers will be assured under their plan to stabilize the citrus labor market.

SOUGHT BY LONG ISLAND GROWERS

Long Island potato farmers' associations are urgently seeking to bring several hundred Polish DP farmers into the Suffolk County potato region, which heretofore has depended on migrant labor from the West Indies to work its huge crop. They are promising year-round employment at fixed wages.

The DP law has nothing to say on the question of economic status beyond demanding that the sponsor of a DP assure four specific matters: That the displaced person will have suitable employment at the prevailing rate of wages, without displacing someone else; will have safe and sanitary housing, without displacing someone else; will not become a public charge, and will be received at his port of entry and supplied with transportation to his destination in this country.

The problem heretofore has not been an acute one because most of the early DP arrivals were sponsored by relatives in this country, and went into jobs in urban centers.

SITUATION IS CHANGED

Now the trend is the other way. Most of the DP's arriving now are not known to their sponsors. They are in the undesignated category. The great majority of them are being sponsored by sectarian and nonsectarian voluntary agencies who have found job-placement assurances for them. They are coming in now at the rate of 12,000 a month, and soon they will be arriving at the rate of 16,000 a month.

Both the United States Displaced Persons Commission and the private agencies, half swamped by the heavy increase in immigration, are making determined efforts to analyze the placements of the more than 23,000 who already have been resettled under the present DP law, and those who are currently streaming into the country at the stepped-up rate. But so far there are no figures available to give an accurate picture of DP occupations and incomes on either the State-by-State or the national basis.

But as the DP program gains momentum and Congress debates increasing the present quota of 202,000 immigrants to possibly 400,000 and more, officials agree that its humanitarian side tends inescapably to merge with its labor recruitment aspects.

DP Program's Success Hinges on Legislation Before Congress—Struggle Is Likely To Center on Celler's Measure Liberalizing Present Regulations on Entry

(By Robert S. Bird)

The measure of success in the project to resettle in this country some 400,000 displaced persons from Europe will hang on the outcome of the struggle in Congress over new DP legislation.

So burdened with compromise conditions is the present 1948 DP act that the agencies responsible for executing it find it virtually unworkable in its present form. In fact, they are currently disregarding some of its provisions in order to speed up attainment of its main objective to bring into the country the present maximum of 202,000 DP's.

The congressional difference is between the advocates of a more liberalized, and presumably more workable law, and those who want the present law either maintained or more rigorously reinforced, or want no DP law at all.

As matters are shaping up now, the action will center around the bill reported out of the House Judiciary Committee on May 16. This bill was introduced by Representative Emanuel Celler, Democrat, of New York, the chairman of the House Judiciary Committee. It represents, with some seemingly necessary compromises, the administration's liberalized proposals for amending the 1948 act.

A similar administration bill has been offered in the Senate by Senator J. Howard McGrath, Democrat, of Rhode Island. A third bill, which would maintain most of the rigid provisions of the present act, has been introduced by Senator Pat McCarran, Democrat, of Nevada, chairman of the Senate Judiciary Committee and its immigration subcommittee.

It now appears almost certain that the House will pass the Celler bill without substantial changes. The Senate committee has done nothing about its DP bills; not even to the extent of having held hearings on them. As a result of this unexplained inaction, Capitol Hill observers are predicting that the showdown on a liberalized DP bill will come in the Senate when and if it considers the House bill.

BILL INCREASES QUOTA

The Celler bill materially changes the present act in a number of respects. It increases the total number of DP's allowed to enter the country from the present 202,000 to 339,000, and also makes provision for an additional 3,000 orphans and a maximum of 18,000 Polish soldiers who fought with the allied armies. It further authorizes the immigration of some 4,000 Shanghai refugees, mostly White Russians who are now in the Philippines, and 15,000 political refugees from Europe, who would be nominated by the Secretary of State.

More importantly, perhaps, it advances the cut-off date of December 22, 1945, as provided in the present act, to January 1, 1949. This cut-off date establishes a condition of DP eligibility. The present act requires that DP's must have entered Germany, Austria, or Italy by December 22, 1945, in order to be eligible for immigration under the terms of the act. But the date failed to take into consideration the plight of the thousands of persons who were displaced by events subsequent to that date—persecuted persons who fled from the eastern European countries in 1946, 1947, and 1948. In 1946 most of these were Jewish, but since then the bulk who have fled have been Catholics.

Advancement of this cut-off date reflects the theory that these persons—refugees from communism mostly—should enjoy equal opportunities to immigrate here with those who suffered under the Nazis.

The Celler bill would make the Displaced Persons Act effective for 3 years instead of 2.

Another important change under the proposed administration amendment would be elimination of the present provision which requires that not less than 40 percent of visas issued shall be available exclusively to DP's whose place of origin or country of nationality has been annexed by a foreign power. This now tends to favor DP's from the Baltic countries annexed by Russia.

Proponents of the Celler bill consider this restriction to be discriminatory, and assert that in the long run it will hamper the entire program, if, for example, only 40,000 DP's from these countries were found eligible for entry to the United States, then under the limiting provision, only 60,000 of the others could be granted visas.

Likewise, the present clause which requires that a 30-percent preference be given to agricultural workers would be eliminated on the theory that this, too, amounts to a discriminatory provision, and besides it has induced many DP's who are not agricultural workers to represent themselves as such in order to get into this country. This last has been a source of ill-feeling in some resettlement areas where DP farmers turned out to be no farmers at all.

The Celler bill also would liberalize the controversial section of the existing law which applies to the admission of "ethnic Germans"—the so-called Volksdeutsche, who find themselves displaced from many countries where they had lived for generations.

Strong pressures have been brought to bear for and against this group of people. On the one side the accusation is made that they are mostly Nazis at heart, and on the other side the charge is made that they are victims of racial prejudice and a mistaken sense of collective guilt. In any case, strong persuasion is being made from sections of this country populated largely by persons of German ancestry to have these people brought into the country.

Up to this time, for reasons not officially explained, none of these Volksdeutsche has yet been brought in. The Celler bill would extend the effective date of the section permitting them to immigrate here from 1950 to July 1, 1952. It also adds Latvia, Lithuania, Poland, and Russia to the list of countries from which eligible Volksdeutsche immigrants may have originated.

UNIVERSITY OF MICHIGAN LIBRARIES

Another controversial change involves the section which "mortgages" immigration quotas. At present, quotas are mortgaged to 50 percent against the countries from which the DP's originated. This has the effect of restricting future immigration of natives from these countries to that numerical extent. The new bill would mortgage these quotas only to the extent of 25 percent to 1954, then upward to 50 percent.

The new bill would provide a $5,000,000 loan to the United States Displaced Persons Commission for payment of inland transportation of DP's. At present, the International Refugee Organization bears the cost of ocean transport of DP's, and the sponsors are required to provide costs of transportation from the port of entry to the destination in this country.

One effect of this arrangement is to discriminate against sponsors of DP's in the western part of the country. A farmer in Colorado who wants to resettle a family of, say, five DP's on his place must make a much higher investment in fare than a farmer in Maryland who wants to resettle a family of five.

These are the principal changes which the administration, with the general backing of the three major religious denominations cooperating in the DP program, would incorporate in the new DP law.

CRITICISM STIRRED ABROAD

Senator MCCARRAN'S bill would make some minor changes, but would retain most of the features which are objected to in the present act. He would allow 502,000 DP's to enter the country. But the conditions which he would keep in the act would not, in the opinion of the Celler bill proponents, permit any such number actually to enter the country. He favors extending the Volksdeutsche section to 1952, and he would make the $5,000,000 inland transportation loan applicable only to DP's going to rural areas or places of less than 100,000 population.

The restrictions in the present act have helped to delay seriously this Nation's commitments in the DP program, and have brought it some criticism abroad. Beyond that the red tape in screening eligible DP's out of Europe has even more seriously hampered the program. It now takes almost 6 months' time between the day a farmer, for example, sets in motion his request for a DP family and the day the family arrives on his farm. The actual screening period consumes about 120 days.

The result of this is that many people here who want to resettle DP's, especially farmers who must consider their crop deadlines, are discouraged from tangling with the red tape in Europe. It is the belief of most of the voluntary agencies participating in the immigration program that the screening and transportation time could be reduced to a minimum of 2 months by some sort of an efficiency clean-up in administration circles abroad. Meanwhile, Congress has it in its power to either help or hinder the program by the action it takes in the next few weeks on DP legislation.

Address by the Very Reverend Robert J. White, Rear Admiral (Retired), United States Naval Reserve

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. MCCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Very Reverend Robert J. White, rear admiral, retired, United States Naval Reserve, president, Military Chaplains Association of the United States, at its annual convention held in Chicago on May 10, 1949:

Our last annual convention in New York gave the year an auspicious beginning.

The warm friendship and the thoughtful praise reflected in letters, editorials, and personal comments, gave convincing evidence that our association had made a deep and favorable impression upon chaplains and the American public.

If a benediction were needed to our convention, it came upon that sunny summer morning a few weeks in Washington. There on the White House lawn, several hundred people, including the survivors of the four chaplains and your officers, witnessed the Presidential ceremony of the official issue of the postal stamp dedicated to the lasting honor and remembrance of chaplains. Sometimes we stand too close to events of great religious and historical import to appraise their true significance. As I looked upon the original sheet of autographed stamps presented to me by the President, and in turn given to your association—my curiosity was aroused. Where else could this happen? Where else had such a solemn Government recognition of the military chaplain ever been given? Inquiry into historical sources revealed no similar honor known in stamp history here or elsewhere in the world. These auspicious beginnings have grown through the year, and today we are assembled with the largest number of local chapters, and a great and representative number of national delegates from every part of the country.

In a few important instances, it has been necessary to speak out openly in your name. In mid-summer, as the draft was about to take effect, the Nation was startled by an open appeal of some 100 alleged clergymen inciting American youth to resist the draft and proclaiming Sunday, August 22, a day of national mourning, in protest against the Selective Service Act. An appeal to disloyalty by a Nation-wide observance of a Sunday of mourning had within its elements of tragedy, travesty, and even treason. A swift and powerful answer was imperative. I said to the news services in your name "Not a Sunday of mourning, but a Sunday of faith and firm resolution should be proclaimed." If our duly elected representatives legislate that all American youth, conscious of the heritage of liberty should make willing sacrifices to defend the Nation's freedom, then, we should rather have a Sunday of patriotic dedication, least indeed we suffer the truly dark day of mourning which has come to nations who failed to keep strong against the threats and aggressions of godless tryrants, foes of all human liberty.

Again during the year, we were faced with a deluge of magazine articles, some in technicolor for lush fees, proclaiming that this campaign or that campaign in World War II was a mistake. On close examination it was apparent that the writer's motives were rather personal vindication at the expense of personal enemies, than an objective attempt to improve military tactics in the future. Now chaplains are, in a singular and sacred sense, the custodians of the memories of the dead, and the guardians of the sorrows of their bereaved. I felt that it was my duty to state publicly in your name, "To be sure there is a necessity for critical review of military campaigns. However, the proper forum should be the War College, or a similar forum, or military committee of Congress where arguments could be presented and discussed as the basis for future improvements in the military forces. There is one aspect of this trend which is particularly ominous. In the critical situation today—and for a lot of tomorrows—we still need a strong military force backed by the confidence of parents and all Americans. What surer method could be found to break down such confidence with blazing headlines: 'X was a mistake?' What sharper stab could increase the suffering and lone loneliness of brave casualties in such a campaign, and engender bitterness in the memories of surviving parents who gave sons so generously? Placing the curb on this avalanche would be in no proper sense a restraint on the freedom of the individual, nor a cover-up for military errors. By all means analyze and publicize them—but in a proper tribunal, and in a useful process for future military improvement, rather than in personal and often petty self-glorification of the face-saving revelations, 'Who dunnit—not me!'" Among the widespread and favorable comments upon this statement I received the following letter from the editor of a leading scientific magazine: "Dear Chaplain: That was a proper statement of yours. Although my wife and I are both steadfast believers, my task as husband is not made easier by flashy magazine articles proclaiming that this or that action was a mistake. Our only son was a flier shot down over Chichi. His body was not recovered. As a chaplain you will understand. That is bad enough for a mother, but to have the whole strategy blasted in the magazines makes the plodding just that much harder. We are grateful."

As stated before, the association has granted more charters to local chapters than in any previous year. The credit for this growth goes to the area vice presidents, and in particular to the State councilmen of the individual States who have taken on the added burdens of time and travel with selfless generosity and singular success.

In pursuance of resolutions adopted at the last annual convention, we have established certain commissions and standing committees. First, our war experience as chaplains witnessed the wholesale wreckage of hasty and improvident marriages of service personnel. Unfortunately, the trend has continued in peacetime. The evil effects of such disasters has produced untold bitterness, neglect of innocent children, serious sin, and crime. Indeed, I would venture to assert that perhaps a major percentage of unlawful absences and consequent courts martial, even today, have their root in such tragic and ill-advised alliances. While it is true that there will always be some broken homes—that constitutes no excuse for culpable neglect in the matter of premarital instruction of young service personnel. Indeed, as to all youth, it is apparent that there is a crying need for sensible preparation for marriage which places supreme emphasis upon the spiritual basis of the union as the only enduring foundation of the home and the Nation. The commission of our association on marriage will present a workshop on premartial instruction and I commend their thoughtful report as the basis for a continuing program which may mature into invaluable instruction through chaplain conferences, printed pamphlets for servicemen, and audiovisual programs in the armed services.

Also, in the moral field, we have created a commission on decency in entertainment in the armed services, established in view of the regretfully frequent immoral and degenerate performances of wartime entertainers. While the association recognizes gratefully the generous contribution of wholesome entertainers, it has adopted an intelligent and determined resolve not to tolerate harmful repetitions of degrading entertainment provided by the USO or special service agencies. This commission will give a valuable report to our convention. I recommend that the commission continue this important work in close cooperation with the USO, the chaplains, and the military officials.

The commission on grievances was established by the last convention to draft a set of principles and procedures to bring about prompt and effective official discipline of any officer, of any rank, who seeks to impede the chaplain in his proper function in religious and moral leadership. The commission will render its report and should be continued. No chaplain should be compelled to stand alone in an unjust and intolerable situation. Our moral solidarity can and should defend and vindicate religion and morality in such situations.

The statement of our position would be incomplete without our public and generous acknowledgment of the cooperation and friendship of the overwhelming majority of military authorities.

Among other committees which will make their reports will be the committee on finance, committee on the new charter, and the committee on world chaplains.

Our association is a living force in an America which has national and international responsibilities to struggle against the atheistic and communistic attacks upon the dignity and liberty of man. For such assaults affect our domestic and international peace and security, and the moral and spiritual integrity of all mankind. Our days have witnessed the completion of an evil trilogy. First, we were struck with pity for the sufferings of the Jewish people, persecuted because they were not made in the image of a ruthless master race, but in the image of God, as are we all. As was to be expected, the Catholic Church has been and is persecuted as the defender of divine faith against the tyrant's lust for power. Inevitably the Protestant Church has felt the lash of persecution when they refused to bend the knee to the god of Bael. We have witnessed the path of progress of the pagan forces of godless tyrants. From the seizure of worldly goods, and the infliction of barbarous torture and death to the human body, we now witness the diabolic ingenuity in a new technique of torture and destruction to weaken and destroy the character, personality, and even the minds of helpless victims of religious persecution. All men of intelligence everywhere reject with scorn so-called confessions of saintly men whose solemn dedication to God, whose long and honorable service to their fellowmen, and whose uprightness of character, belie the strange, stuttering confessions and sinister convictions and judgments of these so-called judicial proceedings. No credence is to be given to trials which are an empty mockery of justice in their denial of the elementary requirements of divine and human justice. Tragically, the evil drama has not come to a close. For with satanic savagery, the enemies of God are bound not only upon the conquest of the individual, but the final mastery of man's immortal soul. There can be no thought of cowardly unconcern in such a fateful struggle. They shall not scale the ramparts if all believers unite to defend the inviolable sacredness of the individual made in the image of God and destined for immortality with Him.

If, as we know by long experience, eternal vigilance be the price of civil liberty, then certain it is that in this fateful hour, eternal vigilance, plus the understanding friendship and cooperation of all men of faith, must be the price of religious freedom everywhere and the only hope of peace for mankind.

Like you, I have listened to news reporter after news reporter, heard commentator after commentator, read book upon book, and I have reached the deliberate conclusion that men of little or no faith cannot inspire men to faith; nor can they strengthen hope, which the world so sorely needs; and when faith and hope fail, charity among men dies still-born.

Men of good will in our Nation have watched too long the engrossing of charters, the enunciation of principles, purposeless and petty debates, ad interim reports, and the declarations of human rights. The surfeit of words has sickened men. Throughout the length and breadth of our land, there is a growing restlessness and stern demand for more than words and debates' delay. That demand is born of the latent wisdom of the great common masses of those who believe in God, a wisdom not dependent upon degrees of fancied higher learning, or wiles of statecraft, nor devious ways of diplomacy. This inspired wisdom of the masses is bringing forth a thunderous judgment, in which this convention should take the lead, that all is vanity and folly in raising marble halls for the United Nations, unless now, without delay and without equivocation, the United Nations raises its vaunted moral power to strike and break the shackles of languishing nations—in spiritual slavery imposed by godless tyrants, and liberate the souls of men whose rightful sovereign is Almighty God, the Creator and Redeemer of mankind.

Ours is the God-given mandate to teach, preach, and to repeat again and again to the American people, that it was an aggressive minority in every country which forged the chains of religious slavery upon a complacent majority. Armament is only a part of total preparedness. In truth, spiritual and civic complacency may well be the Achilles heel of American democracy.

Our task is neither simple nor our burden light in a nation where too many have forgotten or ignored God; where the well-springs of learning have been poisoned by atheistic teaching; where many youths, robbed of faith, have reached out eagerly for the seeming bread of liberalism, which without God turned into the cold stone of atheistic communism. Nor can we shirk the duty of stern warning to our people that nations more powerful in their day and world than America fell prey to foreign conquerors, but never before such nations had paved the way for easy conquest by the self-inflicted ruin of the decay of conscience and character.

In this our hour of history, we have a singular and prophetic mission of divine warning, but also we are the messengers of divine hope.

For God, for peace, for home—these are the transcendent goals of our endeavors. Though the past is gone, it yet abides in present memories to demand we keep faith with those who were our spiritual sons in war by strengthening the faith of their sons and younger brothers who are in the armed services now.

For these men, who yesterday were the boys in your parish, are today the youthful defenders of this Nation, and tomorrow will be the fathers and the moulders of the future of America.

I would hesitate to appeal to even your enlightened self-interest, but rather depend upon the memories of your youthful dedication and your strong abiding memories of your service to the Nation in the time of war.

To each chaplain his memories are sacred, silent, and secure within his soul, a source of strength, and in an added sense, the measure of his ministry in bringing men to God and God to men. "Be strengthened in the Lord and in the might of His power," for however dark the night of persecution, God will bring to men the bright dawn of a new freedom to the soul.

For while nations may build heavy-iron curtains to divide men, who otherwise may live in friendship and peace, no nation or nations, however powerful, can draw a bleak iron ceiling across the skies to divide men on earth from God in heaven.

Nations may jam with static the voice of truth which can make men free. But no nation or nations can jam with static the powerful pleadings of prayer to God and the resultant blessings in grace to men.

There is no pact so powerful as God's pact with men who believe and love and serve Him. In the days ahead we may stand brave, confident, and unafraid, for we shall surely find in the silent strength of faith the all-powerful two-edged sword of the spirit given in days of old by God Himself.

"Beheld, I command thee. Take courage and be strong. Fear not and be not dismayed: because the Lord thy God is with thee, in all things, whatsoever, and everywhere." (Joshua, ch. I, verse 9.)

Overtime on Overtime

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. CELLER. Mr. Speaker, I am sorry to see this important measure being rushed through this House with so little consideration or discussion. Very few of us have had an opportunity to study it—it has been whisked past us so quickly, with such an air of crisis and secrecy, that we have had very little opportunity to find out what it is all about.

But I can see, on the most cursory reading, that it affects one very important principle, that is of the greatest importance to all of us—the independence and integrity of the Federal judiciary. For section 2 of the bill, which was added by the Senate, retroactively frees certain employers from liability to pay back wages due under the Fair Labor Standards Act. The language is general, but the intent of the bill is to reach into the Federal courts and snatch a particular case from before the bar of justice. This would be shocking enough if this were a case which had just been initiated. But the cases involved here have already been appealed through the entire Federal court system to the highest court in the land. The Supreme Court has decided the issue in favor of the plaintiffs, and has remanded the case to the Federal district court in New York. At this very moment that trial is going on. Yet we now propose to oust that court of its jurisdiction, and to set up Congress as a kind of super-Supreme Court.

This high-handed action will lessen respect for all laws. It will supplant our time-honored judicial process with a new system of litigation by politics. Whenever a party is displeased with a decision of the Supreme Court, he need only cross the street to the Capitol and get Congress to change the law—retroactively, if you please. In the future, then, parties will be well advised to forget about retaining a lawyer, and instead engage a lobbyist.

Mr. Speaker, as chairman of the Judiciary Committee, it is my job to work patiently and faithfully with my colleagues to strengthen and protect the Federal court system. But H. R. 858 as amended could, in one fell swoop, do harm far greater than all of the good we can do throughout the year.

I say could do harm; rather than will do harm, however, because I know it will never go into effect. I know the vitality and courage of the Federal courts is far

UNIVERSITY OF MICHIGAN LIBRARIES

too great to let so patently unconstitutional a measure go by unchallenged. I know that Federal judges will not acquiesce in a measure which deprives thousands of hard-working longshoremen of rights which have been vested in them by law and by the decisions of the highest court of the land.

The constitutional problem in connection with this bill has been likened to that under the portal bill. I disagree. The Portal Act did not affect cases which have been as far advanced as the cases involved here. The Portal Act did not affect cases where employers had clear notice of the illegality of their pay practices, as we have here, in numerous letters and opinions of the Wage and Hour Administrator. And the Portal Act did not affect hours of work and types of work which the parties always regarded as compensable. And finally, let me remind my friends, that the constitutionality of the Portal Act has never been passed upon by the Supreme Court. Denial of certiorari does not, and never has, committed the Court in any way.

The amounts involved in these back-pay suits are paltry. All of them, throughout the United States could be settled for $10,000,000. This offer has been made publicly and privately, most recently at hearings of the Senate Labor and Public Welfare Committee. But the principle involved is tremendous. It is nothing less than the honor and independence of the American judiciary. And if we fail to respect that honor here today, I know that those who sit on the bench will, in due course, vindicate it.

I therefore urge that the House insist that the bill remain in the same form as it was passed by us.

An Easy Dollar

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, who does not want a dollar, especially if he thinks the first one will be followed by a steady stream of others, all coming to him without very much—perhaps without any—effort on his part?

Necessity has taught man to be acquisitive. First, reaching out for his daily needs—then, ambition and a desire for security for himself and advancement for his children, cause him to lay by something for the future. But, and fortunately for our prosperity and real happiness, experience has taught us that it is the earned dollar which is the worthwhile dollar.

To express it in another way—as a rule, only the things we must strive for give us a real benefit. Easy come, easy go.

Politicians play upon man's cupidity and all too often they win by promising first one group, then another, special privileges and benefits, discriminatory advantages.

And, all too often, the people forget that in this Government of ours the Federal dollar which they think they will get, which sometimes comes to them, is their own dollar and when it went to Washington was accompanied by another half dollar, no part of which ever came back.

In the Thursday, June 2, issue of the Allegan Gazette, published at Allegan, Mich., Leo W. Hoffman calls attention to the fact that, after all, the promised easy dollar is not so easy to get and may in the end cost more—the loss of our freedom—than it is worth.

The editorial follows:

THE EDITOR'S NOTEBOOK—GREAT FEDERAL FARM FRAUD NOW EVIDENT

Truman, in his successful effort to win the Presidency of the United States, promised the farmer subsidies and other benefits. His promise of Federal money swung a sufficient number of farmers behind him to assure his victory.

Now Truman is attempting to deliver on his promises to the farmers, but like all his other socialistic schemes there are certain strings attached to benefits if his program should be approved by Congress.

Specifically, his social agriculture planner, Brannan, has asked Congress to extend rigid marketing quotas to include hogs, cattle, lambs, poultry including chickens and turkeys, whole milk, butterfats, eggs, hops, honey, honeybees, gum, naval stores, corn everywhere, barley, oats, rye, grain sorghums, flaxseed, soybeans, dry edible beans, grass seeds, vegetables including potatoes, cabbages, tomatoes, and fruits.

Now the reason that this starry-eyed apostle of planned economy gave Congress to justify his request is that rigid controls are necessary to prevent overproduction and excessive cost to the Government in supporting farm income.

Previously, Secretary Brannan had sent Congress the other phase of his socialistic farm program. This part of the plan provided for a farm production Government payment plan which guaranteed a minimum price on practically all farm products, the theory being that farm product prices would fluctuate freely in the open market but the Government would pay the farmer whenever the market price fell below a Government established price.

In brief, Truman proposes to guarantee the farmer an established return for his crops, but insists upon telling the farmer what and how much he can raise.

What the plan amounts to is that social planner Truman tells Farmer Jones that the taxpayer will guarantee him a fair return for his crops, but tells him that he can only grow a certain amount and a certain kind of crop because otherwise there might be overproduction and the farmer might make too much off the taxpayer.

This proves the point that the Gazette has stressed repeatedly—there never can be any Government benefit without a corresponding Government burden, and a resulting loss in individual liberty.

What Truman told the farmers when he was running for office was that he would assure them of direct Government subsidies; what he did not tell them was that he also intended to limit their income by controls.

His whole campaign was a fraud upon democracy. But then, as we have said before, Dewey's campaign was likewise a fraud. There was no one to raise a voice against the social and economic planners. We hope that both the Democratic and the Republican Parties have learned a lesson and that by the time we have another presidential election the people will have a choice between two real believers in democracy instead of wasting their vote upon a disciple of socialism.—L. W. H.

Bill Providing That Small Business Shall Receive Fair Share of All Government Procurements Introduced After Being Approved by Committee on Small Business of the House—Proposal Extends Present Law To Include Civilian Agencies To Tighten Up Present Law

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. PATMAN. Mr. Speaker, H. R. 4760, introduced by me, is a bill to provide that small business shall receive a fair share of Government procurements. This bill has been unanimously approved by the Select Committee on Small Business, which directed me to introduce it.

Under this bill, every Government agency shall issue regulations and prescribed conditions to the end that small-business concerns will be assured of a fair and substantial portion of the procurement of supplies or services by it.

There is nothing very new about this proposal in my bill. There are now existing laws on the books providing that small business shall receive a fair share of certain Government procurements. But my bill is an attempt to make the law on the subject more definite in its operation and more uniform in its application, and my bill tries to plug up the holes in the present statutes relating to procurement.

EXTENDS ARMED SERVICES PROCUREMENT ACT

The Armed Services Procurement Act of 1947 now provides, in section 2 (b), as follows:

> It is the declared policy of the Congress that a fair proportion of the total purchases and contracts for supplies and services for the Government shall be placed with small-business concerns.

This is a declaration of policy in respect to small-business procurement, whereas my bill is a mandate in respect to small-business procurement.

In making the provision mandatory, my bill follows the wording of the Selective Service Act of 1948, in section 18, relating to the program of national procurement described therein, and stating in clear language that "small business shall be granted a fair share of the orders placed, exclusively for the use of the armed forces or for other Federal agencies now or hereafter designated by this section."

My bill, in effect, simply reconciles and conforms these two laws so that small business may have definite assurance that it shall be entitled to, and shall obtain, its fair share of Government procurement.

My bill goes further than existing law in that its provisions are applicable to all Government agencies—civil as well as defense agencies.

BUREAU OF FEDERAL SUPPLY INCLUDED

The most important agency which is reached by my bill, but which is not cov-

ered by existing legislation, is the Bureau of Federal Supply, which serves as a joint purchasing agency for various Government departments and units. As I have already indicated, it is something new to impose small-business conditions on purchases by the Government other than for war or defense purposes. But it seems to me that there is no reason why small business should not obtain its fair share of procurements by civilian agencies of the Government the same as in the case of procurements by defense agencies. In fact, I think there is even more reason why small-business concerns should be assured of a fair share of procurement by civilian agencies of the Government than in the case of procurement by defense agencies. Small business and free enterprise must be given a fair break during the longer and more normal periods of peacetime and not merely during the shorter periods of emergency and war.

Moreover, I should point out that my bill is not limited to certain specified defense agencies like Army, Navy, Air Force, Coast Guard, and Advisory Committee for Aeronautics, as in the Armed Services Procurement Act, for instance.

My bill, since it expressly applies to all Government agencies, would apply to the Atomic Energy Commission, to take an example, which is not mentioned in the Armed Services Procurement Act, although it is mentioned in the procurement section of the Selective Service Act of 1948, at least for certain purposes.

To recapitulate, my bill makes it the duty of all Government agencies to issue regulations and to prescribe conditions in order that small-business concerns will obtain a fair and substantial portion of Government procurements. A small-business concern is defined as one employing not more than 500 persons, which is independently owned and operated, and which is not dominant in its trade or industry. Essentially, there is no new legislative principle involved. Existing legislation is, in effect, conformed and consolidated. However, as I have said, the bill applies not only to some Government agencies but to all of them, including such agencies as the Bureau of Federal Supply, Atomic Energy Commission, and in fact any Government agency, corporation, or other instrumentality.

SMALL BUSINESS DEFINED INDUSTRY BY INDUSTRY

However, apart from the agencies covered by it, the bill contains much the same language as my amendment to the ECA bill which passed this House by a vote of about 3 to 1, although it did not fare so well in conference. That amendment, too, authorized the issuance of rules and the prescribing of conditions. That amendment, too, spoke of a fair and substantial share of procurement for small business. That amendment, too, defines small business as I have defined it in my present bill, and, as we have seen, it is already defined in existing law. That amendment, too, provided, however, for a smaller number than 500 for those industries where a smaller number would be appropriate for defining small business.

If the honorable Members of this House thought so well of my ECA amendment, applying to procurements here by foreign purchasers, a proposal which had no specific legislative precedent, as to give it the overwhelming vote in its favor which they did, I feel that they may readily think just as well of my present bill, which applies to procurements by our own Government and which has specific existing precedent in both the Armed Services Procurement Act of 1947 and in the Selective Service Act of 1948.

OTHER LEGISLATIVE PRECEDENTS

Indeed, my bill has precedence not only on the books today but going back to the early days of World War II. I refer, in particular, to the Small Business Mobilization Act of 1942, to its detailed provisions in connection with procurement from small-business concerns, including even a declaration by the Congress recognizing the right of small-business concerns, in certain instances, to be paid a higher per-unit price on procurements.

Ever since that time, the Congress has been passing special small-business legislation, as witness the small-business provisions in the Surplus Property Act, the Mobilization and Reconversion Act, the Contract Settlement Act, and existing laws already referred to by me.

The time has come for the Congress to make its policy on small-business procurements applicable to all Government agencies, whether defense agencies or not, and the time has come that this existing congressional policy should be expressed as a mandate binding on all of these agencies.

SECRETARY LOUIS JOHNSON QUOTED

I shall close by quoting from remarks by Hon. Louis Johnson at the annual meeting of the chamber of commerce, delivered on May 5, 1949, shortly after his induction as Secretary of Defense.

These hundreds of thousands of small businesses, scattered throughout our land, together with our millions of independent farmers, are the essence of our democracy—they are our basic safeguard against the dangers of statism. It is high time that those few power-seeking and merger-mad corporation officials in our midst realize that the enemies of our economic system are gambling on a hope that American big business, by concentrating more and more economic power in fewer and fewer business enterprises, will finally drive us into some form of the corporate state which can readily be seized by a small group of ruthless men to spell the death knell of freedom.

The National Military Establishment appreciates the value of small business to our whole economy and to production of military items particularly and is bending every effort to have its share in its defense program.

The National Military Establishment is interested in small business because it wants to know that the productive capacity of all plants, including the small, is available. It is interested because it feels that small business is one of the institutions we Americans believe in and want. We must not forget that practically every American business in existence today once started as a small business.

The Congress recognizes the deep interest that the American people have in small business. From 1933 to 1944 more than 570 bills and resolutions dealing with one or another of the myriad aspects and problems peculiar to small business were introduced in the Congress of the United States.

In the Armed Service Procurement Act of 1947 Congress provided that—and here I quote—"a fair proportion of the total purchases and contracts for supplies and services shall be placed with small business concerns."

The Selective Service Act of 1948 carries a provision to the same effect.

On December 12, 1947, President Truman transmitted similar wishes on this matter to the heads of the executive departments and establishments.

And as Secretary of Defense, I intend to carry out the President's wishes in every respect.

My bill on the right of small business to a fair share of Government procurement thus hardly conflicts with the desires of the head of the three armed services, who, as he states, is determined to carry out the wishes of the President to enforce the laws of the Congress in respect to small business. It should, therefore, hardly conflict with the desires of the Bureau of Federal Supply or any other Government agency.

I respectfully commend this bill to the Members of this House for their favorable consideration.

Address by Hon. Olin D. Johnston, of South Carolina, at Confederate Memorial Services

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 6 (legislative day of Thursday, June 2), 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by me yesterday, June 5, on the occasion of Confederate memorial services at Arlington National Cemetery.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As we stand in reverence on this Sabbath afternoon in the midst of tombs whiter than the sands of the sea and more numerous to us than the stars in the heavens to pay tribute to our forefathers with music, song, and tender words, a swelling comes into our hearts. A swelling of pride and sadness as we remember the words of our dear mothers as they watched their fathers and brothers take gun and sword in hand, not for fame or reward, but to defend their freedom and ideals.

We have come to this funeral field of fame where our forefathers have slept through the years, the years in which our mothers were fatherless, the years during which our mothers took the plow and the spade to till the war-ravaged soil on which Confederate heroes died.

Yonder, beneath the grass-covered sod, resting in the serenity of death, are men who saw Lee surrender his bullet-torn flag with the consciousness of duty well performed; a lad who stood by the side of the "Gallant" Pelham at Kelly's Ford and saw the great cannoneer write his name in letters of gold on history's scroll; a lad who was with Albert Sidney Johnston at Shiloh when the great Confederate soldier led a charge against the enemy shouting, "Men, they are stubborn; we must use the bayonet."

These gallant men who wore the gray did not rebel, nor did they create any new doctrine, nor were they of misguided fathers who waved the battle flag against the genius

UNIVERSITY OF MICHIGAN LIBRARIES

of liberty in the New World. They did not sacrifice their sons to slaughter nor their land to ruin for slavery.

No, they realized that they could no longer live in peace with the Union. They asked to be seceded in peace. This was denied. Then came the gunfire at Fort Sumter, S. C.

A single theme for this occasion is difficult to select. There were thousands of heroic men who fell by the wayside whose names are not known; there are thousands who were fortunate enough to return; there were women who sacrificed their all, died in pain and agony as they fought to defend their homes without their husbands. There were children who fought with stones along the side of their mothers. There was not one hero, there were thousands.

But as we stand here in the shadow of the monument to Washington and near the home of Lee, there is not one American in this great memorial who is not thinking of what caused the war; what was responsible?

Not one of you would steer from the truth.

The commonly known reason is slavery. There was never a statement so far from the truth as that.

Gen. Robert E. Lee liberated his slaves, as did many others long before the war. Many Confederate soldiers had never owned a slave nor had their families. Many Southern States prohibited the institution of slavery long before the war. The Southern States supported the ordinance creating the Northwest Territory which outlawed slavery.

The Confederate constitution prohibited the importation of slaves from any country. The United States Constitution recognized slavery in three different places.

It has been said that the South led in the institution of slavery, but the first slave ship to be built was built in New England and the first import of slaves arrived in New England in 1638.

At the outbreak of the war, many prominent northerners and New Englanders owned slaves and among those owning slaves was U. S. Grant. Why, New Englanders even captured and sold Indians as slaves.

The South, however, did have more slaves, but only for one reason. It just wasn't profitable enough in New England.

Secession, like slavery, was born in New England. The South was not the first part of the country to think of seceding from the Union. The seeds of secession were sown in the Constitution of 1787 and there was never a time from the date of the Constitution to the outbreak of the war but what there was strife between the Union and the States. If the Constitution had declared that a State could not secede from the Union, there would have been no strife or war. As it was the Constitution clearly stated that it was up to the States individually as to whether they secede or not. Another point which may be entered into the matter was brought out in a statement by Horace Greeley in 1861. He said, and I quote, "If the Declaration of Independence justified the secession from the British Empire of 3,000,000 colonists in 1776, we do not see why it would not justify the secession of 5,000,000 southerners from the Union in 1861. If the slave States choose to form an independent nation, they have a clear moral right to do so."

John C. Calhoun, one of South Carolina's greatest statesmen, in a statement on the status of the Union, said, "Does any man, in his senses, believe that this beautiful structure, this harmonious aggregate of States, produced by the joint consent of all, can be preserved by force? Its very introduction would be the certain destruction of the Federal Union.

Lee, while at West Point, studied a textbook which stated secession was a right of a State. This is said to be one of the main reasons for Lee's leaving the United States Army to lead the Confederate forces.

You may think at this time why do I recall all this?

I have brought out the facts of history for just one reason: To tell the actual truth to people who love the truth so that the South will no longer be regarded as a section which was fighting a war to destroy the Union.

The South was reluctant to leave the Union. There was no attempt to alienate any Northern State which wanted to operate under the Federal Constitution. The Confederate States wanted to withdraw peacefully. Had they been permitted to do so, there would still be a great Nation of many States. Such a separation would have been temporarily disastrous, but it would not have brought more disaster than that brought by the war.

When the Southern States seceded, they exercised rights which all other States had at one time considered rights. A broader view of freedom could have prevented the entire thing.

But sometimes God works in a mysterious way to perform his wonders. He let us wage a war between the States in order that we might become a great Nation. We never could have become the great Nation that we have, as long as there existed the divided opinion on the rights of a State to secede.

It seems evident that we had to forego some sort of freedom to have the larger freedom which we have today. Now, we can recall our heroes without stirring antagonism. Now the Blue and Gray has been blended into the United States khaki and we must forget that we were divided.

The Nation is now theoretically divided into four sections, but we must think of these four sections as four bricks in the foundation of the American home, a home which we all have in common, a home which we must, as we have done in the past, defend.

As the sun is getting lower, soon our forefathers will have slept peacefully another day. As we leave for our homes, let us remember that our Confederate dead did not fight and die in vain—for out of that great strife, the greatest Nation in the world was born.

Let us dedicate ourselves to the great principles for which our forefathers died.

Let us look to God for divine guidance in all things.

Columbia Valley Administration as an Aid to Western Development

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 6 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "CVA as an Aid to Western Development," which I have prepared.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CVA AS AN AID TO WESTERN DEVELOPMENT

The Pacific Northwest is one of our greatest last frontiers. The people of the United States know this, for they have been streaming westward in truly American fashion to develop new opportunities in the land of the Columbia River. Since 1940, there has been one of the greatest waves of migration to the West in our history. There is no sign of its slackening.

The people of previous migrations to the West found wide-open areas from which, by diligent and sober enterprise, they wrested a pioneer livelihood. Yet, in spite of the amazing degree of individualistic effort, it was necessary for the Federal Government to lend assistance in the development of the western country. Thus developed the era of land grants, or stimulation by Government in the building of railroads—all to the end effect of causing the West to yield up some of its wealth to settlers.

Today, the individual arriving in the Pacific Northwest by plane, train, and by auto, faces a distinctly different situation. The great areas of wide-open spaces are still there, but it is no longer possible for the modern-day pioneer to settle there merely by the use of the ax, the pick, and the shovel.

To begin with, civilization has become more complete and the individual expects more of life than did his forebears. The whole pattern of employment, the securing of employment, is a complicated one as compared to that of the 1800's or even the early 1900's. The modern pioneer looks for irrigated land; or for a job in industry; or for a job in one of the service industries.

These opportunities arise out of joint rather than strictly individual action. Irrigation is a large-scale enterprise even though its benefits accrue to individuals. Power development is a joint enterprise even though the ultimate consumers are individuals. Industrial and manufacturing establishments and operations are joint enterprises even though individual workers benefit by them. These examples are merely suggestive of a general over-all situation.

Specifically, the Pacific Northwest confidently expects another 600,000 people to swell its population during the next decade. These people are coming to that vast area because they have heard of its yet-undeveloped opportunities. But can they stay, as prospering citizens, if matching opportunities for a secure livelihood are not developed? The answer is crystal-clear: Unless such opportunities are stimulated and enhanced, these modern-day migrants will find the going difficult; Pacific Northwest communities will be faced with heavy welfare and relief expenditures. The Nation would thereby suffer.

It is the policy of this Congress—expressed through literally reams of progressive legislative action—to assist in the development of our entire economy, of the resources of the regions of the United States. Thus for the West, we have the reclamation law, we have the numerous authorizations for the use of byproduct hydroelectric power from the control works on great western rivers. We have many other laws dealing with forests, land, water, fish and wildlife, minerals, fuels—and in large measure, these are all directed toward wise and full development.

As a result of congressional policy, great developmental works have been constructed in the West and the Pacific Northwest. The Grand Coulee and Bonneville Dams—for irrigation, flood control, navigation and power—are the beginnings of an epochal program to meet the needs of the Pacific Northwest and of the Nation. Their contribution already has been enormously significant. Had it not been for the power supplied from these two dams and the Federal power transmission network in the region, it is not conceivable how this Nation could have waged the last war to successful conclusion. What is remarkable is that today these mammoth facilities are operating full blast for peacetime purposes, and that there is unified clamor for more rapid development.

The President's message on a Columbia Valley Administration recognizes clearly the goals which must be met in the Pacific Northwest for more land, more power, more effective flood and soil erosion control, for better navigation and, in general, for increasing economic opportunities in that great region. The message, however, is particularly significant in that it enunciates that development for the mere sake of de-

velopment, without full and balanced understanding of all values, is not the end to be sought by the Federal Government. There isn't an intelligent human being who will disagree with the President's premise that existing Federal resources activities in the Pacific Northwest must be harmonized from the inception of plans to the actual operation of the resulting programs. A CVA offers the only way, in my opinion, through which to do the necessary job in the Pacific Northwest. To do less than a coordinated job would be to do it not at all. I applaud the President for the forthright terms in which he poses the legislative problem to us. I am sure we shall rise to the occasion.

The 24-Day Ford Strike

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, the recent Ford strike cost workers millions of dollars; the Ford Co. other millions; suppliers and dealers, and indirectly merchants in many cities, including Benton Harbor and St. Joseph in the Fourth Congressional District, substantial and unnecessary losses.

Two editorials from two of the country's newsiest newspapers, the first from the News-Palladium published in Benton Harbor, Mich., a town of some 15,000 people, the other from the Chicago Tribune, analyze the situation and demonstrate a lack of sound aggressive leadership in the CIO.

The editorials, of recent date, follow:

[From the Benton Harbor (Mich.) News-Palladium of June 1, 1949]

NEEDLESS ECONOMIC WASTE

The 24-day Ford Motor Co. strike involving UAW-CIO charges of an assembly line speed-up, was settled over the week-end, but it will be 2 weeks at least before normal production can be resumed and the 106,000 idled Ford workers put back to work.

Under the terms of the strike settlement, a three-man arbitration board will determine whether a speed-up existed. The company has agreed to rehire approximately 50 employees who were dismissed.

The Ford walk-out not only threw 106,000 Ford employees temporarily out of jobs, at a cost to the company and workers of an estimated $77,000,000—it either shut down or curtailed operations and employment in supply plants all over the country.

The loss in wages and production in the twin cities alone was heavy and was reflected in decreased retail trade and increased relief loads.

The strike was unnecessary. The lost wages can never be made up and the union's bargaining position relative to a new contract was harmed. For sheer economic waste the Ford strike set a new high. Nobody won a victory. Ford's competitive position in the automobile field was weakened, hundreds of thousands of workers and their families suffered and the city of Detroit was brought to the brink of a serious depression.

[From the Chicago Tribune]

AN UNNECESSARY STRIKE

The agreement between the Ford Motor Co. and the CIO United Auto Workers to arbitrate the key issue of whether a speed-up existed in the Ford assembly line ends the 24-day strike by making use of machinery available from the start to settle the dispute. This is the paramount fact, and it is a tragic commentary on the recklessness of CIO leadership.

Meanwhile, some 107,000 union members have lost millions of dollars in wages, the company has lost 3½ weeks of production of cars and parts, and 7,200 dealers and their 100,000 employees have lost time and earnings.

Henry Ford II, president of the company, asserted May 7 in his letter to employees that the strike was unnecessary. "For some reason," he stated, "the union has repeatedly declined to submit this issue, as provided in our contract, to an impartial outsider—surely a more sensible way of handling this dispute than by a strike."

Under the contract terms, Dr. Harry Shulman, Sterling professor of law at Yale University, was available as permanent umpire in disputes between Ford and the UAW. If the arbiters designated by the company and union now fail to agree on a third person to sit on the arbitration panel, Dr. Shulman will receive the assignment. There is no good reason why this process should not have been invoked before the strike was allowed to start, instead of more than 3 weeks afterward.

The CIO has endeavored to rationalize its refusal by contending that the definition of the issue to be arbitrated was more important than the act of arbitration. The issue has now been put into words satisfactory to both company and union and will go to the arbiters in the agreed form. There would seem to be no justifiable argument against having given the task of definition to the arbiters in the first place and thus to have avoided the strike. The contending parties would have had the same weight of representation and the outside mediator could have balanced the scale.

Walter Reuther, the Socialist-minded CIO boss, had the strike forced upon him by union elements farther to the left than he. The strike was the outgrowth of internal union maneuvering rather than of valid bargaining points. Once committed, Reuther had to put up the best show of militancy at his command, that being expected of him in line with the UAW tradition. In the outcome, the union had to crawl off its high horse; but in a situation like this nobody wins. There is a net loss all around when there need have been no loss at all.

Tribute to Former President Hoover by Julius Klein

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Monday, June 6 (legislative day of Thursday, June 2), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD, an article prepared by Julius Klein, of Chicago, Ill., paying tribute to former President Herbert Hoover.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

OUR NATION'S BEST—HERBERT HOOVER

To a lover of justice, no event could be more satisfying than the Nation-wide acclaim now being heaped upon Herbert Hoover. His great talent for organization, as expressed in the recommendations of the Commission on Executive Department Reorganization, has finally dissipated the misunderstandings, the prejudices, and uninformed criticism, and brought a proper appreciation of the noble character and the tremendous abilities that he has placed at the service of the American people.

WINS TRUE APPRECIATION

Many men of great accomplishment have lived too long, in that the waning powers of their declining years have dimmed the brightness of their reputations. Other men have died too soon to reap the full reward of their achievements. Mr. Hoover has escaped both these unfortunate fates. The powers of his ripe years have overcome the disappointments of the darker days and brought his countrymen to a true appraisal and proper appreciation of his stature.

Such contrasts have marked his life. The orphaned son of an Iowa blacksmith at 7, he had to work long and hard for his education. But it was characteristically thorough, and his intelligence, industry, and scholarship brought him wealth. These same capabilities brought him to the attention of the whole world in World War I, and at its conclusion he had earned the plaudits heaped upon him by a monumental job of organizing and directing a world-wide program of relief, rehabilitation, and reconstruction.

"RUGGED INDIVIDUALISM"

It is popular now to reexamine the record he made as President of the United States. It comes as a surprise to many who had unthinkingly accepted the political smears to discover the many solid contributions of his administration to sound government practice. It is one of the darkest pages in the record of his successor that he refused to avail himself of the wise and experienced statesmanship generously offered by Mr. Hoover in combating the country's economic troubles. How many look longingly today at the ideal of "rugged individualism" which he preached.

To the qualities of industry, imagination, courage, and humanity which made him great, Mr. Hoover has added a demonstration of two others—patience and humility. They have lifted him, belatedly but no less gratifying, into that small group acknowledged to be the best we have produced.

Address by Miss Louise Replogle to New York State Young Republican Clubs

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Monday, June 6 (legislative day of Thursday, June 2, 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by Miss Louise Replogle at the eighteenth annual convention of the New York State Young Republican Clubs, at Fallsburgh, N. Y., May 20, 1949. Miss Replogle is county attorney and prosecutor of Fergus County, Mont., and is also assistant secretary of the Young Republican National Federation, and former chairman of the Young Republicans of Montana.

UNIVERSITY OF MICHIGAN LIBRARIES

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and young Republicans of the great State of New York, it is a distinct honor and privilege to receive an invitation from the Young Republicans of America's largest voting State, to come here to speak and visit with you.

I assure you that I appreciate your kind invitation, and I bring to you greetings and felicitations from the Young Republicans of Montana. They wish me to express to you their gratitude for the valiant, successful fight that you in New York made at the last election to hold the lines against the insidious attacks of those willing to destroy much of America's best traditions under the guise of a Fair Deal.

I am sure that we can all agree that the greatest and best hope for America lies in the clear thinking of her younger people. We can further agree that the present plight of this country stems from the political views of the younger generation, and not because of a change in the thinking of those long of Republican faith.

YOUNGER GENERATION REARED UNDER THE NEW DEAL

It is not surprising that the majority of those reared in the shadow of the New Deal have been receptive to the teachings and philosophy of those highest in official power and authority, and that they have been over impressed by the power of the office itself held by the President of the United States. The mere fact however that bad political philosophy is taught by one temporarily holding the greatest office in the world can never make it good sound governmental policy.

And what is the answer? Who are best able to effectively combat and eradicate the errors in that political and governmental philosophy? Upon whom, primarily, does that burden fall? Clearly, it rests upon you and all the other young Republicans of the country. We must make our party again the party of youth.

We must keep up the fight whether we win or lose elections. Let us not make success at the polls measure the standard of our work nor should we for one instant surround ourselves with a defeatist attitude. Our task is to know and speak the truth at every opportunity; to supplant the insidious, false philosophy that the world owes everyone a living, and that idleness is a virtue, with the true ideas of government.

A true and sound government recognizes that there is a place for everyone to render useful service. It recognizes that initiative and the right to earn, to save, and to put away for the protection of those naturally dependent is necessary for government to endure. It recognizes that everyone has a God-given right to expend his energy in whatever free enterprise he chooses and in which he thinks he will find the best expression of himself.

As American citizens we must eradicate as much as possible any ideas that give comfort and encouragement to radicalism or any other ism than the good, old-fashioned Americanism of our forefathers—the Americanism of the pioneers who came from the Old World to make the New, who gave us the foundation and the fundamentals that have made us the leading country of the world; the pioneers who made America, America.

Let us fight for success at the polls, but let us strive harder for principle. The more difficult the task the more imperative that we see and enunciate clearly the true principles of government.

In Montana and the West we do not surrender our convictions of right and wrong because thieves continue to steal cattle. We county attorneys cannot and do not abandon the cause of law and order because a certain group of jurymen frown on convictions for certain offenses. Neither do you, the Young Republicans of New York, slacken your effort because in certain communities in your State the electorate finds itself bribed by the economic and monetary promises of a new or fair-deal philosophy. Such experiences must make us realize the need of more faith that right makes might and that true ideas of government will put to rout and destroy the false, unsound political philosophy and propaganda designed to saddle debt and untold burdens upon future generations in the hope that it will temporarily advance the selfish interests of those living today.

It is because the truth has not been made plain to the American people and because they have not fully realized that we have an administration forcing mortgages and colossal debt upon the little children of the United States and upon their children's children, that they have not rebelled at the polls.

ONE-FOURTH OF GOVERNMENT EXPENDITURES ARE WASTED

Can any country continuously prosper and suffer waste in government on such a gigantic scale? Think of a government spending over $40,000,000,000 a year in peacetime and wasting one-fourth of that expenditure. It is in truth and in fact a tragic story of waste at home and waste abroad.

Consider for a moment the amount of human energy that is thrown away. Contemplate, if you will, the effect of such waste upon the moral fiber and the morals of the people of this country and the peoples of the world. Waste in government breeds waste in private affairs and waste can and will destroy the economy of any country. Thrift and honest spending mean more comfort and happiness throughout the world.

If the President's recommendations were all put into effect the expenses of the Federal Government, it is estimated, would jump from forty-two billion to over sixty billions of dollars a year. Where would the money come from to pay such a bill?

Can we fail to realize that the treasure chest is not inexhaustible? Can we continue to consume our substance in excessive taxation and Government spending that gives no thought to the inevitable day of reckoning?

Recent campaign promises and President Truman's state of the Union speech suggest the statement made by that great economist, John Stuart Mill, when he said "It is the art of the demagogue to tempt people into idleness by promising them a share in a fictitious hoard lying in an imaginary government strong box supposed to contain all national wealth."

The President has asked Congress to approve 15 new domestic programs to be financed out of general tax funds. In addition he has asked for three new or expanded so-called social-welfare programs to be financed by pay-roll deductions. Experts have estimated that when these programs are in full bloom they will add to the Nation's permanent tax burden a minimum of $14,800,000,000, and will require an annual budget in excess of $56,000,000,000. Senator MARTIN, of Pennsylvania, declares that these same experts predict that these programs could reach a maximum cost of $42,700,000,000 a year. If we add that staggering sum to the present already swollen sum we would have an annual tax burden of $84,000,000,000.

These are shocking figures. They cannot fail to alarm every American who is concerned with our country and the welfare of his family. We cannot undertake all of these constantly increasing expenditures without diving headlong into state socialism and national bankruptcy. It would be disastrous to us and to the free world that is now depending upon our leadership for guidance and assistance.

THE PEOPLE SHOULD SUPPORT THE GOVERNMENT

It is a matter of recorded history that governments that live off of the people have been strong, successful, and prosperous, but in countries where the people live off of the government, sooner or later the governments have come to grief and downfall. You cannot have a harmonious, sound government where one group of citizens is unjustly obliged to carry the burden of another.

Every well, able citizen should assume his responsibilities and not endeavor to shift them to others. That principle applies to the family, the community, the state, and to the nation.

Too much government, too much dependence on government, and government that gives no heed to the cost are the milestones on the way to a socialistic pattern of government. The end result is always the same. The government becomes supreme. Individual initiative, thrift, opportunity, industry, savings, and freedom are wiped out.

The President has asked the Congress for the right to take steps which would lead to the nationalization of various industries. But America must not follow in the footsteps of England.

Great Britain was once looked upon as the world's great stronghold of human rights and property rights. Now it is struggling in the grip of a socialistic government which is day by day increasing the power of the Government over individuals. England has nationalized its coal, power, and transportation industries and is about to place iron and steel under Government ownership and operation.

Last winter many of her people were cold because the output of its coal mines was reduced under nationalization. Today many of the British people do not have enough food, though all supplies are under strict Government rationing.

The patriots of the American Revolution fought because oppression by British rule threatened their liberty and personal freedom, which was their most precious possession. The primary purpose of the Constitution was to limit the power of the Central Government over freemen. The Bill of Rights was added in order to state explicitly the rights guaranteed by the Constitution.

Today we are confronted by proposals of the President based upon socialistic theories which have failed in every part of the world where they have been attempted.

FOREIGN POLICY

There is not time, nor am I disposed to speak of the administration foreign policy, other than to call attention to the frightening spectacle of all Asia, representing a majority of all the people of the world falling more and more into Communist hands. Who would have believed that after the great victory for freedom of World War II our administration would so incompletely handle world foreign affairs as to permit our traditional friend, China, to become so dominated and conquered by the Communists. Ask yourselves how far reaching may be the effect of permitting this stupendous blunder.

FREE ENTERPRISE

America has grown strong because of her free enterprise. True free enterprise is enterprise that is most free from government interference, from government control. We are a liberty-loving people and liberty means freedom from the tyranny of government. As Woodrow Wilson said, "The history of liberty is the history of limitations on the government." It is only government that can deprive us of liberty.

Call to mind if you will, the total absence of liberty and the dominion of evil behind the iron curtain in Russia. If Russia had a free government would she refuse to let the world see it in operation?

We know that we have the greatest government on the face of the earth. We know

that our Constitution is the most sacred civil governmental document ever written.

We know that we have the highest standard of living, that we pay the highest wages, and that we have liberties of which the peoples of most countries have scarcely dreamed. And it is the business of the United States to let the people of the world know by education that our traditional form of government is the greatest on earth. Call it the profit system, the free enterprise system, the American system, the human nature system—call it what you will—it is the greatest governmental system that civilization has known.

It is a practical system that has been proven. For more than a century and a half this country has constantly grown and expanded and our people have lived in freedom and in the greatest of luxury as compared with the other peoples of the world.

Should we weaken that system by endeavoring to borrow part of the Russian system? Will you increase the controls and dominion of the Government step by step until you have a total government—like Russia's?

In what soil will communism best grow? It will expand best in the soil of the government regulation and control.

The danger to our country is not that this Nation will now accept communism, but we know that there is a national and international conspiracy to divide our people, to discredit our institutions and to sell the people the idea of government control and government operation of one business after another in the hope that eventually, most free enterprises will be displaced and the capitalistic system be first weakened and eventually destroyed.

All countries are beginning to realize that it is our Government more than our resources that causes us to lead the world.

Why is every country appealing upon bended knee for help from the United States? How does it happen that we are the only country in the world able to help all other countries?

It is because of our system of government, the profit system if you like, the competitive free enterprise, or capitalistic system whereby men can put away something for a rainy day or in case of adversity help those who mean most to them—and can leave something to their dependents to give them the education, care, and security that it was meant they should have.

It was the development of our factories and industries that came into being through our free enterprise and the competitive economic system that did so much to win World War I and World War II.

RIGHT OF PROPERTY

Every sound-thinking man and woman in America believes in the right of property. They believe that if a man has a house, a piece of land, or some property, it gives him more stake in the community and tends to make him a more responsible citizen.

Lincoln said, "Property is but the fruit of labor, property is desirable, is a positive good in the world. That some should be rich shows that others may become rich. * * * Let not him who is houseless pull down the house of another, but let him work diligently and build for himself, thus by example assuming that his own should be safe from violence when built."

There are minorities who foster a philosophy which encourages men to pull down the house of another so that they may share in the earnings of others. There are those who would make America over with an planned economy.

ECONOMY AND TAXES

As things stand today the man who saves a little has it taken away from him in one way and another—much by Government spending and high taxes.

We must have lower taxes and have more Government economy. Our national debt is over $250,000,000,000.

It is significant that throughout history the clear thinking of a few men has stood out as beacon lights to guide future generations—and the great Thomas Jefferson knew so well the meaning of Government economy. This is what he said, "I place economy among the first and most important virtues and public debt as the greatest of dangers to be feared. To preserve our independence we must not let our rulers load us with perpetual debt.

"We must make our choice between economy and liberty or profusion and servitude. If we run into such debts we must be taxed in our meat and drink, in our necessities and in our comforts, in our labors and our amusements. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them they will be happy."

OUR DUTY AS REPUBLICANS

What is our duty as Republicans? The mandate to be derived from the last election to the Republican Party, was to come alive, to wake up, to give the people who would like to support us and have not done so, a campaign based on performance issues and constructive purpose.

WE KEPT OUR CAMPAIGN PROMISES

In 1946 we won our first important victory since before 1932. We captured the Congress on a definite program which was good for this country, and we shall capture the Congress in 1950 in exactly the same way.

In the campaign of 1946 we promised to reduce taxes, to balance the budget, to end the OPA regimentations of our daily lives, to improve the Wagner Labor Relations Act, to do all in our power to drive Communists out of the Executive Department of the Government. We made good every last one of these promises.

Those pledges were in response to a public demand for action along those lines. We were in step with the people. We did what they wanted us to do. And yet we placidly allowed ourselves to lose credit for those and other outstanding accomplishments of the Eightieth Congress.

Now the Washington scene has temporarily shifted. The executive and the congressional majority are of the same party. There is now a united authority within itself. The Republican minority is once again the loyal opposition charged with an obligation to hold the administration to strict accountability for what it does.

AN AGGRESSIVE MINORITY IS NEEDED

There was never a greater need for an alert, aggressive minority in State and Nation than there is today. When difficult problems face us we need a healthy opposition. We should realize that in the Nation out of 49,000,000 votes cast, a total shift of less than 30,000 votes in 3 States—California, Ohio, and Illinois—would have made Dewey President. That certainly does not call for pessimism.

We must convince the voted that ours is the party that will carry forward the great American tradition of opportunity and freedom; the great American tradition that we cannot spend more than we have and we cannot expect to get something for nothing.

We should now resolve to stand shoulder to shoulder with new determination and new enthusiasm borne of the righteousness of our cause to win for our great country a Republican Congress in 1950, and with that Congress among many other important accomplishments, we will keep our country solvent.

CONCLUSION

Let us remember that the Republican Party stands for a Republican form of government. Under that government we have become the leading Nation of the world. Let us keep America great, strong, happy, and prosperous and even more let us preserve the traditions, the free institutions, the free enterprise, the independence and the dignity of the individual as it is known only in the United States of America.

The Monticello Ode

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, June 6 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a communication entitled "The Monticello Ode," being a tribute in poetry to the sister of the Governor of Florida, and another communication also entitled "The Monticello Ode," being a prose and poetry description of a very fine meeting recently held at the Fred A. Mahan's.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

THE MONTICELLO ODE

THE MAHAN PLANTATION,
Monticello, Fla., May 4, 1949.

Saluting the honoree, Miss Alma Warren, chatelaine of the Governor's mansion, Tallahassee, and the wives of members of Florida State Legislature; the reception; and their gracious hostess, Mrs. Fred A. Mahan, and her receiving line.

THE ROSES OF MEMORY'S LANE

From North and South; from East and West,
With palms and pines their State's proud crest,
Came Florida's fairest—
In bibs and bonnets, airy laces,
Winsome faces, matronly graces,
'Midst the roses of Memory Lane.

Behold Miss Alma, poised, serene,
In lilting step, the pageant queen,
With Florida's fairest—
Their laughing eyes glad with surprise
In fairyland 'neath Florida's skies,
'Midst the roses of Memory Lane.

The scene is haunting: May-leaf green,
With Florida's sun, a gift supreme,
As Florida's fairest—
Sip nectar of the gods—and sod
Where Ponce de Leon's hosts once trod,
'Midst the roses of Memory Lane.

All hail, our hostess, chatelaine,
The stately rose of Memory Lane,
And Florida's fairest—
Who greet her chic receiving line
'Neath palms and Florida's singing pine,
'Midst the roses of Memory Lane.

And list' the mockingbird's trilled call,
Comes mesdames once again, come all,
Of Florida's fairest—
Breathe deep of roses subtle breath
'Fore winter seals with kiss of death
The roses of Memory Lane,
In the hush of the whispering rain.

Inscribed, with the author's compliments, to a gracious lady, Mrs. Claude Pepper, Washington, D. C.

Sincerely,

ED. G. CLAYTON.

UNIVERSITY OF MICHIGAN LIBRARIES

THE MONTICELLO ODE

THE MAHAN PLANTATION,
Monticello, Fla., May 4, 1949.

Here was staged this evening, at the east end of the Fred A. Mahan drive, a fish fry extraordinary in the sense that it honored Gov. Fuller Warren, the members of the House and Senate of the Florida Legislature now in session in Tallahassee, Florida's two United States Senators, Hon. Claude Pepper and Hon. Spessard L. Holland, and the six living ex-Governors of Florida, namely, Cary A. Hardee, John W. Martin, Dave Sholtz, Doyle E. Carlton, Spessard L. Holland, now United States Senator, and Millard F. Caldwell. The host to the assembled governors, Senators, Representatives, and distinguished guests, was Hon. Fred A. Mahan, whose fish fries to the Florida Legislatures of other years have become a State tradition, rich in good-fellowship and flowered with the spirit of sportsmanship, where political differences are buried in the common appeal of camaraderie, and the succulent taste of the elusive trout served with all the fixings, brings that touch of nature which makes us all akin.

QUOTH THE BARD

'Tis a date with our State legislators
Who attend our Fred Mahan's fish frys
They're suave and benigning—
Bereft of designing
Eat the succulent trout with glad cries.

Their toast to our host is intriguing
Rich in wit as they say their good-bys
Titans of debate—
They're elected, by fate
To grace our Fred Mahan's fish frys.

So we of the masses, called the downtrodden classes
Stand pop-eyed like stars in the skies
To chant an ovation to the great of the Nation
Spellbound by Fred Mahan's fish frys—
And—a succulent dish of fried Florida fish,
Served with vintage—whose flavor is mellow,
Brings a feeling of peace, from all fear released,
And pink roses which seem to be yellow—meaning,
Fred Mahan's a prince of a fellow.

—*Ed. G. Clayton.*

Inscribed with the author's compliments to my friend, Hon. CLAUDE PEPPER, United States Senator, Washington, D. C.

Sincerely,

ED. G. CLAYTON.

Hoover Group Warns Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, June 6 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article which was published in the Bismarck (N. Dak.) Leader of June 2, 1949, dealing with the recommendations of the Hoover Commission. The article states that the Commission cautions the Congress against partial or half-way measures in carrying out recommended reforms in government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOOVER GROUP WARNS CONGRESS

WASHINGTON.—The Hoover Commission has cautioned Congress against "partial or half-way measures" in carrying out recommended reforms in Government.

The commission, headed by former President Herbert Hoover, also warned that democracy's highest ideals can be thwarted by excessive costs, waste, disunity and the "other by-products of inefficient government."

In a hard-hitting concluding report, it frankly acknowledged that Congress has a big row to hoe in attempting to bring both economy and efficiency to the exclusive branch of the Government. Then it cautioned against any "piecemeal attack" in carrying out reforms recommended by the commission.

"It is necessary that the president and the Congress give careful attention to treating the whole body of our recommendations even though the implementation may have to be done on a step-by-step basis * * * once the practice of exempting certain agencies and excepting particular functions has begun, the chances of achieving substantial improvements in the efficiency of the Government will speedily diminish."

NOTE OF URGENCY

With a note of urgency, the commission said "we cannot afford to lose this opportunity to put the operation of the Federal Government on a sound and efficient basis" because the people are entitled to receive full value for their tax dollars.

The "concluding report" summed up the nearly 2 years of study, investigation, and reports on the complex and cumbersome structure of the exective branch.

Major problems posed by the Commission and recommended solutions:

1. The President at present lacks authority to organize the agencies of the executive branch for the most effective discharge of his duties. Recommended: Sufficient authority be delegated to the President and to his department heads to permit them to carry out responsibilities that have been assigned to them by the Constitution and the Congress.

2. The budget process is weakest at the department level where it should be the strongest. The budget document is a relatively ineffective tool of management. Recommended: The budget document be completely recast along the lines of work programs and functions. Such * * * a performance budget would analyze the work of Government departments * * * according to their major functions, activities or projects * * * rather than on things to be acquired.

NEED MORE PLANNING

3. The Civil Service Commission has not been organized to develop as a really effective staff arm of the President. Planning and administration of the personnel program have not kept pace with the tremendous expansion of employment in government. Recommended: Decentralization of the personnel system "so that the operating agencies of the Government will perform the day-to-day tasks of recruitment, selection, position classification, and other aspects of personnel management, under standards to be approved and enforced by the Civil Service Commission."

4. In several of the chief housekeeping services of government—supply, records management, and building maintenance—there are shocking instances of wasteful practices and poor business management. Recommended: Put Government supply operations on a businesslike basis. This can result in "enormous savings."

5. Wastes in overlapping and duplication are exemplified in water resource development where there are conflicting jurisdictions between the Army engineers and the Bureau of Reclamation; in land and forestry management where Interior and Agriculture compete; and in hospital construction where four agencies, including the Veterans' Administration, vie with one another for new construction. Recommended: Consolidate overlapping services and bring major construction activities together in one agency.

RED TAPE PROBLEM

6. Another general and continuing problem is red tape. Much of the Government's paper work stems from detailed statutes, rules, regulations, failure to use modern mechanical methods, and insufficient attention to problems of internal administrative management. Recommended: Continuous attention in each agency to the problems of internal management by studying work flow, organization, procedures, and employ utilization.

7. As a general rule, economy can be achieved in administration by centralizing services common to all agencies. But there is a limit beyond which it is no longer feasible to furnish services centrally without creating serious bottlenecks, delays, and confusion. Recommended: Further decentralization of operations under proper central controls.

8. There are at present too many separate agencies to permit adequate attention and direction from the President. Many closely related functions are so scattered that in certain fields such as labor, transportation, or medical services, no one is charged with considering the problem as a whole. Recommended: Reduce the total number of agencies (about 60) reporting to the President to about one-third the present number.

The Press, the People, and the Police State

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Monday, June 6 (legislative day of Thursday, June 2), 1949

Mr. O'MAHONEY. Mr. President, if capitalism is to survive the war which is being waged against it, upon ideological grounds if not also in other ways, by communism, it must learn that it must permit nothing to prevent the creation of more capitalists. Unfortunately, the economic development of the world in this century has tended to create the proletariat rather than to create more capitalists. This is the great danger which confronts political as well as industrial democracy. Mr. Richard J. Finnegan, editor of the Sun Times, of Chicago, is one of the publicists of our time who seems to comprehend the nature of our problem. He read a remarkable paper during the recent meeting of the American Society of Newspaper Editors, here in Washington, on April 22. The subject under discussion at the time was The Press and the People, and was presented with special reference to the explanations the press might have to the fact that generally throughout the country, prior to November 2, 1948, it had exhibited no advance awareness of the outcome of the presidential election. Having had the opportunity to read Mr. Finnegan's statement to the panel of

editors, I have come to the conclusion that it should be entitled "The Press, the People, and the Police State." I ask unanimous consent that the text of this presentation may be printed in the Appendix of the RECORD. I recommend it to the attention of Members.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PRESS, THE PEOPLE, AND THE POLICE STATE

This panel member can't approach his chore without recollection of the occasion when our society had as the main dish at dinner a debate between Harold Ickes and Wendell Willkie. The official subject was the third term, then in prospect, and my assignment was among the four picadors. Two on each side, we were to goad the star contestants into "highfalutin" combat.

How well the picadors succeeded you will remember—Willkie and Ickes made a notable contribution to nursery lore with their feud on the proper way to didy a baby.

In 2 minutes of my time in that memorable meeting of the masters, I reported on some viewpoints gathered in several Western States. I had inquired whether the impending reversal, or violation, of the two-term tradition for the White House was as upsetting to the average voter as it was to me and my newspaper associates. I had been surprised to find, especially among young voters, that in early 1940 we had exaggerated that tradition as it measured up in importance with issues of the economic emergency and all its disruptions. The economic, mental, and even spiritual health of the body politic was so different from what it was on that remarkable September 3, 1929, the day when the stock market had attained its peak of gambling values. (It was that very day, by the way, we had chosen to launch a new paper in Chicago.)

In trying to see through the third-term cloud, we had not understood how deeply the people had been wounded by the shocks and punishments of a depression that had toppled many rich into the ranks of the poor who had to go on relief. We doubt that we understand even now. In trying to understand the present scene and the deep currents that motivate the crowd, or mass mind, there are not always clear lines marking off some of the issues we may call war and foreign policy from those issues that definitely carry over from the depression. But I believe we of the press have had shorter memories than the people on economic events that made it necessary to call in the police to save our capitalism.

There is ominous conflict between our capitalistic society and the overseas police state societies, but I wonder if the press has had the vision and tolerance to appraise realistically the background and motives of such a thoughtful movement as the Council on Economic Development in which Paul Hoffman and his associates, all business leaders, have taken independent action; and such a long-range study on which the Temporary National Economic Commission has labored, chiefly guided by Senator O'MAHONEY. It is my understanding that both these groups are apprehensive about what may happen in the future if we continue so casually complacent in accepting the police plan rather than searching for some other way to ease the great economic stresses of our increasingly complicated existence. Both these groups, and others, retain a lively respect for what was common knowledge just a few years ago.

Assuming that one purpose of this discussion is to inquire how well the press understands the people and how well the people understand the press, we may get some light by looking at just one most important happening of the depression period.

It is most important because its roots provide, in my book, the fundamental reasons that prompted the people to make known their 1948 election choice, not in advance to the press, to pollsters, or to each other but on election day itself, after the last word was spoken and the last smile smiled. Which candidate and which party seemed to share with most voters the common knowledge of events of the early 1930's—common knowledge of uncommon things which the people want never to happen again?

This happening is most important, too, because some of its effects are being recorded month after month not in the press but in court reports. This happening raises the question whether capitalism is so constituted that it is or must be fashioned mostly by the law of emergency. On January 8, 1934, a majority of "the nine old men" of a famous Supreme Court handed down a momentous decision in the so-called Minnesota Moratorium case. It is to that decision that I call your earnest attention. Minnesota, like some 25 other States, had used its police powers to protect Government against violence growing out of the failure of capitalism to function on the human side as well as on the dollar side. Its law altered contracts by extending the time of redemption from mortgage foreclosure and execution sales and other relief of like character and was declared justified under the police power to declare a public economic emergency. The law was assailed as a violation of the contract clause and the due process and equal protection clauses of the fourteenth amendment of the Federal Constitution. Five of the "nine old men" upheld the law for reasons that should have a sobering effect upon any citizen or editor who may be inclined to underestimate the dangers that lie in letting our capitalistic system drift from one emergency to another, with the eventual use of the police power to resuscitate it. One of the dangers is that the experience of security with the policeman at the business office door can make us too soft to continue pioneering as individuals in the chief mission of capitalism.

The chief mission of capitalism is to create more and more capitalists. The chief mission of capitalism is to make it possible for the "have nots" to become "haves" by working with the tools of capitalism and enjoying the profits and comforts of that work according to merit—the homes and farms, the bank accounts and insurance policies, the autos and airplanes, the educations for culture and careers and the visits to the distant hills—and buy the things advertised in newspapers.

It is a grievous fact of our life that in the early 1930's our capitalistic system did a "wrong way" Corrigan. The Minnesota case boils down for the record many of the things we lived through and reported in our own communities and areas. Chief Justice Hughes quoted the Minnesota Supreme Court's words: "The courts must be guided by common knowledge." It's common knowledge in Chicago that the mayor, Mr. Cermak, scared an emergency meeting of business leaders into buying $1,800,000 of relief bonds that had lain dormant for months by reciting details of common knowledge among the police and the great mass of people. He told these leaders of the capitalistic system that he could not be sure that at the very minute he was speaking whether mobs of desperate unemployed and dispossessed were on the move in certain sections of the city, breaking into stores and yards for food, clothing, and fuel. He said that the municipal judges had junked the constitution and through a pattern of granting long and unlawful continuances were permitting tenants to occupy living quarters free of rent. At our city's outskirts dairy farmers overturned the milk trucks of other farmers who had reduced their prices to meet the buying power of the city's millions.

In Iowa, disturbed also by eviction problems, a mob in one city took a judge from the bench to a convenient tree and threatened to lynch him unless he swore to sign no more eviction orders. In Minnesota the people literally took some functions of government back from their elected servants, circumvented courts and sheriffs by restoring evicted families to their homes and threw stink bombs through courthouse windows. The attorney general of the State said the perpetrators of these disturbances were normally decent, law-abiding citizens. In the crisis the Governor had to decide between rule by troops or rule by reason, between satisfying the mortgage under the defaulted capitalistic system or protecting the people whose character and enterprise were the most essential ingredients of that system and who, if the militia was called would compose the militia. In 1932 corn was quoted as low as 8 cents a bushel, oats 2 cents, wheat 29 cents, eggs at 7 cents a dozen, and butter at 10 cents a pound. These meant economic chaos for farmers. In its next important industry—mining—Minnesota, normally producing 60 percent of the iron of the Nation and 30 percent for the world, was down to less than 15 percent of normal in 1932.

In the Supreme Court the attorney general said most persons on farms couldn't get enough to support their families and pay taxes and mortgage interest. He said disaster had hit lumbering, manufacturing, and other industries. In one county tax delinquencies had reached 78 percent and towns, school districts, and cities were practically bankrupt.

The Minnesota Supreme Court held that if the legislature could adjourn the constitution in time of pestilence it could do so also under these conditions. The Hughes decision was that Minnesota had done the right thing when it held this economic calamity to be in the same category as public calamity by fire, flood, or earthquake. It was bolstered by 1921 Supreme Court precedents which Justice Holmes read. These Holmes cases were from New York and Washington and involved the right of the community to permit tenants to retain possession of living quarters during a housing shortage. They were not far away from days when veterans of World War I sold apples on the streets.

The Hughes decision came near to the recognition of a rebellion or local revolution, for it said there existed a living reserve, sovereign power in the people to surmount emergency and to safeguard the economic structure on which the good of all depends; and further that the constitutional protection of a contract—and a contract means all business—"presupposes the maintenance of a government which retains adequate authority to secure the peace and good order of society. In other words what good is your contract, what good is your whole business structure if you don't have a government to make it good?

Of course, whenever the police power is used in such an emergency it has been established by legislation and approved by the courts to continue only temporarily, pending the end of the emergency. But precedent piles on precedent, even after the chaos of emergency is over. And that is happening now. Since the decision was read in 1934 by Chief Justice Hughes in the Minnesota case (known as *Home Building & Loan Assn.* v. *Blaisdell* (U. S. 290, 398)), it had been cited up to the end of February of this year in 133 cases in the Federal courts involving matters of constitutional law, emergency legislation, State powers, construction of contracts, foreclosures, delegation of legislative authority, legislative powers, rules of interpretation, and the means test. In addition it had been cited in 311 cases in 43 State courts, 62 times

UNIVERSITY OF MICHIGAN LIBRARIES

in New York, 25 in New Jersey, 24 in California, 17 in Minnesota, and 15 in Michigan. These States are the leaders. There must be in the pages of those court decisions many situations that will help the press understand the things of common knowledge that once distressed the people so grievously, that still keep them on their guard and that lie deep in their conscience when they look upon politics, upon election decisions, and the other institutions of our noble country, including the press—and the press is big business, according to William Allen White.

The issues in these court cases, luckily for all of us, remain in the economic area. In that area, the police power is in use and stands ready for further use. My own opinion is that the people are much more disturbed about the things that created need for the use of the police power than the press has understood. Can we as a people devise methods of live and let live in our daily enterprises so that the people will feel certain that capitalism will always function as a system to make more and more capitalists? I think the people would like more constructive leadership from the press in getting the answer to that. I am afraid that too many citizens feel that in its fight for a free press, the press thinks too much of its own economic welfare.

Meanwhile, we here in this room must be aware that if capitalism stumbles in its job, if the police power is called upon too often as a tool to keep capitalism on the beam, there may come a day and there may come individuals wild enough to attempt to extend the police power even into the Bill of Rights. There must always be a living power in the people to protect and help themselves, but they must be a free people and they must be conscious of the burning devotion of their free press to their prosperity and happiness, a press sincerely and courageously searching, asking questions, and unselfishly seeking the right answers.

Frances Persons Carroll

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Monday, June 6 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Orlando Tragedy in Far-Off Munich—and Happiness Lost," written by Martin Andersen and published in the Orlando (Fla.) Sentinel, together with a letter from Mrs. Carl J. Friedrich, carrying a beautiful tribute to a young lady from Orlando who lost her life in Germany.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

TODAY—ORLANDO TRAGEDY IN FAR-OFF MUNICH—AND HAPPINESS LOST

(By Martin Andersen)

She was only a little girl, but she admired the antebellum columns of the old Dr. Persons home, which once graced South and Main, across from the First Methodist Church.

Her daddy, the fondest of devoted parents, indulged his daughter, bought the house, razed it, moved it to a more scenic spot out in Lancaster Park and there reerected it, piece by piece.

Dr. Persons was not only modern Orlando's first physician who could administer something more than pink pills and the juice of a sassafras root, but he was an educated, cultured man. He had an eye to beauty, in architecture, in medicine, and in citizenship.

And this little girl came along and acknowledged the good old practitioner's architectural talent, long after he was dead. And her own daddy, not so slow on the mental pick-up himself, acquiesced to her wishes, * * * and now this house with its handsome Grecian columns lives as a sort of a memorial to a happy youth between father, mother, and daughter.

When young men marry they dream of a son to carry on their name, their ego, their fortune if any.

Other men are fathers of daughters alone and love them quite as much—forgetting the vanity that goes with progression of one's own name.

Such was the father of this daughter.

They were great companions. He taught her to ride horses. At this she became proficient, so much so that we recall her in the Macon blue ribbon exhibition of 1940 when Mr. Adolphus Keene carted his stables to that city for exhibition.

She was quite an athlete, but also studious. She was an honor society student in the Orlando High School and she went on to Florida State College, and to fashionable Smith College.

But with all of the attention foisted upon this fair and brilliant daughter by father and mother, she was quite a democratic child. She was interested in all people, sympathetic and patiently listening to her elders and carefree and jovial to her own age.

We saw her as a child. A kid we call them, more out of reckless habit than anything else.

And, once you see a person as a child, particularly a girl, they never seem to grow up.

Age stands still for the aging, and it is almost inconceivable that youth ever attains majority for marriage, babies, or death.

Then we used to see her at the country club. Home from Tallahassee or Smith up in Connecticut for the holidays. Just a fleeting glance of a pretty young woman. And then she was gone, to disappear for another year.

And then her wedding. Travel and a home in the great metropolis of New York. Travel across the ocean to Europe. And somewhere there in between a child was born.

The youngster we knew was now almost a matron, living in war-away Munich, but not too far from fabulous Vienna nor too distant from the Swiss mountains. Here is ideal living among the world's most charming scenery, music, and food.

The cable came Thursday. The soldier-officer who read it to the mother did not know her but he made it as soft as he could. But how can you break tragic news in velvety words?

The mother, who was about to be reelected president of her favorite club, thought the daughter, ever mindful of her parents, was calling from far-off Austria to compliment her.

Instead, there was the business voice of the soldier-officer, who tried to be courteous and who tried to do it right. But, as our own father told us when our mother died, after we had said: "Everything will be all right." He answered: "How can anything be all right now?"

The news of her death spread quickly about town. Because this is that kind of a town. It is a town of sorrow and sadness when tragedy falls, as well as it is a town of joy when babies are born and everybody comes out all right.

The town is neither too large, nor too small for sympathy. Neither too small nor too large for everybody to know the happy families. The love and companionship of father, mother, and daughter.

The town is so small, so intimate and its heart beats so warmly for its own people, that on occasions such as this, one need not even mention names for the whole area to know that a mother and father have lost a daughter.

For this was her town, her own neighborly home, where she grew up as everybody's friend. * * * And her town is sorry and mourns with her dad and mother.

CONCORD, MASS., *November 17, 1948.*

DEAR SIR: Your column "Today" with its heading "Orlando tragedy in far off Munich" was sent to me because I am one of the many who loved Frances Carroll.

In the beautifully moving expression of the grief we all feel it seems to me that Mr. Andersen is overwhelmed by the loss of the enchanting little girl and perhaps does not realize the even greater loss it is to a still larger circle that this wise and radiant young woman has been taken from us.

I spent a few days with Frances and Charles Carroll in July in their home in Munich and I know that all of you who loved her would have rejoiced as I did to see how serene, harmonious, and competent she was in the midst of the shattered world around her. For her surroundings in Munich were not those of former European gaiety and ease. She lived among hopelessly ruined cities, starving, desperate people, muddled administration, corruption, evil, misery, physical suffering, and spiritual chaos. But wherever she came there was light. The members of the American community took her to their hearts at once. Many who had become dismayed because of the conditions felt a new courage because she was there. The Germans whom she came to know and many of whom she helped felt, too, that a new hope had come. One woman told me that just the sight of Frances helped her forget the years of Nazi terror, the bombings and the undreamed-of privations.

For she did not go over there for fun. She did not go because she had to, nor, as so many American women have gone into Germany, to enrich herself and have an easy life, to buy pearls and china with a few cigarettes. She scorned the black market purchasing all around here and instead of enriching herself with her cigarette ration she gave it away. She went because she shared her husband's enthusiasm to help rebuild a shattered world, to do what they could to show that Christianity and decency were alive in America. Many women over there have not been able to "take it," they have become neurotic and gone home, many have refused to go at all, thus depriving our military government of some very able men, who refuse to go without their families. But not Frannie. She learned German so that she could handle her household better, she pitched in wherever she could, and her only regret was that there was so much she wanted to do and she couldn't find time enough.

Here too, in Harvard, where they spent only a few months, there is a hushed, aching silence. All who knew her grieve with her parents, her devoted husband, and the exquisite little daughter that she so loved and so needed should be taken.

Sincerely,

LENORE PELHAM FRIEDRICH
Mrs. Carl J. Friedrich.

Aviation Agreement Between United States and Canada

REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. HINSHAW. Mr. Speaker, on last Thursday, June 2, during the annual convention of the Aviation Writers Association, that organization adopted a resolution calling attention to the fact that an aviation agreement between the United States and Canada was being conducted in complete secrecy in New York, and recommending that certain publicity should be given to such negotiations.

They also appointed a committee to call upon the Assistant Secretary of State and the Chairman of the Civil Aeronautics Board to present the resolution. On that committee was Mr. Albert Hughes, of the Christian Science Monitor; Mr. Charles Corddry, of the United Press; and Mr. John Stuart, of the New York Times. On Friday afternoon, June 3, they made the visit and were told by Mr. Barringer, of the State Department, and the Civil Aeronautics Board Chairman that they perhaps ought to do something about the recommendations in the resolution. The writers made certain suggestions, namely, that before the negotiations resumed the American delegate be authorized to brief the press, and that if and when the meetings were resumed in New York a press officer be authorized to reveal their progress. Mr. O'Connell answered that "maybe we ought not to hold the negotiations in New York."

The very next morning it was announced in the press that the agreement had been adopted, which I understand is pretty much in violation of the statements that were made to these press people. The agreement, according to reports, was not at all in favor of the United States. It exchanged one United States horse for one Canadian rabbit. That is not unusual. The United States seems never to win in international negotiations, let alone break even. Perhaps we should revise the law to provide that after such negotiations resulting in an agreement, the agreement should be submitted to the Congress for approval before it can become effective.

Mr. Speaker, the resolution of the Aviation Writers Association follows:

Whereas the Aviation Writers Association has been informed that the negotiation of an air agreement with Canada has been carried on with complete secrecy in New York, even the attorney for the Air Transport Association having been threatened with exclusion from the meetings should he apprise his clients of their progress; and

Whereas the signature of a single individual acting on the authority of the President in foreign affairs makes any agreement by the United States binding to the probable extent that it cannot be reviewed by the courts; and

Whereas the vital interests of the air carriers of the United States and their substantial property investments are thus put in irrevocable jeopardy without either they themselves or the public they serve being apprised thereof until too late for argument or public protest; and

Whereas the hands of the negotiators for the United States might well be strengthened were it publicly known that American interests were subjected to excessive Canadian demands: Now, therefore, be it

Resolved by this convention of the Aviation Writers Association, That the departure from precedent set at Bermuda and other important air agreements by which interested parties, the press, and the public were promptly and fully and daily advised of the progress of the negotiations, is regarded as a practice dangerous to the national interest and policy; and be it further

Resolved, That the president of the association be empowered to appoint a committee to present this resolution as promptly as possible to the Chairman of the Civil Aeronautics Board and to the responsible officer in the State Department and to request of them in the most vigorous terms that a competent press officer be assigned to these negotiations in order that knowledge of their progress may be made properly available to press and public.

Mr. Speaker, the committee appointed was Albert Hughes, of the Christian Science Monitor; Charles Corddry, of the United Press; and John Stuart, of the New York Times. They reported to the last meeting of the association, late on Friday afternoon, that the two officials concerned had received the resolutions and promised to consider the suggestion for better coverage on resumption of the negotiations.

Are We Headed Toward a Socialist Economy?

REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. KEEFE. Mr. Speaker, on June 2 I addressed the House on the subject, Are We Headed Toward a Socialist Economy? In that speech I quoted at length from a book entitled "Strategy for Democracy," written by Mr. J. Donald Kingsley and Mr. David W. Petegorsky in 1942. Mr. J. Donald Kingsley is Assistant Administrator of the Federal Security Agency. He presented the administration's principal argument in support of compulsory health insurance to the Senate committee.

On June 3 I received a communication from Mr. Kingsley in explanation of his attitudes as expressed in this book and his subsequent change in views. From Mr. Kingsley's letter it is clear that he has changed his views in the light of new experience. In complete fairness to Mr. Kingsley I desire to extend these remarks and incorporate therein his letter of June 3 and my reply thereto.

FEDERAL SECURITY AGENCY,
Washington, June 3, 1949.

Hon. FRANK KEEFE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I have studied with natural interest the speech which you made in the House on June 2, entitled "Are We Headed Toward a Socialist Economy?" In that speech you undertook to portray me as a proponent of Marxian philosophy and an advocate of state socialism. This you did upon a basis of skillfully selected quotations from a book to which I contributed more than 8 years ago. All but one chapter of that book was, in fact, written before Pearl Harbor at a time when we were just emerging from a prolonged and disastrous depression, and when the Nazis had all but engulfed western Europe. Upon the basis of your interpretation of that book, you drew your own conclusion that I would then have viewed with approval "the advent of communism and the ultimate adoption of the Marxian philosophy here in America as the only ultimate solution for the benefit of the common man."

You have, of course, every right to your own opinion. As a matter of fact, however, I am now and have always been unequivocally opposed to communism in any form. My record as an anti-Communist liberal is clear and, in fact, the Young Communist League in Ohio issued a pamphlet attacking me as a warmonger during the period of the notorious Hitler-Stalin pact. What, in truth, I advocated in the book to which you referred was a mixed economy modeled in large part upon experience with the Tennessee Valley Authority.

There is, however, no useful purpose served by a debate over the public policies I did or did not favor in 1941. That was a period of considerable soul searching for most of us. A great deal of water has gone over the dam since Pearl Harbor and in common with most other people I have changed my views in the light of new experience. Few intelligent people, I dare say, would care to stand today upon positions taken in 1941. Indeed, with the present pace of events, even a lesser number of years can make a great difference. I am reminded, for example, that Senator TAFT, from my own State of Ohio, vigorously opposed Federal aid to education a few years ago, although he is today one of the leading proponents of that measure.

Moreover, policies which might commend themselves to reasonable men in times of war and national crisis would be rejected by those same men at other times. I certainly do not favor the nationalization of any industry, nor has my own governmental experience assured me of either the practicability or the desirability of a planned economy. On the contrary, my experience in the Office of War Mobilization and Reconversion utterly convinced me that our economy is too complex and too sensitive to lend itself to central planning and control without loss both of initiative and of the freedom which I cherish above all else in America. For these very reasons, I have advocated social insurance as a means of providing an adequate economic base for the operation of our voluntary hospital and medical services.

As a matter of fact, I have come increasingly to believe in the maximum possible amount of decentralization. I am sure you know this, because you and I have discussed this philosophy as it applies to the administrative organization and the operations of the Federal Security Agency.

The discussion of political and economic philosophies can be a long process. To save time—and since you raised the question of my current views in the course of your speech—let me state as unequivocally as I can that I believe with all my heart in the fundamental political and economic principles upon which American democracy rests; that I am not a Marxist and that I do not favor the nationalization of industry or of medicine. Moreover, I am profoundly anti-Communist and fully support—and have supported—our present foreign policy, including the Greek-Turkish aid program.

UNIVERSITY OF MICHIGAN LIBRARIES

As a matter of fact, I would have thought that my present position could have been readily ascertained from my public utterances. As a public official, my views are a matter of record and are widely known. In the course of the last few years I have appeared before committees of the Congress on numerous occasions and have taken public positions on many current issues. And since you have not questioned my integrity or sincerity, I would suppose that these more recent utterances would provide a better indication of position than those made far earlier. Moreover, the record will hardly support your suggestion that in some sinister fashion I undertook to "bore from within." I have never at any time sought Government employment, and I have remained in such employment only after considerable urging by my superiors on successive occasions.

My influence upon the national health program of the Truman administration, or on the health proposals of Mr. Oscar Ewing, has been, I should say, negligible. The original health insurance legislation was introduced in 1938, 4 years before I entered Government service. President Truman first urged adoption of his health program in November 1945. At that time I was Director for Manpower in the Office of War Mobilization and Reconversion and had no connection whatever with health matters. I came to the Federal Security Agency, as you know, at the end of December 1947, long after a program of national health insurance had been repeatedly urged in the annual reports of this Agency. What I have done is to support, as best I can, the administration's program, in which, of course, I believe.

I have always appreciated your fairness and courtesy in my official dealings with you, and I hope that you will be so good as to insert this letter in the CONGRESSIONAL RECORD. I am sending copies of it to the Honorable JOHN W. MCCORMACK, the Honorable AUGUSTINE B. KELLEY, and the Honorable ANDREW J. BIEMILLER, all of whom participated in this discussion.

Sincerely yours,

J. DONALD KINGSLEY,
Assistant Administrator.

JUNE 4, 1949.

Mr. J. DONALD KINGSLEY,
Assistant Administrator,
Federal Security Agency,
Washington, D. C.

MY DEAR MR. KINGSLEY: I acknowledge your letter of June 3 delivered to me by messenger this afternoon. I shall be most happy to insert this letter in the CONGRESSIONAL RECORD.

I am exceedingly pleased to note your contention that the period during which your book was written was a period of considerable soul-searching for most of us. A great deal of water has gone over the dam since Pearl Harbor, and in common with most other people, I have changed my views in the light of new experience. I am also pleased to note your statement: "Moreover, policies which might commend themselves to reasonable men in times of war and national crisis would be rejected by those same men at other times. I certainly do not favor the nationalization of any industry nor has my own governmental experience assured me of either the practicability or the desirability of a planned economy." I note with great interest and approval the other statements in your letter that you are not a Marxist and that you do not favor the nationalization of industry or of medicine and that you are profoundly anti-Communist.

Your letter is a very proper statement of renunciation of arguments and philosophies expounded in your book written in 1942 from which I quoted at length in my June 2 address to the House. I may add that in preparing that address I scrupulously confined myself to exact quotations of whole paragraphs in order that the contention could not be made that I have lifted single sentences or words out of their natural context. I made it perfectly clear in that statement and the debate which followed that at no place did I accuse you of subversive intent. I am glad to reiterate that my contacts with you have demonstrated the fact which I referred to in my address, namely: that you displayed unusual administrative capacity. I may say to you that if you conceive the period in 1941 to have been one during which there was considerable soul-searching, I consider the present situation facing the world and our country to be equally as important and critical, and as calling for continued soul-searching by intelligent citizens who view present and prospective political and economic trends with grave misgivings.

Very sincerely yours,

FRANK B. KEEFE, *Member of Congress.*

Address of Mr. Archibald McIntosh

EXTENSION OF REMARKS
OF
HON. HARRY L. TOWE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. TOWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Mr. Archibald McIntosh, vice president, Haverford College, Haverford, Pa., at the sixteenth annual commencement exercises of Bergen Junior College, Teaneck, N. J., Saturday, May 28, 1949:

If one is to judge from what he reads in the daily papers, in the periodicals, and in recent books, he will conclude that nobody is satisfied with the job that education is doing today. This conclusion will be even further strengthened by talking to students.

A wholesale and sweeping condemnation of education will not, however, solve our problems. Criticism alone is easy. Constructive criticism, more difficult.

If we are to arrive at adequate solutions, we must define our aims and make sure of our direction. We must have a clear idea of just who is meant when we say "we," whether it is the students, the parents, the people in education, in government, in industry, or in one lump—all Americans.

As a nation we say most vociferously that we believe in education. But one cannot have worked in this area without being amazed at how uninformed so many are about what is happening in our schools and colleges today. How complacent so many are about our present practices; how smug in the belief that the acquisition of a degree must of necessity lead to better and bigger things.

Recent explorations in the realms of science have produced results which have surprised the scientists as much as they have bewildered us by the problems which these miracles pose, and the complexities with which they now surround us.

If a nation faced with the problems of an atomic age wants to pass the buck to education—and you will recall that I have just said that we aren't very clear what education is in more than very general terms—then it is high time that as a nation we understand more exactly what our present status is.

A determined and thoroughgoing attempt should be made to inform the public not only of the shortcomings and deficiencies of our educational system but also of those things which are being well done. This information should be conveyed in simple, clear, direct terms so that all may understand. (Dr. Benjamin Fine, who was awarded a citation here several years ago, has made a notable contribution in this respect.)

No matter how satisfactory a plan may be devised, the day will come, sooner rather than later, when we shall have to count the cost. The plant, the equipment, the books, are all important, but competent well-trained teachers are essential. At the college level I know from experience that a young man who has invested 8 years or more and considerable money in his education will have a difficult decision to make when he must choose between an appointment to a college faculty or a position in government or industry at twice the salary the college can offer. In the last few years we have had increasingly a demonstration of what that decision is likely to be.

During the war certain of the Army and Navy educational programs showed startling results and the cry immediately went up, why can't the colleges and universities learn some lessons from this? The answer is that the colleges and universities did learn some important lessons, chief among which was the demonstration of what it is possible to do if money is no object.

If we really believe that education is of prime importance in our scheme of things, we surely should be willing to pay the price. In terms of our national expenditures for a great variety of things which we do not hold nearly as important as we do education, we gladly pour out millions, and indeed billions, of dollars.

As a demonstration of what can be accomplished one need only cite the GI bill. This experiment has produced many interesting results, among the most significant of which is the amazing records made in college by men who under normal circumstances would not have been able to attend.

In this country we pride ourselves on doing things on a large scale and in the grand manner. In an area which we regard as vital to the welfare and the best interests of the Nation, now and in the future, certainly double the amount we now spend does not seem an unreasonable price to pay for the results which we could properly expect.

Linked directly with the problem of cost is that prime essential to which I have already referred—well-trained teachers. Basic in this problem is the building of an attitude, a frame of mind, a belief and sure conviction that the teaching profession is an honorable and attractive one, and what is more, that there shall be adequate recompense.

In the examination of our status during the last few years, there has been a growing realization that all is not well as regards the training of our teachers. Dean Carman of Columbia was outspoken on this point not long ago. He threw a major portion of the blame on the universities themselves, and possibly with considerable justice, but I am of the firm conviction that the responsibility goes much further than that. In this country there are millions of citizens who have been through the educational process in some form or other (and are therefore ipso facto experts on education), who should realize that if they have responsibilities under a democratic form of government it is some concern of theirs how the people who do the teaching, from primary school through the graduate schools, are trained and how they are paid. Frequently one hears the sentiment expressed that "what was good enough for me is good enough for my son or daughter," a reversion to the good old days. One

also hears the wish expressed that perhaps soon we shall get back to that ideal state we were in before the war. Of course, we shall never do that, and on mature consideration would not want to if we could.

The changes that have come have profound implications as regards teachers and teaching. Faced with new and strange and complicated situations we must have teachers who are aware that a new and different approach is necessary, that the tempo and the needs of the students have changed with the tempo of the times. If the educational process itself is to be adequate to the new demands put upon it, then we can no longer safely take it for granted that a long-established and deeply rooted method of training our teachers and our professors will provide us with the faculties which our times demand.

Another matter of vital concern is what the teachers shall teach—what is the curriculum to be?

In an age which becomes daily more complex it is difficult to give a simple answer to that question. One principle, however, seems to be basic. The broader the curriculum is, the more it gives a student a broad base on which to rest any future specialization, or the self-education which he will acquire after college, the better equipped he will be to face the maze of opportunities and the myriad problems which will confront him.

Some undergraduates are greatly concerned about practical courses which will insure them good jobs immediately upon graduation. What they often don't stop to consider is whether, from the nature of the courses they have had, they won't be in those self-same jobs 15 or 20 years after graduation simply because they lack the flexibility and the habit of thinking in larger and more important terms.

Increasingly it is important to see relationships. Gradually the realization is growing that a curriculum which tends to compartmentalize offers no adequate solution. Our students want to know what the score is—or at least, how to figure out what it is; and a smattering of one subject here and another there with no visible relationship between the two will not give them the answer.

The acquisition of facts may, up to a certain point, be a necessary part of the curriculum, but an acquaintance with ideas and concepts lies at the heart of the matter. For years the claim has been made that one goes to school or college to learn to think. Too often a critical examination shows that what actually happened was the acquisition of a lot of factual material with little enough emphasis on how to deal with these facts.

In such a brief space one dare not attempt to be specific about what should go into the curriculum, but there is no question of the general nature of its content. It must deal with ideas and their relationship, it must be as broad as conditions will permit, and to be worth while it must have real vitality.

Underlying all that I have said thus far is the assumption that we area dealing with students, and what is more, with students who are interested in getting an education.

Why do students go to school and college? In some instances it is safe to assume that they go because the State laws require them up to a certain age to do so. In others, because their parents insist. They may go because their friends are going; because it is socially acceptable; because they want training for a specific job or profession; or they may conclude that because they have to live with themselves the rest of their lives some education might improve that prospect.

As we study the various components of the educational process we talk about intelligence, about aptitude and ability, about interests, with a certain assurance that may or may not be warranted, but over and above these is that component which makes these other things significant and meaningful. What is it that furnishes the drive to do the job? Why does he want to study? What is the urge that pushes him on? What are his motives?

As yet we know all too little about these things, though daily we have demonstrations of what powerful motivation will do in driving a man on and, at the same time, in compensation for lacks in one direction or another. The experiment at Brown University a few years ago with the group of veterans, who according to the records had not had adequate college preparation, but who through sheer drive forced themselves in a period of 6 months to begin to do creditable college work, is an illustration. During the war there were countless examples of previously indifferent and bored students who under the urge of a specific necessity developed amazing skills and competence.

Part of our job in facing a new age with its new and interesting possibilities is the cultivation of attitudes which shall help to furnish our young people with a real and burning desire to attack their education with eagerness and with enthusiasm.

If you are interested in the thoughtful observations of a keen student of our American education I refer you to Benjamin Fine's book, Our Children Are Cheated. If you are interested in what one college administrator thinks about admissions and what happens after admission I refer you, with some hesitancy to my book, Behind the Academic Curtain. As we progress through the next few years and more of us become more and more concerned about improving our educational process, I hope we shall not be able to say, "Our children are cheated behind the academic curtain."

A Weaker Voice

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. STEED. Mr. Speaker, I think I am the only Member of Congress who has ever had the privilege of serving this Government in any type of work such as that now being carried out by the Voice of America. I served overseas during the latter part of World War II with the Office of War Information, whose wartime duties have been absorbed by the Voice of America.

This experience taught me how very vital this program is to this Nation of ours. I wish every Member could have had some of the experiences that came to me. I wish all of them could have learned at first hand some of the things that I had the opportunity to learn.

I am sure, if such had been the case, that this Congress would feel as I do that we cannot afford to underestimate the value of this program in these difficult days of cold war. Propaganda, in a cold war, is just as effective as the atomic bomb can be in a hot war. I am alarmed at the prospect that Congress is about to curtail the funds for the "Voice". I think this would be most ill-advised, because we are only now beginning to realize the benefits of this program. I feel that, if anything, we ought to increase and expand this program now more than ever, even at the expense of doing our saving of funds at the expense of other activities.

I call your attention to the following editorial from the Washington Star under date of June 4, 1949:

A WEAKER VOICE?

The State Department has asked $36,000,000 to carry on the Voice of America and related activities during fiscal 1950. The House has passed a bill reducing that sum by $2,000,000. And now a subcommittee of the Senate Appropriations Committee has made an additional cut of $2,000,000, leaving a total of $32,000,000.

In view of the need for economy, it may well be that all this is sound, and perhaps the Voice of America and our general overseas informational program can be run effectively enough without the money requested. But last year Congress itself created a special commission of five private citizens to look into the subject and make recommendations. Two months ago the commission reported back. The substance of its advice to the House and Senate was that there should be "a much larger expenditure" than $36,000,000 because the effort to tell our story abroad called for "an immediate and broad expansion" in order to cope with the distortions and lies being spread against us in all parts of the world by an able and energetic Soviet propaganda machine spending far more than the sum sought by the State Department.

Despite this, the House as a whole and the Senate subcommittee, far from permitting expansion, have voted for cuts that would weaken the Voice in a way that would enable the Russions to suspend some of their all-out jamming operations against it. Possibly the economy can be justified even so, but Congress would do well to think twice about it before taking final action.

Housing of Dependents of Military Personnel Overseas

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PEWAUKEE, WIS., *June 1, 1949.*
Hon. GLENN R. DAVIS,
House of Representatives,
Washington, D. C.

DEAR MR. DAVIS: I have read a great deal about increasing taxes, Government spending, the budget, etc. I don't claim to know much about these things but from what I observed while in Japan it seems to me a lot of money is being spent that could be used for other purposes, especially in these trying times.

At the present time the tour of military personnel is 30 months. Most of them send for their dependents, dependents including wives, children, mothers, fathers, sisters, or brothers. The dependents are billeted in rest hotels until housing is made available. I have known some families that spent 4 to 6 months in rest hotels before getting a home. This means that the majority of the

UNIVERSITY OF WISCONSIN LIBRARIES

rest hotels are full of dependents, which also works a hardship on military personnel and civilians employed in Japan. If they wish to take a leave or go some place over holidays, it is difficult for them to find a place to go. It is necessary to make reservations, which are limited, quite some time in advance. Very often these reservations are canceled because of the arrival of more dependents from the States.

So, first, there is the expense of transporting the dependents overseas. Second, there is the money expended in building and furnishing all the homes. It seems like an awful waste of money. What is going to happen to all these houses when the occupation pulls out? If military personnel can't be separated from their dependents for a period of 30 months, why don't they shorten the overseas tour? It isn't as if they held the same job for their entire tour because the majority of them don't. At least they didn't at the base I was at.

If this is the situation in Japan, I imagine it must be much the same in Germany.

It seems to me this money could be better spent on housing projects in the United States than overseas.

Very truly yours,

LORRAINE RICHARDS.

Townsend Plan

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. HILL. Mr. Speaker, following is a petition signed by members of the Townsend Club, No. 2, in the Second Congressional District of Colorado, and I wish to present this as evidence of the interest in the passage of H. R. 2136.

We, the undersigned citizens of the Second Congressional District of the State of Colorado, respectfully request the passage of H. R. 2135 and 2136 known as the Townsend plan and respectfully request your cooperation and help.

E. O. Smith, Mrs. Hattie Smith, Chas. Gaston, James H. Parker, Mrs. J. H. Parker, Effie Mae Wallace, W. R. Lynn, B. B. Marshall, Gertrude May Marshall, W. S. Miller, Mrs. Meta Perry, Mrs. Fred Steeves, Fred Steeves, Mrs. Bob Burkholder, Bob L. Burkholder, Carl Christensen, Mrs. Annie Christensen, Pauline Bussard, Mrs. Mamie Blumenthal, Mrs. Fred Blumenthal, C. B. Liresay, John Shaffer, Aldrich C. Buskohl, Fila V. Buskohl, Wm. F. Ehmann, P. S. Rotin, W. L. Jarvis, Mrs. W. L. Jarvis, Lavina Van Pelt, L. F. Marshall, Philip Dinig, Fort Collins, Colo.; Ben Davis, Loveland, Colo.; Robert W. Sanderson, Mrs. Mary Skold, Mr. and Mrs. A. F. Reinhardt, Effie M. Kennedy, Fort Collins, Colo.; Mrs. Davis Brunnage, Bellvue, Colo.; C. M. Garrett, Mrs. Alice Phipps, Mrs. J. H. Fritz, Mr. Loris L. Morrison, Mr. George Hardwick, Mrs. George Hardwick, R. E. Kimble, Mrs. Lyle Montgomery, Maude Hodson, Mamie Ocherman, A. L. Reynolds, M. L. Parish, Jean Parish, Everett M. The Basing-Point System and the State of New York—Cement Trust Forces Most of New York To Pay Phantom Freight—Basing-Point Bids to New York State Highway Department Show Same Identity as in Other States—Empire State Has Great Natural Advantages for Manufacture of Cement but Consumption Exceeds Production—Small Business Must Be Protected From Basing-Point and Moratorium Bills

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. PATMAN. Mr. Speaker, the Empire State has been one of the brightest stars in our United States since the earliest colonial days. New York's contribution to the welfare and progress of our country is unquestioned and admirable. New York's mountains, valleys, lakes, and rivers are rich in the gifts of nature and her cities and towns bear witness of the imagination and ingenuity of her citizens over the past 300 years. The greatest city in the world marks the progress of the trade and commerce for which New York is famous. But with all her advantages, her progress and initiative, New York, like other States, has paid a high price for the artificialities inherent in the system of basing-point pricing.

There is perhaps no State in the Union more favorably blessed with natural resources for the manufacture of portland cement than in New York. Yet because of the operation of the basing-point system it has undoubtedly limited the development of cement-making facilities so that for many years the manufacture of cement within New York State has been far less than her consumption of this product. During the years 1939 and 1940, New York's deficiency as compared to consumption was nearly 5,000,000 barrels annually. In the postwar years of 1945 and 1946, production and consumption were nearly in balance, however, New York ships a large quantity of cement into the New England area so as a matter of fact it is a logical assumption that a deficiency existed during those years for the reason stated.

BASING-POINT PRICES TO NEW YORK DEPARTMENT OF HIGHWAYS REVEAL SAME IDENTITY AS IN OTHER STATES

The following cement-producing companies operate in the State of New York:

Catskill: North American Cement Corp., New York.

Alsen: Lehigh Portland Cement Co., Allentown, Pa.

Hamburg: The Federal Portland Cement Co., Inc., Buffalo.

Buffalo: Lehigh Portland Cement Co., Allentown, Pa.

Cementon: Alpha Portland Cement Co., Easton, Pa.

Glens Falls: Glens Falls Portland Cement Co., Glens Falls.

Greenport: Lone Star Cement Corp., Albany.

Howes Cave: North American Cement Corp., New York.

Hudson: Universal Atlas Cement Co., New York.

Jamesville: Alpha Portland Cement Co., Easton, Pa.

Portland Point: Pennsylvania-Dixie Cement Corp., Nazareth, Pa.

Several of the above-operating companies are the giants of the Cement Trust. Such companies have strategically located plants all over the United States. These locations in the various States enable relatively small groups of companies to control the price and policies and the distribution of cement throughout our United States. One of the companies, Universal-Atlas Cement Co., is a subsidiary of the United States Steel Corp. which also operates plants at Universal, Pa.; Buffington, Ind.; Leeds, Ala.; Hannibal, Mo.; Duluth, Minn.; Independence, Kans.; Waco, Tex.; Osborn, Ohio; and Northampton, Pa.

Another of the big boys is the Lehigh Portland Cement Co., of Allentown, Pa., which operates two plants in the State of New York, one at Alsen and one at Buffalo; and also operates one plant in Alabama at Birmingham; one in Illinois at Oglesby; one in Indiana at Mitchell; one in Iowa at Mason City; one in Kansas at Iola; one in Maryland at Union Bridge; three plants in Pennsylvania at Fogelsville, Ormrod, and Sandts Eddy; one plant at Fordwick in Virginia; and one at Metaline Falls in Washington; a total of 13 plants. The Alpha Portland Cement Co., the Lone Star Cement Corp., and the Pennsylvania-Dixie Cement Corp., all have plants scattered around the country.

All of the foregoing companies were listed as members of the Portland Cement Association in the association's Cement and Concrete Reference Book of 1948. These companies were also members of an organization called the Cement Institute at the time the Federal Trade Commission instituted proceedings against the Cement Institute and which finally resulted in the decision of the Supreme Court on April 26, 1948, outlawing the basing-point system of pricing. Members will recall the lack of competition in bids to Federal agencies and to the several States as evidenced by the identity of the bid prices throughout the years.

The situation was no different in the State of New York than in any other State and in witness thereof I present for the information of the Members two tables to various destination points within the State of New York which show the identity of bids inherent in the basing-point system. The tables follow:

The State of New York Department of Public Works, Division of Operation and Maintenance; Highways. Specification No. CA–468, letting of Mar. 28, 1947, for regular portland cement in paper sacks, item 15, standard specifications of the New York State Department of Public Works, Division of Highways, adopted Jan. 2, 1942

[Discount: 10 cents per barrel, 15 days]

Item No.	Destination	Bidder							
		Universal Atlas Cement Co.	Alpha Portland Cement Co.	Federal Portland Cement Co., Inc.	Glens Falls Portland Cement	Lehigh Portland Cement	Lone Star Cement Corp.	North American Cement Corp.	Penn-Dixie Cement Corp.

21	Malone	2.97	2.97	2.97	2.97	2.97	2.97	2.97	2.97
22	Lowville	2.86	2.86	2.86	2.86	2.86	2.86	2.86	2.86
23	Watertown	2.78	----------	2.90	2.78	2.71	2.78	2.78	2.78
24	Ogdensburg	2.93	2.93	2.93	2.93	2.93	2.93	2.93	2.93
25	Binghamton (Montgomery St. siding)	2.75	2.75	2.75	2.75	2.75	2.75	2.75	2.75
26	Oxford	2.78	2.78	2.78	2.78	2.78	2.78	2.78	2.78
27	Hancock	2.75	2.75	2.75	2.75	2.75	2.75	2.75	2.75
28	Oneonta	2.81	2.81	2.76	2.81	2.81	2.81	2.81	2.81
29	Monticello	2.75	2.75	----------	2.75	2.75	2.75	2.75	2.75

The second table of bids received approximately 1 year later at the letting of April 29, 1948, on specification No. CA–714 for portland cement in paper sacks, item 15–2, standard specifications of the New York State Department of Public Works, adopted January 2, 1947.

These bids, although taken 3 days after the Supreme Court decision, undoubtedly had been prepared prior to the decision on April 26, 1948, because the same identity of prices exists in this table as in the table above. Subsequent to the Cement decision, the pattern of bid prices changed considerably, evidencing the first competition in the sale and distribution of cement in many, many years. Many of the tables that I have included for the RECORD have been such tables. The second New York table for the letting of April 29, 1948, follows:

[Discount: 10 cents per barrel, 15 days]

Item No.	Destination	Bidder						
		Alpha Portland Cement Co.	Federal Portland Cement Co.	Glens Falls Portland Cement Co.	Lehigh Portland Cement Co.	North American Cement Corp.	Universal Atlas Cement Co.	Lone Star Cement Corp.

WITH MANY CEMENT PLANTS NEW YORK PAYS PHANTOM FREIGHT TO THE CEMENT TRUST

The foregoing tables, of course, represent relatively small quantities of cement. But over the years with the progress of the times New York and its citizens have purchased millions upon millions of barrels of cement for the construction of its great public works, its lofty Manhattan skyscrapers, and the thousand-and-one other projects which have made the Empire State great and strong.

However, in the purchase of cement, with a great number of mills located within the State, New York has paid its share of phantom freight to the cement trust. Like all other States which have cement mills within their borders, New York had certain basing-point mills and the State was thus divided up into favored areas by the cement trust. This division of territory meant that a great many destination points would have been charged prices which included phantom freight and that no destination point would be charged a price based on less than the actual freight. Phantom freight, as you know, is the difference between the actual freight charges from the point of shipment and the freight charges from the more distant basing point, which is added arbitrarily to the f. o. b. mill price to make a destination price. The following destinations are used as examples of points within New York which, under the basing-point system, paid phantom freight before the system was outlawed by the Supreme Court. The rates used to compute the freight on cement per barrel were those as published in tariffs on file with the Interstate Commerce Commission and the public service commission in New York, effective August 15, 1935, as compiled and published by the Cement Institute Freight Rate Bureau, Bethlehem, Pa., and include emergency charges authorized by the Interstate Commerce Commission in Ex parte 115 until June 30, 1936, unless sooner canceled or extended—Federal Trade Commission Docket No. 3167, Commission's exhibit No. 1110–U. The examples follow:

Destination	Applicable basing point freight charge per barrel	Lowest mill freight charge per barrel	Phantom freight or excess freight per barrel
Richland	$0.59	$0.41	$0.18
Rome	.52	.37	.15
Hudson Falls	.45	.20	.25
Three Mile Bay	.74	.53	.21
Binghamton	.53	.40	.13
Pulaski	.59	.41	.18
Canton	.80	.57	.23
Glens Falls	.45	----------	.45
Howe's Cave	.39	----------	.39
Jamesville	.63	----------	.63
Oswego	.53	.37	.16
Portland Point	.59	----------	.59
Watertown	.72	.47	.25

NOTE.—These examples are only a few out of hundreds that could be cited.

BASING-POINT PRICING SYSTEM NEVER OPERATES TO THE BENEFIT OF THE PURCHASER

There are two salient features in the basing-point system of pricing which should always be kept in mind. These two points are:

First. No purchaser under the basing-point system of pricing ever pays less than actual freight.

Second. Most purchasers under the basing-point system pay more than actual freight.

Why are these statements true? Take the first statement, that no purchaser under the basing-point system of pricing ever pays less than actual freight. If you are located at a destination which has a less or equal freight rate from a basing point in relation to any other supply point and you are in the territory controlled by that basing point, you would then pay actual freight calculated on rates from the basing point. These are the only circumstances under the basing-point system which would reassure you that you were paying only freight charges based on actual freight rates from the shipping point to your destination.

In all other cases under the basing-point system you would pay more than the actual freight charges as stated above, that more purchasers under the basing-point system pay more than actual freight. This situation arises because of lesser freight rates to your destination from a non-basing-point plant or because you may be situated in some other basing-point plants' territory. As an example, you may be a purchaser of cement at Syracuse which is based on Buffalo, which has a much higher freight rate to Syracuse than does nearby Jamesville. Because there is a cement plant at Jamesville purchasers in Syracuse should have the benefit of location and natural freight advantage, but under the basing-point system as it existed in the cement industry prior to the Supreme Court decision in the Cement case all this advantage was wiped out by the artificial basing-point system.

As another example, Ithaca was located in the territory of the basing point, Northampton, Pa., but there was a cement plant at nearby Portland Point, which had a very much less freight rate into Ithaca than did Northampton; or you may have had the natural advantage of being located close by the Glen Falls cement plant. Nevertheless, every time you purchased a barrel of cement from Glen Falls you were charged a price based on the higher freight charge of either Hudson or Alsen, which were basing-point mills.

You could have been very close to a basing-point cement mill and yet pay phantom freight because you were situated in a territory assigned by the cement trust to another mill, a mill which may have had a very high freight rate to your destination. So with this arbitrary division even though you purchased from the close-by mill across this unnatural and artificial boundary you would get no advantage because your freight charges as included in your price would be calculated on the more distant basing-point mill.

Most of the towns and cities in New York State were more distant from the three controlling basing points, namely, Hudson-Alsen, N. Y.; Northampton, Pa.; and Buffalo, N. Y., than from Glen Falls, Howe's Cave, Jamesville, Portland Point, and other mills in the State which were all non-basing-point mills. It therefore follows that all of these cities, towns, and villages located much closer to the non-basing-point mills were unable under the basing-point system as applied in the cement industry to take advantage of the lower rates from the nearby mills.

The Northampton, Pa., territory extended through the State of New York up and along the northeastern shores of Lake Ontario and on up the St. Lawrence River nearly to Lake Champlain. The Buffalo territory was composed of most of the State west and southwest of Syracuse and dipped down slightly into Pennsylvania. The Hudson-Alsen territory took a large pielike slice of the State extending through the eastern border to take in a corner of Connecticut, all of Vermont, New Hampshire, Massachusetts, and a good slice of Maine. Incidentally, Northampton also controlled all of New Jersey and Delaware, the southern tip of New York including all of New York City and Brooklyn, all of Long Island, most of Connecticut, practically all of Rhode Island, and the Cape area south of Boston, in Massachusetts. Certain territory up in Maine was common territory for Northampton and Hudson-Alsen. Of course the fact that there was a cement plant at Rockland, Maine, made no difference. That is another story.

Had there been no basing-point system and had there been free and open competition among the mills concentrated in eastern Pennsylvania and southern New York, the savings on this basic commodity to public and private works within New York State is something for the imagination and the statisticians to play with.

BASING-POINT AND MORATORIUM LEGISLATION DEADLY THREATS TO SMALL BUSINESS

New York, with the greatest population of any State within the United States, has thousands upon thousands of small-business enterprises which have been subjected to basing-point pricing and other artificial price systems for a long time. Not only cement but many of our basic commodities such as steel, glass, clay products, and many others, have been sold and distributed under such pricing systems. The small-business man in New York, or in any other State in our Union, is prepared to hold his own when the markets are free and supplies are not restricted either through pricing systems or territorial divisions. However, as we all know, there is a growing tendency toward the concentration of power in the hands of enormous integrated corporate structures, which day by day further puts a small-business man in peril of his business life.

The attempts which are being made by the industrial giants to induce Congress to pass moratorium bills on our antitrust laws and to legalize the artificial basing-point pricing system are extremely dangerous to our whole economy. Such legislation must be defeated in the interest of the vast majority who will be adversely affected by the weakening of our antitrust laws and the legalization of artificial and arbitrary pricing systems. I do not believe the Congress can assume such a burden and at the same time pay homage to our free-enterprise system.

Statesman Barkley

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid editorial appearing in the Boston Post of May 28, 1949, paying a deserving tribute to Vice President ALBEN W. BARKLEY:

STATESMAN BARKLEY

The annual dinner of the Massachusetts Committee of Catholics, Protestants, and Jews is always a notable gathering. Its purpose makes it so. It sums up the selfless effort which so many citizens from all walks of life are making daily to beat down bias and spread tolerance so that all of us of varying lands and creeds can live side by side in mutual respect and helpfulness, thereby insuring a more wholesome Commonwealth and, as a corollary, a better world.

The meaning and endeavor of the assembly Thursday night was enriched beyond all anticipation by one of the finest orations ever heard. In Boston, a city which since pre-Colonial days has been noted for the eloquence of its preachers, patriots, and public figures, ALBEN W. BARKLEY, the Vice President, made a memorable address against bigotry and the things which deny the constitutional guaranties that "all men are equal."

Cited for outstanding labor for justice for all, along with ex-Treasurer Morgenthau and Gene Tunney, the statesman from Kentucky, without referring to written note, charmed and held spellbound for hours an audience of 1,200 enthusiastic listeners. Yesterday, his manner of speaking was the talk of the town. The famed "Dear ALBEN" endeared himself to people of all shades of politics. On a topic which transcends politics, he spoke superbly and in accents which will echo timelessly, as an American.

Constitutionality of Pending Housing Legislation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. McCORMACK. Mr. Speaker, under consent to extend my remarks, I include a memorandum prepared for me on the law relating to the constitutional power of the Congress in the field of housing, and that pending housing legislation is constitutional:

Article I, section 8, clause 1 of the Constitution invests Congress with the power to "lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defense and general welfare of the United States."

It is true, of course, that the "general welfare" clause is itself not an independent grant of power but rather a limitation on the power to tax. *United States* v. *Butler* ((1936) 297 U. S. 1); *Kansas Gas and Electric Co.* v. *City of Independence* ((C. C. A. 10th, 1935) 79 F. (2d) 32); *John A. Gebelein, Inc.* v. *Milbourne* ((D. Md. 1935) 12 F. Supp. 105; 1 Story, Commentaries on the Constitution (4th ed.) §§ 928, 929). Congress thus "has the great power of taxation to be exercised for the common defense and general welfare." *United States* v. *Gettysburg Electric Ry. Co.* ((1896) 160 U. S. 668, 681). But the power to tax and the power to appropriate the moneys raised by taxation are addressed to the same objects. The latter is qualified to the same extent as is the former. (Brief of Hon. Charles Evans Hughes, 72 CONGRESSIONAL RECORD, 7890, 7892).

As stated in 1 Story, opinion cited, supra, section 976, "The controversy is virtually at an end if it is once admitted that the words 'to provide for the common defense and general welfare' are a part and qualification of the power to lay taxes; for then Congress has certainly a right to appropriate money to any purposes, or in any manner, conducive to those ends." To the same effect, see 1 Willoughby on the Constitution (2d ed.), section 62. Accordingly, it is now settled beyond any real question that under this provision Congress may appropriate and spend money, raised by taxation, for purposes of the national welfare, and that the congressional discretion in selecting the means therefor is extremely broad. *Helvering* v. *Davis* ((1937) 301 U. S. 616); *City of Cleveland* v. *United States* ((1945) 323 U. S. 329); *United States* v. *Kay* ((C. C. A. 2d, 1937), 89 F. (2d) 19), vacated on other grounds (303 U. S. 1). In so doing the only limitation is that Congress must act merely in furtherance of general or national, as distinguished from local, purposes. Ibid; see also *United States* v. *Butler* ((1936) 297 U. S. 1). The discretion in choosing between what is general and what is particular "belongs to Congress" and not to the courts, "unless the choice is clearly wrong, a display of arbitrary power, not an exercise of judgment." *Helvering* v. *Davis*, supra. The line of demarcation may be said to be whether the general problem involved is national in scope, even though the effects of the specific effort or act involved are local in character. *City of Cleveland* v. *United States*, supra; *First Federal Savings & Loan Ass'n of Wisconsin* v. *Loomis* ((C. C. A. 7th, 1938) 97 F. (2d) 831); *Kansas Gas & Electric Co.* v. *City of Independence* ((C. C. A. 10th, 1935), 79 F. (2d) 32). "Nor," the Supreme Court has said, "is the concept of the general welfare static. Needs that were narrow or parochial a century ago may be interwoven in our day with the well-being of the Nation. What is critical or urgent changes with the times." *Helvering* v. *Davis*, supra. It thus has been held that the "general welfare" embraces the use of public funds for local public works (*School Dist. No. 37, Clark County* v. *Isackson* ((C. C. A. 9th, 1937), 92 F. (2d) 768)), the grant of moneys to the States for emergency relief (*Langer* v. *United States* ((C. C. A. 8th, 1935), 76 F. (2d) 817)), and the loans of public money to States and municipalities for public projects themselves local in nature (*Kansas Gas & Electric Co.* v. *City of Independence*, supra; *Ohio Power Co.* v. *Craig* ((1935) 50 Ohio App. 239, 197 N. E. 820); *Carolina Power and Light Co.* v. *South Carolina Public Service Authority* ((E. D. S. C. 1937), 20 F. Supp. 854, aff'd 94 F. (2d) 520, cert. den. 304 U. S. 578)).

In the field of housing, the activities of the Federal Government have uniformly been upheld on the basis of the congressional power under the general welfare clause. Accordingly, the courts have sustained the Home Owners' Loan Act to relieve the distress of mortgage foreclosures and benefit home owners (*United States* v. *Kay*, supra); the creation and operation of the Home Owners' Loan Corporation (*Walker* v. *Home Owners Loan Corp.* ((S. D. Cal. 1938), 25 F. Supp. 589)); the development and operation of low-cost public housing (*United States* v. *City of Milwaukee* ((E. D. Wis. 1943), 49 F. Supp. 436, aff'd 140 F. (2d) 286, cert. den. 322 U. S. 735)); the creation and operation of the Federal Savings and Loan Associations to aid and finance home ownership (*First Federal Savings & Loan Ass'n of Wisconsin* v. *Loomis*, supra); and the condemnation of land and construction for the purposes of a low-cost housing and slum-clearance project (*Oklahoma City* v. *Sanders* ((C. C. A. 10th, 1938), 94 F. (2d) 323)). If any question remained on this score, it was settled in *City of Cleveland* v. *United States* ((1945) 323 U. S. 329). In this case, the lands involved were acquired by the United States by condemnation for low-cost housing projects. The Federal Public Housing Authority then erected low-cost dwelling units which were leased to Cleveland Metropolitan Housing, a State of Ohio authority. The latter sublet the units to tenants for residence purposes.

The appellant contended that the United States Housing Act of September 1, 1937, was unconstitutional because Congress had no power under the Constitution to establish low-cost housing projects. The Supreme Court said:

"A majority of the Court below held the Federal statute authorized by the Constitution. Its reasoning was that even though the evils of bad housing are local in their origin, their effect may become so widespread as to create a menace to the national welfare and that Congress is empowered to deal with the subject in that aspect. The dissenting judge was of the view that the project amounted merely to an embarkation by the Federal Government in a private business and that the Government could not do this in such a way as to immunize the property employed from normal State taxation to support local police and other services required by the community of which the housing project forms a part."

Then, after setting forth certain procedural facts concerning the various cases involved in the pending appeal, the Supreme Court declared:

"Little need be said concerning the merits. Section 1 of the Housing Act declares a policy to promote the general welfare of the Nation by employing its funds and credit to assist the States and their political subdivisions to relieve unemployment and safeguard health, safety, and morals of the Nation's citizens by improving housing conditions. Section 5 provides in part, 'the authority, including but not limited to its franchise, capital, reserves, surplus, loans, income, assets, and property of any kind, shall be exempt from all taxation now or hereafter imposed by the United States or by any State, county, municipality, or local taxing authority.' Section 13 authorizes agreements by the Authority to pay annual sums, not exceeding taxes which would otherwise be paid, in lieu of taxes.

"Challenge of the power of Congress to enact the Housing Act must fail. And Congress may exempt property owned by the United States or its instrumentality from State taxation in furtherance of the purposes of the Federal legislation. This is settled by such an array of authority that citation would seem unnecessary."

Aside from the general welfare clause, the congressional power "To borrow money on the credit of the United States" (art. I, sec. 8, clause 2) supports legislation authorizing the issuance of bonds by Federal agencies to finance housing aid. *United States* v. *Kay*, supra ((1935) 38 Op. Atty. Gen. 258). And Congress may create Federal agencies or instrumentalities to carry out a program of housing development, provide for the insurance of mortgages in connection therewith, and otherwise promote a system for the general improvement of housing conditions. *City of Cleveland* v. *United States*, supra; *Pitman* v. *Home Owners' Loan Corp.* ((1939) 308 U. S. 21); *United States* v. *City of Milwaukee*, supra ((1935) 38 Op. Atty. Gen. 258). In *United States* v. *Kay*, supra, the appellate court, speaking of the Home Owners' Loan Corporation, said:

"In creating this governmental agency and investing it with the described functions, Congress relied on its power to tax, borrow, and appropriate public money. The power 'to lay and collect taxes * * * and provide for the * * * general welfare of the United States * * *' is explicitly conferred (art. 1, sec. 8, clause 1, United States Constitution), and necessarily contains the implied power of appropriation. See *Field* v. *Clark* (143 U. S. 649, 695, 12 S. Ct. 495, 36 L. Ed. 294). The power 'to borrow money on the credit of the United States' is granted without express limitation (art. 1, sec. 8, clause 2). See *Legal Tender cases* (110 U. S. 421, 444, 4 S. Ct. 122, 28 L. Ed. 204). In taxing and making appropriations for the general welfare, Congress is not confined within the scope of the delegated powers but must merely act in furtherance of general or national as distinguished from local purposes. *U. S.* v. *Butler* (297 U. S. 1, 65, 56 S. Ct. 312, 80 L. Ed. 477, 102 A. L. R. 914). And the power to borrow can be subject to no other or greater limitation."

In *United States* v. *Brooks* ((W. D. Wash. 1939) 28 F. Supp. 712), the court stated:

"If aiding business establishments and farmers, through loans, is within the ambit of governmental authority, aids to improve housing certainly are. For, in these days of congestion of population, nothing is more conducive to the health and contentment of the community than proper housing."

Insofar as a Federal housing program may relate to the eradication of conditions brought about by World War II, the war power of Congress (art. I, sec. 8, clauses 1, 11–16) will support legislation seeking to eliminate the deficit in housing which was largely caused by heavy demobilization and by the necessary cessation or reduction in residential construction during the period of hostilities. See *Woods* v. *Cloyd W. Miller Co.* ((1948) 333 U. S. 138). The war power "includes the power 'to remedy the evils which have arisen from its rise and progress' and continues for the duration of that emergency." (Ibid.) Nor does the fact that actual hostilities have ceased toll the authority of Congress to remedy conditions brought about by the conflict. (Ibid.)

UNIVERSITY OF MICHIGAN LIBRARIES

An Aroused Citizenry Oppose CVA

EXTENSION OF REMARKS

OF

HON. JOHN SANBORN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include three editorials from Idaho newspapers giving the view of the citizens in my State in regard to the proposal of the administration to establish a Columbia Valley Authority.

I firmly believe that to represent the wishes of the people in the State of Idaho Members of Congress will defeat any proposal for a CVA.

The editorials follow:

[From the Wallace (Idaho) Press Times of May 12, 1949]

THREE MEN AND YOU

Some pertinent facts relative to what the Northwest may expect if a Columbia River Authority is set up by the Federal Government were presented to members of Portland's East Side Commercial Club by Robert Ormon Case, nationally known Portland author and student, recently. They were facts that bring into sharp focus the relationship of the three individuals who would direct a CVA with each of us as individuals.

Commenting on the TVA, often used as a comparison for a proposed CVA, Mr. Case declared, "The annual timber cut in Tennessee could be handled by Oregon mills in 20 days." That gives a graphic picture of the immensity of the proposed CVA and the area it would control when compared to TVA, a fact that most folks have overlooked.

Mr. Case drove home five points of vital concern to every citizen residing in the vast region which would come under domination of the proposed CVA. Pointing out that the three-man board would have lifetime jobs and would be responsible only to the President, he outlined these five powers, which could and would be exercised in dictatorial manner:

1. Management of all projects affecting navigation, flood control, power production, and reclamation.

2. Control of all unexpended balances credited to all existing projects, such as Bonneville, Grand Coulee, etc.

3. Building any form of industrial plant it pleases and selling its products at any price it pleases in competition with existing industries.

4. Telling farmers what crops they may or may not raise.

5. Condemning any real or personal property in the Columbia Basin, at the board's own whim or discretion.

None has come forth to deny that such powers would not be given to the three-man board. None will. But protagonists of the CVA plan will attempt to minimize the results that may obtain in the actual exercise of the powers. That is but a smoke screen. Freedom comes at too high a price to gamble the loss of it upon the fickleness of individuals. The greater the power delegated to individuals or small groups, the greater becomes their zeal to use it to the hilt.

The price of winning the West still is too fresh in the hearts and minds of men to permit its great abundance to be taken away from them in one fell swoop by Government fiat. The vast majority of citizens of the Northwest want and will have no part of a CVA.

[From the Post Falls (Idaho) Register of May 3, 1949]

A MOUNTING TENSION

There seems to be a mounting tension in the fight for and against a Columbia Valley Authority.

That is not so noticeable around Idaho Falls, where, we would guess, roughly 90 percent of the people are at present against the CVA. But it is easily discernible in the western part of the State where the Authority advocates have a well-organized program, and where you can get an argument started quicker than you can say scat.

Alined against this legislation are the water users, the livestock and mining interests, the power companies and the governors of all the States involved in the proposed CVA. On the other side we find Senator GLEN TAYLOR, an aggressive pro-CVA organization, and chiefly Washington officials and other easterners.

To us, as well as to others, it would appear that the Northwest States, which would be affected, are pretty much against the plan, while its proponents consist of a minority in this area, and a majority outside the area. The Spokane Spokesman-Review, one of the larger papers published in the Northwest, has some editorial thoughts on this matter, which we believe will present an interesting view of the controversy to our readers. We reprint their editorial here.

"One of the several Government office holders who constitute the chief backers for the idea of a Columbia Valley Administration has sent the Spokesman-Review copies of editorials from three Washington, D. C., newspapers and the New York Times. Those editorials support the CVA idea and are all for putting it into effect promptly.

"In almost the same mail there arrived another budget of editorials, all clipped from the Pacific Northwest newspapers and forwarded by the Pacific Northwest Development Association. They were all as uniformly skeptical as the eastern newspapers were satisfied with the idea.

"To the Spokesman-Review this is significant of the whole alinement on the CVA question. The push and the promotion for CVA all comes from outside the region, save for the little group of Democratic Members of Congress from here who are working with the administration to create a CVA. The fact that spokesmen in Washington, D. C., and in New York City want a CVA is not convincing evidence that we here should open our arms to it. On the contrary, it is reason why we should examine it still more closely.

"The governors of the States most affected by the CVA proposal are against it. Most of the region's Congressmen will probably be against it. Most of the area's newspapers are either against it or await further evidence that it is necessary or desirable.

"Suppose we in the Northwest should start a move for a Potomac Valley Administration, to be managed from here, but with some members of the governing board to be chosen from the population of Washington, D. C., in order to give them a voice in management? From many sources we hear that the Potomac region is backward, wasteful, and inefficient. Our Potomac Valley Administration would see to it that things were changed in the National Capital. We would coordinate the existing agencies and shape things to the pattern of our own ideas.

"If we were to propose that, perhaps the people who are sponsoring the CVA from the National Capital would understand a little better the feeling that we have for their proposal."

[From the Eastern Idaho Farmer of May 5, 1949]

THAT ARGUMENT'S GONE

One of the potent arguments which proponents have advanced to support their approval of the creation of a Columbia Valley Authority has been the matter of speed. It has been argued that a CVA would expedite the development of reclamation, power, and navigation possibilities on the Columbia River.

That contention was right—if CVA was to be patterned after the Tennessee Valley Authority. For TVA is self-financing. It started with an initial appropriation and built its empire with bonds.

But the bill now pending in the Congress of the United States designed to create a CVA must submit annual reports to the Congress. The reports detail financial operations, progress made on its program, and enumerate projected public works together with cost estimates. On that basis, Congress will provide the appropriation for pressing that program.

That's exactly what we have now. The Reclamation Bureau and Army engineers can't move one bit faster than the money which Congress appropriates permits.

And CVA under the present bill will be dependent upon the same source for its money.

It seems unlikely that Congress will be more liberal in dishing out cash for Columbia Basin development for a CVA than it would be for funds for the engineers and Reclamation Bureau.

Confederate Memorial—Robert E. Lee and Jefferson Davis

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an address which I delivered over the radio on Saturday, June 4, as a part of the memorial services of the Daughters of the Confederacy.

It reads as follows:

Mr. RANKIN. My fellow Americans, I am speaking to you at the request of Mrs. Mayde Howell Smith, chairman of radio service for the District of Columbia United Daughters of the Confederacy.

As everyone knows, yesterday, June 3, was the one hundred and forty-first anniversary of the birth of Jefferson Davis, the President of the Confederate States, and one of the outstanding leaders of all time.

Ever since the close of that unfortunate conflict the glorious Daughters of the Confederacy have conducted their memorial services on the anniversary of his birth.

In fact, they are responsible for the first Memorial Day. On April 25, 1866, just 1 year after the war closed, the Daughters of the Confederacy at Columbus, Miss., in the district which I have the honor to represent in Congress, while decorating the graves of the Confederate dead, also decorated the graves of about 40 Federal soldiers who had been buried there.

The news of this incident spread throughout the country and brought from the pen of the Honorable Francis Miles Finch, a distinguished northern writer, a little poem called the Blue and the Gray, that will live as long as the Stars and Stripes continue to float over a free people; as long as the sweet strains of old Dixie shall continue to stir the southern heart with its sweet but melancholy pathos.

He said:

"By the flow of the inland river,
Whence the fleets of iron have fled,
Where the blades of the grave grass quiver,
Asleep are the ranks of the dead;
Under the sod and the dew,
Waiting the judgment day;
Under the one the blue,
Under the other the gray.

"These in the robings of glory,
Those in the gloom of defeat,
All with the battle blood gory,
In the dusk of eternity meet;
Under the sod and the dew,
Waiting the judgment day;
Under the laurel, the blue,
Under the willow, the gray."

He closed with this verse:

"No more shall the war cry sever,
Or the winding rivers be red;
They banish our anger forever
When they laurel the graves of our dead!
Under the sod and the dew,
Waiting the judgment day;
Love and tears for the blue,
Tears and love for the gray."

From that incident came our Memorial Day, which the country as a whole observes on May 30, and which the Daughters of the Confederacy now observe on June 3.

Almost a century has passed away since the end of that unfortunate conflict. The people of the South are glad that human slavery has disappeared. They were not responsible for it in the beginning. But be it said to their everlasting credit that they did more for the colored race in teaching them the rudiments of civilization and showing them for the first time the light of Christianity than any other people have ever done in all the ages past and gone.

We are glad our country is reunited. We hope it will forever remain so. If those men who wore the blue, and the ones who wore the gray in that unfortunate conflict, could come back today and see what is going on, in my opinion they would throw down their arms, embrace each other, and say, "Let's get together and save our country from destruction at the hands of those insidious alien influences that are now attempting to wreck our Government, trying to undermine and destroy the American way of life, and striving to wipe Christianity from the face of the earth."

They would say, "Let's join hands in combating those pernicious influences, in order that we may save America for Americans, and perpetuate those blessings of liberty, freedom, and Christianity which have been handed down to us by the heroes, patriots, and statesmen of former generations."

On yesterday, with the Daughters of the Confederacy, I stood before the statues of Jefferson Davis and Robert E. Lee in Statuary Hall in the Capitol. As I looked upon their majestic figures, my mind ran back across the years, and I recalled that although Lee and Davis were together almost every day during the 4 years of that horrible war, I have never seen where Lee ever criticized Davis, or where Davis ever criticized Lee. They were two of the greatest Christian leaders of all time, and their majestic figures in Statuary Hall represent all the brave Confederate soldiers who went through 4 years of that war and 20 horrible years of reconstruction.

The world has never seen greater soldiers in times of war or greater citizens in times of peace than those brave men who wore the gray in that War Between the States.

With all deference to our other great heroes, I feel perfectly safe in saying that Robert E. Lee was the greatest commander the world has ever seen.

In paying my humble tribute to him and to Jefferson Davis, I include their brave followers and the noble women of the Confederacy.

Senator Ben Hill, of Georgia, once said:

"When the future historian shall come to survey the character of Lee he will find it rising like a huge mountain above the undulating plane of humanity, and he must lift his eyes high toward heaven to catch its summit. He possessed every virtue of other great commanders without their vices.

"He was a foe without hate, a friend without treachery, a soldier without cruelty, a victor without oppression, and a victim without murmuring.

"He was a public officer without vices, a private citizen without wrong, a neighbor without reproach, a Christian without hypocrisy, and a man without guile.

"He was a Caesar without his ambition, Frederick without his tyranny, Napoleon without his selfishness, and Washington without his reward.

"He was obedient to authority as a servant, and royal in authority as a true king. He was gentle as a woman in life, modest and pure as a virgin in thought, watchful as a Roman vestal in duty, submissive to law as Socrates, and grand in battle as Achilles."

In the words of Oliver Goldsmith—

"As some tall cliff that lifts its awful form
Swells from the vale, and midway leaves the storm—
Though round its breast the rolling clouds are spread
Eternal sunshine settles on its head."

He stands today the most commanding, the most masterly, the most serenely inspiring figure upon the horizon of human history.

In a book written by Maj. Gen. Federick Maurice, of the British Army, in 1925, he compares Lee with Wellington and all the other great English generals, from Marlborough down, and winds up by placing Lee above both Marlborough and Wellington as the greatest commander of the English-speaking race.

Jefferson Davis, the President of the ill-fated Confederacy, was one of the most remarkable men this Nation has ever produced. When he was on the western front as a colonel in the Black Hawk war, he swore in a young captain of infantry from Illinois by the name of Abraham Lincoln, and together they fought and won that conflict.

I believe, if Davis and Lincoln were here today, they would again join hands in combatting the evils of communism, the greatest menace our Christian civilization has ever known—a menace that threatens the safety of our Nation at home as well as abroad.

Hon. Caleb Cushing referred to Jefferson Davis as being "eloquent among the most eloquent in debate, wise among the wisest in counsel, and brave among the bravest on the battlefield."

He went through the horrors of war and reconstruction, in which he manifested courage, wisdom, strength, and ability unsurpassed, and never wavered in his devotion to those principles for which he fought and suffered, but stood at all times as—

"* * * constant as the Northern Star
Of whose true-fix'd and resting quality
There is no fellow in the firmament."

As Bishop Galloway once said of him:

"Marvelous, many-sided, masterful man, his virtues will grow brighter and his name be writ larger with each passing century. Soldier, hero, statesman, gentleman, American—a prince of Christian chivalry, the uncrowned chief of an invisible republic of loving and loyal hearts—when another hundred years have passed no intelligent voice will fail to praise him and no patriotic hand will refuse to place a laurel wreath upon his radiant brow."

So we have come today to lay the flowers of filial love and affection at the feet of these great men and to place wreatha upon the graves of our heroes of the past as symbols of their laurels of fame that will live and brighten with the passing years, as a great southern poet once said:

"Till the sun grows cold,
And the stars are old,
And the leaves of the Judgment Book unfold."

God bless their sacred memories.
God save America.

Townsend Club Petition

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. HILL. Mr. Speaker, following is a petition signed by members of Townsend Club, No. 3, in the Second Congressional District of Colorado, and I wish to present this as evidence of the interest in the passage of H. R. 2136:

We, the undersigned citizens of the Second Congressional District of the State of Colorado, respectfully request the passage of H. R. 2135 and 2136 known as the Townsend Plan and respectfully request your cooperation and help.

The Clerk-Hire Bill

REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, I understand that the bill, H. R. 4583, which has to do with this additional clerk hire, is now on the Speaker's desk. Am I correct? Can it be assumed that any Member can at any time submit a consent request that conferees be appointed? Or will the House leadership not recognize such a request? It is up to the Speaker, but I thought maybe the gentleman from Massachusetts had something to do with it.

The SPEAKER. The Chair would think that the last statement made by the gentleman from Michigan was correct.

Mr. HOFFMAN of Michigan. I do not quite understand.

The SPEAKER. The matter of recognition would be up to the Speaker.

Mr. HOFFMAN of Michigan. What would the procedure be should a Member submit such a consent request?

The SPEAKER. The Chair will meet that issue when it arises.

Mr. HOFFMAN of Michigan. It would seem, then, that those who are opposed, in order to get the floor, will have to stay here on the floor all the time.

The SPEAKER. I was elected to stay here; I do not know what the situation is with the other Members.

The Brannan Plan

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast over the Columbia Broadcasting System on Sunday, May 1, 1949:

ANNOUNCER. Dwight Cooke, chairman of Columbia's weekly discussion program, People's Platform, opens today's debate on the question: "Should the New Farm Plan Be Adopted?" Again, the People's Platform comes to you from Washington. Mr. Cooke's guests are Ralph S. Trigg, Administrator of the Production and Marketing Administration of the United States Department of Agriculture, and President of the Commodity Credit Corporation; and Representative FRANCIS CASE, Republican, of South Dakota, rancher and member of the House Appropriations Committee.

And now we hear from Dwight Cooke.

Mr. COOKE. Well, gentlemen, we might try to skip both the broad speeches and the complicated technicalities of this idea and get right down to the meat and, for that matter, to the eggs and the vegetables and the milk of this new farm idea. Briefly, where it's completely different from anything we've been doing in this area is in the area of perishable crops—these meats and eggs and milks and vegetables. Instead of holding the price of eggs up to a certain level, the way the present farm price support-program works, the idea is that these things we buy and need to eat in the cities would fall to their regular demand and supply market price, whatever the farmer could get. But, whenever this market price to the farmer was too low to give him a fair profit, the Department of Agriculture would pay the farmer cash to make up the difference.

All right, Mr. Trigg, you might well be the administrator of this program, if Congress passed it. Did I do fairly in describing this somewhat complicated baby?

Mr. TRIGG. Yes, I think you did, Mr. Cooke. I think that the program does provide for the extension of definite price supports to commodities not heretofore covered well enough, such as milk, meat, and other perishables. And I might say that these perishable commodities, this whole group, provides for about 75 percent of the farm income, and it is important that the consideration be given to these commodities and at the same time the consumer be taken into consideration.

Mr. COOKE. Well, you know, the way I described it, Mr. Trigg, it could almost sound like having your cake and eat it, too. The farmer gets a fair profit and we get cheaper food. Somebody pays for it, doesn't he?

Mr. TRIGG. Why, of course, Mr. Cooke. And let us not forget that we're not comparing this program with no program at all, but remember we have a program on the books now, one that Congress has passed some time back and the country has adopted, and that program is going to cost money. So, if we compare them, it's one program against another program, and not this one against no program.

Mr. COOKE. A better way of achieving the same long-range objectives, in other words.

Mr. TRIGG. That is right. Yes, sir.

Mr. COOKE. Is that the way you see it, Mr. CASE?

Mr. CASE. Well, except that it isn't necessarily a comparison of this particular program with the program which is in existence at the present time. And I just wonder how you actually can talk about eliminating the complications and technicalities of a program when you start out by saying that you waive those. Actually, one of the things that is bothering a great many people about the proposal that has been voiced by Secretary Brannan is the very fact of its technicalities and details.

Mr. COOKE. You mean, you aren't sure what will happen under this kind of a complicated plan?

Mr. CASE. And I don't think the country knows, that's true. Why, just this week, for example, I got a telegram from the president of the South Dakota Livestock Growers' Association, very much alarmed over the proposal to initiate the program by trying it out on hogs, giving a trial run on hogs. He pointed out that there is a definite relationship between meat prices, and that if hogs, for example, were to go to 5 cents a pound that you'd have the biggest panic in this country that can be imagined.

Mr. COOKE. Mr. Trigg.

Mr. TRIGG. Well, Mr. CASE, I don't believe that anyone would ever assume that prices of hogs go to 5 cents a pound, as we now know it. Now, of course, you can't work out the details and technicalities of any broad program such as this one and lay them all out one by one, until experience has taught us a few things. But in connection with this proposal to make production payments for hogs, which we now have submitted to the Congress and have asked Congress to take action on, I don't believe that that's going to present a great deal of a problem. It's a matter of taking what we would normally spend in the way of purchasing pork in the market, taking it out of the market, it's a matter of taking that amount of money and making payments direct to the farmer to insure that he gets 90 percent of parity.

Mr. CASE. Well now, let's see. The Commodity Credit Corporation has some corn loans hasn't it?

Mr. TRIGG. That is correct. Yes, sir.

Mr. CASE. What will happen to the value of those loans if hogs drop off abruptly?

Mr. TRIGG. I don't know that anything will happen to them, Mr. CASE. The Commodity loan will still have its value.

Mr. COOKE. For a connection for people who don't have hogs and corn, you feed the corn to the hogs. And if you aren't going to

UNIVERSITY OF MICHIGAN LIBRARIES

get much money for the hogs, you can't afford to pay much money for the corn.

Mr. CASE. And, historically, it's always been recognized that there's a definite relationship between the price of hogs and the price of corn and vice versa.

Mr. COOKE. And the price of pork chops.

Mr. CASE. And the price of pork chops.

Mr. TRIGG. Well, of course, Mr. CASE, any program that we design in connection with hogs naturally takes in the feed relationship between corn and hogs and the price of corn and the price of hogs.

Mr. CASE. All right, Mr. Trigg, but there's also a relationship between meat prices. Now, the thing that Mr. Horgan, who wired me, was worried about was the effect on the cattle market. He said that already the cattle market has dropped off in the last 2 weeks, since this suggestion came out, because it is realized that if the price of pork chops goes down, then the consumer isn't going to be so much interested in buying beef. And if not interested in buying beefsteak and the prices of cattle go down, then the banks that have loans on cattle are going to worry about those loans.

Mr. TRIGG. Well, it seems to me, Mr. CASE, that you're assuming that the consumer is going to eat pork and beef at the same time and in the same quantities. And I don't think that is absolutely correct.

Mr. CASE. No; it doesn't assume that at all.

Mr. COOKE. Sounds like a nice idea, from the consumer point of view.

Mr. CASE. It's quite the contrary all around, Mr. Cooke. As a matter of fact, he isn't going to eat both beefsteak and pork chops at the same time. But if he can buy the pork chops at a price considerably below what will buy beefsteak, he will stop buying beefsteak; beefsteak will go down sharply; your loans on cattle aren't worth so much, and you have a first-class panic all over the country.

Mr. COOKE. I thought that's where this idea came in and paid the difference to the farmer, so it didn't go down. (Speak simultaneously.) I guess I'm wrong.

Mr. CASE. But the suggestion now is that you start out by giving a trial run on hogs and doing nothing so far as the cattle are concerned.

Mr. TRIGG. It isn't necessarily a trial run for this program, Mr. CASE. We're faced right now with the possibility of going into the market and buying pork and pork products from the packers in order to assure that the farmer is returned 90 percent of parity on hogs. Now, there is no other method available to the Department at the present time, except to buy the pork and pork products from the packer in order to support the price of hogs.

Mr. COOKE. I wouldn't want a listener to beef, because this idea of hogs and corn and beef was hogging the whole program, gentlemen. Something went past my ears a few moments ago, maybe we ought to focus on first here. Mr. Trigg is saying that this new idea is just a better way of achieving an objective which he is for. The question that maybe we should look at very sharply here: Are you, generally, for this same objective he is?

Mr. CASE. Well, Mr. Cooke, there's no difference in objectives, so far as I know, between sincere people on trying to establish a proper relationship between the producer of food and the consumer of food.

Mr. COOKE. Is it fair to ask you what "proper" means?

Mr. CASE. Well, prices are all relative, and the aim of the old parity program was to achieve a buying power for the farmer on the basis of what he produced that bore a fair relationship to the price of what he had to buy.

Mr. COOKE. So, both of you are agreed that the farmer, one way or another * * *

we should attempt to hold the farm income to that kind of level.

Mr. TRIGG. Well, Mr. Cooke, that's been the purpose of this farm program over the past year, to return to the producer a fair price for his products. True enough.

Mr. CASE. Now, of course, Mr. Trigg, there are two ways that this matter could be approached. Mr. Cooke is bringing in the consumer angle, and that's a proper angle. But a great many farmers are asking me this question: Well, why not reverse the process? If this is to subsidize the food bill so that the consumer can buy his food below the cost of production, why not give the check to him? That is, give the check to the consumer so that he can pay a price that represents the cost of production.

Mr. TRIGG. I think if you will, Mr. CASE, look at the technicalities and difficulties of any such program as that, I believe they would be insurmountable. Whenever you would have to distribute any such payment as that to 140,000,000 consumers in this country, I don't believe it could be done. I don't think the Congress would ever approve any such mechanism as that. However, you're in a much better position to judge that than I.

Mr. COOKE. Wasn't the old blue-stamp program somewhat of an effort in this direction?

Mr. CASE. Of course, Mr. Cooke, that was what was running through my mind as Mr. Trigg was speaking. That the food-stamp plan was essentially that. However, there the distribution of food stamps was to those who had an income that was below normal.

Mr. TRIGG. Well, we feel, Mr. CASE, that you can do much more, or just as much, at least, with the method of production payments in the way of getting better food and more food to the consumer under this program than you can with a food allotment or food-stamp program, such as you mention.

Mr. CASE. But one difficulty about it, Mr. Trigg, is that it's hard to be really friendly to the farmer and lay upon him the onus of receiving a check from the Treasury, when as a matter of fact, it's a move to subsidize the cost of food at a cost below production.

Mr. TRIGG. Well, that in a sense may be true, Mr. CASE. But we haven't found any farmer actually running from a check that he has received from the Federal Treasury. And, after all, this is a method to get direct into the hands of the producer a check for what he produces and not necessarily guarantee the market or the margin of some of these other producers or packers, and so forth.

Mr. CASE. Mr. Cooke, if you were to give farmers, as I know them, the choice between getting their price in the market place and getting it by means of getting a partial price, representing part of the cost of production, and then later on getting a check from the Treasury, they would go for the first and say, "Give us our price in the market place."

Mr. COOKE. In other words, you think the farmers would much rather have the consumer get the subsidy.

Mr. CASE. Yes; because the farmer regards it as a subsidy, because it means that he's asked to sell his food at something less than the cost of production.

Mr. TRIGG. This, of course, is an effort to go at it in a direct manner, to get the producer the cost of his production or to get him the support price on this, and not to give it to someone who's between the consumer and the producer, in this case. And we have also had a number of farmers say that they are in favor of such plan because it does that very thing, Mr. CASE.

Mr. CASE. Well, now, of course, when we're talking about consumers and farmers in this regard, Mr. Trigg, it seems to me that we're overlooking the fact that both of them are taxpayers. And I do not see how we can consider the question without considering the effect on the taxpayer. Has any estimate been made yet on the cost of this program?

Mr. COOKE. That little four-letter word c-o-s-t makes a lot of trouble.

Mr. TRIGG. Well, Mr. Cooke and Mr. CASE, of course, that is a big item in this program, but as I explained, it's a big item in any farm program, in an effort to stabilize the income of the farmers.

Mr. COOKE. Have you any idea of what kind of a level of cost is involved in either kind of program?

Mr. TRIGG. There is no exact way of estimating the cost of either of these programs, and that is one of the reasons why Congress has made the flexible Commodity Credit Corporation operate in the manner in which it operates in order to discharge its responsibilities to the producers.

Mr. COOKE. Well then, are you asking Congress and the people to approve a blank check, because of an objective they're in favor of?

Mr. TRIGG. No, Mr. Cooke. That isn't it at all. As a matter of fact, the Secretary the first of this week presented to the Congress or the Committee on Agriculture in the House the difference in cost between making these production payments and supporting the prices under our present system on a number of commodities.

Mr. CASE. But, of course, the determination of any price requires going into the things that make up a price; it requires going into wages, transportation, other raw materials, steel, iron, things that go to make fences, go to make farm machinery and——

Mr. COOKE. Because until you know what the farmer pays for those, you don't know what is a fair price for the eggs his hens lay.

Mr. CASE. That's correct. And, as I understand it, there's to be some sort of a complicated form of a price index that will be based upon prices over a 10-year average, which expired 1 or 2 years prior to the time at which that index has applied.

Mr. TRIGG. Well, Mr. CASE, this is true. There is a new formula, so-called, in this present proposal which takes into consideration the purchasing power of the farmer, which it is not in the national interest to permit such farm-purchasing power to fall below; in other words, it sets up a definite figure in relationship to the total national income and says it is not in the interest of the national situation to let it fall below that.

Mr. CASE. And certainly I agree with that as a matter of principle, that it is not in the national interest to let the farm income fall below a desirable level.

Mr. COOKE. Well now, wait a minute. There are a great many people who might wonder about that agreement in principle you two gentlemen have. In effect, you're both in favor of a system whereby, a good many people might argue, alone of the great groups in the economy, the farmer is guaranteed a fair profit. Now, that doesn't happen anywhere else in the system, does it?

Mr. CASE. Well, but I might point out, Mr. Cooke, that it would be just as logical to approach this whole problem by saying we're going to have a guaranteed income for a painter or a bricklayer or a newspaper reporter or a radio columnist.

Mr. COOKE. That's exactly what I was bringing up. Is that what we should do, then? And if not, why should we only do it with farmers?

Mr. CASE. That's a question I'd like to ask, except that I'd want to point out this also, that the total national income of the country bears a very definite relationship to the farm income. Historically, it's been about 7 to 1.

Mr. TRIGG. And vice versa, Mr. CASE, the farm income bears a definite relationship to the total income.

Mr. CASE. That is true.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. COOKE. And vice versa, the manufacturing income bears a relationship to the total income, too, and the labor income bears a proportion. What's the difference——

Mr. CASE. It flows out of the income which comes from the production of food; because the production of food is basic.

Mr. TRIGG. Absolutely. The production of food is basic. And we can go a long time in this country without probably painting all of our buildings, but we can't eat that paint. We must have things to eat.

Mr. CASE. That's right. Mr. Trigg and I agree, I think, that farm income, the stability of farm income is important to the national welfare, but when you attempt to achieve a stability of farm income by making a guaranteed wage and apply it individually, why, then the question arises as to, well, what about this particular individual who isn't quite as thrifty, or who isn't quite as efficient.

Mr. TRIGG. I believe, Mr. CASE, that would be taken care of by the efficient manner in which a producer markets his products or produces them. And I believe that that is all taken into consideration.

Mr. COOKE. Well, is that a basis of judging how much you'll pay him in cash payments?

Mr. TRIGG. Certainly. Certainly, he will not be paid what he gets; he will be paid, Mr. Cooke, the difference between the average of what the market is, or what is received in the market place in which he markets his products and what the support standard would be.

Mr. CASE. Now, then, Mr. Trigg, if we're going to have an average price, obviously some of the price received is below that average and some is above. The man who doesn't get the average will be paid enough to bring him up to the average, presumably. What about the man who is efficient enough and produces better grades and gets a price which is above the average?

Mr. TRIGG. Well, Mr. Case, should we penalize the efficient producer in this country?

Mr. CASE. Well, that's what I'm afraid that you propose to do. You propose to have him establish a higher price and tax him to pay support prices to the man who isn't so efficient.

Mr. TRIGG. No; his top price or the better price that he gets for his products will benefit him in two ways—as an individual and also in helping lift the average price.

Mr. COOKE. You're getting over my head here, gentlemen. You're lifting all sorts of different prices and payments to different people. What's the principle involved once more, Mr. Case?

Mr. CASE. Mr. Cooke, that illustrates exactly the kind of a proposition you're working with. Every farmer is going to be asking the same question that you just asked. And he's going to ask, well, will the Government please come out and keep books for me, so that I can tell whether or not I'm entitled to a support price and, if so, how much.

Mr. TRIGG. I don't believe he will, Mr. Case, if I may disagree with you. I don't believe that any farmer wants the Government to come out and keep books for him, and certainly the Department of Agriculture doesn't want to do that. And I don't believe it'll be as serious or as complicated as might have been indicated.

Mr. CASE. Well, I certainly hope not.

Mr. TRIGG. But let me ask you this, is there any other group in the country that doesn't have the opportunity to set the price of his finished product, except the farmer? Isn't he the only one that doesn't set the price of his product in the market place?

Mr. CASE. That may have been true, historically, but it doesn't necessarily need to be true. If we would get away in this country from the idea that we've got to bring the prices in this country down to a world level; if we would recognize that the American farmer, who produces in the American market, for a protected American worker, for a worker who has the highest demands in the form of social security and wages, if we would get away from the idea that we have to produce food for him at a world level and maintain wages and a standard of living above the world level and recognize that protection should go both ways, we wouldn't get into that kind of a predicament.

Mr. TRIGG. Mr. Case, if I understand you correctly, I think this program that the Secretary of Agriculture, Mr. Brannan, has presented to the Congress does that very thing. It attempts to establish a level of income for the farmer, in which it is not in the national interest to let it fall below that level.

Mr. CASE. Unfortunately, though, it puts the farmer, in approaching the thing—and bear in mind that I'm not opposed to the objective; I want the farmer's income to be at a proper level, so that the national income will be at a proper level—but I don't like that feature of the program which puts the farmer in the position of a mendicant or a suppliant to get a part of his income out of the Federal Treasury, rather than in the market place.

Mr. TRIGG. Well, I think you're assuming, Mr. Case, that he's going to get all of his income * * * that this entire program is to work through the production payment method. That is not the case. On all of the big commodities, such as cotton and corn and wheat, on those commodities we will continue to make loans in the same manner that we have in the past 15 years or so.

Mr. COOKE. A matter which is perhaps not under particular debate here, this whole flexible parity formula. But, Mr. Trigg, I haven't asked you this question: Suppose this kind of a program were in effect, is there any control whatsoever on how many eggs the farmers of this country produce?

Mr. TRIGG. There is no control on it now, no, Mr. Cooke.

Mr. COOKE. Under your program would there be?

Mr. TRIGG. Under any program, whether it's this one or any other program, I think we've got to look forward to some sort of a production control. I don't believe that the farmer wants to just produce and produce and have no market and have the price fall out and expect the Government to take and destroy the surplus commodities. I don't think the farmer wants that. He will regulate, himself, as he has done in the past——

Mr. COOKE. I thought he has often overproduced, when he had a chance to do it at a profit.

Mr. TRIGG. No, I don't think that's exactly correct. I think you'll find that in periods of low, depressed prices, Mr. Cooke, the farmer has continued to produce in order to make enough to pay the cost of operating his plant. I think Mr. CASE would find that the case in his * * * the situation in his own ranch. If the price of cattle goes down he may have to try to raise more of them in order to meet the out-of-pocket cost. Farmers are inclined——

Mr. COOKE. You still feel that the Government, via the Department of Agriculture will have to control the long-range production levels over the country.

Mr. TRIGG. Well, certainly, the effort must be made to bring supply in line with demand. I don't think anybody wants an unlimited amount of production in this country.

Mr. CASE. Well, we aren't going to quarrel on that. That is, if you're going to have any support program that involves really substantially large supports, you're going to have to have some form of control of production, if you're not going to get unmanageable surpluses. But, personally, I believe that there should be other approaches to that. For instance, I think that any comprehensive agricultural program, Mr. Trigg, ought to encourage the development of new markets and new uses for agricultural products, and we ought not to depend entirely upon controls as a means of disposing of what the farmer produces.

Mr. TRIGG. Again, Mr. CASE, the Brannan proposal does exactly that, because this is based on a production of abundance; it isn't based on scarcity of any of these commodities. And one of the biggest markets we have here, of any place in the world, and particularly on our perishable commodities are in our own United States. We could produce an additional amount of——

Mr. CASE. Potatoes, for example?

Mr. TRIGG. No, I think potatoes is an exception.

Mr. COOKE. Practically a swear word brought in on a broadcast like this, isn't it, Mr. Trigg?

Mr. TRIGG. Well, it doesn't make us feel too good, because we've asked the Congress on several occasions to give us authority to control potatoes and we haven't received that authority.

Mr. CASE. As a matter of fact, I understand that the Potato Growers' Association, in May 1948, asked the Department of Agriculture to exercise the authority it had under existing law to reduce the support program for potatoes, and the Department finally, in November of 1948, did.

Mr. TRIGG. I think, though that you'll find, Mr. CASE, that the Department of Agriculture moved in to reduce the support price on potatoes at the very first opportunity, which was under the present legislation that we now have, that came into effect on the first of this year.

Mr. COOKE. How far are we getting into politics with this particular discussion, gentlemen. The Republican Party, and Mr. SCOTT, I think, just last week announced that the farm vote was the prime goal of the Republicans. You're a Republican, Mr. CASE.

Mr. CASE. Yes and, of course, I'm interested in the farm vote, but primarily I'm interested in seeing that we have a sound economy, and that means a sound agricultural income and it means a sound tax burden for the country, too.

Mr. COOKE. And as a Democrat, you feel very much the same way, Mr. Trigg?

Mr. TRIGG. Well, there's no difference between Mr. CASE and myself on this question of having a sound agricultural program as part of the total economy of this country. And that's what we're all working in a direction to do.

Mr. COOKE. Well, let me examine the principle involved here just one step farther, then. You both made the point that the farm income is vital to the whole general set-up of the country and you've made the point that food is far more important than some of the manufactured products. But it might be said, to get into a violently controversial area here, that doctors and medicine are just as vital as food. If the principle is that in such a vital area as food you're going to provide a special kind of a program and guarantee a profit, why shouldn't there at least be another equally vital area of the economy?

Mr. TRIGG. Well, Mr. Cooke, I think the administration has submitted some sort of a bill to Congress to maybe take care of some of those things that you've just spoken about.

Mr. COOKE. And you think this same principle operates as well in those areas?

Mr. TRIGG. Well, I'm concerned with agriculture primarily, and it's our responsibility to look out for the producer of agricultural commodities in this county, and there are plenty of other people that are capable of taking care of the other things.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. CASE. Of course, you're comparing two fields in which the situation is quite different. We have a scarcity of doctors. We want more there; we want an abundance. And perhaps the matter that you bring up illustrates the very fact that you can't get away from the effect of supply and demand when you're dealing with any human need.

Mr. COOKE. Well, the effort of this program is to get away from that, in effect, by covering the gap when it goes in the wrong direction, isn't it, Mr. Trigg?

Mr. TRIGG. I don't quite understand what you mean by that, Mr. Cooke.

Mr. COOKE. Well, if the demand gets reduced, that is, the price goes down, you keep an adequate supply going by keeping the price up to the farmer, although it stays down in the market.

Mr. TRIGG. Well, there's an effort being made here with the Brannan proposal to see that the taxpayer is not taxed twice by this production * * *? arrangement, that he doesn't pay for it in terms of tax dollars and at the same time pay a very high price in the market place. There's some effort to give the consumer——

Mr. CASE. In other words, he's to pay double taxes, so that he doesn't pay it the other way.

Mr. COOKE. I lost that. Say it in longer words, Mr. CASE.

Mr. CASE. Well, Mr. Cooke, under Mr. Trigg's explanation, he would pay part in taxes and part in the market place. But apparently the Brannan proposal is to have him pay double taxes and pay it all in one place.

Mr. TRIGG. No; I don't believe that's quite correct, Mr. CASE, because I think the old friend, potatoes, that you brought up a minute ago * * * it's clearly shown or can be shown that the price of potatoes in the market place could have been reduced substantially to the consumer and at the same time it wouldn't have cost any more than we're spending this year, which is a tremendous sum, some $225,000,000.

Mr. CASE. There's one thing I think should be explained, perhaps we don't have time to go into it now, but if you're going to take this 10-year average as a price index, what will happen when you have a price index based upon years like the thirties, where you had years of relatively low farm income, and then you go up against the buying prices of '41 and '42?

Mr. TRIGG. Well, Mr. CASE, there's a 2-year lag period in this formula for that very purpose.

Mr. CASE. That's what I'm afraid of, that 2-year lag, applying the level of the thirties against a cost level of '41 and '42.

Mr. COOKE. Or applying the level of 1945 and '46 to 1948 and '49.

Mr. CASE. That's correct.

Mr. TRIGG. But the point of it is this, Mr. Cooke, the formula itself will be 2 years behind what is taking place, which will give the Congress, the Department of Agriculture and everyone else concerned with it an opportunity to look at it objectively and see what it is doing, what it should do.

Mr. COOKE. Well, gentlemen, thank you for the opportunity you've given us to look at this somewhat objectively by taking this kind of a nonpartisan and direct consideration to this whole problem of what kind of a farm program we're going to have.

ANNOUNCER. You have been listening to Columbia's People's Platform as it discussed the question, "Should the New Farm Plan Be Adopted?" Chairman Dwight Cooke's guests were Ralph S. Trigg, Administrator of the Production and Marketing Administration of the United States Department of Agriculture and President of the Commodity Credit Corporation; and Representative FRANCIS CASE, (Republican, of South Dakota) rancher and member of the House Appropriations Committee.

Bureaucrats in Politics—Dangers Cited by One Who Knows—Democracy Threatened

---

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, in the May 1949 issue of Plain Talk, one Alfred M. Cooper relates his personal experience as a Government employee who got himself into politics, first on the local level and then in the Federal service. He tells an amazing story and his article should be read by every Member in the Congress. Mr. Speaker, I include it as part of my remarks:

THE BUREAUCRAT IN POLITICS

(By Alfred M. Cooper)

I was appointed educational director, in 1934, of a large municipal electric bureau. In this capacity I was permitted to train the civil-service employees in accident prevention, in legitimate public-relations activity, and in other matters pertaining to their work, just as I had previously done in a number of private corporations.

Within 6 months, however, I was asked by the management of this city power bureau to take over the training of all their civil-service employees in political activity. Intrigued by the possibilities of such a training program—between 1934 and 1938—I therefore carried on this political work in addition to my regular training and, as a result of the loyal efforts of the 10,000 employees, 5 hard-fought successive municipal election campaigns were decided in the bureau's interest.

The various elections in question authorized the issuance of tens of millions of dollars in municipal bonds for the benefit of this power bureau, defeated the efforts of the competing private power company to renew its franchise to operate and thereby put it out of business and, in the final election of the series, even succeeded in forcing the rezoning of some real estate to the financial advantage of the then head of this municipal power bureau. I had entertained no compunctions in the matter of fighting a mismanaged privately owned power company. Earlier I had observed from the inside the venality of management in the old Insull utility empire, and had fallen into the common error of believing that public ownership of electric utilities would correct many of these evils. I had yet to learn that the management of any corrupt governmental bureau can make a Samuel Insull smell like a lily.

After winning the five elections I was surprised to discover that the power bureau had suddenly become the political arbiter for our entire State, and that no Congressman, governor, State assemblyman, or any other politician could hope to be elected to public office until he had contrived to secure the sanction of the management of this bureau.

The methods I employed in organizing these thousands of city employees into an irresistible political juggernaut are no secret. Briefly, just previous to any election, hundreds of employee conferences were scheduled (on city time) in each of which the immediate supervisor of any employee group (foreman or office supervisor) conducted the meeting. In these conferences the employees discussed in detail every phase of the election issues, and were instructed in methods of meeting citizens' objections to such legislations. As an assignment at the close of the conference, the employees were issued sheets on which they were to transmit to me the number of citizens they had contacted, and the reactions to the campaign issue in question.

Each employee was expected to work on between 10 and 15 people (relatives, friends, and neighbors) and, on election day, to see to it personally that the favorable voters reached the polls. In this manner, over a period of years, about 80,000 votes were rigidly controlled by the power bureau, and in any special election (and even in general elections) this served as an ample margin to assure victory for whatever issues the bureau sponsored.

Coincidentally with the burgeoning of this bureau into the leading political power in our State, the Federal Government—between 1934 and 1938—was rapidly expanding its TVA organization into a formidable set-up. This was to be the first move of the ultraliberals toward the socialization of all of our industries.

Since our municipal power bureau was the closest thing to this proposed gigantic Federal power bureau, especially in ability and intent to wipe out competition among privately owned power companies, the executives and engineers of our bureau were much sought after by TVA. Many of these executives were loaned to TVA and spent as much as a year or more either at Washington or at the bureau's Nashville headquarters.

For example, our chief accountant spent 1 year in setting up the bookkeeping system of the TVA—an account set-up which has since confused and confounded every outside expert who has attempted to discover whether or not the TVA today is in the red or in the black. The accountant was very proud of his job, but told me frankly that he doubted the ability of the TVA bookkeepers to perpetuate the system he had installed. In this he underestimated the skill of the Federal accountants. Even today, no one knows where the TVA stands, financially speaking—not even TVA.

At the same time, the political activity procedures developed in our local power bureau eventually spread to a score of other governmental bureaus. Since the TVA is an offshoot of the titanic Bureau of Reclamation of the Department of the Interior, this Bureau soon took the lead in all manner of Federal political activity.

Later on, CIO–PAC attempted to imitate many of the methods we had developed, but was unsuccessful in this adaptation, first, because it attempted to use short-cuts to achieve results in place of our time-proved training and citizen-contacting methods; second, because it was dealing in the main with groups of nongovernmental employees. Workers in industry never have proved, and I think never will prove to be as amenable to this sort of political indoctrination as have civil-service employees.

At first, all governmental bureaus confined their political activity to the essential job of perpetuating Franklin D. Roosevelt in office. Later, such governmental bureaus as Reclamation, Forest Service, Immigration, Social Security, the Post Office Department, and a score of other Federal organizations began dabbling in local politics from coast to coast. Federal employees were strategically deployed throughout the various States, and their numbers augmented by the Federal Civil Service Commission just prior to any important sectional or national election.

The employees of Federal bureaus have been trained to function very much as did the 10,000 employees of our municipal power bureau. They hustle votes among the people they contact, not only in their daily work, but socially.

UNIVERSITY OF MICHIGAN

In the West stockmen who see fit to use their influence in following out suggestions made by Forest Service workers receive unlimited grazing privileges on public lands. Similarly, sawmill operators who use trees from our public forests may pay $6.70 per thousand feet of standing timber for their raw material, or they may pay $17.50 per thousand feet, depending solely upon whether they hire the right sort of loggers and mill employees, and otherwise "play along" with suggestions of the Forest Service. In the same fashion farmers have learned that the amount of subsidies issued to them in any instance by our Department of Agriculture could vary sharply, depending upon their expressed political views. The effect of the quiet efforts of these governmental agents astounded even the politicians when the votes were counted in the 1948 elections, particularly in rural areas from coast to coast.

The impression still prevails that organized labor elected Harry Truman in 1948. Actually, the President not only received less than a majority of the Nation's popular vote but failed to secure a majority of the so-called labor vote. In a future election it will become crystal clear, even to the politicos, that there never has existed a bona fide labor vote in America. As every labor leader knows, the average industrial workingman in this country votes as his conscience dictates.

The only exceptions worthy of note are those members of Communist-dominated labor organizations who have no choice but to follow a subversive leader if they wish to work. (They voted for Wallace.)

When it comes to the civil-service employees in our various political subdivisions, however, the situation differs sharply from that prevailing in private corporations. Civil-service employees, both local and Federal, organized or unorganized, long ago became sold on the thesis that their continued job tenure depended upon their unreasoning fealty to some political officeholder.

In the 1948 elections the vote of State, county, and city employees split fairly evenly between Republican and Democratic nominees, but the Federal employees voted solidly for their jobs and Harry Truman—and thereby furnished the plurality necessary to put the Missourian back in the White House. Political observers should pay less attention to the inaccuracies of the noisy barkers of the CIO-PAC and watch more carefully the smooth but deceptive pea under the political walnut shell which, since 1936, has been the Federal Civil Service Commission.

No Hatch Act, nor any little Hatch Act, ever has succeeded in keeping civil-service employees out of politics. Yet with 1 in 10 of our 60,000,000 workers now on some sort of governmental pay roll, we should long ago have learned that our civil servants no longer rate as subservient public employees. Too many governmental workers frankly think of themselves as members of a solidly organized political force set apart from the common run of Americans.

Civil service can be administered only by means of a politically appointed Civil Service Commission. This small group of men and women are controlled by one or more politicians, and in turn they control every phase of the civil-service worker's existence, both on and off the job.

Any union leader, for example, will bear witness that Civil Service Commissions long ago usurped all prerogatives ordinarily accorded the labor official. Civil Service Commissions have always set up all wage scales and conditions of employment for governmental employees, and continue to do this without consulting anyone, even the heads of the bureaus involved. Thereafter, such a Commission can deny the governmental worker the very right to strike and summarily remove him from any governmental pay roll, either for striking or for picketing. There are any number of such instances on record, but there is no record of any labor union ever winning a concession frowned upon by an autocratic Civil Service Commission, either through arbitration or by means of striking.

Political activity within governmental bureaus was carried on openly throughout the Rooseveltian regime. Curiously enough, much of this political action had its origin within local (city, county, and State) governmental groups and spread from these units upward into the Federal bureaus.

Fortunately for all of us, however, governmental employees, both local and Federal, are today becoming increasingly fed up with the necessity for placing political activity ahead of proficiency on the job they happen to hold. Particularly is this true of those hundreds of thousands of ex-GI's who have entered governmental employment since 1945.

The Federal bureaus' political machines held together throughout 1948, but just barely. There was much open dissatisfaction evidenced by civil-service employees.

I am convinced that, by 1950, we will see the beginning of the end of the efforts of all major political parties to encourage activity of this sort among governmental job holders. It is also reasonable to believe that the United Public Workers of America, CIO, generally recognized to be the most strategically situated, as well as one of the strongest, of Communist-dominated trade-unions within the United States, soon will be wholly freed from subversive control.

My own experience in directing governmental political activity may prove somewhat typical, before this unpleasant phase of our period of national development has passed into history. In any case, surprisingly enough, no one appeared to doubt my loyalty to "the cause" espoused by this city bureau during the 4 years of my usefulness to the public power organization, and this despite the fact that I have been openly registered as a Republican for more than 30 years. However, when an official of this bureau happened to stumble upon this indication of my "indiscretion," I was first asked to revise my avowed political affiliation. So long as the issues on the ballot were wholly local I could be of value to the bureau heads, but they knew I would not "play ball" when it came to electing any group of leftist politicians to Federal office.

The civil-service employee has been misled, but he is not disloyal. I am convinced he would like nothing better than to be permitted to turn out a good job for his employers, the taxpayers of America. Before long I believe he will flatly refuse to play any politician's game and thereby put an end for all time to political activity in our governmental bureaus, both local and Federal. Here again is a consummation for which every American may well pray.

April Miracle in Normandy

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. GRANT. Mr. Speaker, under the permission granted me, I am enclosing for insertion in the RECORD an ode from the pen of J. Mitchell Pilcher, which appeared in the April 1948 issue of the Parish Visitor:

APRIL MIRACLE IN NORMANDY

(By J. Mitchell Pilcher)

An ode dedicated to the men who sleep beneath the reconquered soil of Normandy—hallowed by the Prince of Peace.

When the long march is over, the winter gone,
Then earth begins once more to wake from sleep
And emerald leaf and petaled flower acclaim
The April Miracle in Normandy.
Sightseers everywhere are on the go,
And tours designed to feed the hungry eyes
Of those lured by adventure's votive smile.
A breathless storied view of beach and hamlet
Is shown in a few hours or just a day,
That one may visit those soft silent towns
Wherein are sleeping—till the trump of Time—
The men who fell, pledging their light-foot years
That fearless Freedom might be born anew.
Nine cemeteries filled with silent men!
Pause, visitor, and think on what you see—
Row after row of crosses, small and white,
Grave after grave as lonely as the heart
That loved and found no recompense therein.
Along the broad highway of Liberty.
One may with crosses trace the tortuous route
That the Third Army took in death's fierce race
Across the sandy beaches of old France.
At St. Laurent, see where four thousand sleep;
St. Mere Eglise, the first, and small La Cambe;
In St. Mere Eglise, the second place,
And old Blosville, the largest with its dead
That number nearly seven thousand men.
St. James, Marigny and La Chene Guerin
And Gorron, with their many thousands more.
All sleeping, sleeping in these humble plots
Revered as God's own acres. O visitor,
With sad or anxious eye, look well about you.
Perhaps your quest reveals in slumber here
A friend, or brother, looking to the east?
Or is there one that would have been more close
Had he returned to his beloved town?
There are so many scarcities about—
In hotels and in lodgment for the living,
While the nine cemeteries bulge with dead.
O Normandy, where wave-swept beaches lie,
And tireless winds sweep over miles of surf
Past the long inland stretch of crosses—See!
The light is paling in the eastern sky,
The stars will soon be patient sentinels
To all who sleep beneath the reconquered soil
While over each low mound as soft winds blow—
Hallowed by the Prince of Peace—the apple trees
Will blossom, pink and white, and bear their fruit.

Nation Cannot Afford Costly Rivalry Between Armed Services

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a resolution adopted at a conference in Dallas, Tex., May 29 and 30, by Aeronautical Training Society, a group of over 30 operators of airports in 38 States:

UNIVERSITY OF MICHIGAN LIBRARIES

RESOLUTION

We, the members of the Aeronautical Training Society, Republicans and Democrats, on firm conviction founded on our activities in 38 States, declare in convention assembled, our belief that parents and taxpayers must take a strong and immediate position on national defense issues to prevent the incalculable disaster of another world war.

Therefore, we now resolve:

1. That unification of the armed forces, advocated by President Truman, must be achieved in deed as well as word, to preserve the resources and security of the United States.

That the decision of our Commander in Chief to employ the atomic bomb in World War II brought an earlier end to that conflict and saved the lives of millions; and that this Nation, with the support of the United Nations, would be justified in prompt use of the atomic bomb again in preventing any future war of aggression. We believe that our Nation should increase its knowledge of both civil and military uses of atomic energy and provide the means to deliver atomic weapons to any part of the world, as now advocated by the United States Air Force.

2. We endorse the action of Louis Johnson, our Secretary of National Defense, in refusing to waste the taxpayers' money on obsolete weapons, and we support his program of effective unification of the armed forces. We believe that complete unification will save $5,000,000,000 annually plus countless lives in the event of war.

3. We urge complete acceptance of the United States Air Force development program as championed by Secretary Symington and General Vandenberg.

The United States can no longer afford the ugly and costly spectacle of rivalries among the armed forces. Those who seek to avoid or minimize true unification should feel the just indignation of an aroused public. Our country's security and our international prestige must take precedence over the selfish interests of the services.

Because we believe that this program is essential in maintaining national security and preventing World War III, we, the members of the Aeronautical Training Society, pledge our efforts and our resources to the support of the defense program of the President and his Secretary of National Defense.

Preliminary Redraft of Bill Assuring an Expanded and Prosperous Economy

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. PATMAN. Mr. Speaker, on January 10 of this year I introduced a measure (H. R. 1177) designed to carry out the objectives of the Murray-Patman Full Employment Act of 1946 and develop the cooperation between business and labor and Government needed to assure an expanding and prosperous economy. Since then there have been a number of changes in the economic situation that make legislative proposals dealing with economic expansion increasingly important. Although total civilian employment continues high, it has significantly failed to expand to meet the needs of our growing labor force—particularly of the hundreds of thousands of veterans who are coming out of schools and looking for jobs. Total industrial production has declined continuously for the last 7 months and is now about 10 percent below the level attained last fall.

As a result, the people throughout the country are looking for a program that will give them hope and confidence about the future. The interest in the full-employment legislation I introduced in January has been growing from month to month, and many suggestions have been made for amplifying the measure and spelling out more specifically the courses of action that will be taken under it. On the basis of these suggestions, I have prepared a preliminary redraft which is now being circulated to a selected list of leaders in business, labor, agriculture, consumer organizations, and the economics profession for the purpose of obtaining their comments and suggestions. In the preparation of this redraft I have had the cooperation not only of the previous cosponsors, Senator MURRAY, of Montana, and Senator SPARKMAN, of Alabama, but also of Senator THOMAS of Utah; Senator MCMAHON, of Connecticut; Senator KILGORE, of West Virginia; Senator KEFAUVER, of Tennessee; Senator HUMPHREY, of Minnesota; and Senator PEPPER, of Florida.

For the purpose of facilitating public discussion of this measure and particularly of bringing it to the attention of the many Members of Congress who are interested in doing something now to prevent depression and contribute toward a steadily expanding economy, I include in the Appendix of the RECORD the present draft of this legislation.

A bill to provide specific measures in furtherance of the national policy established in the Employment Act of 1946

Be it enacted, etc.—

DECLARATION OF POLICY

SECTION 1. (a) In the Employment Act of 1946, the Congress declared the continuing policy and responsibility of the Federal Government, with the assistance and cooperation of industry, agriculture, labor, and State and local governments, to promote maximum employment, production, and purchasing power.

(b) The promotion of these objectives requires not only economic stability but also steady growth and expansion of the national economy in order that an average of at least one-half to three-quarters of a million new job opportunities a year may be available for a growing population; that the average annual increase of at least 3 to 4 percent in total production which our resources and skills make feasible may be achieved; that opportunities for small and independent businesses may be maintained and enlarged; that standards of living may be raised from year to year; that the position of the United States in the world economy may be secure; and that the national security program and the foreign policy of the United States may be effectuated.

(c) While high general levels of economic activity have thus far continued since the end of World War II hostilities, maladjustments resulting from the war, from the postwar inflation, and of a more enduring character have already produced some increases of unemployment, some decreases of production, and some uncertainty in business investment and consumer buying which are not consistent with maximum economic stability and growth.

(d) It is the purpose of this act to develop prompt specific measures to help deal with such economic maladjustments through the broad cooperative action of private enterprise and Government, and through such cooperative action to encourage an economic environment in which maximum employment, production, purchasing power, and confidence may be maintained on a stable basis. Specific measures herein directed toward this purpose of a stable and constantly expanding economy are those which—

(1) encourage the sustained and growing volume of private investment and production to the extent necessary for continuous maximum employment and production, with special emphasis on those investment and production opportunities required (a) to avoid bottlenecks and provide adequate capacity and facilities for a stable and expanding economy, (b) to hasten the improvement of economically underdeveloped or declining geographic areas of the country; and (c) to facilitate small and independent business enterprises (including veterans' enterprises); and

(2) encourage through study, consultation, and cooperation the voluntary development and application by industry, agriculture, and labor of general policies relating to prices, wages, and profits which will help to reduce the burden of excessively high living costs, promote maximum purchasing power of business and consumers in urban and rural areas, and thus discourage economic developments which inflict serious hardships and impede economic stability and expansion;

(3) encourage long-range planning of useful public works and resources development with special emphasis upon projects which by their character and timing will contribute to the needed expansion of private investment and production opportunities and to the stability and expansion of the whole economy; and

(4) give direct and immediate attention to spotty or localized areas of unemployment before these infect other parts of the national economy.

(e) The policies under this act shall be executed consistently with these three general considerations—

(1) insofar as feasible, the Government shall provide advice and assistance to industry, labor, agriculture, and others so that these groups, through their own actions, may help to promote the objectives of this act;

(2) improved opportunity for consultation between Government and industry, labor, agriculture, and others, shall be developed and utilized;

(3) when necessary to achieve the objectives of this act, there shall be resort to the governmental measures provided herein as a supplement to the efforts of industry, labor, agriculture, and others to promote maximum economic stability and expansion.

SHORT TITLE AND TABLE OF CONTENTS

SEC. 2. This act, divided into titles and sections according to the following table of contents, may be cited as the "Economic Expansion Act of 1949."

TABLE OF CONTENTS

Sec. 1. Declaration of policy.
Sec. 2. Short title and table of contents.

Title I—National Economic Cooperation Board

Sec. 101. Creation of National Economic Cooperation Board.
Sec. 102. Functions of the National Economic Cooperation Board.

Title II—Economic expansion through private investment and production

Sec. 201. Purpose of title.
Sec. 202. General investment and production needs and incentives.

Sec. 203. Designation of essential expansion areas.
Sec. 204. Expansion measures for designated essential areas.
(a) Accelerated amortization.
(b) Credit, research, and technical services.
(c) Procurement abroad.
(d) Utilization of Government war plants.
(e) Construction for use by private enterprise.
Sec. 205. Private investment in regional development.
(a) Local surveys of need.
(b) Insurance of private investment.
Sec. 206. Encouragement of small and independent business.
(a) Credit.
(b) Scientific and technical research contracts.
(c) Technical services.
(d) Local administration.
Sec. 207. Investigation of monopolistic restriction on private investment and production.
Title III—Economic expansion through voluntary adjustments in purchasing power
Sec. 301. Purpose of title.
Sec. 302. General studies of prices, wages, and profits.
Sec. 303. Periodic conferences.
Title IV—Economic expansion through public works and resources development
Sec. 401. Purpose of title.
Sec. 402. Study and coordination of planning activities.
Sec. 403. Long-range State and local plans and preparations.
Sec. 404. Federal project plans.
Title V—Treatment of spot unemployment
Sec. 501. Purpose of title.
Sec. 502. Designation of serious unemployment areas.
Sec. 503. Promotion of business activity.
Sec. 504. Acceleration of public works and services.
Sec. 505. Labor mobility.
Title VI—Miscellaneous
Sec. 601. Government corporations.
Sec. 602. Appropriations.

TITLE I—NATIONAL ECONOMIC COOPERATION BOARD

CREATION OF NATIONAL ECONOMIC COOPERATION BOARD

SEC. 101. The President shall establish a National Economic Cooperation Board. This Board shall include representatives of industry, labor, agriculture, and consumers and, insofar as feasible, State and local governments and regional developmental organizations, each of whom shall be appointed by the President. Members of this Board shall receive a per diem allowance of $40 for each day spent in actual meetings of the Board, plus necessary traveling and other expenses incurred while so engaged.

FUNCTIONS OF NATIONAL ECONOMIC COOPERATION BOARD

SEC. 102. (a) The function of the National Economic Cooperation Board shall be to make recommendations with respect to the development of national economic policies to promote maximum employment, production, and purchasing power under the Employment Act of 1946, including the investment, price-wage-profit and other policies set forth in this act. Such Board shall endeavor (a) to bring to Government officials the most representative thinking of various segments of the private economy and other non-Federal sources regarding sound national economic policies and the development of an economic environment within which private and other non-Federal efforts toward the achievement of the objectives of this act can be maximized, and (b) to interpret and disseminate to various segments of the private economy and other non-Federal sources such information and advice regarding the economy and national economic policies as may lead to improved understanding and cooperation in achieving the objectives of this act.

(b) The National Economic Cooperation Board may meet to advise and consult with the President from time to time at his request. Such Board shall meet regularly to advise and consult with the Council of Economic Advisers (which shall allot out of any funds that may be appropriated for such purposes funds to cover such staff services as the Board may need and the cost of any such reports as the Board may print), and representatives of other departments and agencies of the Government may be invited from time to time to attend such meetings. The Board shall be consulted by the Council of Economic Advisers during the course of the Council's assistance to the President in the preparation of his economic reports to the Congress under the Employment Act of 1946. The Board may recommend the holding of regional or industry conferences from time to time, and the Council of Economic Advisers, with the cooperation of appropriate departments and agencies of the Government, may arrange for such conferences and participate in them.

TITLE II—ECONOMIC EXPANSION THROUGH PRIVATE INVESTMENT

PURPOSE OF TITLE

SEC. 201. The extreme fluctuations in the volume of private investment and production have been closely associated with general economic instability. The provisions of this title are designed to encourage a composition of private and public policies which will help to stimulate private investment and production and to encourage their steady and balanced growth from year to year as a prime requisite for a stable and expanding national economy.

GENERAL INVESTMENT AND PRODUCTION NEEDS AND INCENTIVES

SEC. 202. In defining needed levels of employment, production, and purchasing power as required under the Employment Act of 1946, the President shall give particular attention to needed levels of private investment and production and to policies to encourage such private investment and production and to reduce factors militating against them. Such investment and production needs and policies, analyzed according to major areas of the economy, shall be transmitted to the Congress in the annual and midyear Economic Reports of the President and/or Economic Reviews by the Council of Economic Advisers. In carrying forward the studies essential to this purpose, the Council shall consult and advise with the National Economic Cooperation Board and shall utilize the services, facilities, and information of other Government agencies as provided in section 4 (d) (2) of the Employment Act of 1946. Where such studies relate to the levels of investment and production needed to carry out national security programs, they shall also be developed in consultation with the National Security Resources Board.

DESIGNATION OF ESSENTIAL EXPANSION AREAS

SEC. 203. (a) The President may designate essential expansion areas where he finds (1) that these areas because of their importance vitally affect the economy as a whole, and (2) that the present or foreseeable levels of private investment and production in these areas, because of their effect upon general levels of investment and production or upon bottlenecks or inadequacy of capacity or facilities, are not sufficient to be compatible with economic stability and expansion for the economy as a whole and therefore require specific measures as set forth in section 204: *Provided*, That such designation by the President shall not extend, without further statutory authorization, to any area other than the following, the scope of which shall be defined by the President: Steel; freight cars; iron ore (including taconite ore) and iron ore shipping facilities; manganese and chromite; copper, lead, and zinc; bauxite and aluminum; synthetic liquid fuels; electric power; fertilizers; timber; and newsprint.

(b) The President shall from time to time (1) examine other major areas of the national economy (with particular reference to the conservation and development of natural resources) for the purpose of determining whether a lack of investment and production in such areas is seriously interfering with, or threatens seriously to interfere with the promotion of the objectives of this act and, if he so finds, he shall report to the Congress his findings and recommendations for the designation of additional areas of the national economy as essential expansion areas; and (2) review the essential expansion areas designated hereunder for the purpose of determining whether the investment and production needs for any such area have been met or can reasonably be expected to be met without further action under section 204, and if he so finds, he shall revoke the designation for such area and report to the Congress his reasons therefor.

(c) The President shall administer the specific measures set forth in section 204, to the greatest extent possible, through the following agencies, referred to herein as "the designated agencies": The Department of Commerce for steel and freight cars; the Department of the Interior for iron ore (including taconite ore) and iron ore shipping facilities; manganese and chromite; copper, lead, and zinc; bauxite and aluminum; synthetic liquid fuels; and electric power; and the Department of Agriculture for fertilizers; timber; and newsprint: *Provided*, That the President may provide for the cooperation of agencies other than the foregoing designated agencies in the administration of such measures, and that he may assign the primary administrative responsibilities to such other agencies as he may designate if he determines it to be necessary for effective administration. Each designated agency shall establish an advisory committee for each of the designated essential expansion areas, consisting of representatives of business, labor, and consumer, including agricultural and industrial consumers. The business members of such committees shall be representative of small, independent, and large business enterprises, of different geographical areas, of trade association members and non-members, and of different segments of the industry or industries. The President, in determining upon designated essential expansion areas and the general needs and policies for each, shall have the advice and assistance of the Council of Economic Advisers which shall consult and advise in such matters with the National Economic Cooperation Board and with the appropriate designated agencies.

EXPANSION MEASURES FOR DESIGNATED ESSENTIAL AREAS

SEC. 204. The following specific measures are hereby made available to encourage the satisfying of investment and production needs for the designated essential expansion areas:

Accelerated amortization

(a) For the purpose of encouraging new private investment in each of the designated essential expansion areas, the Internal Revenue Code is amended by inserting after section 124 thereof the following new section:

"(a) Accelerated amortization on essential expansion facilities: Any taxpayer, at his election, shall be entitled to an amortization deduction for a period of not less than 60 months with respect to any essential expan-

UNIVERSITY OF MICHIGAN LIBRARIES

sion facility defined in subsection (b) hereof. The amortization deduction shall begin as to any such facility, at the election of the taxpayer, with the month following the month in which the facility was completed or acquired or with the succeeding taxable year, and such election shall be made by a statement to that effect in the return for the taxable year in which the deduction is to begin, accompanied by a certification as to the nature and purpose of the facility.

"(b) Definition: The term 'essential expansion facility' means any facility, building, machinery, or equipment or part thereof, the construction, rehabilitation, erection, or installation of which is begun at any time following 30 days after the enactment of the Economic Expansion Act of 1949 and which is within any of the essential expansion areas designated under the Economic Expansion Act of 1949."

Credit, research, and technical services

(b) The powers granted to the Secretary of Commerce under section 206 of this act for the encouragement of small and independent business shall be available also to the President for utilization within designated essential expansion areas: *Provided*, That, within such areas, technical services, research contracts, credit insurance, and loans may be provided for any business enterprises although particular stress shall be placed upon the needs of small and independent business enterprises (including veterans' enterprises).

Procurement abroad

(c) Whenever the President determines that Federal procurement abroad is necessary to supplement measures for the promotion of domestic investment and production in order to help satisfy investment and production needs for iron ore, manganese, chromite, copper, lead, or zinc, he may purchase or make commitments to purchase, either directly or through the Bureau of Federal Supply, such materials abroad either for Government use or for resale in the United States (particularly to small and independent business enterprises, including veterans' enterprises): *Provided*, That in making such purchases or commitments to purchase, consideration shall be given to the effects of such purchases upon the balanced development of the economy of the area from which such materials are procured, including the protection of health, safety, and labor standards in the production for export of the materials procured or to be procured: *Provided further*, That such materials shall not be resold in the United States at prices which would have the effect of depressing production by competitive domestic producers. Such purchases and commitments to purchase may be made for such quantities, and on such terms and conditions, including advance payments, and for such periods, as the designated agency deems necessary, except that purchases or commitments to purchase involving higher than currently prevailing market prices or anticipated loss on resale shall not be made unless it is determined that the needs for such materials cannot be met at lower prices or on terms more favorable to the Government. Nothing in this subsection shall be construed to limit existing authority under the Strategic and Critical Materials Stock Piling Act, and the administration of this subsection shall be coordinated with the administration of such act.

Utilization of Government war plants

(d) The President (1) shall provide for a complete survey of Government-built war plants in designated essential expansion areas which are owned by the Government and which are not substantially in operation and (2) may, by or under contract with private enterprise, provide for any necessary rehabilitation, equipment, and expansion of such plants, and/or for such lease or sale of such plants to private enterprise as may be helpful to satisfy investment and production needs in designated essential expansion areas.

Construction for use by private enterprise

(e) Whenever the President finds that investment and production needs for synthetic liquid fuels, steel, freight cars, or fertilizers cannot reasonably be expected to be satisfied through accelerated amortization under (a) hereof or under the provisions of (b), (c), and (d) hereof or under other statutory authorization, he may provide for the construction, by or under contract with private enterprise, of the needed plants or facilities or equipment for lease or sale to private enterprise. Construction, lease, or sale contracts may be made on such terms and conditions as the President deems necessary. For the purposes of this section, the President is authorized to acquire real property and any right, title, or interest therein by purchase, lease, or otherwise, as he deems necessary in carrying out the purposes of this section, and assume the obligation to pay rentals in advance on real property.

PRIVATE INVESTMENT IN REGIONAL DEVELOPMENT

SEC. 205. National economic stability and expansion require special efforts to promote industrial and resources development and diversification in economically underdeveloped or declining geographic areas of the country. Such programs will provide vast new direct outlets for private investment, and indirectly will provide new and expanding domestic markets for the products of the whole economy. For this purpose, the term "underdeveloped" area shall mean any geographic area where per capita income lags substantially below the national average because its natural resources remain relatively underdeveloped or because its industries have been relatively undeveloped or undiversified; and the term "declining" area shall mean any geographic area whose rate of general economic growth is substantially diminishing in contrast to national trends.

The Secretary of the Interior, with the assistance of an Office of Regional Economic Development to be created in the Department of the Interior, and with the advice of an interdepartmental committee consisting of the Secretary of the Interior as chairman, the Secretary of Commerce, the Secretary of Agriculture, the Secretary of Labor, and any other officials designated by the Secretary of the Interior, shall develop a coordinated program of encouraging private investment and production for the expansion of economically underdeveloped or declining geographic areas of the country by—

Local surveys of need

(a) advising on the utilization or creation of State and regional developmental organizations, public or private, empowered to encourage the economic development of such areas; and making grants to such organizations for surveys of developmental needs;

Insurance of private investment

(b) insurance up to 90 percent of private investment in State and regional developmental organizations, public or private, empowered to make loans for purposes which such organizations determine to be necessary for the economic expansion of the area, to the extent that private investment for such purposes is not attainable otherwise on satisfactory terms. The Secretary of the Interior upon terms approved by the Secretary of the Treasury shall dispose of any evidence of debt or security held by him in connection with the payment of such insurance and collect, compromise, or sue upon such obligations.

ENCOURAGEMENT OF SMALL AND INDEPENDENT BUSINESS

SEC. 206. National economic stability and expansion also require special efforts to promote increased industrial, business, and commercial activity by small and independent business enterprises (including veterans' enterprises) by providing various forms of assistance frequently unavailable to such business enterprises but yet essential to their existence and growth on a competitive basis. For purposes of this act, the term "small" business enterprises shall mean any enterprise for profit regularly employing not more than 500 persons; and the term "independent business enterprise" shall mean any enterprise for profit regularly employing more than 500 employees which is not a dominating unit in its industry, trade or business, or under the management or control of such a dominating unit.

Except with respect to those areas of the national economy designated as essential expansion areas under section 203, the Secretary of Commerce, with the assistance of a Small Business Division to be created in the Department of Commerce, is authorized and directed to—

Credit

(a) Provide assistance needed by small and independent enterprises throughout the country in obtaining intermediate and long-term credit for developing or expanding competitive industrial, business, and commercial activities where such capital is not otherwise obtainable on satisfactory terms. Such assistance shall be made available on the basis of managerial competence and the prospect of repayment under generally prosperous economic conditions, for periods up to 20 years, and at interest rates not in excess of 4 percent per annum, and under such other terms and conditions as are deemed appropriate, including provisions for the reduction or deferment of interest payments or deferment of principal payments, or both, where necessary, during periods of serious national declines in demand and employment. Such assistance shall be in the form of—

(1) insurance of any qualified private bank or financing institution against losses on loans or advances made to small and independent business for developing or expanding competitive industrial, business and commercial activities not in excess of 20 percent of the total amount of such advances and loans. The Secretary of Commerce may, upon terms approved by the Secretary of the Treasury, dispose of any evidence of debt or security held by him in connection with the payment of such insurance and collect, compromise, or sue upon such obligations; and

(2) to the extent that such credit assistance is not available under (1) hereof in any area of the country, direct loans up to 90 percent of the cost of the proposed activity;

Scientific and technical research contracts

(b) Contract with small and independent business enterprises, educational institutions, research or scientific institutions and foundations, and with governmental agencies, Federal or State, for scientific and technologic research and developmental work, including the construction and operation of pilot and demonstration plants, needed for the development and expansion of small and independent business enterprises for the purpose of making the products of such work available to such enterprises throughout the country. Any such contract may provide that any invention, discovery, or finding produced thereunder shall, whether or not patented, be required to be made freely available to the public and, if patented, the patents thereon shall be required to be assigned to the United States: *Provided*, That if such requirements are not included in any contract, a finding shall be made as to the reasons therefor.

UNIVERSITY OF MICHIGAN LIBRARIES

Technical services

(c) Establish a counseling service to provide small and independent business enterprises throughout the country with assistance in matters of management, organization, production, distribution, merchandising, markets, cost accounting, new business opportunities, sources of raw and semifabricated materials, development of new products, and related matters. For this purpose, the Secretary of Commerce shall—

(1) help provide the economic and business research needed by small and independent business by contracting with educational institutions, research institutions or foundations, qualified individuals, and with governmental agencies, Federal or State, as he deems necessary, and by making the results of such research readily and promptly available to small and independent business; and

(2) furnish small and independent business with information concerning the provisions of this act and the activities of the various agencies and departments under this act;

Local administration

(d) arrange for the administration of this section through local offices which shall be as accessible as practicable to small and independent business enterprises.

INVESTIGATION OF MONOPOLISTIC RESTRICTIONS ON PRIVATE INVESTMENT AND PRODUCTION

SEC. 207. The Federal Trade Commission shall make a continuing study of the extent to which needed expansion in private investment and production is being, or threatens to be, restricted or impeded by monopoly, monopolistic practices, restrictive agreements, or the concentration of economic power (including patent and international cartel restrictions and restrictive financing practices), with specific reference to the essential expansion areas designed under section 203. The Federal Trade Commission shall submit an annual report thereon to the President and the Congress within 6 months after the end of each calendar year.

TITLE III—ECONOMIC EXPANSION THROUGH VOLUNTARY ADJUSTMENTS IN PURCHASING POWER

PURPOSE OF TITLE

SEC. 301. A steady growth in private investment and production, encouraged under title II, will not be feasible and will not contribute to the stability and expansion of the economy as a whole unless, while investors are provided with enough funds and incentives for maximum production, consumers in urban and rural areas receive a steady and expanding flow of real income to furnish steady and expanding markets for the goods and services provided under conditions of maximum production and employment. This stability and growth, both in private investment opportunity and consumer purchasing power, depend largely upon price, wage, and profit relationships. While these relationships are determined in part by supply and demand, they are also determined in part by the voluntary decisions of businessmen, workers, and farmers. It is the purpose of this title, through improved machinery for voluntary cooperation, to promote better Nation-wide understanding and better voluntary application of general price and wage and profit policies which will help to further the objectives of this act.

GENERAL STUDIES OF PRICES, WAGES, AND PROFITS

SEC. 302. In defining needed levels of purchasing power as required under the Employment Act of 1946, the President shall place particular stress upon general levels of prices, wages, and profits as they affect purchasing power and consequently affect national economic stability and growth, and shall transmit the results to the Congress in the annual and midyear reports of the President and/or the economic reviews by the Council of Economic Advisers. For this purpose the Council, with the advice of the National Economic Cooperation Board and utilizing the services, facilities, and information of other Government agencies (especially the Departments of Commerce, Agriculture, and Labor), as provided in section 4 (d) (2) of the Employment Act of 1946, shall study—

(a) the general levels of real wages needed from year to year to help absorb the output of a stable and expanding economy, with emphasis upon those elements of the population, especially unorganized and white collar workers, whose incomes are insufficient for an adequate standard of living for themselves and for maximum purchasing power throughout the economy (including studies of minimum family budgets consistent with health and decency and related to living costs in the various sections of the country);

(b) the extent to which voluntary annual wage plans or guaranties may be utilized in specific industries;

(c) the general relationships between prices, wages, and profits which appear most conducive to an expanding and stable economy, taking into account the needs of investors (with particular emphasis upon cost factors involved in production and distribution) as well as of consumers;

(d) the general relationship between industrial and agricultural prices and incomes, which appear most conducive to an expanding and stable economy, with emphasis in both urban and rural areas upon balanced national growth, improvement of plant and equipment, and rising standards of living; and

(e) the effect of international undertakings involving the United States upon levels of purchasing power in this country.

PERIODIC CONFERENCES

SEC. 303. The Council of Economic Advisers and the National Economic Cooperation Board, working together, and with the assistance of the appropriate departments and agencies of Government, shall arrange for annual national conferences, at which representatives of industry, labor, agriculture, consumers, and Government shall seek to formulate general principles and methods to encourage improved development of such voluntary price, wage, and profit policies, as well as further the objectives of this act.

TITLE IV—ECONOMIC EXPANSION THROUGH PUBLIC WORKS AND RESOURCES DEVELOPMENT

PURPOSE OF TITLE

SEC. 401. Public works and resources development are necessary to conserve and build up the strength of the economy as a whole and to promote its growth, and thus form an essential element in the promotion of the purposes of this act. Such projects require careful advance planning to achieve maximum utility, and to accomplish sufficient emphasis not only upon the direct employment and demand for materials which they create but also upon the long-term stimuli which they provide to private investment, production, and employment. While such projects can be used effectively to take up any slack which may develop in private employment and production, a more far-reaching purpose will be served if they are developed on a long-range regularized basis which promotes the stability and expansion of the economy as a whole and thus decreases the need for emergency projects from time to time. It is the purpose of this title to develop improved machinery toward the attainment of these objectives.

STUDY AND COORDINATION OF PLANNING ACTIVITIES

SEC. 402. In defining needed levels of employment, production, and purchasing power as required under the Employment Act of 1946, the President shall periodically reexamine the needed levels of public works and resources development, and the machinery and financing available for such purposes, with increased emphasis upon the considerations set forth in section 401. The definition of needs and policies resulting from such study shall be transmitted to the Congress in the Annual Mid-Year Economic Reports of the President and/or the Economic Reviews by the Council of Economic Advisers. In carrying forward the studies essential to this purpose the Council shall work particularly with the Federal Works Administrator and shall utilize the services, facilities, and information of other Government agencies as provided in section 4 (d) (2) of the Employment Act of 1946.

LONG-RANGE STATE AND LOCAL PLANS AND PREPARATIONS

SEC. 403. The Federal Works Administrator is hereby authorized and directed—

(a) to make grants to States and their agencies and political subdivisions for the purpose of developing over-all State or local public works plans, based on the long-range needs for public works projects of all kinds, both rural and urban;

(b) with a view to maintaining reserves of planned non-Federal public works projects amounting to approximately $15,000,000,000 at all times, make loans or advances to the States and their agencies and political subdivisions to aid in financing the preparation of advance planning for specific projects which conform to over-all State or local public works plans approved by appropriate State or local authorities, including architectural, engineering, and economic investigations, and studies, surveys, designs, working drawings, specifications, procedures, site acquisition, and other actions preliminary to the construction of such public works projects: *Provided*, That (1) all such over-all State and local plans are oriented at all times toward meeting the needs for public works for at least a 10-year period and (2) the making of grants, loans, and advances shall not in any way commit the Congress to appropriate funds for the construction of any specific projects. For purposes of (b) hereof there is hereby established a fund to be known as the Advance Planning Fund, from which loans or advances under this section shall be made. All loans and advances made under this section shall be repaid if and when the construction of the public works planned with such loans or advances is undertaken. Any sum so repaid shall be deposited and covered into the Treasury to the credit of the fund and shall be available for making further commitments, loans, and advances under this section; and

(c) allot grants and loans and advances hereunder among the several States in the following proportion: 50 percent in the proportion which the population of each State bears to the total population of all the States, as shown by the latest available Federal census, and 50 percent in accordance with the need of the States, in relation to their ability otherwise to prepare over-all State or local public works plans or to undertake advance project planning, as determined by the said Administrator: *Provided*, That if the Federal Works Administrator determines that any funds so allocated to any State cannot promptly be utilized for effectuating the purpose of this title, he may allocate such funds to any other State or States requiring additional allotments.

FEDERAL PROJECT PLANS

SEC. 404. Each department and agency of the Government having responsibility for construction work shall, within the limits of its statutory authorizations and appropriations, prepare and keep current advance plans, designs, and estimates for specific projects for at least a 10-year period and

shall take such other action preliminary to the construction of such projects as it deems necessary.

TITLE V—TREATMENT OF SPOT UNEMPLOYMENT

PURPOSE OF TITLE

SEC. 501. National economic stability and expansion depends upon maximum employment on a Nation-wide basis. Serious unemployment in any geographical area of the country, if allowed to continue for any appreciable length of time, would undermine national economic stability and expansion. This title recognizes that the need for raising the level of employment in any such area requires specialized attention.

DESIGNATION OF SERIOUS UNEMPLOYMENT AREAS

SEC. 502. Whenever the Department of Labor finds that unemployment in any geographic area of the country has reached, or threatens to reach, a serious level (measured by magnitude and possible duration), it shall so certify to the President who may designate any such area as a serious unemployment area. The Department of Labor shall review continuously the employment conditions in designated serious employment areas and whenever it finds that unemployment in any such area is no longer serious, it shall so certify to the President, who may revoke the designation of such area.

PROMOTION OF BUSINESS ACTIVITY

SEC. 503. (a) The agencies with primary responsibilities for the administration of the programs provided for in sections 205 and 206 shall give special consideration to the utilization of such programs for the purpose of maintaining and raising the level of employment in any such area by encouraging increased business activity.

(b) If the President finds that serious unemployment in such area can be eliminated in whole or in part by the placing of Government contracts with business enterprises in such area and, with respect to defense contracts, that such contracts may be placed therein without injury to the defense program, he may direct the appropriate contracting agencies of the Government to place any such contracts in such area, within the limits of existing authorizations and appropriations, including contracts for advance purchases.

ACCELERATION OF PUBLIC WORKS AND SERVICES

SEC. 504. If the President finds that serious unemployment in such area can be eliminated or averted in whole or in part by the acceleration of useful public works and services, he may provide for (1) the initiation or expansion, within the limits of existing authorizations and appropriations of Federal programs for public works and services in such area; (2) loans as requested by appropriate agencies of State or local governments when it is demonstrated that the proposed public works and services in such area would quickly and effectively help to eliminate or avert such serious unemployment; and (3) funds for increasing authorized Federal programs for public works and services. For the purposes of (2) and (3) hereof, the President may utilize the financial resources of the Reconstruction Finance Corporation.

LABOR MOBILITY

SEC. 505. If the President finds that serious unemployment in such area can be eliminated in whole or in part only by assisting workers and their families to move to other locations where there are more adequate employment opportunities, he may direct the Department of Labor to make non-interest-bearing loans available up to $1,000 per family for transportation, including the transportation of household effects, to any other location of new employment arranged for by such workers. For this purpose the President may utilize the financial resources of the Reconstruction Finance Corporation.

TITLE VI—MISCELLANEOUS

GOVERNMENT CORPORATIONS

SEC. 601. (a) For purposes of administering the lending, insurance, and contracting authority contained in sections 204, 205, and 206, each of the designated agencies may create a new corporation. Any such corporation—

(1) shall have the power to sue and be sued; to acquire, hold, and dispose of property; to use its revenues, to determine the character of and necessity for its obligations and expenditures and the manner in which they shall be incurred, allowed, and paid subject to laws specifically applicable to Government corporations; and to exercise such other powers as may be necessary or appropriate to carry out the purposes of such corporation;

(2) shall have its powers set out in a charter, which shall be published in the Federal Register, and all amendments to which shall be similarly published;

(3) shall be subject to the Government Corporation Control Act to the same extent as wholly owned Government corporations listed in section 101 of said act; and

(4) is authorized to borrow from the Treasury of the United States, for any of the purposes of the corporation, such sums of money as may be necessary to carry out its functions under this title. For this purpose such corporation may issue to the Secretary of the Treasury its notes, debentures, bonds, or other obligations to be redeemable at the option of the corporation before maturity in such manner as may be stipulated in such obligations. Such obligations may mature subsequent to the period of succession of the corporation. Each such obligation shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average rate on outstanding marketable obligations of the United States as of the last day of the month preceding the issuance of the obligation of the corporation. The Secretary of the Treasury is authorized and directed to purchase any obligations of such corporation to be issued hereunder and for such purpose the Secretary of the Treasury is authorized to use as a public-debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which such securities may be issued are extended accordingly.

Limitations on credit and contract authority

(b) The total amount of outstanding commitments, contracts, liabilities, loans, and advances under this act shall not exceed the following sums:

(1) Essential expansion programs under section 204, $———;

(2) Private investment in regional development under section 205, $———;

(3) Encouragement of small and independent business under section 206, $———;

(4) Preparation of State and local public works projects under section 403 $———; and

(5) Funds for State and local public works and services and for increasing authorized Federal programs for public works and services under section 504, $———.

APPROPRIATIONS

SEC. 602. There is hereby authorized to be appropriated the sum of $15,000,000 per annum of which—

(a) $2,000,000 shall be for investment studies under section 202, to be allocated among the Department of the Interior, the Department of Commerce, and other agencies by the President;

(b) $2,200,000 for administration of essential expansion measures under section 204;

(c) $500,000 to the Secretary of the Interior for grants for State and regional surveys under section 205;

(d) $500,000 to the Secretary of Commerce for the administration of his functions under section 206;

(e) $1,000,000 to the Federal Trade Commission for the study of monopolistic restrictions under section 207;

(f) $1,800,000 for the study of wage, price, and profit data and policies under section 302, to be allocated among the Department of Commerce, the Department of Agriculture, the Department of Labor, and other agencies by the President;

(g) $7,000,000 to the Federal Works Administrator for grants for State and local public works plans under section 403.

Socialist Absolutism

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including a timely article by Edna Lonigan entitled "Socialist Absolutism." It appeared in the May issue of Plain Talk:

SOCIALIST ABSOLUTISM

(By Edna Lonigan)

Most people are aware that the word "liberalism" is used today in a sense directly opposite to its true meaning of freedom from state control. Few people are yet aware that the word "socialism" has undergone the same transformation. It used to refer politically to government by the rank and file; today it refers to government by a small elite, controlling both economic and political power, and answerable to no one.

Dr. Beckwith's book deals with neo-socialism, or the economic theory which is applicable to the new political society in which a few control all the economic wealth of the nation.

The (new) socialist state, says Beckwith, will have to accept classical economics just as we do today. "Once Socialists grasp the point of view set forth above," he says, "Marx will be replaced by Marshall as the chief guide to the solution of the economic problems of a socialist economy."

Oh, what a change is here, my countrymen, from the old Socialist dogma that classical economics is an outdated theory, a mere apologia for the status quo.

The labor theory of value with its corollary, the exploitation of labor by capital, is abandoned. As a matter of fact, workers receive almost the full value of their labor under capitalism, says our author.

The neo-socialism envisaged by Beckwith will use most of the economic institutions of capitalism. Money is necessary, he says, if consumers are to have freedom of choice. So are prices. The Communist doctrine of equal pay for equal work is out, because individuals do not all have the same desires for money.

Profits will be necessary under neo-socialism because they alone show which enterprises are successful, and which are failing. Saving will be necessary to provide new capital. Wages must be unequal because inequality of payment is an incentive for high production. Wages must be set by employing officials; wage problems are too technical for workers to understand. There can, of course, be no collective bargaining, says our

UNIVERSITY OF MICHIGAN

author, because that would interfere with payment to workers on the basis of what they produce.

His new socialism is in fact the familiar classical case of pure monopoly. The state is the only employer, the only investor, the only bank, and the only merchant.

Beckwith admits that the Neo-Socialists must change their attack against free capitalism. Free capitalism cannot be charged with inequality because the Neo-Socialists have taken over inequality. The new charge is inefficiency. The Neo-Socialist state will produce more. Thus it can pay higher wages, build more houses, schools, hospitals, and concert halls.

The happy assurance that Socialist productivity will be higher than that of free capitalism is the crux of the case for neo-socialism. Socialism generally transfers the management of all our resources from men of experience, selected in the hard school of trial and error, to desk workers, who have had little experience with the world of harsh reality, who cannot be compelled to render accurate accounting of gains and losses, and who can make us pay all losses through the taxing power.

Instead of saying why this should bring higher productivity, Beckwith goes into economic technicalism. The government, he says, can order every enterprise to sell at a price to cover its cheapest units of production, usually the last, instead of asking a price to cover its earlier more costly expenses. This sounds like something new and ingenious, but all it means is that the Socialist government will pay the earlier costs by taxation.

Cicero said that the Roman augurs had reached the point where he wondered how one augur could pass another on the street without laughing. Something of the same thing is happening to economists under the influence of state propaganda.

To understand the new Utopia we must look at its taxes. Under free capitalism, saving is voluntary. Under socialism, saving would be compulsory, withheld from wages. (Why should the Socialist elite bother with individual differences in the desire to save? Why give the poorer workers the right to spend all they make?) "Reckless and improvident individuals * * * would be forced to save at the rate determined by the majority of voters," says Beckwith.

The new Socialist state would furnish hospitals, schools, possibly streetcar service, without charge—but the cost would be added to taxes. Sales taxes, as on gasoline, are very desirable, says Beckwith. But Socialists would never tax a rich district to pay for schools or roads in a poor one. That would be uneconomic. Excise taxes are good because the state is a better judge of consumption than the consumer. A Socialist state would levy restriction taxes on habit-forming drugs, alcoholic drinks, organized prostitution, gambling, tobacco, tea, and coffee, if it did not prohibit them.

The new Socialists would never use personal income taxes to reduce inequalities of income, because Socialist inequalities are good inequalities, designed to increase production. In wartime they might impose capital levies on articles like automobiles and refrigerators, as part of rationing. The government would have unlimited power to create money, which is a form of taxation, because it transfers real purchasing power from the public to government.

The ideal tax, says the author, is the poll tax. The theory that taxes should be based wholly or partly on ability to pay is wholly unsound. A worker who produces twice as much as another should not be expected to contribute more toward the costs of education, health, justice, etc., than the inefficient workers. (Shades of the PCA!)

Poll taxes would be from 10 to 20 percent of average income (relatively more from low-income workers) and "should be deducted from wages and salary payments without asking the consent of the individual." Poll taxes should, he says, be applied to children as well as adult, except as a reward for eugenic parenthood. "Under socialism special taxes on large families will be far more desirable * * * in most countries than special taxes on childless individuals."

Most interesting are the plans for control of the labor supply. "While the state cannot create or destroy large numbers of workers in a short period of time, there is no valid reason why, in the long run, a Socialist government should not alter the total supply of labor in any desired direction." Over the short run, apparently, the state can destroy only small numbers of people (it is easy with rationing) unless war raises the pitch of national passions, when the limits would be off.

"To tell a man how many children he may have may appear to be an unjustified interference with personal liberty. * * *" (But that is not important.) "So far as possible this control should be persuasive only, but compulsory measures should be adopted to deal with an antisocial minority."

The state should teach birth control in the schools. If that does not work, it should impose a tariff on births, high enough to bring about the "desired" level. As Beckwith says, no one could escape the tax.

This is a beautifully frank picture of where we are going today. This is as important a turn in Socialist theory as the Communist manifesto. But it is a Machiavellian revolution by the rulers, not a popular rising. It is technocracy, or government by a permanent elite, who understand modern economic power, and who have an overwhelming desire to take over the total wealth of their nation and use it for their experiments.

How could any opposition get resources to survive and support legislators, newspapers, political parties, or churches?

This system may not be enticing to the planned for. But make no mistake, it has an enormous appeal to those who would be the planners. Thus it can be used by a few power seekers to draw the half-educated into the net of the new absolutism.

Those who want a book on the real economics of socialism would do better to read L. R. Hubbard's spare and beautiful analyses of the experience of Soviet Russia. But those who are studying the propaganda for the new statism, the subtle manipulation of economic symbols to win over the intellectuals, cannot afford to overlook Dr. Beckwith's revealing treatise.

Dr. Bunche Declines

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Washington Post on Saturday, June 4, 1949:

DR. BUNCHE DECLINES

The record of Dr. Ralph Bunche puts him in the front rank of public men in the United States. He has just returned from the Middle East, where, as United Nations mediator in the conflict over Palestine, he scored a signal diplomatic triumph, which left all parties praising his personal qualities and his gift of leadership. The President, sensing the respect of the American people for this achievement, sought unsuccessfully to reclaim him for the diplomatic service. He asked him to be Assistant Secretary of State in charge of middle eastern and African affairs.

Dr. Bunche declined the honor. At the time he gave as his reasons, first, that he could not afford to leave the United Nations, and, secondly, that the work at Lake Success was of more interest to him than the assignment at the State Department. Now, in response to questions, he has given another reason that may or may not have been decisive. This is the public discrimination against Negroes in the American Capital.

This reason had already been suspected. Dr. Bunche must have had many illustrations of this discrimination along with other distinguished men of his race. But the last instance of Jim Crowism at Mr. Bunche's expense is enough to make even hardened Washingtonians wince. It occurred while Mr. Bunche was at work at Rhodes in bringing Arab and Jew together. A dinner had been arranged at a Washington hotel at which he was scheduled to speak. After the hotel had accepted the deposit, the executive secretary of the Middle East Institute, Mr. John E. Marsh, bethought himself of the local mores and told the hotel that Mr. Bunche would be a guest. Immediately the deposit came back from the hotel with an intimation of the hotel's no-Negro policy.

There is no reason to identify the hotel, for the policy is more or less common to the Capital's hotels and restaurants, and is simply a reflection of the prevailing mode of public life. It is nonetheless humiliating to the community. Here is a man who was then and is now being mentioned as a candidate for the next Nobel Peace Prize unable to get into a hotel or a restaurant in the American Capital.

Race, as G. K. Chesterton once said, is "anthropology gone mad." He was referring to Hitler's wild worship of it. In the local case the issue is a nameless fear that seems to have grown in extent and become a community habit down the years as the history of the fear has receded. Back in the seventies there was a local ordinance prohibiting racial segregation in Washington hotels, restaurants, bars, and barbershops. It seems to have been nullified about a generation later, without any apparent repeal by the local authorities. Several times we have urged research into the history of the ordinance, and we are now glad to see that this has now been ordered by the District Commissioners. It is intolerable to let this nullification stand. It subjects the American Capital to ridicule and worse in the eyes not only of the world but also of the Nation at large.

This is the reason that Mr. Bunche would rather not live in Washington, especially as Assistant Secretary of State. Only in his department would he have been honored. Outside its doors he would have risked the status of a coolie. Yet Mr. Bunche is the kind of man who can rise above the indignities to which he has been subjected. He spoke the other day at Fisk University, giving the commencement address against the background of a lynching in Georgia. And here is what he said: "We Negroes must be great realists * * * We are Americans, in a basically democratic society * * * While nothing is easy for the Negro in America, neither is anything impossible. The barriers of race are formidable, but they can be surmounted. Indeed, the entire history of the Negro in this country has been a

UNIVERSITY OF MICHIGAN LIBRARIES

history of continuous, relentless progress over these barriers."

Dr. Bunche's career is the living exemplification of his comment, and his words ring true because of it, leaving an impression of sincerity which is sometimes lacking among the professional organizers on race relations. What the State Department has lost the United Nations has gained.

Still a Bad Measure

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, the following editorial appeared in the Washington Star, and I would like to include it in the CONGRESSIONAL RECORD under leave to extend my remarks:

Although the veterans pension bill which swept through the House with little opposition Wednesday is less objectionable than its rejected predecessor, it is still bad legislation. It is bad because it would saddle the Treasury with an over-all pension burden averaging more than a billion a year during the next half century and because it establishes a costly new pension policy for veterans of both World Wars—a policy not conditioned on actual disability or degree of employability.

The original Rankin bill would have cost the Nation some $125,000,000,000. The new proposal for $72-a-month pensions at 65 for World War veterans will cost only half as much. But even $65,000,000,000 is a sizable expenditure to approve at a time when Federal deficits are mounting, with no relief in sight.

It would be easier to justify the liberal pension program if it could be shown that the Government's past attitude toward veterans had been a miserly one. But the facts are to the contrary. Last year alone the Federal Government spent $6,696,000,000 on the Veterans' Administration and its varied programs for hospitalization, rehabilitation, education and other relief for former servicemen. Nearly fifty billions, all told, have been spent for aid to veterans by the Veterans' Administration and the old Pension Bureau. No other country has been so generous to its war veterans.

It is right that the Government should be considerate of the welfare of the members of the armed services, present and past. It is right that men disabled in combat should be given the best medical care and assisted in overcoming their handicaps, that those whose education was interrupted by war should be helped through college, that loans and other aid should be extended to those in need of homes and seeking to reestablish themselves in the community. But it is unreasonable to go so far beyond this program as to assume—as the bill would for pension purposes—that all 65-year-old veterans with small incomes are totally disabled and unemployable and hence deserving of the present total-disability pension of $72 a month.

If the Senate is as determined to effect economies as its leaders have indicated recently, it will let the Rankin bill die a quiet death in committee. It has no place on a legislative program supposedly dedicated to less, not more, Government spending.

Retreat in the Pacific—A Major Defeat for the U. S. A.

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. Harry Roskolenko, writing in May Plain Talk, says that our retreat—and that is what it is—in China is an explosion of atomic dimensions. In fact, it is a total retreat in all of the Pacific, for which our sons died, and with the prospect that our grandchildren may again storm the atolls in an attempt to drive back Russian soldiers. I am including the article as part of my remarks:

RETREAT IN THE PACIFIC
(By Harry Roskolenko)

An explosion of atomic dimensions is in the making in Asia. As Winston Churchill has warned us in his recent Boston address, "The worst disaster since our victory has been the collapse of China under Communist attack and intrigue."

The life line of American defenses in the Pacific is in real danger of being pushed back to Australia and Hawaii as the downward pressure of the Red armies in China mounts. Our island bases in the Pacific may be rendered useless when all of Asia goes up in the Red conflagration.

Whether Mao Tse-tung becomes an Asiatic Tito or not will hardly affect the problem, except as a tactic. If you will study the map of southeast Asia, you will sense that the remote areas we saw in the newsreels of the Allied campaigns of 1942–45 have changed their political complexion. Former friends are now enemies; and former enemies, like the Japanese and Siamese, are to be wooed as friends.

One important friend, Burma, may soon be lost to us. During the Burma campaign in the war against Japan, 11 divisions of Chinese Nationalist troops poured across the mountains from Yunnan into Burma. Next time it is likely to be Chinese Communists who pour in. Burma is now in the midst of a many-pronged tribal and class civil war. With the added pressure of victorious communism from south China, this mountain-locked country may be cut off as a base of operations right down to the Bay of Bengal. Dismembered by Karen separatists and by Communists of several shades, and rejecting reaffiliation with the British Commonwealth, Burma has no internal power. If Premier Thakin Nu is forced to take Communists into his new cabinet, the end is near.

Not far away is the Crown Colony of Hong Kong, swelling with refugees and Communist infiltrees, where a highly organized Communist movement is waiting for the signal to take over. England's domestic economic difficulties, the curtailment of her military forces, make her chances of holding on to Hong Kong—particularly when Communist pressure there increases—very slender. The British Navy is hardly sufficient to stand as a bulwark. It will need the help of armies to hold in check the tremendous forces the Communists will unleash. The desire of the Chinese to take back Hong Kong and the local aid they will obviously receive also enter the picture.

In the Indochinese provinces, France, unable to resolve the nationalist revolution, has stationed over 100,000 French troops. To break Communist Ho Chi-minh's hold on Viet Nam and the revolution, France is attempting to reinstate former Emperor Bao Dai of Annam. Even if the Emperor is installed he will be forced to continue the national revolution, to placate the peasants, and carry out some of Ho Chi-minh's plans. It will be either that or constant civil war.

Chinese Communist troops operating in Tonking have joined with Viet-Minh in capturing Moncay. An added factor is the recent espousal (to break Bao Dai's new agreement with the French) of exiled Prince Cuong De to join Ho Chi-minh on condition that the latter "does not apply Communist principles to Viet Nam's fight." A real nationalist struggle against communism can still be fought in Indochina.

European troops in Asia are not enough for effective over-all domination, especially as they are not allied to native nationalist armies. The problem is mostly one of allies. In Indochina France has too few friends. Go-betweens like Gen. Nguyen Vanu Xuyan and Emperor Bao Dai give only a surface coloration to France's colonial hang-over. France cannot hang on, particularly if the economic and political pressure at home becomes stronger. The flood from China that may wash France out of Indochina will not stop at Siam, where the Japanese germ of "Asiatic unity" reached its highest fruition. This was the only nation to go over "willingly" to Japan. Rather anti-British because of Britain's past slicing of Siamese territory bordering on Malaya, Siam, however, does look toward the United States.

The stability which Siam had in monarchistic days has been undermined by various palace revolutions. Shortly after the war the young king, Anantha Mahiden, was killed. Since then the Government has changed hands several times. To top it off, one-seventh of Siam's population consists of mistreated but economically strong Chinese. They will make natural allies, loyal to Communist China where most of them have friends, families, and antecedents. Despite its political independence, and because it lies between French Indochina and British Malaya, Siam will go as they go. Though its industries are partially British owned, this country (underpopulated by comparison with Indonesia and China) is the granary of Asia and is therefore a prize conquest. Its social and agrarian problems, and its landlordism will enhance the chances of social unrest.

To continue our travelog in terror, Malaya, like Hong Kong, sits on an uneasy bed of straw that awaits only the match that will fire England's Pacific fortress at Singapore. Local Communist uprisings make life difficult for the European in Malaya, and murder is a common occurrence. The strongest remaining sector of western influence in Asia outside of Japan, Malaya swings between the Gulf of Siam and the Andaman Sea, washed by every ripple of social unrest. Its nine federated states, including Singapore and British settlements, like Penang and Malacca, have 5,750,000 people, of whom more than 50 percent are Chinese. A source of rubber and tin, Malaya is under western financial control. With its extreme tensions of unrest, it is a natural ground for sowing Communist propaganda.

Malaya has much arable land awaiting cultivation, but lacks the people to work it. China can relieve its overpopulation by further migration to Malaya, as well as to Indochina, Burma, and New Guinea. Cheap labor from India and China, bearing revolutionary ideas, has contributed to social and political unrest. The instability of rubber market prices, endless strikes—now illegal—and poor labor laws have intensified Malaya's dilemma.

In Japan we see the reverse side of the coin, for we are the occupiers and teachers.

Though Japan has just voted into power the Liberal-Democrats, a conservative party with three-times Premier Yoshida at its head, most of the safe middle-of-the-road parties have been swamped in the election. This is unhealthy because it narrows the field to conservatives and Communists, the latter having made the greatest single gain.

Formerly the factory of the Orient, Japan is the key country for western aims. The new policy, announced by General MacArthur recently, insists on a program of self-rehabilitation. No doubt our financial experts will soon straighten out the wavering value of the yen, but the lack of a peace treaty is the stumbling block to recovery. A treaty could create trade, arrange huge loans, and establish internal security. Currently, Japan depends on the 100,000 American troops for its defense. What few British brigades there were have been withdrawn to other more important sectors. Russia, however, still has within its borders 600,000 former Japanese soldiers—enough to make a mighty Communist militia. It is apparent that many returned and rehabilitated Soviet prisoners voted Communist. The constant smuggling of Korean Communists into Japan also helps to raise the quota of dissidents.

If we want Japan to be free, our time is short. The major weapons of Japan's military defenses were, of course, destroyed; its navy is gone. The door to communism stands open if we fail there. Despite General MacArthur's pledge to defend Japan, the decrease in our military forces throughout the Pacific has weakened our general position.

By contrast, across the Japan Sea in Korea a few thousand American troops are attempting to referee the struggle to split southern Korea from the democratic orbit. When China goes Red, Korea will topple; for there is no barrier there except our troops, which would hardly be sufficient even for token defense. The request of Ambassador Chough Yyung Ok for arms and United Nations military aid or more American troops runs counter to American foreign policy, with its aid-Europe-now-and-the-Pacific-later program. But Korea is another uneasy dike in our crumbling defenses.

Our last line of defense north of New Guinea and Australia is the Netherlands East Indies, now made ripe for Communist encroachment by Dutch stupidity, avarice, and brazen disregard of the United Nations. That the Indonesians could cope with Communist infiltration became evident—among other indications—when they put down the Musso rebellion in the fall of 1948. The United States was obviously embarrassed because European recovery program funds armed the Dutch; but the speech of Dr. Jessup at the United Nations session saved our moral face. For the Russians, expert in political exploitation, the Indonesian affair meant another victorious round in the battle for Asia. Senator BREWSTER'S resolution denying aid to any violator of United Nation Nations obligations, if passed, may give us more face in Indonesia.

This thickly populated area, with over 70,000,000 Asiatics—and a fervent nationalism that had experienced some Japanese wooing—blossomed into the Republic of Indonesia in August 1945. When the British occupied the islands and handed them back to the Dutch, much as they had offered to return Indochina to the French, the seeds of Japan's former slogan "Asia for the Asiatics" came to partial fruition.

Finally, the British left India; and now India, though still within the British Empire, is the rallying ground for Asiatic unity. The perplexed Dutch, with 15 percent of their national income derived from Indonesian investments, cannot cope politically with the new bookkeeping demanded; and despite all the Dutch subtleties and the agreements reached, peace cannot come to Asia unless the Dutch follow England's example and sail for home.

"Democratic" as it was, the first Linggadjati agreement, which called for a union between the Netherlands and the Indonesian Republic, was still an agreement between unequals. The Dutch memorandum of July 20, 1947, accusing the Indonesian Republic of bad faith, only made it obvious that such "agreements," no matter how democratic they presume to be, are still agreements between a persistent colonizer anxious to form a union to save its 15-percent investment and a country which is anxious to establish its own sovereignty.

Whatever happens in Indonesia is immediately bush-wirelessed down to Dutch New Guinea, which has already experienced Communist infiltration. While underpopulated, with scarcely a million natives in all of New Guinea, there have been strikes even in this Stone Age civilization. I saw one at Madang several years ago, when the natives insisted that the Australians pay in accordance with American wage standards.

Though the jungle has reclaimed most of what the United States Army built, from docks to airfields, the Australians have adopted many of the former United States bases, particularly at Finschhafen, Lae, Port Moresby, and other celebrated places in New Guinea. And New Guinea, too, can hide infiltrated armies leaking in from the overpopulated islands of the East Indies. Like Burma and Siam, it can take in large numbers of Chinese immigrants and there are some Chinese there now, despite New Guinea's primitive appeal. Having been the staging area for the American and Australian forces against Japan, New Guinea may develop into another staging area, this time through a Soviet-controlled invasion aimed at Australia. Japan, too, has just suggested that 20,000,000 of her people must leave the country if Japan is to be self-supporting, pointing to New Guinea as the goal.

After Pearl Harbor was knocked out, the Philippines were invaded from the sea. But the Philippines also lend themselves to internal invasion. Communism in central Luzon has played a role much like that of the Chinese Communist movement in the late 20's and 30's. Though the Philippines are bound to us by trade, political sympathy, and a long history of Filipino-American association, huge Chinese capital, with 120,000 Chinese population, make inevitable the tie to China.

Westernized before most other Asiatic countries, and a playground for American investments, the islands have suffered, nevertheless, the usual lag in social reforms, and the attendant poverty. There is more than enough living space. But there are also landlordism, tenant-farming, and tiny self-owned farms. The 18,000,000 people living on 7,000 islands, with insufficient rice, are dominated by the intermarried Spanish nobility. Many agrarian rebellions have occurred, including the Communist-led Hukbalahap revolt, which originally started as an anti-Japanese movement, at one point reaching a strength of 100,000 well-equipped men. The Huks remain active as Communist insurrectionists.

It is now up to India, occupying the role of buffer state, to neutralize the effects of the east-west war in the making; but India will no doubt feel the full weight of Soviet-Chinese communism and her future depends on the current relationship of the West to Asiatic communism.

In purely military terms, unadorned, we have only the following forces at our command: small legions of European troops and no real armies, made up of 100,000 French and foreign legionnaires in Indochina; 100,000 Americans in Japan, the British at Singapore and Hong Kong, and roughly 125,000 Dutch troops in Indonesia. No matter how modern these "armies" are, they cannot police an Asia in revolt. It would take many months, should we desire to increase our forces, before we could recruit new armies. If the Communists started to move, we could only rely on the naval and air arm—in our retreat. We cannot occupy land, let alone wage an offensive war.

Australia, with its small population, its army numbering some few tens of thousands, and an even smaller navy, has an immense coast line to defend. And, as in 1942–43, when Premier John Curtin sent urgent calls to President Roosevelt for immediate assistance, Australia must still depend more on the United States for its defense and less on England. Though the external Communist forces will lack sea power, they will have political power in Asia, with hundreds of millions of colonial adherents lashed to "Asiatic unity" for substance and battle.

If we cannot resolve the Pacific dilemma soon, then we had better begin to face again the prospect of blood-drenched atolls and of naval armadas recapturing our Asiatic defenses which today are not yet lost to us.

I'll Never Forget Nazi Brutalities

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excerpt from the Courier-Journal newspaper of Louisville, Ky., dated May 22, 1949, in the form of an open letter written by Miss Edith Greifinger, a Polish girl now studying at the University of Kentucky.

Miss Greifinger's letter is an answer to Miss Ingeborg Dedering, who had previously written an article for the Courier-Journal, telling of her experience of terror in Berlin when the Russian soldiers entered.

The excerpt follows:

"I'LL NEVER FORGET NAZI BRUTALITIES"—GERMANS WHO HAVE SUFFERED AT OTHERS' HANDS GOT ONLY A TASTE OF THEIR OWN MEDICINE, SAYS A STUDENT FROM POLAND

(By Edith Greifinger)

I am the last one to defend brutality—and what Miss Dedering describes from her life in Berlin when the Russians entered is brutality. But at the same time I am the last one to forget the brutalities committed by the Nazis. I dare say that they were a million times worse than the Russians.

Let's not forget that the Germans were the ones who first showed how brutal a human being can be. They were murderers and thieves par excellence. Let's not forget the sufferings of Europe under the Nazi regime. Whatever the Russians did, it was vengeance for what the Germans did before.

In Miss Dedering's eyes the Germans are the poor innocent people who were attacked. She complains about the bad times she had for 1 month. She "even" had to be hidden for 3 days. She complains that the silverware and shoes were gone. She complains about the garbage the German hausfrau had to remove, after a Russian visit, from her well-kept household. Is it not awful? Yes, I can only smile sarcastically.

Here are a few facts of the German occupation which Miss Dedering seems to have forgotten and which are necessary when a true picture of what war means is given: The terror did not last a month but 5 years

UNIVERSITY OF MICHIGAN LIBRARIES

The murdering of innocent civilians, women, and children, was organized and done with clean German hands. The killing was performed orderly. When a transport of 5,000 children arrived at the death camp and the children were to be killed, they had to get undressed and fold their clothing orderly in one heap. "Ordnung muss herschen," even in murder.

While Miss Dedering spent 3 days in a box with potatoes, not even a small child could have been saved in this way from the Nazi beasts. The German soldiers were well trained; they searched everywhere in order to murder. The German soldiers did not have to go and look for a woman to take. The first day of occupation of a town, the youngest and prettiest girls were caught from homes, streets, and schools for use of the soldiers. Everything was orderly organized. Hundreds and thousands of girls were shot if they resisted.

To be more specific, however: I am the only one out of 450 girls in my lyceum who outlived the war. I am one of only 1,500 people who outlived the German regime out of 300,000 taken to camps from my home city. In a DP camp shortly after the war I was the only one out of 5,000 who had parents.

And here is how my family perished: One grandfather was gassed in a concentration camp, the other beaten to death in the street, one grandmother committed suicide in a camp, and the other was locked in a room till she starved to death. One of my uncles was hanged in his home; his wife first had to watch his death, then watch the officers "play" with their 16-year-old daughter. Three cousins aged 1 to 4 were bitten to death by trained dogs while their mothers were forced to watch. One aunt with her child at her breast was burned alive. Four cousins aged 6 to 11 had to dig their own graves before being shot. The rest of the family were either electrocuted or killed in the gas chambers. And there are thousands of cases like mine.

While Miss Dedering complains about the clothing her father lost in a Russian prison, no one from my family ever came back from a German prison. While she was hidden 3 days, my father was hidden in worse conditions for more than 30 months. While she complains that German students could not express freely their political opinions under the Russian occupation, the Germans on the other hand first stole from the universities in the occupied areas all the equipment and then punished with death every student caught with a textbook at home.

While broken vodka bottles garnished the furniture after a Russian visit in a clean German home, broken French champagne bottles stolen in France and cadavers of the owners of the ruined home marked a German visit. While Miss Dedering complains about the torn curtains and stolen silver, I point to the impoverished Europe where everything was stolen or destroyed by the Nazis and cry not only because of the ruined homes but because of all the murdered innocent people and swear never to forget the cause of their sufferings.

I don't list these facts in order to be pitied or to complain, because no one can ever understand what living under German rule meant and because the pain of memory is still too great—but I do hope to remind some people that the Germans are not always poor, suffering, good people as Miss Dedering implies.

I think that Germans have no moral right to complain of brutality since they were the first teachers of modern brutality. They wanted war, and started it—and their murder and stealing in other nations did not bother their conscience at all through all those years.

Memorial Day Address by Rear Adm. Daniel E. Barbey, United States Navy

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. VAN ZANDT. Mr. Speaker, among the many Memorial Day speeches delivered this year none is more thought-provoking than the one delivered by Rear Adm. Daniel E. Barbey, United States Navy, commander Caribbean Sea frontier. Admiral Barbey spoke on Sunday, May 29, at beautiful Alto Reste Cemetery to several thousand persons at the Memorial Day program of the Fort Fetter Post, No. 516, Department of Pennsylvania, the American Legion, Hollidaysburg, Pa.

Admiral Barbey's address follows:

Mr. Chairman, Congressman VAN ZANDT, Legionnaires, and men and women of Blair County, less than 4 years have passed since we finished the last war. Yet today we are arming ourselves to the teeth, we are making alliances with other nations, and we are talking about another war. The 682 dead from Blair County could well wonder why.

Like the average soldier, sailor, and marine, they didn't want to go to war. They watched—with an uneasy feeling—while the Germans knocked out the democratic countries of Europe one by one. And then the Japs made the attack at Pearl Harbor and the men we are honoring today found themselves in uniform. These 682 Blair County boys didn't want to go to war, and they certainly didn't want to be killed. All they wanted was to end the war quickly and become civilians again. But they didn't come back, and all over our great country today we are paying homage to those who died.

We know why some of the boys from World War II didn't come back, for it can be found in the citations for their acts of heroism. One of the outstanding heroes from this area who never returned was Corporal Harr from East Freedom. He was a Medal of Honor man in the campaign in the Philippines, just 4 years ago this spring. And if he felt like JIMMIE VAN ZANDT and I did, for we were in that same Philippine campaign, then all he wanted was to win the war and get back home. And like all the other civilians in uniform, earnestly hoped than when this war was over, our country would remain so well armed, and so well prepared, that an enemy would hesitate to attack us again. But if an attack should come, he and his buddies hoped we would be so strong, we could finish it off quickly. Today we see evidence of the overwhelming demand of all veterans to fulfil these hopes.

We all know that preparedness is expensive. If it can keep us out of war, it is indeed cheap, for we know the bitter cost of war—even when we win. Those who suffered personal tragedy are paying a price not measured by dollars and cents, and in addition, every working man and woman in our country must give, 1 hour of daily work for the rest of his life as his share of the cost of the war we just won. On the small island of Puerto Rico alone, more than $1,000,000 are spent every week for the hospitalization and care of veterans.

I remember standing amidst the ruins of battered Yokohama shortly after the Japanese surrender, watching our soldiers patrol the streets and telling the civilians what they could or could not do. There, the bitter meaning of Japanese defeat was everywhere. We have known the tragedy of being the winner, but thank God, we've never known the far greater tragedy of being the loser.

We were fortunate in our last two wars. Our allies were doing the fighting while we prepared. No one knows better than you veterans how poorly prepared we were. When you were first put in uniform you drilled with broomsticks. Ships were being built faster than you could man them—schools were turning out 90-day "wonder" officers. I remember going to Princeton University to talk to one of the first classes of these young officers who were completing a hurry-up course. My talk was about the new types of amphibious ships that were then being built, and I told the young group in front of me that they would be the ones to man them, and then asked for questions. One question I best remember was from the lad who assumed that the ships, of course, would have some old-time bosun's mate to help out. He appeared a bit discouraged when I told him that the bosun's mate would be just as much a stranger to the sea as he was.

Soldiers, sailors, marines, and airmen were partially trained and sent to combat, where they learned fast but often with tragic results. They came from the shops, from the farms, from the schools, and from the Halls of Congress—brought together in common effort. Among them were the courageous, the fearful, the leaders, and the followers. But there were pitifully few with any worthwhile experience.

Our amphibious ships were of a new type with new crews, and anyone with 3 months' experience was considered an old-timer. Among the early arrivals to join up with my amphibious force in New Guinea was an energetic lieutenant from Blair County, an ex-Congressman who had resigned his seat in the House for combat service at the front. Lieutenant VAN ZANDT was welcomed with open arms for he had naval experience in World War I, and between the wars he had kept his "hand in" with the Naval Reserves. You all know JIMMIE VAN ZANDT's outstanding war record with his rapid promotions from lieutenant to captain of a squadron of LST's. His LST's landed more than 75,000 men in assault on the beaches of New Guinea and the Philippines. You can well understand my pleasure at being on this platform today with my old comrade in arms.

There are others in this gathering who took part in those landings; sailors who manned the ships; soldiers and marines who fought their way ashore into the jungle; and airmen who gave us protection in the sky. And as the war progressed, we became a highly trained team. Now that team is broken up. You men and women who formed that team are back to your normal life, and only the professionals remain in uniform—and we professionals must keep the ships, the planes, and the weapons ready—perhaps, for another mobilization day. It is the professional who must provide a nucleus of highly trained Regulars to hold off the attack, until the Reserves can be readied for action; and the Reserves will be followed, finally, by the mobilization of every man, woman, and child. For a war of the future will be total mobilization for total war.

My wartime experience makes me a great believer in Reserve organizations. I venture to say there isn't a prewar Reserve who isn't grateful for every day of his Reserve training; and his country is grateful he had that training. And if there is ever a mobilization in the future, the quality and the quantity of the Reserves will be the vital core in our defense.

Also, I am strongly in favor of veterans' organizations, but for a different reason. I believe in these organizations of veterans because it is through them that veterans can best present to Congress the knowledge they gained in war. These veterans' organizations should be great instrumentalities of high ideals, to be used for the national security and for the national welfare, and never as political instruments for special privileges. You veterans have learned the need for preparedness, and through your veteran organizations can demand a powerful military force, ever ready to hold off an unfriendly nation; and as taxpayers, you can also demand that you receive maximum security for every dollar spent.

I have great confidence in the common sense of the individual veteran. He comes from every walk in life, from the millionaire to the bootblack. He knows what war is. He knows what happens when we are unprepared. He knows who has to fight the war. He doesn't want war, but if war comes he wants an even break. You and I don't want to go to war today or tomorrow any more than we did 8 years ago. Unfortunately, one dictator can bring on a war, but it will take the united effort of 150,000,000 free people to bring back the peace. But if we do have to fight the war that somebody else starts, we want to be so well prepared, that we will lose little time and few lives in the winning. I feel that if the whole world knows that we are well armed and capable of swift retaliation, we will not be attacked. It is not enough that we are strong; the world must know that we are strong, and must know that we will fight to the end for our way of life.

Our policy of patience with firmness can only be successful when we have the military power which is ready to back up our firmness. Our airlift to Berlin is a successful example of firmness backed up by military power. All of us have come a long way from the days when we thought disarmament, neutrality, or appeasement, were ways to peace. It is unfortunate that force is the one thing that is listened to throughout the world.

But that is why our military power must be shown at strategic points throughout the world, for though we speak softly, we must carry the big stick. This has required us to maintain a fleet in the Mediterranean and air bases in north Africa in close proximity to the trouble spots of Palestine, Iran, Greece, and Trieste, as well as troops of occupation and air bases in Germany. Now, after 3 years of tension in Europe, the situation there grows brighter every day, but that in China grows darker with every tick of the clock.

Because of the tense situation in Europe, it has been necessary to strengthen our forces there at the expense of our forces in the Pacific. We can't be strong everywhere at the same time. Perhaps we may soon be able to reverse the movement, and start sending some of our armed forces from the Atlantic to the Pacific to support a far eastern policy, which will prevent 1,000,000,000 Asiatics from coming under the dictatorship of communism. World-wide responsibilities require world-wide effort.

Our people emerged victorious from a war which was fought in support of the four freedoms—freedom of speech, freedom of every person to worship God in his own way, freedom from want, and freedom from fear. It is our way of life. We don't want war, but we have won our freedom through war, and have maintained it by war, and if necessary to keep our liberty, we will go to war again. We are through with appeasement; we are through with weakness. Until a world organization is developed to which we can trust our liberty, we have no choice but to put our faith in our strength.

The watchword of our citizens today can well be the same as that expressed in the Philippics of Demosthenes. That Greek patriot urged his countrymen to prepare against the tyrants of Macedonia. But they did not heed him and they were enslaved. Throughout the 24 centuries since his time, free peoples have had to learn over and over again what he cried then—"eternal vigilance is the price of liberty."

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under permission to extend my remarks, I would like to include in the RECORD this editorial from the Washington Daily News for June 2:

The House of Representatives threw responsibility to the winds yesterday.

It passed, by a 365-to-27 vote, a veterans' pension bill that would cost $65,000,000,000 over the next 50 years.

It followed the reckless leadership of Representative JOHN RANKIN, of Mississippi, and rejected the sober advice of a majority of the members of its Committee on Veterans' Affairs.

And it did this after only 2 hours of debate.

Three months ago the House defeated, 208 to 207, an even more extravagant Rankin pension scheme.

After its defeat the Committee on Veterans' Affairs—over the objections of Chairman RANKIN—undertook to draft a more "reasonable" measure. The result was the bill that went before the House yesterday.

This bill proposed $72-a-month pensions at age 65 for "unemployable" veterans—defined as those unable to work at least half-time. It provided a "means test." Single veterans with incomes over $1,200 a year, and veterans with dependents and with incomes over $2,500, were not to be eligible.

In effect, the bill would have liberalized and extended benefits of present regulations under which many needy veterans already can qualify for $72 pensions when they reach 65. The cost of such pensions, over 50 years, is estimated at $35,000,000,0000. The committee's plan would have increased that by about $9,000,000,000.

But, in the 2 hours the House gave to consideration of the bill, it knocked out the provision that only "unemployables" should be eligible, thus extending the ultimate benefits to about seven times as many veterans. And then it stampeded the bill to passage.

Many of the 365 Congressmen who voted for this measure know that it should not become law—know that a Government already more than a quarter of a trillion dollars in debt, already taking nearly one-fourth of the national income in taxes, should not impose this huge added burden on its people—know that a large share of that burden will have to be carried by the veterans, themselves, and by their children.

Many of them hope that the pension bill will be defeated in the Senate or vetoed by President Truman.

If that happens, the Senate or the President will have to display a brand of courage that was conspicuously scarce in the House yesterday.

Keeping the Pledge Made at Yalta

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the Christian Science Monitor entitled "Keeping the Pledge Made at Yalta":

KEEPING THE PLEDGE MADE AT YALTA

(By Roscoe Drummond)

WASHINGTON.—Remember Yalta?

It was at Yalta in February 1945 that the Government of the United States made some serious and solemn promises to the peoples of six eastern European countries which were just being liberated from Nazi tyranny.

These six countries are Poland, Czechoslovakia, Hungary, Rumania, Yugoslavia, and Bulgaria. The promises were that, when liberated, there would be free elections and political liberty.

These promises have not been kept.

The fact that one of the guarantors of the Yalta pledges—the Soviet Union—has trampled upon them does not erase the name and the honor of America from these promises.

These promises are still to be kept. They are an ultimate commitment of the United States and Britain.

At the moment there is little that the American Government, blocked by the iron curtain which surrounds the satellite nations, can do. But everything doesn't have to be left to the Government, fortunately, and it is heartening to note that there is springing up in the United States a citizens' movement to help further the cause of liberty in eastern Europe, to help the intellectual and political leaders who have come temporarily to this country, and to aid them in their peaceful efforts to prepare the way toward the restoration of the social, political, and religious liberties which their peoples are now denied.

If the American Government cannot yet honor the promises of Yalta, the American people can show that these are their promises as well. That is the purpose of the new National Committee for Free Europe, Inc., of which Joseph C. Grew, former Assistant Secretary of State and Ambassador to Japan, is chairman.

I have just reread the official Yalta communiqué which bears the signatures of Prime Minister Winston Churchill, President Roosevelt, and Marshal Joseph Stalin. The official assurance which was given in this document is no mere passing phrase dropped in casually to pretty up a statement by the Big Three.

The communiqué is literally laden with pledges to give freedom to the peoples who had lost their freedom to the Nazi occupation. There are, in all, 10 separate, explicit, and concrete references to the intention of Britain, America, and Russia to restore to the liberated nations the civil rights of a democratic society.

The Yalta Conference pledged the three governments:

To assist "the former Axis satellite states to solve by democratic means their pressing political and economic problems."

To help them "create democratic institutions of their own choice."

To restore "the right of all peoples to choose the form of government under which they will live."

UNIVERSITY OF MICHIGAN LIBRARIES

To restore the "sovereign rights and self-government to those peoples who have been forcibly deprived of them."

"To foster conditions in which the liberated peoples may exercise these rights."

To "form interim governmental authorities broadly representative of all democratic elements in the population."

To establish "through free elections governments responsive to the will of the people."

To "facilitate where necessary the holding of such elections."

And, finally, a specific pledge to Poland "to hold free and unfettered elections on the basis of universal suffrage and secret ballot."

During the 4 years since the Yalta declaration the peoples of eastern Europe have been progressively deprived of freedom of assembly, freedom of speech, freedom of worship, freedom to perform the work of their choice, freedom to elect a government of their choice.

Mr. Grew describes this situation as "the direct consequence of the determination of the leaders of international communism to dominate the world through the creation of police states subservient to them."

But the pledges of Yalta are still the pledges of the Government of the United States.

The new National Committee for Free Europe, as described in the news of this newspaper today, is evidence that the American people regard the Yalta pledges as their own, not merely the Government's, and are ready to stand by them until they are fulfilled.

The allies of freedom in eastern Europe are today risking their lives for their democratic faith. To help their cause is the least Americans can do to honor the best of what was done at Yalta.

A large group of prominent citizens of our Nation are about to formulate a National Committee for Free Europe with the ultimate purpose of carrying on an ideological offensive for the liberation of the countries that are behind the iron curtain.

I also include the following article from the Christian Science Monitor:

IDEOLOGICAL DRIVE AIMED AT IRON CURTAIN

(By Robert M. Hallett)

NEW YORK.—Prominent citizens have joined to form the National Committee for Free Europe here with the ultimate objective of carrying an ideological offensive behind the iron curtain.

The committee, headed by Joseph Grew, is predicated on the belief that United States citizens have responsibilities in the anti-Communist fight that go beyond defensive governmental actions such as military preparations, the North Atlantic Pact, and the Marshall plan.

Its primary function will be to aid non-Communist, non-Fascist, political, intellectual, and scientific refugees from eastern European nations, said Mr. Grew, former Under Secretary of State and Ambassador to Japan, in a press conference at committee headquarters June 1.

WORK OUTLINED

At present the committee intends to work exclusively with refugees from Bulgaria, Czechoslovakia, Hungary, Poland, Romania, and Yugoslavia. These countries were promised—and never did receive—free elections and fundamental freedoms at Yalta in 1945. Later the committee hopes to use these leaders in their campaign to inform the peoples of their homelands, via radio and the printed word, about the benefits of freedom and democracy.

At some future time the committee may extend its scope to cover such oppressed countries as Spain and China—"the whole road is open ahead," Mr. Grew commented.

Some 200 to 300 eastern European refugees of political, intellectual, or scientific importance are in this country now, committee officials estimate. Many are in "pretty precarious" financial positions—and one of the first objectives of the committee is to find them profitable work in their own fields. It particularly is seeking suitable positions in colleges and universities.

SPECIFIC AIMS

Specifically, the committee will assist these leaders—

1. To maintain themselves in useful occupations during their enforced stay in the United States.

2. To come to know the people of the United States and to understand their spirit and aims.

3. To engage in efforts by radio, press, and other means to keep alive in their fellow citizens in Europe the ideals of individual and national freedom.

4. To establish effective means of cooperation with like-minded European leaders in the United States and to coordinate their plans with those of similar leaders abroad.

"We have a definite self-interest in helping to keep alive, and in full vigor, political leaders who share our view of life—leaders who have refused to knuckle under; men who have not hesitated to risk their lives for their democratic faith," Mr. Grew stressed.

SOCIAL CHAOS

"And we look forward to the day when there will no longer be an iron curtain—that day must come—and these six nations which we helped liberate from the Nazi oppression will be free of the Communist oppression and once more can organize their existence in their own way.

"When that time comes, there will be something close to social chaos and political vacuum, for the first effort of totalitarian regimes is to destroy all constructive elements which might build anything different from themselves. Looking forward to that historic and critical time we have in mind that, if meanwhile democratic leaders have been helped to keep alive and in vigor in the democratic havens to which they have been driven, we can hope that, returning, they can have parts in a democratic reconstruction."

The committee will bring the exiled leaders into broad contact with American life. It will sponsor trips for them to various parts of the country for appearances before trade-unions, farm organizations, colleges, and universities, civic organizations, etc.

Then it plans to put them on short-wave broadcasts beamed to their native lands and reproduce their views on democracy in print for audiences behind the iron curtain. However, details of this program have not yet been worked out.

It will encourage these leaders to form and maintain in this country national committees which will stand as symbols of hope for their peoples.

LASTING VICTORY

"Only in the field of the contest of ideas can we hope to achieve a victory which will last," Mr. Grew declared.

The committee's declaration of policy, summing up the Communist challenge, emphasizes that not only is eastern Europe under its sway but western Europe is striving to guard its freedoms against a fifth-column attack which is without precedent for its lack of principle, its intensity, and its range of action.

"This situation," it continues, "is the direct consequence of the determination of the leaders of international communism to dominate the world through the creation of police states subservient to them. It is this which has frustrated our hopes of peace and increasingly threatens to bring on a third major war.

"The threat cannot be removed and stable peace achieved until the peoples of Europe are once more able to live without fear. Only as the specter of the police state is dissipated can personal liberty and individual security return."

In the meantime, it says, the United States remains the hope of the oppressed eastern European peoples.

While the committee still is in the process of formation, it has already enlisted a distinguished group of sponsors including Frank Altschul, treasurer; Hamilton Fish Armstrong, A. A. Berle, Jr., Francis Biddle, Robert Woods Bliss, James B. Carey, Hugh A. Drum, Allen W. Dulles, Gen. Dwight D. Eisenhower, Mark F. Ethridge, William Green, Charles R. Hook, Arthur Bliss Lane, Henry R. Luce, Arthur W. Page, Dewitt C. Poole, Charles M. Spofford, Charles P. Taft, Dewitt Wallace, Matthew Woll, and James A. Farley.

Address of Hon. Harry L. Towe, of New Jersey

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. AUCHINCLOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by my colleague Hon. HARRY L. TOWE, at the sixteenth annual commencement exercises of Bergen Junior College, Teaneck, N. J., Saturday, May 28, 1949:

I am honored to have the privilege of addressing this graduating class. In my work as a Member of Congress I am faced with the problems of today, not only as they affect us at home but also as they affect us throughout the world. You are about to embark on your career, and I thought, therefore, that a brief résumé of what I think you face and what you ought to do about it might be helpful.

Up to this point in your lives you have had the advantage of aid from your parents or perhaps from the Government. From now on most of you will be on your own, and I might add at this point that you will make a new acquaintance shortly—one who will be a close friend and constant associate for the rest of your lives. I refer to the Government tax collector. You will soon find that a large percentage of what you earn will be contributed to the cost of operating the Government.

I suspect that may result in your having a deeper interest in how your money is spent and I am hopeful that it will increase your interest in your Government; that you will become better informed and perhaps exert influence for making this Nation better than it now is. It should be said at this point that there is considerable room for improvement. And I hope as you go along from this point, no matter in what field you choose your career, you will constantly have in mind the importance of maintaining the form of government which all of us prize so highly and which appears to be in danger today.

I should like to take you back just briefly to a consideration of the manner in which our country was founded without dwelling for too long on any particular period of our history. Several hundred years ago, a small group of people came to our shores to be free either from religious, economic, or social oppression. They had very few tools with

which to begin their work but they did have above all the desire to be free and the willingness to work and to build. You are all familiar with what happened as a result of that start. It was the building of the greatest Nation on the face of the earth and all of us should bear in mind that our heritage came from that humble but determined start. All of the great advantages which you and I have had and which we hope to preserve for those who come after us, resulted largely from the fact that in this country as in no other country on the earth our predecessors lived under a system of government which was completely free.

Under the free system in America we have gathered people from all over the world and the only real test which has ever been applied by which an individual's success could be measured was whether or not he or she had the capacity and the desire to improve his or her position.

Many of the men who became President of this great land have come from humble origin; most of the leaders in industry, large and small alike, have been those who started at the bottom. Our educational facilities have no equal anywhere in the world, and our natural resources are still plentiful. There is every reason, therefore, for young men and women starting on their life's work to have great hope for success and to know that opportunity in plentiful quantity is waiting to be embraced.

As a result of the two world wars and an economic upheaval between them, the Government has assumed a greater place in our lives than ever before. While I recognize the value of governmental assistance and regulation to some extent, I am certain that if we are to have the opportunity in the future that our predecessors have had, the individual in this country must regain his freedom and the Government's position must be reduced to that of a willing partner instead of the one which it now assumes of directing in so many ways our future course.

It is only necessary to look abroad to find the answer to what happens when government becomes supreme and the dignity of the individual is submerged. The foreign political leaders who were responsible for the last World War were heads of governments where the people had given up or had lost involuntarily their individual freedom. The state was all-powerful. Those same political parties or governments, in order to induce their people to relinquish freedom, promised to give them higher living standards, and, in general, assured them of an easy life under government-guaranteed security. Those unsound schemes ended in dismal failure. They not only deprived individual citizens in those countries of their freedom, but the governments themselves collapsed. Complete economic destruction resulted, and that fact was one of the chief reasons for the totalitarian leaders provoking the Second World War. Most of the former leading nations of the world who sought to establish complete government security for their citizens now lie in the international "junk pile" because the citizens were willing to trade individual freedom for the promise of an easy life. The lesson to be learned from that debacle is that there is no substitute for hard work and that any government rule or capitalistic rule which has as its objective the elimination of work or the standardization of accomplishment will end in failure.

Earlier in my remarks I referred to the small group of men and women who had first come to our shores. The valuable work which they started was done with no Government standing by to aid them in their hardship and difficulties, and, of course, we know they were constantly beset by trouble of all descriptions. As we went along in our early development a government was formed. A careful study of our Constitution, or a casual reference to it, will bring anyone to the conclusion that those who perfected that unusual document sought to preserve individual dignity and freedom. We should never forget that our Government, or any other government in this world, cannot give its citizens anything for which it does not charge them by levying taxes, either before giving what appears to be something for nothing or by taking its price later on in the form of taxes. I am sure there are some people in our country who think that the Government can give them something at the expense of someone else. That is a false theory also. In addition to the actual cost in dollars of anything which the Government appears to be donating to its citizens, there is even a greater cost, and that is the giving up of control by the individual over his future and granting to the Government greater power. No nation on earth has ever survived as a free country when the tax which it levied upon all of its people approximated 40 percent of income. Today, in this country, whether it is fully realized or not, approximately 30 percent of all income is paid back to the Government in taxes in one form or another, many of them hidden from view. One of our great difficulties is that our people have become selfish. They are only concerned with the immediate problem of getting along. They give little or no consideration to the future, nor, in general, to the preservation of our free economy and our free form of government. Liberty is freedom, but freedom is not free. It is the most expensive thing in the world because it is the most desired thing in the world. That is the reason millions of men and women have been willing to give up their lives, either in an effort to establish it or in an effort to defend it when there is a threat to take it away.

I do not mean to paint a picture which is discouraging, but I do mean to emphasize the responsibility which becomes yours when you leave here, and I assure you that your future success, and I say again that opportunity is plentiful, but your future success is directly associated with, and dependent upon, the maintenance of a free, sound economy in America. Neither the President of the United States, the Congress, the Governor of the State of New Jersey, nor the legislative body of the State of New Jersey can accomplish very much without the cooperation of the citizens. You must have the desire and willingness to stand on your own feet. You must resist any effort by the Government, no matter which political party is in power, to even partially subjugate you by offering you something which they say you are getting for nothing. This course of conduct on your part will not only be the right course to follow but it will be decidedly in your own interest. Opportunity for you will remain and be plentiful only so long as the people of our country, which includes you, remain free and the Government is returned to its former position of being an instrument of the people, rather than a political entity which controls to a great extent the future of its citizens.

You are graduating at a time when the people throughout the world are at the breaking point with freedom. You must fulfill your individual responsibility in deciding whether government will be master or simply the agent of the people, subservient to their will. You must remember that no accomplishment in life will be of any permanent value unless we preserve the foundation of government upon which rests our security and reward for accomplishment.

There is a call for another generation of pioneers—and the American youth of today are equal to it, equipped and trained as are you graduates of this college—to explore and develop these new frontiers of better human relationships, a more enduring world peace, and the leadership of America in creating a happier world order. You will find the hazards as dangerous, the challenges as inspiring, and the needs as great as those which confronted the pioneers of our country in the days of the territorial frontier. And just as the American pioneers laid enduring foundations for a mighty Nation, so the pioneers of today, building in the heart of our civilization, will lay the foundations of a great new age. It will be a better age if we, as Americans, have the vision, the skill, the courage, and the faith to make it so.

Stockton Naval Supply Annex

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. JOHNSON. Mr. Speaker, near my home town of Stockton, Calif., is located the Stockton Naval Supply Annex. This installation has become part and parcel of Stockton, and the personnel, both naval and civilian, have merged into our population and taken an active part in our civic and social life.

Also, it should be remembered that the Stockton deep-water channel which was built by the United States Army engineers is the major reason why we have the annex with us. The port is unfolding as the outlet for the great central area of California. The production of this area has exceeded the wildest dreams of the pioneers who founded Stockton, and with it the port has gradually developed and will continue to develop in the future.

I commend to my colleagues the reading of the following interesting and informative editorial from the Stockton Record regarding the Stockton Naval Annex:

NAVY IS PART AND PARTISAN OF STOCKTON

The rank of admiral in Uncle Sam's Navy carries great authority and commands respect. Hence the speech of Rear Adm. Murrey L. Royar before the Rotary Club last week packed a punch with which all Stocktonians should be impressed.

Out on Rough and Ready Island, where once grew corn and potatoes, the Navy has invested $40,000,000 in an installation which is one of the major supply bases for the Pacific Fleet and its ocean outposts. As chief of this and all other supply bases in the twelfth naval district, Admiral Royar declared the Navy never has harbored a doubtful moment of regret for the location of the naval supply annex. To the contrary, the huge installation becomes increasingly impressive in its usefulness because of its ideal location.

Location of the annex now permits it to make a significant contribution to the unification of the armed forces. Effective today, quartermaster supplies at the Tracy subdepot of Charpe General Depot (Lathrop) will be stored in four warehouses on Rough and Ready Island. Furthermore, an exchange of services has been arranged whereby Diesel equipment repairs for both Army and Navy will be made at the annex, and repairs of Army and Navy administrative motor vehicles will be made at Stockton subdepot (port).

More closely than many prewar residents of Stockton realize, the naval annex and its employees have become closely integrated

UNIVERSITY OF MICHIGAN LIBRARIES

with the life of the community. The economic impact of the annex alone is considerable. With their families, the 1,768 civilian workers constitute one-seventh of the city's consumer buying power. Private industry and business could take lessons from the Navy as respects participation in such community enterprises as the Red Cross and community chest, and donating blood to the Stockton blood center. The safety record at the annex is a challenge to any industry in the country.

The very presence of the annex is a powerful testimonial to the adequacy of Stockton's deep water channel, and to the favorable centrality of the port for land and water transportation. To these factors Admiral Royar adds his personal praise of the port as possessing facilities which are among the finest in the Nation, and a uniqueness of surroundings which enables the products of rich farming land to be shipped directly by water to any point in the world.

Truly the Navy has become a part of Stockton and a partisan of Stockton.

Chemicalization of Food Supplies

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. KEEFE. Mr. Speaker, I have repeatedly addressed the Congress on the subject of chemicalization of the food supplies of the Nation. I have referred to the Atlas Powder Co. as one of the chemical companies that is producing synthetic materials for use in certain food supplies of the Nation. They, of course, contend that their product is not deleterious to the public health. Other reputable experts contend otherwise.

I am happy to include as part of these remarks a letter bearing on this question, addressed to me by Mr. Isaac Fogg, president of the Atlas Powder Co., and my response thereto:

ATLAS POWDER CO.,
Wilmington, Del., June 3, 1949.

Hon. FRANK B. KEEFE,
United States House of Representatives, Washington, D. C.

DEAR MR. KEEFE: We wish again to express our appreciation for the courteous manner in which our people were received during their recent visit to your office to discuss the growing use of food emulsifiers.

Because of our mutual concern that the American consumer be protected to the maximum degree against possible harmful foods, and because you have twice referred to the Atlas Powder Co. in speeches on the floor of the House of Representatives, we are writing this letter in order to give the full facts about the policies and products of our company.

It seems to us that your May 9 speech made four principal points which can be summarized:

1. That wartime development of chemicals has resulted in a flood of "chemicalized" foods.

2. That the use of chemicals will result in a reduction in the use of farm-grown products such as fats, eggs, and milk.

3. That chemicals used in bread and other foods have little or no nutritive value and that some of these chemicals are designed to exclude the use of shortening in bread formulas.

4. That many currently used chemicals are dangerous and that their manufacturers have not made adequate tests of their potential harmfulness.

We wish to restrict our comments solely to the attitudes and experiences of the Atlas Powder Co. in these matters.

1. Chemicals in foods generally: As you said in your talks of March 2 and May 9, research workers in our American chemical laboratories did a magnificent job during the war. There is no question that this wartime research has vastly increased our knowledge of chemicals that can enhance the value of foods, just as research has increased our knowledge of all the sciences.

Atlas Powder Co., however, developed the first of its food emulsifiers—Span—back in 1938. Span was first made commercially available in 1941. The Tween emulsifier came into public use in 1942, and Myrj, now most commonly used in bread, was first sold commercially in 1947.

These emulsifiers, developed in our own laboratories and based upon farm-produced products, have found Nation-wide acceptance among bakers to facilitate the blending of the various normal ingredients in bread and baked goods. In bread they keep taste and softness longer, thus prolonging bread-box life and avoiding waste. They also improve bread texture and enhance flavor.

It is interesting to note that virtually all foods either contain chemicals or are chemically treated, with advantage to the consumer. Perhaps the most-used chemical products for foodstuffs are the shortenings which are synthetically produced by adding gas hydrogen to animal and vegetable oils in the presence of catalytic materials. Moreover, these shortenings often contain emulsifiers which are produced by chemical processes.

2. Emulsifiers as substitutes: Atlas emulsifiers do not replace any other nutritional ingredient of bread. (Testimony before the Food and Drug Administration is replete with evidence to this effect.) These emulsifiers perform new and distinctive functions and are relatively costly compounds which bakers add in very small quantities to their formulas to improve the quality of their bread. The cost of Myrj is 45 cents a pound. The cost of various shortenings ranges from 14 to 18 cents a pound. On a purely dollars-and-cents basis, it is obvious that bakers are not going to substitute Myrj for less expensive shortenings, particularly since shortening performs functions in bread which emulsifiers do not.

There is an explanation for the publicity given this substitution question and we feel the American people are entitled to the true story, and not purely competitive propaganda.

Atlas food emulsifiers compete with other food emulsifiers including those sold as mono- and di-glycerides. The principal producers of these products are also producers of high-ratio shortening. Atlas food emulsifiers, directly available to bakers, constitute a direct threat to their previous patent monopoly built up around certain patents and licenses for the use of mono- and di-glycerides.

Your reading of the current bread testimony will show that the charge of shortening substitute leveled against Atlas emulsifiers has come from these same shortening interests who fear competition to their mono and di-glyceride emulsifiers.

Bakers have repeatedly testified that to meet customer preferences it is common practice to alter the character of bread and other baked products by the interchange of various ingredients such as eggs, milk, flour, shortening, or even emulsifiers. In fact, there is no uniform formula for making bread in America. This fact is noteworthy: when Atlas emulsifiers are employed in the standard type of soft bread, it is necessary to use shortening to avoid crumbling.

The Atlas emulsifier enhances the quality of bread. That is its sole purpose. Better bread should increase the consumption of bread and likewise increase the use of the various farm-produced ingredients that go into making bread.

3. Nutritive values: Scientific studies show that Atlas food emulsifiers do have positive nutritive qualities. "Myrj," for example, is indicated to have approximately the same caloric value, gram for gram, as flour (about 4 calories per gram).

The point is hardly important, however, because Atlas emulsifiers are used in such minute amounts. For instance, in bread the maximum amount of "Myrj 45" effectively used is one-third of 1 percent of the total solids content.

It is interesting that the amount of fat or shortening in bread is also small and has little bearing on its nutritive value. The amount of shortening added to bread ranges from zero to about 3 percent by weight of the finished loaf. The more shortening that is used, the less flour and vice versa.

4. Adequacy of testing: This is a matter of great importance to the American consumer and to us in the Atlas Powder Co.

Atlas' traditional policy has been to make exhaustive tests on all of its chemical products destined for human consumption or use.

It might interest you to know that for the past 10 years—considerably before even the first Atlas food emulsifier was made commercially available to the food industry—the company has been testing its emulsifiers. In these studies Atlas has been assisted by some of the Nation's top medical, pharmacological and nutritional authorities. Some of the more important of these tests were started by leading authorities on their own initiative without the knowledge of Atlas.

As a matter of company policy, we consulted FDA's division of pharmacology—the agency's technical group—concerning our tests. FDA suggestions were incorporated in our testing. The reports we received on our studies were filed with FDA as they were rendered.

These tests have included intensive animal and human feeding studies, made at leading medical and scientific institutions. Such recognized authorities as Drs. Chester M. Jones and Perry C. Culver, of Massachusetts General Hospital and Harvard University Medical School; Dr. John C. Krantz, of University of Maryland Medical School, and Dr. Sidney Page, of the University of Virginia Medical School, have carried on these tests.

Specifically, tests on animals by Dr. Krantz have included acute, subacute and chronic feeding studies, conducted on successive generations and over varying periods of time up to "life-span" and in massive quantities. Dr. Krantz's findings of harmlessness have been subsequently confirmed by Dr. Bernard Oser, of the Food Research Laboratory, Long Island City, N. Y.

You have referred to the "many unexplainable irregularities concerning the deaths of rats, dogs and other animals under study." As a long-time student of public health matters, you are doubtless familiar with the fact that, particularly during experiments designed to extend over their lifetime, animals frequently are taken ill, and eventually die.

But the important factor here—and the FDA record is very clear on this point—is that such animal deaths or illnesses as occurred were in no wise due to the feeding of Atlas food emulsifiers.

You have also made reference to "manifestations of diarrhea, belching, pruritus, itching and other symptoms" during human feeding studies. A careful examination of Dr. Page's testimony before FDA will show that:

1. These manifestations, all of a minor nature, were considered by a corps of medical doctors to be entirely insignificant. They were no more than was to be expected in a study of 60 persons over the time of the test.

2. In that particular test, the emulsifiers were fed to students in rich chocolate syrup in amounts far greater than normal, and the symptoms reported are common to many people eating chocolate.

3. The pruritus and itching, reported by a few subjects, actually were manifested before the study and could not be attributable to the Atlas emulsifiers.

The Massachusetts General Hospital enjoys a reputation unsurpassed in the field of objective, independent medical research. It might interest you to know that this hospital started clinical study of our emulsifiers even before we were aware of it.

Drs. Jones and Culver at Massachusetts General Hospital found in their human metabolism tests that the polyol portion of Atlas emulsifiers—containing the so-called polyglycol material to which you referred—is completely excreted from the human body. It is not retained in either the cellular or extracellular water of the human body.

Dr. Culver testified as to the nontoxicity of our emulsifiers before the FDA and pointed out their beneficial effects, especially with regard to fat and fat-soluble vitamin absorption.

When you indicated there is no semblance of agreement among experts concerning what happens to polyglycol in the body, the reference apparently was directed at testimony on materials not made by Atlas and not proposed at this hearing for use in bread. There has been no refutation before the FDA of any of the results obtained by Dr. Culver and his associates at Massachusetts General Hospital on the basis of clinical studies of human beings.

You infer that Atlas financing of certain tests on its products in the interest of the public welfare may have influenced the findings of these highly reputable scientists. Such insinuations are wholly unwarranted.

The Atlas Powder Co. has never paid witnesses to sponsor its products at the FDA hearings nor has it in any way sought to shape the course of free and honest scientific inquiry into its food emulsifiers.

We firmly believe that investigations carried on over the years by Atlas and independent scientists to assure the safety of our food emulsifiers have rarely been equaled in that field of modern chemical research.

If you like, the company would be happy to furnish you the complete reports on all the intensive pharmacological, nutritional, and medical studies made on its food emulsifiers.

We hope the facts presented here will answer the points which you have raised and will indicate clearly the Atlas Powder Co.'s keen interest in making products for the benefit and health of our Nation.

In view of your remarks about our company on March 2 and May 9 on the floor of the House, we hope you will consider placing this letter in the CONGRESSIONAL RECORD so it will have an equal opportunity of being noted by the American people.

Sincerely yours,

ISAAC FOGG,
President.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 6, 1949.

Mr. ISAAC FOGG,
President, Atlas Powder Co.,
Wilmington, Del.

DEAR MR. FOGG: Thank you for your letter of June 3. I shall be happy to place your letter in the CONGRESSIONAL RECORD.

I am a layman seeking basic facts that involve the health of the people of this Nation. I am certain that if the Congress sets up the investigating committee which I have requested, we will be able to develop all of the facts relative to the whole subject of toxicity in food supplies. I am glad to note that your company supports my request for a complete and thorough investigation into this whole subject matter. Despite the fact that many of the contentions set forth in your letter are subject to violent disagreement with the opinion of outstanding experts in the field of pathology, chemistry, and nutrition, I am glad to give to the Congress and the American people through the columns of the CONGRESSIONAL RECORD the contentions of your company.

Very sincerely yours,

FRANK B. KEEFE,
Member of Congress.

It Can Wait

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. MICHENER. Mr. Speaker, pursuant to permission given by the House, I include an editorial from the Adrian (Mich.) Daily Telegram of June 2, 1949. The editorial reads as follows:

IT CAN WAIT

For the time being at least, the controversial issue of Federal health insurance is being shunted off the floor of Congress. Senate Democratic Leader LUCAS says it will be impossible to act on the President's national health program at this session. Congress may be pushed beyond July 31, its planned adjournment date, before it has completed action on such vital matters as reciprocal-trade extension, Taft-Hartley-law revision, and approval of the North Atlantic Pact.

Since Senator LUCAS is the Senate floor leader for the Democrats, his statement is taken to mean that the administration has decided to postpone pressure for enactment of the health program. That should be a good thing. The delay can be used to do some clearer thinking about the proposal.

The facts that have been mustered so far in support of the administration's proposal are far from convincing. A lot of heat has been generated in behalf of it but not enough light shed on it. Parts of the program undoubtedly are designed to meet certain needs that are definite and real—the need for more physicians and health workers, for example, and for more hospital facilities in some sections. But, on the other hand, the program in its entirety is vastly complex and costly. It should have more study if Congress is to approve it at all. As presently offered the program represents a radical change in the traditional doctor-patient relationship and the entrance of Federal bureaucracy into a wider field of American life.

The motive of improving health standards is worthy, of course. But on the other hand the health standards of our country already are the highest in the world and have been going up remarkably in the last quarter of a century. And for the last several years voluntary hospital and medical-care plans have been expanding and proving their worth. They are capable of further expansion, and will have it, if the Government keeps out of the field. Their charges are not onerous by any means. For the most part those who cannot afford to pay them are persons who never could pay all their medical bills.

At present Government economy is clearly one of the Nation's most urgent needs. Certainly a Federal health plan is bound to add heavily to Government costs. More dependable estimates are needed as to the cost before any final decision is made. The experience of Great Britain is frightening, and the British plan was the pattern followed in drafting the President's proposal.

The whole idea needs further study both as to its costs and its social and political implications. A delay in congressional action is advisable. If the plan is as good as its advocates claim, it will not suffer by waiting. If it is as bad as the opponents say, the country will have avoided a costly mistake.

The Nation's Finances

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent, from the Washington Sunday Star of June 5, 1949:

CONGRESS SHOWS WORRY OVER THE NATION'S FINANCES — FEELING GROWS THAT DEFICIT SPENDING WILL LEAD TO BANKRUPTCY

(By Frank R. Kent)

The concededly sick condition of the Nation's finances is being taken more seriously now by more Members of Congress than ever before.

Republicans as well as Democrats agree that this is a reflection of the feeling of many hundreds of thousands of citizens hard pressed for money to pay taxes and still maintain a reasonable standard of living for their families. Many have reached the point where the increasing penalties and perils of national debts and deficits have become a nightmare.

Certainly it has taken them a long time to get to that point. For a good many years the dangers of vast governmental expansion and uncontrolled expenditures have been stressed in vain. Even those who admitted the unsoundness of the spending policy and regarded the three-thumbed theory of the self-styled "liberal economists" that the size of the national debt does not matter because "we owe it to ourselves" as too silly to deny—even these were too apathetic to be actively antagonistic. On the other hand, while the Treasury billions continue to pour out, great hordes of voters directly profit either by getting on the Federal pay roll or receiving some form of personal bounty, subsidy, or dole.

For four elections the "tax, tax, spend, spend, elect, elect" formula of the late Mr. Hopkins, which expressed with complete accuracy the whole New Deal political philosophy, has prevailed. Perhaps it will prevail again, but there is in Congress today a concern about economy and an alarm about waste that has not existed since 1933, when the Treasury floodgates were flung open and a large part of the population ran in to get theirs.

In less than a month the fiscal year of 1949 will close and fiscal 1950 begin. There is reason to believe tht the figures then made public will shock all save the most dizzy optimists and callous politicians.

Last January Mr. Truman presented a voluminous but unintelligible budget in which he forecast for fiscal 1950 a deficit of $900,000,000. The Joint Congressional Com-

UNIVERSITY OF MICHIGAN LIBRARIES

mittee on Internal Revenue Taxation points out that, accepting the President's estimate of $41,900,000,000 for expenditures, he has underestimated the deficit by $2,100,000,000, which means a deficit of $3,000,000,000.

But Senator BYRD and others insist the President's spending estimate for 1950 is far too low. They say appropriations already authorized justify putting the figure at $44,300,000,000. In other words, the 1950 deficit cannot be less than $6,500,000,000—and easily may run to $7,000,000,000. Republican Senator WHERRY a few days ago estimated it at $11,000,000,000.

The facts seem to bear the Byrd figure out. If and when they are substantiated, the crisis confronting the country will be one no citizen can afford to blink. Clearly, something then will have to be done or down the drain we go. We will have arrived at that inevitable end of the road so long and futilely talked about.

Obviously there are only three possible courses of action—spend vastly less; tax vastly more; or take the foot off the brakes.

Despite passage by the House of a new veterans' pension bill, sentiment for economy appears rapidly growing. Recent newspaper polls in various States are highly significant. There is a real prospect that the 5-percent cut all down the line will be made. But that would total only one and one-half billion, which is a long way from enough.

The Hoover Commission has shown how three billion can be annually saved but the power of the Federal jobholders is such that few believe Congress has the guts to go full distance on that.

Clearly you can't raise $5,000,000,000 more in taxes without further depressing business and drying up revenue. Economy is the only answer. Faced with the stark prospect of a bankrupt nation, the only possible way to avert disaster is to push aside all new expensive experiments, completely cut out waste and recover our financial equilibrium. Upon that hinges not only our own salvation but the civilizations abroad which we are so desperately trying to prop.

It is interesting to note that while Mr. Truman is alarmed over the prospect of a big deficit and still—publicly anyhow—favors raising four billions in new taxes, his zeal for economy is not great. So far he has opposed every cutting proposal. Nor has he really put his weight behind the Hoover proposals.

It is even more interesting to note the attitude of the Americans for Democratic Action and their allied labor bosses. These denounce the President's partial retreat from the more fantastically expensive part of his program as a betrayal of the people. But they do more than that. Recently a Harvard economist, representing the ADA, appeared before a Senate committee urging the administration's extremely costly compulsory health-insurance bill. He rather stunned some Senators by declaring that governments cannot afford to economize, and family heads who save instead of spending are antisocial.

There is no available information as to how he behaves with his own money, but certainly Senator HUBERT HUMPHREY, who is head of the ADA, does not intend if he can help it that Uncle Sam shall go antisocial in this way. In 5 months he has personally sponsored bills totaling more than 22 billions of dollars of taxpayers' money. He is probably pretty proud of himself.

Anyhow, it's a great thought that the more we spend and the more we owe and that the deeper the deficit and the higher the debt the better off everybody is. Those who believe that—and there are still an astonishing number—may have a lot of fun—until the dam bursts.

Farming's Still a Gamble

EXTENSION OF REMARKS
OF
HON. ERNEST K. BRAMBLETT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. BRAMBLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article from the Pacific Grove Tribune:

FARMING'S STILL A GAMBLE

In spite of the best laid plans of bureaucrats and college professors, lady luck, even in the year 1949, still plays a major role in the farming business.

California's artichoke growers can testify to that. January's killing frosts literally nipped the chokes in the bud and prices shot up to $12 a crate. But after a couple of months of enforced dormancy, the plants burgeoned into such abundant production that growers now are getting only $1.75 a crate. Last year at this time, the average price was about $3.

Buffeted by the vagaries of weather and the effects of supply and demand, artichoke growers must be reeling from the dizzy change of pace. Their experience is a good example of the difficulties faced by the economic planners who attempt to control farm production on drawing boards.

A Good Rural Job

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting a bulletin issued by the Ohio Bell Telephone Co., entitled "A Good Rural Job." I feel that this record is outstanding and am, indeed, glad to bring it to the attention of the Congress.

A GOOD RURAL JOB

In 1948 excellent progress was made in our efforts to provide telephone service in the rural areas served by the Ohio Bell.

The rural job last year meant a lot of work and a lot of material. In all, 10,243 poles were added, 7,000 miles of wire were strung, new central offices were built, and new instruments were installed. The cost was about $3,500,000.

Despite this excellent record, a great deal more needs to be done. At the end of last year, there were still 5,277 held orders on file and there were still too many being serviced by lines with more than eight parties. To meet this demand our company is planning in 1949 to cut in half the number of lines with more than 8 parties and to install 14,700 new telephones. Having already installed 5,117 new telephones in the first 3 months, we are well on our way to this goal.

In 1948, 17,168 new telephones were installed, a gain of 15.2 percent; 19,810 people who were on lines with more than 8 parties received improved service. This is a reduction of 52 percent on those lines with more than 8 parties; 71 out of 100 rural establishments now have telephone service. In 1945 only 45 out of 100 had service.

Address by Hon. Oscar L. Chapman at Franklin D. Roosevelt Memorial Services

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Hon. Oscar L. Chapman, Under Secretary of the Interior, at the memorial services for Franklin D. Roosevelt at Hyde Park, N. Y., May 30, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am deeply touched by the privilege I have here today of paying tribute at this annual memorial service of the Roosevelt Home Club to the memory of Franklin Roosevelt.

I am also somewhat awed by the task of talking about the greatest man of our generation to members of his family and lifelong friends who had opportunities to know him much more extensively than I ever had. But at least I speak as one who had the privilege of serving with him for many years, and as one who followed him gladly in the peaceful revolution of which he was the leader in his first two terms in the Presidency, and later during the war which shook the earth.

Hyde Park is the mecca today of tens of thousands of people, citizens of this country and of other lands the wide world over. These people, plain people and great, who loved and followed Franklin Roosevelt in his lifetime, are drawn here by the mysterious bond by which he drew them to him in his lifetime, and which still exists.

Here at Hyde Park, amid the familiar scenes he knew so long and so well, we are privileged to sense something of the spirit of Franklin Roosevelt. Here are the places he loved above all other—this rose garden, this home, these rolling acres and majestic trees, the views of the broad and tranquil Hudson, and all the favorite spots which had a special meaning for him. Here grew and ripened those qualities of mind and heart which stood him—and the whole Nation—in good stead as there came to him the tremendous responsibilities first of national leadership and then of world leadership.

As human as he was, and with his sharp sense of history, he was aware of his impact on the national and world scenes. He must have been proud of his many great triumphs. But the most precious victories he won were those he won here. The support that he valued most highly was that of his neighbors. The faith and friendship that resulted in the formation of the Roosevelt Home Club no doubt was one of the really important things in his life.

He relished the victory celebrations and the torchlight processions of this club with that great capacity for relishment which he possessed. He must have been deeply touched, too, by the idea of fighting infantile paralysis in his name which originated with this group and which was taken up by others through the length and breadth of the Nation.

The word "neighbor" always had a special meaning for Franklin Roosevelt—a meaning which grew out of his life-long associations

with his friends here at Hyde Park and in Dutchess County.

Many of you are here today carrying on associations formed in the Roosevelt Home Club or otherwise during the spirited years of the thirties and early forties, when common struggles and common victories brought a feeling of genuine kinship. It is interesting to recall how those warm, neighborly relations here became, through the spirit of Franklin Roosevelt, the pattern for a whole series of widening relationships.

The "fireside chat," which informed and reassured the American people in many a day of crisis, was a talk to Hyde Park neighbors—on a national scale.

The "good-neighbor policy," which reoriented into international relationships throughout the Western Hemisphere, carried into international relationships the spirit of the simple, homely neighborliness which the President learned from boyhood onward in Dutchess County. This spirit was based upon mutual understanding, and through such understanding a sympathetic appreciation of another's viewpoint. Even on a world scale this same neighborly outlook ran through his thinking, from the caution of a "quarantine" to the magnificent conception of the United Nations.

"We are, all of us, children of the earth," he wrote in 1944 on the eve of the Normandy invasion. "If our brothers are oppressed, then we are oppressed. If they hunger, we hunger. If their freedom is taken away, our freedom is not secure." This spirit of the neighborliness, this sense of the brotherhood of mankind, was an inherent part of Franklin Roosevelt's nature.

In looking at the manifold problems of today both at home and abroad, two are foremost in my thinking. One is the continuation of humanity's long struggle for peace in the world and the other is the fulfillment of our age-long ideal for democratic society in which all our people participate equally.

To many the progress we have made in reaching these objectives has been discouragingly slow.

Although I mention them as two problems, in actuality, I believe that they are but different facets of the same problem, the solution of which will come from making the spirit of neighborliness a living force in the world.

Franklin Roosevelt realized this when he warned us that "if civilization is to survive we must cultivate the science of human relationships—the ability of all peoples, of all kinds, to live together and work together in the same world at peace."

In the United Nations, which he did so much to build, Franklin Roosevelt saw an opportunity to take a long step forward "in cultivating the science of human relationships."

In thinking of man's attempts to make "neighborliness" a reality I often think, as I am sure many of you have, of the crucial period in the history of our own country when the United States was an infant organization composed of States jealous of their sovereignty and power, frequently quarreling, and suspicious of each other. Yet a union was formed and a Constitution established which despite its imperfections at the time became a unifying force for a great Nation.

Although the first faltering steps of the United Nations have not taken us to our goal, we would not be true to the heritage he left us if we let our fears and discouragements destroy the ideal for which he gave so much of himself—if we did not heed his admonition that "the only limit to our realization of tomorrow will be our doubts of today."

It is faith in the future and our concern for our children, and our children's children, that must lead us to build the United Nations as an organization strong enough and able enough to secure the future for them and other children of the world.

We must move forward to strong and democratic world organization, and we must continue to move forward to a healthy and strong democracy in our own land.

Somewhat slowly and hesitantly we are moving back the dark frontiers of superstition and prejudice which must be conquered if we are to live in an America in which all our fellow citizens have equal rights to life, liberty, and the pursuit of happiness.

Franklin Roosevelt's love of people and his faith in them, was strengthened by his love of nature and the land. This, too, grew naturally out of his experience at Hyde Park. His father taught him the great enjoyment of country life, and the responsibility that is owed to the land. He took an exceptionally keen interest in the trees and the crops and the weather and loved to spend as much time out of doors as he could. There grew in him a profound appreciation of the supreme value of America's natural resources of soil, timber, minerals, and water.

With his vast comprehension and diversified interest in many activities, Franklin Roosevelt never lost the realization that the things in which he was interested were important not for themselves, but because they were related to people and the wants and desires of people.

In the field of natural resources, there are many who seem to consider the conservation of water, soils and forests, an end in itself. But to Franklin Roosevelt, resources were never unrelated to people, their needs, their hopes and their future. The planting of trees, the contour plowing of soil to prevent erosion, the protection of wilderness areas—these and other conservation measures were never more effectively pushed forward than by Franklin Roosevelt—but these things were done so that the people of our country—we and those who come afterward—would enjoy greater abundance and security.

One of Franklin Roosevelt's first great achievements as President was to tackle, during the disastrous depression, the physical rehabilitation of the country. This meant launching a winning fight against the forces which for generations had been upsetting the balance between the people of the United States and their natural environment.

The President's bold actions to meet those forces galvanized the will of the Nation. Franklin Roosevelt not only knew himself what so urgently needed to be done, but the Nation was able to learn the conservation lesson from him. The great conservation measures he fathered gave an impetus to the cause of conservation which continues as a vital force today.

This lesson of conservation, so close to the heart of Franklin Roosevelt, is one which our democracy must never allow itself to forget.

America's wealth is not measured in dollars, but in people, in land, water, minerals, and forests.

Although some of our resources are becoming exhausted, we still have enough resources to last, if we use them wisely and well, and if we apply to our resource problems of today the imagination, courage, and foresight that was characteristic of Franklin Roosevelt.

His was never the negative approach nor did he waste his energy in lamenting the difficulties of a situation. In conservation and resource development, as well as in other fields, he was convinced that if we tackled our problems bodily and constructively, solutions would be found.

Franklin Roosevelt always recognized that men and nature must work hand in hand, and that the throwing out of balance of nature's resources throws out of balance also the lives of men. The restoration of nature's proper balance tends also to restore the balance of men's lives, strengthening their occupations, their morale, and their self-respect in a democracy. It nourishes that consciousness of the people and the land so well expressed in Roosevelt's phrase I quoted a moment ago—"We are all of us children of the earth."

It is this spirit which is communicated to us in one of its highest forms in just such places as Hyde Park with its serene countryside and historic associations. In developing our Nation we must make certain that the great places of America, those national parks and historic sites which communicate most fully to us our understanding of nature and history, are preserved unimpaired for the continuing inspiration of present and future generations.

Our physical greatness, based on natural resources, must be matched by a moral and intellectual greatness nourished by the grandeur of unspoiled wilderness and by the living associations of historic sites adequately protected in their natural setting.

For his leadership, his courage, and his vision, for all that he gave this Nation and the world, Franklin Roosevelt has taken his place among the Titans of history. The question is whether we shall prove worthy of the leadership he so generously gave us and by our actions and our deeds carry on in his spirit toward the great objective set for us. It is our duty here on this day to dedicate ourselves to deepening our understanding of his spirit, and strengthening our determination to achieve his objectives.

Hyde Park is now a national historic site, a memorial to his greatness, and one for which we may be eternally grateful. This rose garden in which he lies is hallowed by the love and affection of millions of people. Here is a well-spring from which men and women will draw inspiration so long as brotherhood has any meaning, so long as faith in the ultimate good of mankind has any verity.

Franklin Roosevelt has also a wider and deeper monument than this. He has joined the select company whose home is in the minds of men, where their glory remains fresh to stir to speech or action as the occasion comes by.

Politics Before Peace

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Politics Before Peace," published in the Pittsburgh Press of June 5, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICS BEFORE PEACE

Preserving peace is America's greatest problem. Compared to the matter of avoiding another war, all other issues are secondary.

Yet in the new line-up of administration proposals to be acted on at this session of Congress, repeal of the Taft-Hartley Act has been placed ahead of ratifying the Atlantic Charter. Due entirely to politics.

Labor, despite all claims to the contrary, has not suffered under the Taft-Hartley law. Unions have gained members, higher wages,

UNIVERSITY OF MICHIGAN LIBRARIES

better conditions, and many other benefits. The so-called slave-labor law clearly has neither enslaved nor injured any worker in any way.

During the last year, however, world tension has increased. The peril to peace is at least as great as it was a year ago, perhaps greater.

But merely because there is a clamorous pressure bloc demanding repeal of the present labor law, it gets precedence in Congress over action on the Atlantic Pact—the keystone of our peace efforts.

In other respects, the peace situation is discouraging. We are constantly told that we need a strong, united defense establishment. Yet there is daily evidence that we don't have it.

Congress defeated a sound military pay bill because of cheap demagogic attacks on officers.

Politics and pressure are keeping us from getting the strength and unity which are essential to preserve peace and enjoy security.

We are sitting on a volcano.

There are civil wars in Greece, China, Burma, French Indo-China, and Indonesia. Europe is an armed camp, divided by Russia's iron curtain. Yet, though the potential aggressors are better armed than the forces of peace, Congress hesitates to vote arms for western Europe.

Peace can't be sustained by that kind of fence-straddling.

Banditry must be discouraged by police measures.

To obtain peace, the whole world must be organized for it, beginning with the nations that want it badly enough to defend it.

Congressional indifference to the administration's peace program reflects the confusion in the minds of the people. Our foreign policy does not add up and make sense to the average man, because it is indefinite and contradictory.

The American citizen has been told that the United Nations would keep the peace—and he hasn't been told that the Russian veto has prevented that organization from functioning.

He has been told our Government is against communism. Yet he sees that same Government coddling Communists and fellow-travelers. He knows we have opposed communism in Greece and encouraged it in China.

Unity is the basis of strength and unity can be achieved only through understanding. Peace in the Pacific area is just as essential to us as peace in the North Atlantic. The American people haven't forgotten Pearl Harbor, if the State Department has. From the viewpoint of our defense, Spain has just as much rightful place in the peace camp as, say, Italy or Turkey.

A foreign policy fashioned as ours has been by pressure groups, and subject to constant change on that account, cannot have well-defined objectives or any real meaning for the American people as a whole. That is our weakness, and it is the peril of the world, because the world looks to us for leadership.

America at the Crossroads

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address, in part, of Mr. G. E. Blewett, delivered before the Kiwanis Club of Denton, Tex., on the subject America at the Crossroads.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

CHARGES POLITICAL MOTIVES

DENTON, TEX.—G. E. Blewett, secretary of the Texas Grain and Feed Dealers Association, today charged administration forces with deliberately complicating the grain storage situation for the purpose of influencing legislation that would permit CCC to launch an expansive program of building grain storage facilities and thus hasten socialization of the grain industry.

Speaking before the Kiwanis Club on the subject of America at the crossroads, Mr. Blewett stated in part:

"Much publicity has been given the grain storage situation in Texas and other Southwestern States and the grain trade has been most unjustly criticized. So without any qualifications or reservations, I charge and accuse CCC, PMA, United States Department of Agriculture, Secretary of Agriculture Charles Brannan, President Harry Truman, and other bureaucrats unknown of knowingly and wilfully, intentionally and maliciously causing the congestion that now exists in the grain storage situation by deliberately withholding sales and loading orders on old crop grains, thus keeping present storage facilities filled, thereby discrediting the grain trade for the sole purpose of influencing sentiment in Congress and in the public mind toward legislation now pending that would give the afore-mentioned greater power and more control over the grain industry.

"An impartial analysis and study of this situation and of the statistics clearly shows the afore-mentioned are wholly incompetent, completely unable and totally inexperienced to conduct a grain business either in export or domestic, and I am going to urge the Congress to turn the grain business back to experienced and qualified firms who are sufficiently capable and thoroughly competent to handle the grain business, both in export and domestic without burdening the American people with heavy taxation.

"Had the grain trade been in charge of the grain business, this vast accumulation of old crop grains would have long ago disappeared in commercial channels, for the grain trade cannot afford to take losses by carrying old crop grains into new crop deliveries, but the bureaucrats in Washington are not in the least concerned about how much money they lose as these losses do not come out of their pockets, but out of the pockets of the taxpayers of America."

Hon. James I. Dolliver, of Iowa, Endorses the Arkansas Plan for Fair Employment

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. HAYS of Arkansas. Mr. Speaker, recently I received a letter from the gentleman from Iowa, Hon. JAMES I. DOLLIVER, commenting upon the arguments I had advanced in opposition to pending FEPC measures. Our distinguished colleague from Iowa was kind enough to study an alternative proposal which I presented to the Education and Labor Committee, and his endorsement of my plan of achieving fair-employment practices in private industry is set forth in the following letter, which I include under leave to extend my remarks:

DEAR COLLEAGUE: Having given considerable attention and study to your proposal with respect to fair-employment practices, I am persuaded that your proposal is the proper answer for this very difficult and perplexing domestic issue. It is altogether true, alas, that good morals and friendly attitudes cannot be legislated. An advisory, rather than compulsory, commission on fair-employment practices, would be ultimately far more effective, in my opinion.

Since it is not possible for me to appear before the committee at the time set, you are at liberty to use this letter as an expression of my views on the subject.

Sincerely,

JAMES I. DOLLIVER.

A Civil Rights Bill

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of June 7, entitled "A Civil Rights Bill."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CIVIL RIGHTS BILL

A bill to make lynching a Federal crime won the approval yesterday of the Senate Judiciary Committee. This is the first civil-rights measure to be approved by any committee of the Senate at the present session. The proposed legislation would provide severe penalties for conspiracy to incite, aid, or commit a lynching and these penalties would apply also to peace officers who willfully refused or failed to protect persons threatened with mob violence or who willfully refused or failed to make all reasonable efforts to bring to justice those who are guilty of such violence. In this respect the new measure follows the recommendations made some months ago by the President's Committee on Civil Rights, headed by Charles E. Wilson.

As the President's committee noted at the time of its report, the constitutionality of some parts of the measure now recommended has been questioned. The committee was of the opinion, however, "that there are several constitutional bases upon which such a law might be passed and that these are sufficiently strong to justify prompt action by Congress."

Action has not been prompt. But it remains imperative. For while the ultimate remedy for the monstrous evil of lynching must lie in the social consciousness of the local community, there are sound reasons for believing, with the President's committee, that the enactment of a Federal antilynching law would set a standard and serve as a deterrent.

Address of Dr. Cloyd Heck Marvin, President of the George Washington University

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following splendid address by Dr. Cloyd Heck Marvin, president of the George Washington University. The speech was given June 1, 1949, to members of the graduating class. It follows:

Members of the graduating class of 1949, as I discuss with you ways of thinking about life, I shall mention serfdom, ants, and freedom. Under our constitutional republic, we can develop an absolute collectivism, we can develop a socialized control, or we can maintain a democratic freedom, as a way of life. During war periods, when we voluntarily turn over to the President of the United States extraordinary political powers, we tend toward absolutism in our thinking. When we legislate for any part of a planned economy, or to care for the physical wants of our citizens, we are favoring socialized controls. Under our ideals of democratic freedom, we have held that men are, under rules of the game, responsible for getting on together. Of this way of thinking about life, Woodrow Wilson wrote, "America was created in order that every man should have the same chance as every other man, to exercise mastery over his own fortune."

Believing in absolutism, collectivism, or socialized control is to think according to rules. These rules restrict and circumscribe the fields considered and thereby limit the development of the minds of men. The totalitarian pattern of thinking educates its devotees to expect dependence and frustration. They cannot expect the gratification attending upon intellectual inventiveness or spiritual freedom. Dependence exists that the state might live. To this pattern is added another concomitant deterrent to independent mental activity; that is, a deteriorating fear complex. This fear is built up by the use of the repetitive statements that poorly defined wicked groups from within or without are threatening the existence of the collectivist state. So the state is supported by an overactive police power. There can be little freedom of thought under a regime of secret police and internment camps maintained to create fear.

The reason that totalitarian thinking ends in dictatorship is that dictatorship is a most effective instrument of coercion, and the enforcement of the collective ideal. The pattern is established by one mind, or the collective mind of a chosen few. Of this, Nikolai Lenin makes this statement, "The whole of society will have to become a single office and a single factory with equality for work."

Into this assigned work, men must fit. Such a society has a definite socio-economic goal. It holds that democracy, with no single aim, lacks direction, and is guided by the whimsical and the fanciful thinking of irresponsible individuals. Totalitarian thinking overlooks the incapacity of its leaders to make an over-all pattern into which every man of the nation can fit; and the fallibility of the leaders who would undertake to adapt such totalitarian generalizations to the intimate life of every man within the state. Hence, under the totalitarian thinking, the limitation of human aspiration and invention is inevitable.

The socialist planners differ from those who believe in democratic liberalism in that they would organize the total resources of society for an economic end. The ideas they espouse refuse to recognize the independent spheres in which the ends of the individual are supreme.

As early as 1835, the Count de Tocqueville defined this position in the following way. "Democracy extends the sphere of individual freedom, socialism restricts it. Democracy attaches all possible value to each man, socialism makes each man an agent. Democracy and socialism have nothing in common except one word, 'equality.' But notice the difference, while democracy seeks equality in liberty, socialism seeks equality in restraint."

Restraint and frustration go hand in hand. In a society where men exist for the state, they are always forced to turn their efforts to the problems of production of material wealth. They are compelled to turn to these problems because the inventiveness, the eagerness, the fullness of production is lost under the restricted pattern. So they never get beyond the supplying of the earthy things of existence. You may have noted in the papers recently the sale in New Jersey of the Commons of the North American phalanx of Fouriereist Society. It was sold for a mere pittance, and it recalled like failures of the Oneida community, the Owenites, and other like groups. The idealists that established these socialized communities never reached their goals, because they could not attain to economic self-sufficiency. History is replete with such failures.

When we look at an ant hill, we see that the ant is reduced to a point where the insect becomes incapable of doing anything other than that which it is born to do. Some cannot feed themselves. They depend for their sustenance on specialized sexless individuals of the colony. Other individuals were created male. After they have served, they die. The queen bearing eggs is the unit around which the colony survives. Individual action is lost. It is replaced by other impulses, imposed by the morphological and physiological structure of each specialized, limited group. The individual's life is only a part of the community, which holds the interest of each ant with the interest of the others. This ant hill community is without soul or future, and becomes the sole reason for the existence of its members. But we are not yet thus specialized. We have no desire to reverse our evolutionary process and become ants.

Faith in democratic freedom is to believe that because of individual effort man has risen and will continue to develop from stage to stage in physical, intellectual, and moral power. There is a valid satisfaction in the opportunity to order our ways of living so that it recognizes the strengths of each man, and have each strength acknowledged as a contribution to the society of which the man is a part.

This is your belief, or you would not be spending these fine years of your life, working your way through college in order to better prepare yourself for the tasks that are ahead. This very belief has been the great contribution of our America. The freedom of thinking in a democracy spontaneously evolves a natural leadership without which we could not have developed this Nation. The power that comes with such freedom is not separate from the interest of the state. It is an essential and integral part of our social well-being. It is the everlasting form in a structure composed of transitory parts. Because of its force, there has been molded together the mysterious incorporation we call our free Nation. That this way of thinking has been successful cannot be doubted. To prove the point all we have to do is to recall what at this very moment we are being asked to do for other nations.

So the strength of a nation is to be found in its thinking. Men have great energy and that force must have an outlet. The curbing of this naturally free activity, by whatever means; the negation of a citizen's full responsibility for his actions; the consideration of the individual as merely a physio-social unit, inevitably brings about frustration of moral man. It will suppress the spirituality, the hope, and leave only the frightened, discouraged feeling of uselessness, or it will burst forth in weird, nonsocial ways.

Let us illustrate this point by the example of overlegislation—legislation which sets ceilings upon men's activities. Such legislation results in the lowering of the moral tone. We saw this in prohibition times. In the long run, overlegislation is just as destructive to moral responsibility when it is enacted to meet social-betterment concepts. Call to mind the fraud that is now being practiced in the tight-woven British society in regard to socialized medicine. Many members of the Labor Party itself are adversely critical of what is taking place in their program and asking for limitations in it.

Morality flourishes only when men are held responsible for the development of their own lives. You can't legislate into the individual such attributes as hope, growth, or morality. It has often been tried, and as often it has always failed. Good legislation lays down rules for guidance as we undertake the free way of life, of personal responsibility. It stops there. It does not try to supplant moral growth, nor by creating security restrictions, limit inventiveness and faith.

When men are held down by ceilings, life that is intended to sublimate the physical always emphasizes it. And an overemphasis on the physical side of life sets up false values, which if not met cause baffled persons to despair. The frustration of repressive ceilings leads to lack of faith, to nonsocial action, to despondency, to suicide, to the increase of crime, sex outrages, mental diseases, nervous disorders, and dishonoring of the home.

If we are going to overcome paralyzing skepticism and destructive materialism, freedom alone will suffice. Only under freedom can man have faith to develop his deepest emotion, which is a decent regard for the dignity of man. The test of true democratic thinking is that it contends for such freedom and provides for the recognition of the faith and the power of men.

You have all heard the derisive expression, "Tied to his mother's apron strings." When applied to growth in a free society, its meaning has a deep scientific significance. When the people of the land, old and young, are told what to think, they become dependent. Dependent, they fall back upon the security of the "mother-idea." Psychiatrists make clear the result of what is called "mother complex." Under such retreat there is present a desire to hide under the mother's skirts. Excuses are the order of the day. Difficulty is never squarely met. Irresponsibility marks behavior. Weakness becomes a virtue. Apt, free aggressiveness is lost, men become subservient. When men's thinking allows "apron-string concepts" to prevail, the state supplants the overzealous mother in his mind, and weakened men turn more and more to government for protection and sustenance. This is not the way of democratic self-reliance. Under free and democratic thinking, men with heads held high are aggressive; they eagerly accept responsibility for their own lives; they struggle by faith, and endeavor to be creative.

I would have you believe that only a free mind is a trustworthy mind; that only a free mind is a liberal mind; that your nobility as a human being can emerge only from your efforts to liberate yourself from limiting physical concepts; that the law of growth is and always has been to struggle free and untrammeled toward spiritual attainment; that devotion to freedom is not something ab-

UNIVERSITY OF MICHIGAN LIBRARIES

stract, but as a way of living it is necessary for the very existence of the Nation. Under freedom alone can you get the deep satisfactions attending upon attainment and service that will make you a useful, happy citizen; that freedom is a divine attribute; that it is a spiritual expression of life that best manifests itself through the faith, the hope, the creation, the cooperative service of our democratic way of life.

Government Wheat Fills Storage Space

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Kansas City (Mo.) Grain Market Review for Thursday, June 2, 1949, entitled "Government Wheat Fills Storage Space."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOVERNMENT WHEAT FILLS STORAGE SPACE

A long fight by members of the Kansas City Board of Trade and other grain markets of the Southwest to help assure for wheat growers the full 1949 Government support prices appears to have been lost. On the prospective 1949 wheat crop of Kansas, Colorado, and Nebraska, this may mean a loss of many millions of dollars in farmers' returns, Edmund Marshall, president of the local exchange, said today. He warned farmers to plan accordingly and advised them to provide sufficient storage on the farms.

The grain trade of Kansas City and other markets, functioning as merchandisers and storers of wheat, has been pressing since early April to make a maximum of grain-storage space available for the new wheat crop in terminal market elevators. About 80 percent of the wheat entered into the loan program in the Southwest from the 1948 crop was placed in elevators and only 20 percent on farms.

This season these public elevators are about 75 percent filled with accumulations of 1948 wheat and other grains now owned by CCC through last year's support program. Little room is therefore left in the terminal elevators for the new crop.

The grain trade has already been overwhelmed with applications from farmers and including country grain dealers for storage space for the 1949 crop, but its hands are largely tied because CCC has to date refused to move out the old-crop grain.

As far back as last April the grain exchanges began to press CCC for a solution to this problem. They pointed to the fact that more than 100,000,000 bushels of empty space is available in public elevators east of the Mississippi River and pleaded with the Federal agency to move as much of the accumulations in Southwest elevators as possible to those elevators in order to provide space for the new crop. Meetings were held in Kansas City, Hutchinson, Kans., Chicago, and Washington, but without avail. CCC, while delegated by law to operate a 1949 wheat-support program, has in reality assumed an opposite role. By refusing to move its old grain in Southwest elevators it is really preventing many millions of bushels of new wheat from entering the support program.

Farmers can still protect themselves, it is pointed out, by building wooden storage or buying steel bins. If they fail to do so, they must expect to pile wheat on the ground or press it onto markets plugged with Government wheat. Prices substantially below the loan price must be the result.

Address by Hon. Frank P. Graham, of North Carolina, at Graduation Exercises of the University of North Carolina

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very splendid address delivered yesterday by my colleague [Mr. GRAHAM] at the commencement exercises of the University of North Carolina.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The deepest need of the peoples of the earth is peace with justice and freedom. Mankind in self-defense of civilization must not let go in the difficult struggles and patient hopes for peace. Two world wars nearly wrecked, and a third world war, with its superweapons of utter destruction, might destroy our modern world.

After the First World War the United States renounced the League of Nations and failed the hopes of mankind. After the Second World War the Soviet Union has obstructed the United Nations and has failed the humane hopes of the peoples of the world. Upon the ruins and miseries left by World War I the Fascist dictatorships reared their monstrous power against the peoples of Europe, Asia, and America. Upon the ruins and miseries left by World War II the Communist dictatorship constructs its no less monstrous subversions and aggressions against the freedom and dignity of the people in both the east and the west. We devoutly trust that the twilight of the cold war will not turn into the darkness of the unthinkable tragedy of a third world war. In the struggles toward the dawn, we are groping for the free light and fair balance of both freedom and security.

The responsibility for the cold war will ultimately be adjudged by better informed minds than my own. I am not unaware that America and the free nations have some responsibilities for which they are answerable to themselves and the God of history. The frustrations and deficiencies of our own Nation and the other democracies, the corruption in China, and the imperialism in the African, Pacific, and Asiatic world are a part of the sins of the democratic world in which we all must share.

It is written in the record that the Soviet Union, instead of continuing the Allied cooperation which won the war and could have won—and could yet win—the peace, obstructed the continuation of this cooperation; broke the pledge for the self-determination of peoples; subjugated little nations by force, or threat of force, and internal subversion; picked off nations, one by one, and locked them behind the iron curtain of the police state; carried on sabotage of European recovery; made war on religion; obstructed, by abuse of the veto in the United Nations, international procedures; blockaded Berlin; and in the midst of the world-wide hopes for peace and the world-wide fear of atomic bombs, rejected the United Nations plan for the international control of atomic power. Instead of the grand design for the translation of the cooperation of the Allied Nations for winning the war into the cooperation of the United Nations for winning the peace, this tragic world now carries the heavy loads, disillusionments, and strains of the unprecedented cold war in which we have neither the security of peace nor the actuality of war.

Atomic power and its secrets thus became one of the chief centers of tension and fear in the cold war. With international control and sharing of atomic knowledge and power against its use for the destruction of civilization and with international cooperation for its use for the construction of a more productive, humane, and fairer world, all the people and their scientists would have these blessings of the freedom of the human mind and spirit adventuring along the farthest frontiers of free research and creative cooperation toward a better life for all people. Without this cooperation, without the international agreement for its control and use, atomic research and the industrial know-how for the production of its terrible power became one of the prime objectives of the espionage of the Soviet Union.

Against this international, national, and psychological background, the resulting fears of the American people are understandable. To those officials of the Government who have been the objects of this fear and even whipped-up hysteria, such an understanding, I feel sure, has been to them a source of perspective and forgiveness rather than rancour and resentment. They would agree that it is important that the press, radio, and congressional investigation have clear freedom, even if some individuals have "to take it" meantime. If they can stand and "take it" long enough, the American people always rally in fairness to those individuals who themselves are free, competent, and loyally devoted in the service of their country. In the invisible world of God and the human spirit, truth is mighty and will prevail.

At such a critical time it is well that the American people do not allow our well-grounded fear and hatred of the Communist dictatorship to subvert our free institutions and change our historic American way of life into totalitarian ways. It is our faith that the American people will keep the democratic perspective and the fair balance of a free people. Once in fear, they passed the alien and sedition laws, but in a calmer mood they soon restored the basic freedom of petition, inquiry, discussion, and publication on which America was so largely founded. These precious freedoms have since been preserved to this hour.

The student legislature, in keeping with the historic traditions of this place, passed its resolutions against any required oaths of students and teachers regarding their economic, political, and religious views. The North Carolina Legislature wisely passed no laws and the university board of trustees wisely passed no regulations against the freedom of the human mind. The trustees also wisely held that the question of the character, competence, values, and patriotic loyalty of members of the staff were a first responsibility of the able and devoted chief administrative officers of the university with their faculty advisers. The universities, in accordance with the principles and spirit of the American constitutional Bill of Rights, will not close their doors to any student because of his political, economic, or religious views.

The Atomic Energy Commission is, by experience, in a new field seeking to develop policies which will protect the freedom of

scientific inquiry and the security of the Nation. Two principles have evolved: One for civilian control, and the other for a security check as part of the national defense during the cold war for those engaged in the atomic production and research program of the Commission. The universities likewise are seeking to find an answer to the question as to whether a member of the Communist Party is under such a discipline and party line of a foreign tyranny that he is not free to teach in accordance with the principles of a free university. Upon the establishment of the fact and nature of this iron discipline will depend the ultimate policy of our universities throughout the democratic world. The aggressions of the dictators and the subversions by their agents in the cold war and not a retreat of freedom, created in the policy of a security check in the atomic production and research program on membership in Fascist and Communist organizations which seek to destroy both security and freedom.

The Atomic Energy Commission, the National Research Council, and the Joint Congressional Committee on Atomic Energy of both the Eightieth and the Eighty-first Congresses, have directed one of the most unprecedented and stupendous scientific and industrial enterprises of history with eminent ability, patriotism, and dedication to America and the cause of freedom and peace in the world.

The schools and colleges for the sake of the mind and spirit of man now in global issue need integration, balance, and the general view, and must have freedom for its own sake to offset the idea and fact of the tyranny, aggression, and infiltration of the totalitarian state, whether of the right or the left, in the struggle for the possession of the mind and spirit of man.

History teaches beyond the denial of bigotry or the sneer of cynicism that the answer to a difference in color or creed is not the KKK, is not tomatoes and eggs, is not a concentration camp; the answer to error is not terror, but the cleansing power of light and liberty under the laws and the Constitution of the United States of America. In the days of its weakness America was the haven of heretics and should not in the days of its power become the stronghold of bigots. To be American in the great American traditions is sometimes miscalled un-American. To stand by our historic American Bill of Rights is not a subversive activity. It is unfair to our religion and our Americanism to call communistic the most decent, humane, and spiritual hopes of mankind. The more Americans who understandingly and sincerely subscribe to the Constitution and its Bill of Rights, the better for America and the world. The freedom of the college means not only the freedom to inquire and publish the theological implication of the geologic structure of the earth, and the biological implication of the physical structure of a fish, but also the human and spiritual implication of the economic structure of society and the international moral implication of the nuclear structure of the atom.

The conceptions of the modern scientific age have contributed greatly to the knowledge and progress of man and civilization but deeply need an emphasis on the sovereignty of the moral law, moral values beyond science, ethical ideas above force and totalitarian power, and spiritual insights which will make a deeper and wider synthesis—a new integration of ideas in the unity of learning, the unity of human personality, the unity of mankind, and the unity of the universe—one world, one family, one God.

The organization of the idea under God of the oneness of the family of nations in a limited world federal government under the Charter of the United Nations is the last desperate defense against modern civilization's powers of self-destruction. The abolition of the veto; international inspection and control of atomic power; a world court with original jurisdiction over individuals guilty of crimes against the United Nations, with the guaranty of an international bill of rights; an international police force responsible only to the United Nations; and the widening of legislative powers in the Assembly of the United Nations—all these make imperative amendments to the Charter. America and the other democracies must take the initiative for the organization of peace even at the risk of war. Drift into war is immoral in the atomic age.

American isolation did not prevent either the First World War or the Second World War. American participation in international procedures may prevent a third world war. The danger is that we may get weary of the heavy economic load and the heavy moral responsibility of world leadership. The cold war, with all its burdens, has been forced upon the democracies. To prevent the cold war from becoming a shooting war, we must now carry the present load of the Marshall plan, the prospective load of the Atlantic Pact, and perhaps the load of some future plan for saving southern Asia from totalitarian tyranny—all to prevent a global war and save freedom in the world.

For the United States to continue for a long period to carry these heavy loads would be to overstrain our economy and to undermine our social advance. For America to throw down these burdens, withdraw from the world, and abdicate her position of responsibility and leadership, would mean the totalitarian domination of all Europe and of all Asia. American isolation would then likely lead to the third world war, the bankruptcy of nations, the murder of millions, and the ruin of civilization.

The way out is not through isolation but more participation; not less world leadership, but more world leadership through the United Nations.

May we not rely solely or mainly on economic, military, and atomic power for the security of America. May we stand stanch and constant for the freedom, recovery, international cooperation, and the peace of all peoples. America must be morally strong and increasingly free and fair to all people in our own democracy. Let us at a propitious time within the Charter of the United Nations, with a sense of human brotherhood under God, raise the standard of a limited federal world government to which all people, even in this dark world, can look with hope for freedom, justice, and peace.

To the Victors

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "To the Victors," published in the Somerset (Pa.) Daily American of June 4, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO THE VICTORS

Grover Cleveland was elected President of the United States largely because of a pledge he made that the spoils system, which had ruled in the civil service of the United States Government, should be abolished.

Andrew Jackson a predecessor of Mr. Cleveland, had been the daddy of the idea that to the victors (in a Federal election) belong the spoils.

Mr. Cleveland made the Jacksonian doctrine look like the rule of a gang of thieves.

The Civil Service Commission was set up and a sort of security was given Government servants.

President Truman seems to have turned back the pages of history so that he might reward those who have rendered him extraordinary service.

But has he?

In the olden days, the spoilsmen controlled the living of the humblest Federal employee.

President Truman seems to have applied the Jacksonian doctrine to the higher ups alone, perhaps, because of the civil-service laws.

Yet, the men who fill the higher offices in the Government ought to be the most capable available.

For example, it seems incredible that the Secretary of Defense should be selected because of his success as a collector of campaign funds, or that any representative of this Government in a foreign land should be appointed because of his contributions to the victory.

Not long ago the press reports from Washington told of the determination of President Truman to ignore the recommendations of representatives of the people in Congress who refused to take dictation from him.

When Rome got to the point where the purple was auctioned off to the highest bidder, the end of the republic was at hand.

The Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. WILEY. Mr. President, we are now engaged in the vital task of reviewing the Taft-Hartley law. One of the reasons why I, like many—I believe the majority—of my colleagues, favor the essential provisions of this law is that we believe that it is part and parcel of our American system of checks and balances. We believe that the Taft-Hartley law prevents arbitrary abuses of power by any one group in our population.

I have in my hands, Mr. President, two items which bear out this very theme. The first is a powerful editorial which was carried over a month ago in the May 4, 1949, issue of the Waukesha, Wis., Daily Freeman. This editorial rightly upheld the action of the House of Representatives in refusing to be a rubber stamp to the President and refusing to repeal the Taft-Hartley law outright. The editorial emphasizes that it is a part of our American way of life that Congress must not accept the dictates of the Chief Executive, but must exert independent authority. The editorial also points out how badly misrepresented was the record of the Eightieth Congress. Although the House later reversed its action and refused to send on the Wood bill to the

UNIVERSITY OF MICHIGAN LIBRARIES

Senate, the validity of this editorial remains unimpaired, and, in fact, has been strengthened over the past month.

The second item is a forthright statement on the part of Mr. De Witt Emery, president of the National Small Businessmen's Association. Mr. Emery prepared a statement regarding the injunction provisions in the Taft-Hartley law, and pointed out how these provisions also are in keeping with the American system of checks and balances. This statement was printed in the May issue of the publication Pulling Together, which is issued in Chicago by his organization.

I ask unanimous consent that the text of the editorial from the Waukesha Daily Freeman and the text of Mr. Emery's statement be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[Editorial from the Waukesha (Wis.) Daily Freeman]

THE EIGHTY-FIRST IS NO RUBBER-STAMP CONGRESS, EITHER

Historians who are constantly looking for the beginning of eras and their end, might put down May 3, 1949, as a definite conclusion of modern-day rubber-stamp Congresses. The lower House yesterday gave a resounding answer to President Truman's demand for full repeal of the Taft-Hartley law and gave approval to its own substitute bill, sponsored by Representative JOHN S. WOOD, Democrat from Georgia. Thus the President was again rebuffed—and this time badly—by a Congress which he had hoped and had believed would do his bidding, as Congresses before him had done the bidding and rubber stamping demanded by President Roosevelt. The Eightieth Congress was viciously maligned and in some cases libeled last fall by Mr. Truman during his tour of the Nation prior to the November election. The Eightieth Congress had refused to do his bidding and the President was angry. He spoke during his campaign as though Congress should have done what he wanted done, whether his demands were right or wrong. He asked for the ouster of that terrible Congress because he could not dictate to it as Mr. Roosevelt before him had dictated to legislators and usually got what he wanted.

But time has disclosed that the Eightieth Congress was not as terrible as the President had represented it to be. It was merely assuming once more the duties that are ascribed to the Congress of the United States. It was emerging from the puppetry to which it had long subjected itself and to which it was subjected by a strong and powerful President who sat across the table from dictators in foreign lands, who charted areas and adopted policies which later were merely confirmed and rubber-stamped by the people's representatives. It was an effective way of getting things done without argument, without opposition, without clearing with the will of the constituted authorities of the people. The practice became so general that there was serious talk in many circles about abolishing Congress because it was an ineffective and impotent arm of the Federal Government.

President Truman's slander of the Eightieth Congress whipped up indignation among many people, some of whom fail to realize what the constitutional relationship is between the executive and the legislative branches of Government. It was never intended that the President should dictate to Congress; his function and purpose are to recommend. His will is not paramount, as in the instance of dictator governments; his role is that of an adviser whose greatest power rests in the power to veto, not to demand.

Yet Mr. Truman, like Mr. Roosevelt, got into the habit of demanding. And while it is not a good habit for a President to acquire, regardless how powerful he may become with the people, that is a personal matter which he alone can decide. But it still does not mean that Congress must acquiesce to his demands. This is to say President Truman had a perfect right as Chief Executive to recommend adoption of his own Taft-Hartley repealer, but it does not follow that Congress must do his bidding. Nor does it follow that because Congress does not do the President's bidding that it is a terrible Congress which deserves to be maligned and thrown out or thoroughly discredited. Here is representative government at work, as conceived by the founding fathers and as stated in the United States Constitution. It is the great leveler of the peaks and the depressions which alternately occur in the executive and legislative branches. Strong Presidents find their will thwarted by the will of Congress, when Congress is firm and strong. We have just emerged from an era when Congresses were weak and accepted the will of a powerful President at its face value and seldom crossed him.

Today Congress is back in the driver's seat, firmly and squarely. The Eightieth Congress began the job of building back the respect of the two branches of the Legislature which had been lost and at one time during the Roosevelt administration was all but destroyed. The young people today are learning, if they study the work of Congress, that it is more than a butt of some evil or some funny jokes. By a vote of 217 to 203 the lower House of Congress yesterday spoke its will and that will is greater by far than the will of one individual, even though that individual is President of the United States. That is democracy at work—democracy at its best. That is what makes this Nation the greatest nation in the world, a nation worth preserving, a nation worth defending for the great good it can do for the greatest number.

A MESSAGE FROM OUR PRESIDENT

It seems evident from some of the comments that have been made concerning my piece in the March issue of Pulling Together that I did not adequately answer William Green's contention that the Taft-Hartley Act is a slave labor law. So I'll try again.

Green, as you no doubt remember, said, "The Constitution of the United States provides that involuntary servitude shall not be imposed on any individual except as punishment for crime. Yet the Taft-Hartley law authorizes the use of injunctions which, when applied, compels workers to work against their will. That is slavery and involuntary servitude, practiced in a free America. How would employers feel if they were enjoined and compelled by injunctions to operate their plants against their will and at a loss? It matters not how long a man is compelled to work—for 1 minute or 1 second—it is compulsion and if he is forced to work against his will and go to jail, as a consequence of refusing to work, he is a victim of involuntary servitude and slavery. You and no one else can deny this fact."

Involuntary servitude is not involved in an injunction against a labor union because each individual member of the union is still free, after the injunction has been issued, to quit his job and get himself another job. An injunction does not deprive him of his freedom of choice. If it did, it would be involuntary servitude, but it doesn't. He's just as free to quit and get another job or go fishing as he was before the injunction against his union was issued, and so long as the individual has a choice between working and quitting, he very definitely is not, cannot be, a victim of involuntary servitude.

All the injunctive provision in the Taft-Hartley Act does is to give the Government the right to request the courts to curb a union, when in pursuit of its own selfish aims and purposes the union carries its activities to the point where public health and safety are jeopardized. Anyone who objects to this must then subscribe to the idea that labor unions are a thing apart, are over and above all the laws of the land and can do no wrong.

A republic is essentially a government of checks and balances. Whenever certain rights or privileges are established for a group or groups, a check must also be set up to be used to bring the group or groups back into balance if these rights or privileges are abused. That is fundamental and no republic, ours or any other, can long endure which does not adhere to a carefully thought out and well-established system of checks and balances.

DEWITT EMERY.

Socialism in Great Britain

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD two news items from a London newspaper indicating the manner in which socialism is working in Great Britain. In February 1946, when I was discussing the pending British loan with the Right Honorable Winston Churchill, I asked him if the Labor Government was going to nationalize the industries of Great Britain and he emphatically replied: "If it attempts to do so it will be voted out of office overnight." But it has proceeded with its nationalization plans including the nationalization of steel and iron and it has not been voted out of office.

The great British statesman, Edmund Burke, once said that nations do not learn by experience. It would help those in this country, who while professing a firm belief in a capitalistic system and private enterprise apparently think that a little dash of socialism would help our system to operate more effectively, to study what is now taking place in Great Britain. The following news items throw a significant light on that situation plus the current news that railway workers are threatening to strike because of dissatisfaction with their working conditions.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

ABANDONED COAL-TO-OIL PLAN COST £3,000,000—AUDITOR GENERAL REPORTS ON LOCOMOTIVE CONVERSION

Expenditure of nearly £3,000,000 on converting 93 railway locomotives to oil firing and then back to coal is referred to in a report by Sir Frank Tribe, comptroller and auditor general, on civil appropriation accounts, 1947–48 (Stationery Office, 2s).

In the summer of 1946, at the instance of the Ministry of Fuel, a scheme was launched to convert 1,200 locomotives to oil firing with the object of saving a million

tons of coal a year. Expenditure in 1946–47 reached £268,650, and in 1947–48, £1,335,309.

In September 1947, when 93 locomotives had been or were being converted, the Ministry of Transport was warned that the 840,000 tons of oil needed annually might not be available. Work on locomotives was suspended, but storage depots were completed.

The British Transport Commission, which took over the railways on January 1, 1948, told the Ministry that the additional cost of operating the 93 converted locomotives was £279,000 a year; for the full program the extra cost would be more than £3,500,000 a year.

Disagreeing with the Ministry, the commission maintained that extra expenditure on the scheme was not justified. In May 1948 it was abandoned. The 93 oil burners are being reconverted to coal at a cost of £200 each.

Expenditure estimated initially at £11,000 and afterward at £10,000 a year is being incurred by the Ministry on care and maintenance of the storage depots. The Ministry, in November 1948, estimated its total expenditure at nearly £3,000,000.

OFFICIAL CAR COSTS £500,000 THIS YEAR

Sir Frank Tribe reports that a Ministry of Supply vote includes about £300,000 on wages of drivers and other costs of a car service for ministers, government officials, and certain semigovernment bodies. Total cost of this service for 1947–48 was assessed at £420,000. Estimated cost for 1948–49 is £500,000.

The service comprised 216 cars in the London pool, based on a garage in Kensington, and 442 cars in 26 regional pools. In addition, independent pools were operated by the service departments, the post office, and some other departments.

Cars were allocated to ministers of Cabinet rank and were held solely at their disposal. Junior ministers and a few senior civil servants had nominated cars which were available for pool duties only when not required by them.

Responsibility for the proper use of pool cars rested with the authorizing officer appointed by treasury instructions in each department. Cars were only to be used when transport by public conveyance would be less economical, having regard to the serious loss of official time which would be involved.

Sir Frank points out that normally cars are only available for official use and free of charge. There were two main exceptions: Ministers of Cabinet rank can use their cars for private purposes, when the charge is 1 shilling a mile, recently revised from 8 pence; commonwealth and colonial governments, regional hospital boards, hospital-management committees, new towns development corporations, and certain grant-aided bodies can hire cars for approved purposes from the pool at 9 shillings 2 pence an hour, or 1 shilling 9 pence a mile, whichever is greater.

FORTY-FOUR PERCENT SAID: "NATIONALIZATION IS FRUSTRATING"

Railwaymen are not happy on our railways. This fact has been discovered by the Railway Review, the organ of the National Union of Railwaymen, in the course of a recent survey. Here are some of the results:

To the question: "Did you support the nationalization of the railways?" more than 88 percent replied "Yes." But, since they have seen nationalization in action, many are discontented. They were asked: "After a year of national ownership, how did you find your job?" "About the same," replied 45 percent. "More frustration," said 44 percent. So, 90 percent have found no improvement or a definite worsening.

The next question went right to the heart of the matter: "Do you feel you have a share in running the railways?" Over 75 percent replied "No," and another 10 percent were doubtful. It is clear that the railwaymen sense a loss of status and a lack of responsibility for their organization.

This loss of morale will puzzle many Socialists. Yet the answer is clear.

Morale within an organization depends on more than the mere question of working hours, working conditions, and wages. It depends, too, on the feeling of subordinates that they have a responsible place within the organization, that they matter, that they are treated as human beings and not as personnel.

If an organization is too centralized, if too little responsibility is delegated to the men on the spot, then a grave danger will arise.

Problems occur. The men on the spot have no authority to deal with them. They must refer the matter to the center for decision. It reaches the center after passing through a chain of buck-passing middlemen. A decision is given, on second- or third-hand information, without first-hand knowledge either of the people involved or the technical circumstances. To the subordinates on the spot, the decision often seems inept, arbitrary, and inhuman. They feel that the anonymous "they," by whom they are controlled, have little knowledge of the situation and no interest in them as human beings. Morale suffers.

Free-enterprise organizations have a much more realistic attitude to morale than Socialist theorists. They delegate much more responsibility to the men on the job. Before nationalization, pit managers in the coal mines could settle problems on the spot, with first-hand knowledge of the facts, and of the individuals involved. Now their hands are tied. Continued absenteeism since nationalization is a reflection of resulting low morale.

Free-enterprise factories found the advantage of direct consultation between workers and management during the war. Low morale means low efficiency. Private concerns have no Government money behind them to make good the deficit.

Socialists would do well to remember the words of David Lilienthal: "In the general atmosphere of bigness, men continue about the same size."

General Motors Request for Bonus Approval by Securities and Exchange Commission

---

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "General Motors Asks SEC O. K. on $20,000,000 Bonus," published in the Washington (D. C.) Times-Herald of June 2, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENERAL MOTORS ASKS SEC O. K. ON $20,000,000 BONUS

DETROIT, June 1.—The Detroit Free Press said today the General Motors Corp. has asked the Securities and Exchange Commission to approve a $20,000,000 bonus for 900 officers and employees.

In a Washington dispatch, the newspaper reported the bonus will be paid partly in stock, with a market value of $55 a share, and partly in five annual cash payments. The bonus is for 1948. In that year General Motors did $4,738,000,000 in gross volume of business and had net income of $440,447,000.

The newspaper gave this account of the bonus plan:

It is made subject to future corporation's earnings.

A report to the SEC lists 71,309 shares and $17,043,876 cash in the bonus.

One-half the stock and a fifth of the cash awarded has been paid. The balance of the stock and a second 20 percent of the cash will be paid in January. The balance of will be paid in January. The balance of the cash will be paid in the three following years.

General Motors asked SEC to keep certain details of the bonus confidential. The Commission has not yet acted upon the request.

Those splitting the bonus earned more than $20,000 in 1948.

Charles E. Wilson, corporation president, heads the bonus list with an award of 1,180 shares of stock and $280,026 in cash in addition to his $166,000 salary.

Albert Bradley and Marvin E. Coyle, executive vice presidents, get 1,062 shares of stock and $252,023 cash each in addition to their $126,100 salaries.

Other individual bonus payments listed: Ormond E. Hunt, 1,062 shares, $240,048 cash; Harlow H. Curtice, 1,013 shares, $240,048 cash; Frederick G. Donner, 893 shares, $212,048.

Donald K. Evans, 893 shares, $212,048; Louis C. Goad, 893 shares, $212,048; Francis L. Burke, 674 shares, $160,032; Edward R. Godfrey, 674 shares, $160,032; Bayard D. Kunkle, 674 shares, $160,032; Thomas P. Archer, 421 shares, $100,035; John J. Schumann, 421 shares, $100,035.

Thirty-one directors, many of whom are officers of the company, will receive a total of 10,921 shares and $2,592,444 in addition to salaries of $1,566,392.

Twenty-six officers who are not directors will receive 12,010 shares and $2,052,807.

Capitalism in the United States Versus Socialism in England

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. RANKIN. Mr. Speaker, it has been very amusing to hear our super-internationalists clamoring for the subordination of the United States to the domination of foreign powers under the so-called United Nations.

It seems to me that we have burdens enough now. As far as I am concerned, I am not willing to subordinate my country to the control of any foreign power or group of foreign powers.

The Secretary of the United Nations, Mr. Trygve Lie, made a speech at Chattanooga, Tenn., a day or two ago, in which he advocated the harnessing of the waters of the Jordan, the Tigris, the Euphrates, and the Nile Rivers. No one seems to understand why he left out the Amazon, the Orinoco, the Yangtze, the

UNIVERSITY OF MICHIGAN LIBRARIES

Ganges, and other rivers throughout the world. Perhaps they will come in later.

Mr. Speaker, this is all, or practically all, to be done at the expense of the taxpayers of the United States. I am opposed to any such nonsense. Let us get back to America and stay there.

If you want to involve our country in that kind of a program, then submit it to the people in the form of a constitutional amendment, and let them vote on it, and I dare say it would be defeated in every single State in the Union.

Mr. Speaker, on yesterday I got permission to extend my remarks in the RECORD, and to include an article from the May issue of the Reader's Digest, entitled "Lessons From Britain's Socialist Experiment."

I am going to take advantage of that agreement to insert that article at this point, and ask that the remarks which I have just made, along with this extension, be printed in the Appendix of the RECORD.

I want it remembered that a majority, probably an overwhelming majority, of the countries that constitute the present Tower of Babel, known as the United Nations, are either Communist or Socialist.

To bind America into an organization to be dominated by such influences would be just like wiping out the Declaration of Independence and abolishing the Constitution of the United States.

At this point I am inserting the article from the Reader's Digest to which I referred.

The man who wrote this article was a Socialist member of the British Parliament who indulged in all the fantastic dreams relative to socialism that these internationalists are now indulging in with regard to international entanglements against which Washington, Jefferson, and our other great leaders of the past warned us for more than a hundred and fifty years.

The article referred to reads as follows:

LESSONS FROM BRITAIN'S SOCIALIST EXPERIMENT

(By Alfred Edwards, member of Parliament)

Until 1945 I shared with my colleagues in the British Labor Party an enticing dream of the brave new world which socialism would bring, a fairer and fuller life for all.

We have now been in power almost 4 years. We have socialized a large sector of our industrial life and subjected what is left to national planning. I have spent years discoursing on the defects of capitalism. I do not withdraw those criticisms. But we have seen the two systems at work, side by side. And the man who would still argue that socialism is the means of ridding our society of the defects of capitalism is blind. Socialism just does not work. We must find some other means of dealing with the imperfections of the private-enterprise system—we dare not abandon it.

We Socialists had made a pet collection of the frailties of private industry. We believed that the system bogged down for want of planning; that the businessman had no brains; that the worker was a wage slave; that the devil in the whole machine was profit; and that when we organized industry on the principle of producing for use rather than for profit the worker would be a free man living in abundance. So we nationalized the Bank of England, the railroads and motor transport, the electric-power industry, the coal industry and medicine. We now propose to nationalize the steel industry.

Before that die is cast let us look at coal under nationalization and steel under private enterprise. Heaven knows coal under private ownership was no model. England's plight was desperate and she needed full production. So the Labor Party took over the mines for the people, and voted the equivalent of $100,000,000 dollars for mechanization to increase the per capita production of the worker. Yet from June to October 1948, in spite of the increased mechanization, and in spite of the fact that it is now the people's coal—not that of greedy capitalists—the mines produced 158,000 tons per week less than in 1948.

Has the miner ceased to be a wage slave? He still works for wages. He still has a boss. Instead of working for a group of stockholders he now works for that vast, amorphous mass called the people. Instead of having a managing director at the mine with authority to deal with problems as they arise, he now has a bureaucrat who dares not say yes or no without sending the problem up through layers of other bureaucrats to the real directing boss, a remote being in London called the National Coal Board.

Most of the privately run industries have shown large increases in production since 1945. But coal actually shows a loss. England has done a little laughing at this. When Emanuel Shinwell was transferred from the Ministry of Mines to the War Ministry, Winston Churchill said this was a good augury, for while he was in charge of mines we got no coal; now we might hope to get no war. One of our cartoonists pictured a coal miner talking to the Minister and saying: "You told us under socialism we would get more money for less work. Well, we've given you less work. How about more money?"

We ought not to be surprised to learn that whatever government touches slows up. The reasons are obvious. First, the coal mines are now under the withering hand of the civil servant whose training is to make no decision that can be passed to a higher level. Such delays can be tolerated in government but in industry swift decisions are essential.

Here is a trifling illustration which is important because it is trifling: The young miner works in grime and likes to slick up when he comes out of the mines. So the miners wanted the mine canteens to carry a hair dressing called Brylcreem which is much admired by the girls. In private industry the canteen manager would have settled that quickly. But this small request had to go to the local mine representative, then to the local committee, then to the regional committee and finally to the Coal Board in London. Then the ruling filtered down through the various layers. By the time the miner got his cream he had probably lost his girl.

Second, the coal miner will not produce more just because he is working for a Socialist government instead of a capitalist boss. Men will throw away their lives for a great ideal, but it is now clear that they will work more only for more wages—the profit motive. And the Socialist government professes not to believe in the profit system.

The next target for socialism is steel. This is by all tests the most efficient industry in England—perhaps in the world. It produced 11,000,000 tons in 1938, more than 15,000,000 in 1948 with but little increase in its mechanization. It has not had a strike in 30 years. Its wages rise and fall according to an agreed arrangement in relation to prices.

When, in the light of our record in coal, the party began to insist on socializing steel, I raised my voice against it. And I was thrown out of the party. I say it would be an economic crime of the first magnitude to transfer this highly efficient industry into hands that have made such a mess of coal. I believe that the more level-headed labor leaders are not eager for this step, but are being driven against their better judgment by their more violent colleagues—chiefly Aneurin Bevan, who has declared that if the party does not socialize steel he will resign. England might well survive his resignation, but it could not survive the socialization of steel.

The Labor Party suffers from the curious illusion that the government possesses some magical power for planning industry. This goes with the delusion that capitalist industry is planless. The Labor idea of planning is to put some young lady or gentleman from the London School of Economics, without any practical experience, to directing some of our greatest industrialists. And their plans, put into blueprint form, are carried out by a group of civil servants and Labor politicians.

We have seen these young planning magicians allocate to private companies three times as much steel as was being produced. Then they cry, as did G. D. H. Cole, their prolific writer of books, "Produce more steel. What good is 16,000,000 tons when we need 25,000,000?" Well, why not tell the coal industry to produce more coal? The coal is there in the ground. But there are at present only 7,000,000 tons of iron available for steel production, and 8,000,000 tons of scrap. Britain and the United States have been scouring the world to get more scrap and it can't be done. But a little item like that is not important to a planner.

Compare Socialist planning with, let us say, that of the Ford Motor Co., which is bigger than the whole automobile industry of Britain. During the war I went through the Ford bomber plant at Willow Run. They told me that one of those gigantic four-engine planes was finished every hour. It seemed unbelievable—35,000 wheels, bolts, nuts, bars, plates, wiring, instruments, all moving from various corners of that vast plant according to a plan almost beyond credibility, and converging finally at a single spot. Earlier I saw a sign above a partly finished bomber which read: "This plane will move at 3:15." I thought I would check. As that hour drew near I had my guide take me to the huge hall into which the completed monster would emerge. When two vast doors slid open, out rolled the completed B-29. I looked at my watch.

"Just 3:16," I said, and was about to add, "darn good timing." But my guide beat me to it by saying: "Your watch is a minute fast, sir." That planning was not done by amateurs.

We are learning rather painfully that the men who operate our great industries under private ownership do have brains of a sort—the kind needed to run an industry. Compare them with the management in our coal industry. The state now owns the mines. The Labor Party runs the state and the trade-unions own the Labor Party. The miners' union is dominated by its secretary, Arthur Horner, a Communist who has announced publicly that if England goes to war with Russia there will be no coal. The Labor Party cabinet appoints the personnel of our industrial leadership. Hence you find that the man in charge of a large regional department of coal is a former taxi driver who became the leader of a taxi union. He undoubtedly had some talents as a union leader, but he certainly has no qualification for running the coal industry.

How ever did we come to suppose that a change of ownership from a group of people that had built up a business to a group of people who had never built anything would advance the interests of the workers. We made the mistake of believing that the young economists would do better because they had a sense of social values while hard-bitten old industrialists had none. It dawned upon me gradually that we Socialists were talking

as if nothing had happened in industry in the last 50 years. Most enlightened bosses now are ahead of the Labor leaders and realize that their profits and dividends must, at some point, come through the worker's pay envelope. Full employment is as essential to a prosperous boss as to the workers themselves. There was a time when I imagined I employed workers to make goods to sell to other kinds of people. But I learned that there is practically no one to sell most things to but working people. What made prosperity in America was high wages—high wages for the workers, high earnings for the boss. It must be profits for everybody or profits for none. Modern business leaders know that.

The situation today is very serious for England. She cannot exist without imports and she cannot buy abroad without having exports to sell abroad. Our automobiles, coal, steel, and chemicals must compete in the markets of the world with the products of other lands. How will our industries meet the challenge of the United States or other capitalist countries if the products they make are turned out in socialized industries where low production keeps prices up? Our Labor leaders in their hearts know the answer.

The Labor Party took over the railroads. They also took over motor transport—the busses and trucks in the carrier trade. I asked Alfred Barnes, head of the transport board, why they had taken over motor transport. He replied, "I am advised that if we take over the railroads and do not take over motor transport we shall never be able to compete with motor transport." I said to him: "Let me get this straight. Do I understand you to say that you are determined to make motor transport as inefficient as the railroads?" We can get rid of the embarrassment of motor-transport competition against our railroads by such procedure; but when we meet the competition of highly efficient foreign private industries, we shall not be able to get rid of it by buying up our competitors.

Socialist enterprise will always fail because you can't reach into a bag of smart men and pull out a fellow and say: "You run the movie industry." Finding the leaders in business has been solved by a simple law—you must succeed or else you fail. But when politicians pick the men to lead industries, they pick politicians. Success in politics, then, means a chance at some big industrial job with a big salary. That is the way it works in England now. There is no outlook for it to change.

There is another frightening aspect which cannot be ignored. Our Labor Party rose to power by devouring the old Liberal Party from within. The Liberals, to keep in power from 1906 to 1918, surrendered to the Laborites on many points to get their support. The more they surrendered the more the Liberals quit the Liberal Party and the more the Labor Party took its place. We have now to wonder whether the Communists will be able to devour the Labor Party from within. Communists are not admitted to the Labor Party. But they are admitted to the labor unions, and the labor unions control the Labor Party. The rank and file of labor-union members are not too much concerned about ideological matters. They want a job, good pay, shorter hours, and better working conditions, and if the labor leader works for those things the men are satisfied without troubling too much about his politics.

Ten men now strongly influence the policies of the trade-union movement. One is the Communist, Arthur Horner, of the powerful miners' union. The electrical workers' union, among others, is infested with Communists. I am satisfied that the Communists in the union movement, acting through fellow travelers, have been responsible for rushing the Labor Party toward nationalization of steel.

As we go deeper into nationalization we shall require more and more ruthless leadership. Most of our old Socialist leaders are not fit for that. They are primarily Englishmen, after all. But the Communists can supply that kind of leadership. If the experiment fails, English workingmen will be told it failed because their Labor Party leaders are not aggressive enough. This is the issue upon which Socialist-minded governments everywhere have bogged down. And always out of the Socialist parties—never from capitalism—have sprung the ruthless leaders to take possession: the Communists in Russia; the Fascists in Italy, Austria, and Germany.

Too many Socialist apostles in other lands have ended by toying with the idea of force. Yet they are wrong. In 30 years of Socialist organization, Russia has not learned how to produce abundance by force. With the whip and the concentration camp among her instruments of compulsion, she had at last to turn to the profit motive. She turned to incentives and, most curious spectacle of all, produced the hardest-working man in the world, Mr. Stakhanov, such a miracle of drudgery that he was taken around Russia and exhibited with pride as the world's most profit-driven wage slave.

The history of these years must be terrifying to any man who has dreamed the great dream of socialism's brave new world. The abundance that we hoped to produce for all can be produced only by hard work. And apparently men will work hard under the spur of only two forces—profit or force.

Mississippi Welcomes DP's

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1949

Mr. CELLER. Mr. Speaker, it gives me great pleasure to insert in today's RECORD the following article which appeared in the June 3 issue of the Jackson (Miss.) Daily News welcoming the displaced persons who have come to live in the State of Mississippi.

FAMOUS PHYSICIAN EN ROUTE TO STATE AS DISPLACED PERSON

(By Howard Suttle)

WASHINGTON.—Mississippi's most famous displaced persons—Dr. and Mrs. Otton Lazar, Polish refugees—soon will arrive in Calhoun City to relieve the shortage of physicians in the Magnolia State.

Calhoun City's new neighbors arrived in New York recently aboard the United States Army transport *General Hugh Taylor*, among 877 displaced persons, and after a visit to Washington they will join some 700 European refugees now residing in Mississippi.

The Lazars owe their assurance of a job and housing to Mr. M. L. Lackey, manager of the Ben Franklin store in Calhoun City, following a Rotary Club luncheon address on displaced persons.

The International Refugee Organization in Washington, which handled the immigration of Dr. Lazar and his wife, said the first group of 90 displaced persons arrived in Mississippi in March, and more than 600 reached New Orleans early in May. These DP's have been scattered over the Magnolia State.

Dr. Lazar kept his hand in during the Atlantic crossing by acting as medical officer for the other new immigrants aboard the *Taylor*. Until recently, he has been employed by the IRO as physician in charge of the DP concentration camp at Wildflecken, Germany, in the American zone of occupation.

Wildflecken, located in the Rhone Mountains, once was a German Army installation for the training of crack troops and members of the Gestapo.

SPEAKS FIVE LANGUAGES

Dr. Lazar, 37, was born in Ustro, north Poland, the son of the town mayor. He speaks English fluently, in addition to Polish, Hungarian, German, and Russian. His wife, Magda, 34, speaks only Polish and Hungarian. Both are Lutheran.

The future Mississippian attended high school at Cieszyn, a city founded in the thirteenth century. At 18 he entered medical school at Cracow, then rated as Poland's finest medical institution. After his internship, he practiced at the resort town of Visla.

Both Dr. Lazar and his wife had many experiences with the Gestapo. In April 1940, Gestapo agents visited Lazar's home and while his sister stalled at the front door, he escaped through the back door and traveled as a German to Vienna, and from there by foot and rail to Budapest.

The young Polish doctor worked in Hungarian hospitals for 4 years. Most of his patients were fellow Polish refugees. In 1944, the Gestapo again was hot on his trail and he was forced to go into hiding.

During that period of hiding he met Magda, the daughter of a wealthy Polish family who owned a wine and tea business in Cracow, Poland, and vineyards in Hungary. Her home on the Hungarian-Czech frontier became headquarters for the Polish underground during the war.

The Lazars were married soon after VE-day and the doctor offered his services to UNRRA, predecessor to IRO, which was beginning to take responsibility for the care of displaced persons.

After serving at a DP camp near Hitler's famous hide-out at Berchtesgaden, Germany, Dr. Lazar studied at Heidelberg University, specializing in the eye. He passed the German state medical examination and received high praise from the German professor of the eye clinic.

"I consider him an extraordinarily able and conscientious doctor," the testimonial stated, "and a man of high human quality. He would be an advantage and pride to any country to which he might apply for entry."

The doctor and his wife read all the American magazines they could find, hoping that one day they would be accepted as new Americans. It will be a big day for them when they arrive in Calhoun City, where the Lazars hope to end a 9-year search for a home.

Problem of Coordination of Federal, State, and Local Taxation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered at the sixth conference of the Inter-American Bar Association at Detroit, Mich., May 25, 1949, by Hon. Henry F. Long, Massachusetts commissioner of corporations and taxation:

COORDINATION OF FEDERAL, STATE, AND LOCAL TAXES

The problem of the coordination of Federal, State, and local taxation has been under

UNIVERSITY OF MICHIGAN LIBRARIES

consideration for many years. Even prior to 1940, the subject had received more or less random attention from time to time. In that year, however, the American Bar Association appointed a committee on coordination of Federal, State, and local taxes with a view to studied and more effective action. The National Tax Association having also appointed a similar committee, it was felt desirable to unite the two committees. Shortly thereafter, the National Association of Tax Administrators appointed a committee to study the same field. The advantages of a union were obvious and resulted in a joint committee of all three of these associations in 1941. This joint committee has continued its study making annual reports of progress to the cooperating associations, although the work was interrupted and delayed during the war. In the meantime a treasury committee on intergovernmental fiscal relations in the United States has presented to Congress a comprehensive report, which contains a great deal of valuable information. Interest in the subject has recently been further stimulated by the President, by the governors' conference and by the report of the so-called Hoover Commission.

Because of my connection with the joint committee of the three associations to which reference has been made, it might be assumed that the views presented by me are the views of the committee. To a large extent such an assumption is probably justified by the facts. It should be stated at the outset, however, that this is not necessarily so and that the opinions expressed by me are in no way intended to bind the committee.

In the first place, it should be recognized that the problem presented is not static but as the years go by subject to great change. To look for a permanent solution that may be handed down from generation to generation like the Magna Carta is impractical. The complexity and the gravity of the situation have enlarged immensely in the last two or three decades. When governmental expenditures were low, there was little occasion for competition in the pursuit of revenue as among the Federal, the State, and the local levels of government. The Federal Government early discovered that it could not tax property effectively and it then imposed no income or death taxes. At that time, excises were not highly developed at either Federal or State levels and the States were not permitted to levy custom duties. There was little or no need to invade common fields of taxation. But all this has changed radically. The steady increase in State and local expenditures and the tremendous upturn in Federal expenditures are a matter of common knowledge. Whether the peak has now been reached and whether there may eventually be a trend toward reducing the aggregate burden of taxation for all three levels of government in the United States of America is in the realm of conjecture. But however this may be, suggested cures for existing problems of coordination may obviously become unnecessary or inappropriate in years to come. Clearly, too, remedies that may seem adapted to conditions as they exist in the United States may be inept in other federated states where conditions are dissimilar.

It must also be borne in mind that the problem of coordination in taxation is closely related to and affected by changing philosophies as to the appropriate functions of government and the distribution of those functions as between the Federal Government and the States, upon the one hand, and between the States and their political subdivisions, upon the other. Paternalism and experimentation in social-welfare programs are not altogether novel. If it finally develops that present trends do not bring the happy results expected by their advocates, if the ever-growing burden of taxation forces a change of viewpoint, or if the expansion of these functions brings imminent threat of collapsing public finance, a revision of these philosophies may in itself wipe away many of the difficulties of coordination that today perplex us.

Therefore it seems manifest that our best hope of improving conditions lies in our recognition of these ever-changing factors and in addressing ourselves in as practical a way as possible to the existing situation without expectation that we are providing remedies for all times and for all peoples. If these endeavors meet with some measures of success and thereby afford some precedent for future generations to follow under like circumstances, so much the better.

Even when the objectives are thus limited in scope, it is evident from the reports of the joint committee how intricate and baffling is the task. Here was a group of 35 men, each of whom had a wide knowledge of and experience with problems of public finance and particularly of taxation, either in the academic or the administrative field, and yet the number of dissents running through the reports is indicative of the difficulties inherent in the various phases of the subject matter under consideration even when approached by those highly qualified to deal with it. The following fundamental assumptions in approaching the problems of tax coordination are made:

1. Any solution must preserve, and not impair, the sovereign powers of both the Federal and the State governments.

2. In general, each grade of government should support its functions from its own independent revenues.

3. In general, the governments of whatever grade which raise particular tax revenues should control their expenditure.

4. The primary purpose of taxation is the raising of revenue, and its use for regulation should be limited to those instances where such use is clearly warranted. When these assumptions are considered in the light of certain trends which seem to have been traveling in a somewhat opposite direction, it is perhaps a bit surprising and no doubt to many reassuring that so many are in accord upon these points.

Now to the techniques of tax coordination. Fourteen methods of coordinating taxes directly or indirectly are to be considered. These are as follows: (1) The reallocation of governmental functions; (2) grants; (3) tax sharing; (4) tax supplements; (5) delegated administration; (6) joint administration; (7) tax credits; (8) tax deductions; (9) separate sources of revenue; (10) administrative cooperation; (11) legislative cooperation; (12) interstate compacts; (13) reciprocity; and (14) uniformity.

In respect to the reallocation of governmental functions one is warned against centralization and specifically reminded that the responsibility for education remain very largely with the States and their local subdivisions, that they accept the responsibility for necessary highway service, in general, and also the primary responsibility for public health, crime control, and social welfare. Defense should continue to be a function of the Federal Government, and it cannot escape all responsibility for aid to agriculture and other economic activity and various other public services of national concern. Wherever it is feasible, necessary public services should be provided by the State and local governments.

It is recommended that for the present, grants should not be increased but should, on the contrary, be decreased wherever possible and that governments should have adequate revenues to support their necessary functions without having to rely upon grants from other governments.

Tax sharing of federally imposed taxes is not advised partly because of its centralization tendencies and partly because other methods of tax coordination appear to be both more desirable and more practicable. The sharing of State-collected taxes with local governments is recognized as likely to continue although it is recommended that wherever possible, local governments have adequate independent revenues.

Tax supplements are felt to suffer many of the disadvantages of tax sharing and are not recommended.

Neither delegated administration nor joint administration are deemed practical in this country at the present time although in respect to joint administration some persons express dissent.

Tax credits have been employed by the Federal Government in the fields of death taxes and unemployment insurance taxation. It is suggested that the crediting arrangement as to death taxes now be abandoned in favor of Federal withdrawal from the field of death taxation.

Tax credits may serve a useful purpose in coordinating the taxes of the various States with each other, thereby eliminating unequal double taxation that arises because certain sales or incomes, for example, are taxed by two or more jurisdictions without regard for the taxes imposed by other jurisdictions. Tax credits may have some value as coordinating devices in the Federal and State tax fields under particular conditions and with the proper limitations. The coercive power of credits against Federal taxes for the payment of State taxes may be very great, however, and, as previously indicated, it could easily be abused. Such credits should be employed only where they are clearly warranted and will not seriously impair the financial independence of the States.

Tax deductions can be approved as helpful coordination arrangements. It is suggested that it is particularly important that the Federal income tax, because of its higher rates, should allow the State income taxes to be deducted in ascertaining taxable income.

The separation of revenue sources wherever feasible meets with favor as possessing a number of advantages, including the simplification and tax administration and compliance and the elimination of tax conflicts and inequities. Although it is not practicable to introduce a complete separation of revenues, within limits separation can be developed to the advantage of Federal, State and local governments and also to the taxpayers.

The value of administrative cooperation as a means of facilitating tax coordination is greatly stressed. It is to be pointed out that the tax officials can aid each other by exchanging useful information, developing more uniform forms and regulations, joint auditing, assisting at times in the enforcement of taxes, planning tax programs with regard for the taxes levied by other governments, and other acts of friendly cooperation for their mutual benefit. Administrative cooperation is believed to be practical and desirable not only as among the States, but also as between the Federal Government and the State governments and as between the State governments and the local governments.

All should look favorably upon legislative cooperation. In this way much can be done to bring about greater uniformity. Moreover, legislation is frequently a prerequisite for cooperative administration.

Interstate compacts may be regarded as too cumbersome to have practical value in tax coordination.

Reciprocity is a method of voluntary tax coordination which does not destroy or weaken the independence of the governments entering into reciprocal agreements.

Uniformity may well be viewed as a promising field of tax coordination which should, with patient cultivation, yield good results.

Having considered the several major methods of tax coordination, we can with profit

explore to some extent the possibilities of better coordination of particular taxes.

Chief among the fields to be examined is that of net-income taxation. Many favor the withdrawal of the States from income taxation leaving this source of revenue entirely to the Federal Government; some hold a contrary opinion. It is believed that by legislative and administrative cooperation uniformity in this type of taxation can and should be increased substantially. It feels that the Federal Government should continue to allow the deduction of State income taxes in determining the income subject to Federal taxation but that the States, in order to protect their independent revenues and to achieve uniformity, should not allow the deduction of Federal income taxes. It is recommended that in reporting State income taxes as deductions for Federal income taxation, individuals should be permitted to report such taxes on an accrual basis whether or not they report their income on the same basis. It is difficult to make a suggestion concerning the taxation or exemption of the income of Government securities which may be issued in the future. Congress appears to have settled the problem of taxing the income of married couples so as to remove the disparity between community- and non-community-property States.

So far as State income taxation is concerned, it is suggested that the States should coordinate their taxes by means of legislative and administrative cooperation which will define taxable income more uniformly, allow individual taxpayers reasonable credits for taxes paid to other States on the same income, develop uniform definitions of residence, tax partnership income to the partners as individuals, tax trust income, so far as possible, like other income, and allocate business income according to the Massachusetts formula. Local income taxes should, in general, be avoided.

The conflict between Federal and State death and gift taxation is readily disposed by the suggestion that the Federal Government should withdraw from the field. It is further recommended that the States allow the same deductibility for bequests to nonprofit institutions outside the State as they allow to similar institutions inside the State.

Priority should be given to the States in the matter of the taxing of motor-vehicle fuel and the licensing of motor vehicles because of greater need of these revenues than the Federal Government and because the States are carrying the primary responsibility for highway financing. It is recommended that the taxation of airplane fuel be left exclusively to the States. Many are found to agree to the proposition that the States, as well as the Federal Government, should have the privilege to license and register airplanes and pilots and regulate aviation, although the State requirements should not interfere with interstate commerce or conflict with Federal regulations. Aviation may properly be subjected to the property, net income, and other general taxes which other competing forms of transportation must pay.

A large number of students of this problem believe that the States should relinquish the tobacco-tax field to the Federal Government partly because the Federal Government was first in it and partly because the States have experienced some difficulty in the administration of these taxes.

As to liquor taxes, it cannot be proposed that either the Federal Government or the States withdraw although it is clear that license taxation should be left to the State and local governments. The States should abstain from the levy of discriminatory taxes and the erection of barriers to liquor importations from other States. They should allow credits against their taxes for the payment of similar taxes to other States and should cooperate to increase the uniformity of their taxes and to meet their mutual problems. Some persons advocate the taxation of Government liquor enterprises on the same basis as private enterprises.

There is some dissent from the proposition that general sales taxation should be left to the States. Greater uniformity in State sales taxation is advocated. It is felt that if a State imposes a use tax it should allow a credit against it for sales taxes paid to other States. Joint auditing has been found advantageous. Local general sales taxes are difficult of enforcement, may drive trade outside the city and add the duplication of taxation.

Property taxation has been left exclusively to State and local governments because of the constitutional limitation upon direct taxes imposed by the Federal Government. The tendency to leave this revenue to the local governments is generally approved, although it is suggested that the States should directly assess property of an interstate or interdistrict character, intangibles, and other property not adapted to local assessment and should otherwise assist the local governments by aiding them in the assessment of real estate and other locally assessed property. Property-tax exemptions should be denied unless clearly warranted. The taxation of the property of the Federal Government may involve constitutional question and is a sector of taxation still to be explored.

Amusements frequently require State and local regulation. Taxes thereon may be administered successfully by State or local governments and this field should be left exclusively to these governments.

Unemployment insurance is of both national and State concern. In coping with its problems the States should assume the maximum possible responsibility. It is felt that the credit allowed to employers of Federal pay-roll taxes should be increased from 90 to 100 percent. The States should coordinate their unemployment-insurance systems as effectively as possible in order to eliminate discriminations and to improve administration and compliance.

It would be unreasonable to expect that all in positions of authority and capable to some extent of translating opinions into governmental action will agree fully with these conclusions. It is hoped, nevertheless, that this paper affords a basis for consideration with a view to action. The fact that in many matters unanimity was attained from a large group of persons and in others there was so close an approach to unanimity in so large a group of men whose training qualified them to deal with the problems involved, should in itself afford some impetus toward the adoption of its proposals.

As one of Shakespeare's characters opined many years ago, "If to do were as easy as to know what it were good to do" many fine things would take place on this mundane sphere. The doing in the case of tax coordination rests with the governments themselves. The make-up of our administrative and legislative branches of government is widely varied. Some are fully competent and some fall quite a long way short of being fully competent. Some are ultraconservative and reluctant to make any change whatsoever that parts company with the practices of the past. Others seem obsessed with the idea that whatever was in the past must be wrong and are willing to gamble on anything that differs from the practices of the past on the theory that it may be an improvement. It perhaps is unnecessary to suggest today that some are constrained by political considerations. Our legislative bodies are large and composed of men of all types. No matter how much light may be shed by reports, addresses, speeches, and studies upon the intricate problems of tax coordination, it seems highly improbable that legislation reflecting the enlightenment will invariably follow. In the administrative branch of government, it would seem that results might be looked for more promptly.

The responsibility for action is clearly placed along the lines of these recommendations upon the Federal, State, and local governments. It is suggested that the administrative and legislative branches of our governments delegate to competent personnel the duty to cooperate more effectively in tax administration and tax legislation. Some urge the creation of a Federal-State authority to promote tax coordination. Some propose a Federal-State committee for continuous study and recommendations on tax coordination. No doubt, the tool to be employed to achieve results is important.

A certain Roman senator at one time concluded all his speeches with the single sentence, "Ceterum censeo Carthaginem esse delendam," regardless of what may have been the subject matter under consideration. To him the destruction of Carthage was paramount over all else and never to be lost sight of. To some of us today the importance of sound public finance justifies allusions to it even where it has less connection with the subject in hand than is the case when we are discussing the coordination of taxation.

Due in part to war and in part to the assumption by the Federal Government of numerous and extensive functions once not considered appropriate or at least not exercised, our national debt has reached a point where many despair of our ability ever to liquidate it. Others adhere to the belief that we still have the capacity to meet our obligations, but doubt if we have the will to do it. Still others are so opposed to any interruption or postponement of what they conceive to be social welfare programs, that they subordinate the maintenance of sound public finance to the fulfillment of these aims.

Usually when governments are unable or do not find it convenient to meet their obligations, they are sooner or later forced to repudiate those obligations openly or to conceal their difficulties by artifices that temporarily serve as a cloak. We have already had debasement of the dollar, repudiation of the gold clause in Federal obligations, artificial interest rates and other evidences of inflationary methods. How much farther we can go along these lines without serious disaster, probably no one can say, but we do know that the continued pursuit of such policies has brought great disaster to other countries.

It would seem that all of us who are interested in the coordination of taxation, also have an interest in the maintenance of a sound public finance for all three levels of government—Federal, State, and local. The subject of coordination dwarfs in comparison to this broader subject. It is, however, inextricably bound up in it. When the pursuit of a sound policy in public finance is completely abandoned, then there will be a mad scramble for revenue and the problems of coordination will indeed run riot. Whatever may be our ideas as to what are the appropriate functions of government and how they should be divided among our levels of government, it is my opinion that the restoration of sound public finance is positively essential for the welfare of the American people. It is my belief that the time has come when we should unite for the accomplishment of this objective as one that transcends all others. Then and then only may we have hope that all our efforts to bring about coordination in taxation have not been in vain.

United States Occupation Policies in Japan and Germany

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a newspaper article which appeared in the May 8 edition of the Washington Times-Herald, with the heading: "VFW head flays 'soft' policies of United States occupation forces." I ask that there be printed at the end of this newspaper article the text of the speech delivered by Commander in Chief Lyall T. Beggs, of the Veterans of Foreign Wars, on May 7, 1949.

There being no objection, the article and address were ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of May 8, 1949]

VFW HEAD FLAYS "SOFT" POLICIES OF UNITED STATES OCCUPATION FORCES

NEW YORK, May 7.—Lyall T. Beggs, commander in chief of the Veterans of Foreign Wars, said today "something is wrong" with United States occupation policies in Japan and "we have not been any smarter in Germany."

He said American "top brass" in Germany "have gone soft," and "Nazi ideas are cropping up, more and more, into the open—while we blink our eyes and do nothing."

MAKING POOR SHOWING

In a VE-day anniversary message over the Columbia Broadcasting System, Beggs said United States authorities in Japan are "making a poor showing as ambassadors of our American way of life."

"Instead of encouraging free trade-unions and a free press," he said, "our authorities in Japan appear to have shown a strange hostility toward such developments.

"Instead of demostrating democracy by practicing it, our representatives in Japan have been content to talk about the dangers of communism, without giving the Japanese any clear idea of what we propose as an alternative."

Describing America's "excellent resolutions" immediately after the war to denazify Germany, the Madison, Wis., veterans' leader said, "Once we were through with the top criminals * * * we began to relax."

HAVE GONE SOFT

"What is happening in Germany makes it look as though not only our GI's, but our top brass as well have gone soft," he said.

"How else explain the fact that Ilse Koch, the 'Beast of Buchenwald,' was liberated; that Von Papen, Schacht, and the Krupps got off so easy, that big and little Nazis all over the place are scurrying out of their holes and sliding back into their old jobs as government officials."

Beggs praised the Marshall plan and the Atlantic Pact as effective measures for "stemming the inroads of communism" and "building strongholds of democracy at home and abroad," but he said:

"We cannot permit the rise of aggression again, whether Communist, Fascist, Nazi, or under any other name. We must be strong and we must be vigilant. Otherwise, we'll help to bring on world war III, instead of stopping it while we have the chance."

VE-DAY CHALLENGE

(Address by Commander in Chief Lyall T. Beggs, Madison, Wis., Veterans of Foreign Wars of United States)

Two days after this country went to war in 1941, President Franklin D. Roosevelt said: "We are now in the midst of a war, not for conquest, not for vengeance, but for a world in which this Nation, and all that this Nation represents, will be safe for our children."

We fought the war—with all that war takes: Youth and life, hope and love, heroism and sacrifice. We fought the war—with all that war brings: Pain and anguish, devastation and death. After almost 5 years of magnificent concentrated and consecrated effort, we shattered the fortress of modern tyranny. We smashed into Hitler's Europe. And, 4 years ago today, in a little red schoolhouse which was General Eisenhower's headquarters at Rheims, Hitler's henchmen signed the papers of total and unconditional surrender.

VJ-day came 4 months later, and we were through with war. We were determined to have peace, the kind of peace where, in every nation, people would respect the right of men, rich and poor, to be treated as men; the right of men to make the laws by which they should be governed; the right of men to work where they will at what they will; the right to speak the truth in their hearts; the right to worship in their own way, the God in whom they believe.

So, in partnership with other nations, we set out to make that kind of peace, and that kind of world. Gradually, however, it dawned on us that the voice of aggressive tyranny was not yet stilled. Twice the cry for world conquest had come out of the west. First, it was "Deutchland Ueber Alles"; then "Tomorrow the World." But now the cry was coming out of the east—out of the stronghold of communism.

Communism—which talks in gentle words of peace, of human rights and the welfare of the humble, but which rules with a greedy hand; seizing every resource of a vast, rich land and pouring it into weapons. Communism—the self-appointed savior of the masses, which keeps the Russian people huddled in crowded rooms living in fear, poorly clothed and badly fed, slaving long hours for meager pay and stalked by the secret police.

Today, in every land outside of Russia, the agents of communism gnaw at the roots of democracy, hoping to destroy the people's faith in freedom, weakening their unity of spirit and purpose, their power to resist the new despotism. And where this despotism has been enthroned, as in the lands bordering the Soviet Union, liberty of expression and freedom of action are no more. Communism now threatens the freedom of mankind, the peace of the world.

Here in the United States it has taken us a little time to realize what we must do. We made a start with the Truman doctrine. We knew we had to rush aid to those lands, like Greece and Turkey, where the clash with communism was out in the open. Soon we came to see that in every country where people were hungry, homeless, jobless, and cold, the struggle to keep alive would take all the energy they possessed, leaving none to combat Communist aggression. So we embarked on a full-scale program of relief, first under the banner of the Marshall plan, and now through the European Cooperation Administration. The results have been highly successful, vindicating our faith that freemen will always choose to stay free. The Veterans of Foreign Wars has wholeheartedly endorsed and supported these successive programs.

Then, within the past few months, we realized something else—that in stemming the inroads of communism, it isn't enough simply to help war-devasted countries back to their feet. Twice in our lifetime, aggressor nations opened fire on the world, secure in the knowledge that the United States would not spring to arms at the first shot. This time, our desire for peace must not be misunderstood. If a show of might is the only way of warning aggressors that we mean business, then a show of might is what we mean to have!

That's the meaning of the recently signed North Atlantic Pact—and that's the meaning of our plans for a program of preparedness at home.

Preparedness makes tremendous demands—all embracing in the life of the Nation. Not only does it take billions of dollars for the Army, Navy and Air Force; not only does it call for universal military training and a civilian defense corps, for speeded-up research and more effective intelligence. It also requires the most devoted dedication, on the part of every man, woman and child, to the ideals of democratic freedom. It means cementing our national unity, welding Americans of every race, of every faith and ancestry, into one harmonious, strong, impregnable Nation, standing solid against any and every threat. But the Veterans of Foreign Wars has always felt that security through adequate preparations is worth the cost and sacrifice.

There is only one way to accomplish this. In a land where everyone, regardless of the color of his skin, his manner of worship, or the birthplace of his ancestors, may feel that he enjoys full civil rights and equal opportunities—in such a land, no Communist in the world can ever find a willing ear, let alone a following. And while the United States leads the world in human rights; while most Americans enjoy all the democratic liberties that people in other lands are still struggling for, it is nevertheless a fact that many of our citizens are not given an equal chance. An equal chance for education, an equal chance to make good in a job and live in a decent home. This is part of our American birthright, and there's no room in our land for anything that stands in the way. There's no room for racial and religious prejudice, for unfair discrimination in education, employment and housing. There's no room for bigotry, which undercuts a man's chances for security and happiness, and gives the enemies of democracy a propaganda weapon at our expense. National security demands national unity. That's why we must knuckle down to the task of expanding and improving our civil rights here at home. The Veterans of Foreign Wars does this through its broad Americanism program.

But while we're building strongholds of democracy at home and abroad; while we're taking every possible measure to block the advance of Communism, what are we doing to block the resurgence of Nazism? What are we doing to make sure that fascism, which we thought we had defeated, does not rise again? How intelligent are we being, in our occupation policies in Japan and Germany?

Certainly the recent elections in Japan should have warned us that something is wrong. The occupation authorities have been criticized for making a poor showing as ambassadors of our American way of life. Instead of encouraging free trade unions and a free press, in good old American style, our authorities in Japan appear to have shown a strange hostility toward such developments. Instead of demonstrating democracy by practicing it, our representatives in Japan have been content to talk about the dangers of Communism, without giving the Japanese any clear idea of what we propose as the alternative. The Communists, of course, quick to see their advantage, have been playing up the contrast between our talk and our deeds. As a result, Communist representation in the Japanese Government soared, in the recent elections, from 4 delegates to 35.

We have not been any smarter in Germany, either. At the end of the war, we made excellent resolutions. We were going to teach those Germans how to live; we were going to show them, once and for all, that they couldn't bring on global blood-baths every twenty-five years. We were going to denazify the oldsters and reeducate the youngsters.

But once we were through with the top criminals; once we got rid of them, we began to relax. There was a period there when we worried a lot about young GI's fraternizing with the German girls and absorbing their Nazi poison, and we made all kinds of rules and regulations against it. But in the last year or two, what is happening in Germany makes it look as though not only our GI's but our top brass as well have gone soft. How else explain the fact Ilse Koch, the "Beast of Buchenwald," was liberated; that Von Papen, Schacht and the Krupps got off so easy; that big and little Nazis all over the place are scurrying out of their holes and sliding back into their old jobs as government officials, editors, school teachers? How else can anyone explain why we don't pour textbooks on democracy into the classrooms of their children; why we don't see that the kids have shoes to go to school in, and that their schools have essential equipment? How else explain our failure to launch a full-scale program of democratic education?

Nazi ideas are cropping up, more and more, into the open—while we blink our eyes and do nothing. A long time ago, when the war first ended, many Germans were afraid to say what they really thought. Now they're open about it—even brazen. Every first-hand observer, every official survey of public opinion tells the same story. As far as the Germans are concerned, the war was not wrong. It was only that Hitler was foolish enough to lose it. Millions of words have appeared in our newspapers about the revival of German nationalism: the conviction that Germany is the predestined master of the world, and must rearm for conquest. With this mania of master racism, the insane delusion that Germans are born to rule, goes a depraved moral code which permits these people to look upon Dachau and Buchenwald with stubborn indifference, as if they had no part in such horrors.

What else but our blunders would let nazism keep its hold on German minds? What else but our colossal failure as the carriers of democracy could let the Germans think that because we hate communism we hate nazism less? What else but our inertia could let them imagine that they'll still get another chance to rule the world?

This is the challenge of VE-day in 1949. Four years ago, no veterans, no GI hobbling on one leg, no weary combat soldier visiting a friend's grave, no mother or wife mourning her loved one, could have believed that in a few short years we would be squaring off again—hoping against hope to stave off another Armageddon by a show of force beforehand. But this is what we're doing. And this is what we must do.

It's no platitude that life without freedom is not worth living. Too many men have laid down their lives to prove that this is so. We cannot permit communism to blot liberty from the earth. We cannot permit the rise of aggression again, whether Communist, Fascist, Nazi, or under any other name. We must go ahead with our program of national security, of military preparedness, and democratic progress. We must be strong, and we must be vigilant. Otherwise, we'll help to bring on world war III—instead of stopping it while we still have the chance. Otherwise, we'll never have a world in which this Nation, and all that this Nation represents, will be safe for our children.

As commander in chief of the Veterans of Foreign Wars I have called upon the members of our organization to dedicate our golden jubilee year to the cause of lasting peace in the world. During the 50 years since our fraternity was founded we have devoted our labors to the common welfare of the American people—and to those principles which stand for equality and contentment at home—and freedom for all people who yearn for human liberty.

Can This Government, So Conceived and So Dedicated, Long Endure?

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. MICHENER. Mr. Speaker, Hon. Everett E. Denison, a former Member of Congress from the State of Illinois, has called my attention to an editorial appearing in the Detroit (Mich.) Free Press of June 2. I am impressed with this editorial, as was the gentleman from Illinois, Mr. Denison.

Pursuant to permission granted to me, I am including the editorial as a part of these remarks. The editorial follows:

CAN THIS GOVERNMENT, SO CONCEIVED AND SO DEDICATED, LONG ENDURE?

After 86 years the question raised by Abraham Lincoln on the field of Gettysburg still is unanswered:

"Whether that Nation or any nation so conceived and so dedicated can long endure."

At that time the fate of this Nation hung in the balance of civil war.

Today, another great danger besets it.

Our Government is strangling to death from red trade, inefficiency, and extravagance.

The people of this country, from whom Government at all levels derives its just powers, will either regain effective control of it or Lincoln's question will be answered in the negative.

Government of the people, by the people and for the people will perish from the earth.

As Lincoln came forward to save the Union in the War Between the States, another great American has appeared to save our experiment in democracy from the rocks toward which it is headed.

With the exception of John Quincy Adams, who served with distinction in Congress after having been defeated for reelection to the Presidency, there is nothing comparable in our history to the selflessness with which Herbert Hoover has worked for the public welfare since he was smeared out of the White House in 1932.

As chairman of the Commission on Organization of the Executive Branch of the Government he directed the most exhaustive study of our Federal set-up that has ever been made.

The Commission's report is more than a monument to the devotion of Mr. Hoover and his brilliant colleagues to the public interest. Any American who wants to understand his Government and where it is leading him must familiarize himself with its findings and recommendations.

The essence of the report is summed up in an exclusive interview given by Mr. Hoover to the United States News and World Report, Twenty-fourth and N Streets, NW., Washington, D. C. This interview has been reprinted in brochure form.

Whether the reorganization of the executive branch proposed by the Hoover Commission is carried out will depend upon the people of this country acting upon their servants in Washington.

The Senate and House have passed separate bills giving the President reorganizing authority subject to congressional veto. These bills are now in conference. There seems to be no haste on Capitol Hill to come to agreement.

When President Truman received the Commission's final report he, too, adopted what seemed to many a rather lackadaisical attitude toward the whole matter.

The morass of waste and inefficiency in which our sprawling bureaucracy is bogged down is the product of years of apathy on the part of the public.

We can't hope to bring order out of chaos overnight.

The Hoover report is a beacon to guide the ship of state through the storm now buffeting it. We shall not make port today or tomorrow. We can do so eventually if we insist that captain and crew sail by that light.

A beginning must be made now, and the ultimate goal of a manageable Government reached as rapidly as possible.

The saving of some $4,000,000,000 annually in the cost of Government has been properly stressed. All the more properly because that waste represents taxes for which the people receive no return.

Jefferson protested in the Declaration of Independence that the King of England had erected a multitude of new offices and sent hither swarms of officers to harass our people and eat out their substance.

As a result of public apathy and indifference, a multitude of new offices have been created in this country and those who occupy them are again harassing the people and eating out their substance through taxation.

The number of Federal employees has increased in 16 years from 560,000 to 2,100,000. The Federal budget has expanded from $4,000,000,000 to $45,000,000,000. The interest on our public debt alone is more than the total cost of the Federal Government before 1933.

Yet the dollars-and-cents saving from reorganizing the executive branch on a business basis is not the only, and perhaps not even the most important, thing to consider.

The executive departments and agencies have grown in number and diversity to the point where no one person can grasp the whole picture.

As a result, an opening is presented to all kinds of manipulation by those who have no faith in the political and economic concepts on which this Nation was founded.

James Russell Lowell once replied to Guizot that our Republic would last "as long as the principles upon which it was built endure."

Those principles today are in danger of being supplanted by soft socialism and eventual dictatorship.

This may be the last chance this Nation will have to bring Government back under control of the people.

The Hoover Commission has pointed the way.

The job of forcing the president and the legislature to follow the course already charted and to which they have given lip loyalty is up to the people.

The desperate need of our times is for a strongly organized, crystal-clear public opinion.

Unless our Government is thus reorganized it will collapse of its own weight of folly and selfishness and the Communists will have won their fight against individual liberty and human freedom as we have always understood this priceless heritage in America.

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I herewith insert in the Appendix of the RECORD an editorial appearing in the Licking Weekly, under date of June 5. This editorial is written by Harold Cohen, editor and publisher of the weekly.

In my opinion, Mr. Cohen has given us some views which should be given consideration by all of us and I trust that every Member of Congress will read this editorial.

FOLLOW ME

(By Harold Cohen)

It has often been said that only a poor man can afford to be a philosopher. Only the men bedeviled by the pressures of economic existence can find solace and confidence in the deeper thoughts of concentration. By the same token, it has been generally proven that the individual who seeks the answers to life in thought and in nature will always find a deep feeling of sincere happiness despite the "talk of war and economic havoc."

The ambitious and worldly may say that the poor have nothing to lose and so they can afford to be dreamers. When they speak of something to lose, we usually like to ask for a definition of that certain "something." It is material wealth, of course.

But, the worldly and wealthy have more to lose than all of their holding if the others decide to rise up and this is what has happened over and over again in the history of the world and has been the downfall of one great nation after another. At the present time, the threat of communism is spreading over the world and temporarily stopped in one direction it expands in another. We have halted its progress in Europe but it has practically engulfed China by now.

Communism is an ideal, a means of government, which evidently has strong appeal to the masses of the world because it offers the "have-nots" something more than they have. Of course, the Russians have distorted the whole idea into a Fascistic police state form of government which promises much and then enslaves its dupes into a regimented and terror-bound existence.

Here in America, as long as the poor can, and will philosophize, there is little chance that such a plight will happen here. As long as the masses have their ballots in hand, there will always be a hope that the truth can be established on every issue and decisions made in democratic fashion.

As we see it, the danger lies within the holders of the material wealth of the Nation, today. These great leaders of our community and Nation haven't the time to philosophize. They deem it beneath their dignity and positions. They look upon it as a waste of time. They are as wrong as the last Senators of ancient and powerful Rome. The average people of the Nation can never be hurt unless they fall dupes to the lies and promises of ambitious dictators.

When a man achieves industrial, commercial or political success, he has a greater obligation to the people, in general, than he had before. That obligation, in a free and independent nation such as ours, is not one to be handled lightly. It is not a matter of hand-outs, dispersal of donations and monetary grants which will endear that person to the people. The American citizen is not of that caliber. He must stand on his own two feet, regardless of his position or resources.

It is here where the successful American must resort to philosophic reasoning. His own life, property and the American way of life may depend upon it. The day of the rugged individualist is a thing of the past. We are entering the period of middle life as far as nations go and if we do not mature in the proper degrees of consideration, we may well become the "dupes" of the future.

We have grown as a live-and-let-live Nation of peoples. Here in Newark, as all over the Nation, one of the great revolutionary principles is now being fought out. Labor and management, for the past few years have been waging a war of revolution. It has not broken out in wide-scale conflict but there have been some serious uprisings and fatality seen in this struggle.

Both sides have some right, of course. But, both sides cannot win on all counts. A philosophic understanding of the needs and responsibilities of both sides must be clearly seen by both sides. This is a very serious condition and one which can affect our whole economic welfare. If not settled properly and with dignity for both sides, we are on the way down.

It can be worked out and it must be worked out. In the meanwhile, all of us on the sidelines must think more than we speak; must be open-minded more than obstinate. The voice of the majority will always win, not the voice of force or wealth.

Basing-Point Unofficial Spokesman Asks Loaded Question—Iron Age Conducts Loaded-Dice Poll—Question Pretends Steel Manufacturers Pay Steel Buyers' Freight Bills—Smoke Screen on Basing-Point System of Pricing Continues—Poll Violates Principle of Secret Ballot—Basing Point an Outlaw, Let It Remain Outlawed

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. PATMAN. Mr. Speaker, the May 19, 1949, issue of Iron Age, the unofficial spokesman of the Steel Trust and tacit supporter of the basing-point system featured the results of its own Gallup poll on the basing-point system. Not unexpectedly, in view of the auspices under which the poll was conducted and the bias of its question and its polling technique, it found that 87 percent of the steel users "do not like f. o. b." But if we examine this so-called study a bit further, we find that, like the old Literary Digest poll, the Iron Age poll was so slanted that its outcome was a foregone conclusion before any returns were tabulated.

THE LOADED-DICE BASING-POINT QUESTION

First. The basis on which these consumers were selected and how wide a coverage the sample provided are not revealed.

Second. The question which was asked is a typical "Have you stopped beating your wife" query:

> Do you prefer the former basing-point system on steel, or do you prefer the new f. o. b. method whereby you pay all the freight?

Had the question stopped short of the phrase, then some pretense of objectivity could have been maintained by the pollster, at least insofar as the question itself was concerned. As it is, it betrays a calculated effort to influence the answer, by creating the erroneous impression that the steel producer under the basing-point system benevolently carried all of the freight burden which now had to be shouldered by the steel consumer. Undoubtedly, Iron Age would have been horrified if the question had been phrased as follows:

> Do you prefer the basing-point system whereby you pay phantom freight and other fictitious freight charges different from those incurred in the shipment, or do you prefer the f. o. b. method widely used in many industries, whereby you pay only for the freight actually used and are not confronted with the identical prices whether you buy from a nearby mill or from a more distant mill?

But this question, misleading though it may be, is no more rigged than the question which was actually used by Iron Age. Both are leading questions which have no place in any impartial, unbiased, inquiry.

BASING-POINT ANSWERS INCOMPLETE BECAUSE ALL FACTS ARE NOT DISCLOSED

Third, the coverage of the poll is open to suspicion because we are neither told on what basis the polled steel consumers were selected, nor the size of the sample. Were all, 90 percent, 80 percent, 60 percent, or less than 50 percent of all steel consumers polled? If less than 100 percent were sampled, what steps were taken to insure a statistically reliable sample by type of consumer, by size of firm, by geographical location, and by degree of integration or affiliation with large steel producers. The reader is only informed that of 2,457 plants answering the questionnaire some 341, or 13.9 percent, did not answer this question. But how many of those canvassed failed to reply at all? We are not told. If the poll covered better than a 50-percent sample of all steel consumers, then, even assuming an initially properly selected sample, returns from plants consuming only one-third of total rolled and drawn steel consumption are entirely insufficient to yield statistically reliable results. The margin of error, under the laws of probability governing replies from less than two-thirds of the partial number sampled, would be too great to have any meaning whatsoever. Under such conditions, it is possible for the results to be completely reversed if all steel consumers were canvassed and replied.

IRON AGE POLL COMPARED WITH RELIABLE NEW ENGLAND POLL

Indeed, a careful analysis of another questionnaire study—conducted by such an impartial source as the Federal Reserve Bank of Boston, through its vice president and director of research, Alfred C. Neal, among 2,500 manufacturers

on the New England Council's mailing list—tends to confirm the foregoing. Dr. Neal reported in his paper on "The Effect of the Basing-Point Decisions on the New England Economy"—delivered September 18, 1948, before the ninety-second quarterly meeting of the New England Council at Dixville Notch, N. H.—that from 2,500 questionnaires and a mail follow-up 3 weeks later only 440 responses were obtained. From these and supplementary information provided by 50 personal interviews, it was found that:

The people most likely to return the questionnaires were the people who thought they were going to be adversely affected by the decisions—

Namely, the court decisions outlawing the basing-point system.

Those respondents already influenced by misinformation in newspapers and statements by leaders of the industries subject to recent court decisions reflected their personal position—in their estimates. The point is well illustrated by the fact that respondents adversely affected generally commented that they thought that the effects upon their own industry and upon New England would be much more severe than an analysis of the results indicated * * *.

Finally, adverse effects were probably overemphasized relative to favorable.

If the experience of this New England survey, where less than 20 percent of those canvassed, responded, and where most of those replying thought they were adversely affected, was duplicated in the Iron Age poll, it is likely that a large proportion of those not responding either preferred the f. o. b. method under which they had been operating or had experienced no difficulty in operating under f. o. b. pricing since the outlawing of the basing-point system. Likewise it was to be expected that most of those who thought they were adversely affected would hasten to express their disapproval. The net result is a loading of replies against the status quo, i. e., against the f. o. b. mill system.

BASING-POINT POLL VIOLATES PRINCIPLE OF SECRET BALLOT

Moreover, the timing of the Iron Age poll, the apparent method of polling and the auspices under which it was conducted all had the calculated effect of intimidating and silencing even the consumers who could overcome the natural inertia against going on record in support of a pricing system already in operation. This matter of "going on record" is vital, for if Iron Age had the slightest intention of running an objective survey, it would have reassured steel consumers through the use of a secret, unmarked ballot, that their identity and how they voted would not be revealed to anyone. For in the absence of such reassurance, and in view of the well-publicized position of Iron Age on this question and its identity with the big steel and cement trusts, no steel consumer could risk a reply displeasing to the big steel monopolists, who could impose a death sentence on any business so dependent upon them for special types of steel and regular service in the purchase of steel supplies. That many steel consumers did not view this threat idly, is evident from the abundant testimony before the Senate Small Business Committee of the Eightieth Congress on how numerous small steel consumers were arbitrarily cut off from their regular source of supply; and from the following account in the New York Times of October 14, 1948:

Cost savings made possible by the switch to f. o. b. mill pricing of steel are being passed on to consumers by hardware manufacturers, spokesmen revealed yesterday at the National Hardware Show at Grand Central Palace.

* * * * *

Citing a typical price reduction resulting from f. o. b. mill pricing, a garden-tool maker reported that these savings had enabled him to reduce his prices 1 percent. However, he feared reporting the reduction because of possible loss of steel allocations. In other products, even larger price reductions were named by exhibitors who did not want their companies mentioned because of fear of trade reprisals.

BASING-POINT POLL TIMING RIGHT FOR MONOPOLY BOYS

The timing of the poll tended to reduce the percentage of replies favoring f. o. b. pricing far below the level which would be obtained in a normal market. For though some steel consumers were not affected freightwise because their current supplier was also a basing point under the old system, and others now paid less freight on steel than formerly through elimination of phantom freight because they are located nearer the producing mill than tc the old basing point. Then too, because of a short supply in many items of steel a number of consumers incurred freight-cost increases through necessity of purchasing from mills located freightwise more distant from them than the old basing points. Of course this latter consumer group would soon be able to effect substantial cost savings by buying from sources closer to their own businesses. This latter group, being able to buy from mills located at the old basing points or closer than the old basing points, freightwise would be no worse off and in many instances better off than under the old system. Hence in times of normal supply they would not be against the old basing-point system.

The timing was also well planned because of the possibility of congressional action on the moratorium bills, hoping perhaps to help the basing-point bills through Congress.

RESULTS OF BASING-POINT POLL "GERRYMANDER"

Having thus insured the desired response to its poll through its rigging of the question, the sample and the method and timing of the poll, Iron Age was still not disposed to take any chances in its method of tabulating the results, lest some regional differences in response be revealed. It therefore proceeded to classify the responding companies into three areas so broad and heterogeneous in character and so unlike any geographical classification in common use today, that its purpose could only have been to obscure any such regional differences and any deviations from the national pattern of response. Thus area "A" grouped all consumers in States along the Atlantic seaboard from Maine to Florida, including all of New England and in addition Pennsylvania, West Virginia, and Alabama. A more diverse admixture of steel producing and consuming, steel surplus and deficit areas would be difficult to construct. The same queer system was followed in setting up area B to encompass the 10 States from Michigan to Mississippi west of the Appalachians and east of the Mississippi River. All States west of the Mississippi River plus, for some unaccountable reason, Louisiana, were lumped together into area C. In view of such obvious regional gerrymandering of the returns, it is not in the least surprising to find the percentage of replies in favor of the basing-point system of 85.8 percent, 87.2 percent, and 90.5 percent originating in the three areas respectively, so closely and evenly arrayed around the national average of 87.2 percent. Having thus juggled the returns into a geographical classification that would yield the desired results, Iron Age was moved to make the following profound observation in its editorial comment on its rigged survey: "Nor was there much difference between various geographical locations."

IRON AGE LOADED DICE CONCLUSIONS

Having obtained the desired results from its "loaded" poll and from its contrived tabulation, Iron Age insight concluded that "the vote was strong and pointed—steel users as a whole do not like the present method of selling steel." The overriding purpose of the so-called survey stands fully revealed, stripped of its hypocritical solicitude for the steel consumer in the following statements: "Just how much pressure their likes and dislikes will have in months to come remains to be seen." And again: "But whether their likes or dislikes will have anything to do with clarification remains to be seen." The poll conducted by this spokesman of the steel monopolists was intended to dress up a prefabricated pressure drive by the steel trust with the trappings of small business respectability. Neither small business, nor the Congress will be fooled or intimidated by such transparent sleight of hand.

BASING-POINT SYSTEM AN OUTLAW—LET IT REMAIN OUTLAWED

The Iron Age poll of May 19, 1949, is again a demonstration of what the cement and steel industries really want. I repeat that what these trusts want is the basing-point system of pricing with its "market controls," "higher prices," "restricted supplies," and a complete "monopoly" in the production, sale, and distribution of steel and cement. Nothing more—but nothing less.

The continued pretense, with which the steel and cement trusts propagandize the country on the question of paying and absorbing freight, in my opinion, amounts to a gross fraud. I do not believe either Congress or the people will be fooled by either sleight of hand polls or fraudulent propaganda. The basing-point system of pricing must not return. It has been outlawed; an outlaw denotes a man on a horse with a mask and a gun who is out to rob and steal. The comparison is obvious because the users of the basing-

UNIVERSITY OF MICHIGAN LIBRARIES

point system of pricing accomplish the same purpose in what may be called a more genteel manner. I am firmly opposed to legalizing either a man on horseback with mask and gun, or a system of monopolistic price controls which will rob our people individually or collectively.

Unemployment in Connecticut

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. PATTERSON. Mr. Speaker, as further evidence of the seriousness of unemployment in Connecticut, as elsewhere, I ask leave to insert in the RECORD the column of June 5 by Jack Butler in the Bridgeport (Conn.) Herald. Mr. Butler is a highly respected member of the fourth estate, and his views on matters relating to labor are given serious consideration by those in Connecticut who profess an interest in labor-management relations.

LABOR FRONT

(By Jack Butler)

The unemployment situation in Bridgeport, worst in Connecticut, has reached the point where the Bridgeport Manufacturers Association is giving it study.

Speaking at a luncheon last week, Msgr. Harmon E. Snoke warned that if Bridgeport industries are unable to reemploy workers laid off in addition to those unemployed because of the removal of Chance Vought to Texas, the outmigration of workers will have an adverse effect on the city.

He spoke of the loss of skilled workers and the loss of business to the retail stores and services.

The situation at the big General Electric Co., where the pay roll is down to about half its postwar peak, may be described from the viewpoint of Business Agent Ellis Brooks, of local 203, UE-CIO.

Brooks said he spends the entire day, 5 day a week, discussing lay-offs and checking on seniority for workers with company officials, and his after-work time is devoted to the workers themselves.

SITUATION TERRIFIC

"The situation is terrific," he declared.

Letters come into his union office from workers whose unemployment claim period is exhausted.

An employment bureau has been set up but the union has not been able to find jobs. No one in Bridgeport industry is hiring, he said.

At Remington Arms, another big Park City plant, persons with 9 years' seniority are being laid off.

The Stanley works in Bridgeport closed down its strip-steel mill and is operating the open hearth on a piecemeal basis to handle the small amount of orders.

The need for some stand-by public works operations is definite, and all the groundwork should be done so that the program can be put in operation at a moment's notice.

The situation is bad in other Connecticut cities, and it would be well for the mayors of those towns to go into action.

Standing by and waiting just isn't the answer.

National Military Establishment

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. MILLER of Nebraska. Mr. Speaker, I am greatly disturbed by reports that the Committee on Armed Services in the House may not take action on the bill to convert the National Military Establishment into an executive department of the Government which has been recently passed by the Senate. Failure to act on this measure in this session of the Congress would be a serious and costly mistake. The hodgepodge that is called the National Military Establishment has no definite lines of authority. It is dominated by high brass that have no thought for the poor taxpayer. This bureaucratic mess with its unbridled spending is breaking the taxpayer's back. The Navy spends $20,000,000 on construction of a supercarrier which is later stopped by an arbitrary order of the Secretary of Defense. The Air Force cancels a plane-building program costing unknown billions and expands the building of B-36's which the Navy says are vulnerable to attack by its new fighters.

While both Houses of Congress have passed bills to give the President authority to reorganize the executive branch of the Government, there are many laws that must be passed by the Congress before an effective reorganization can be made in line with the recommendations of the Hoover Commission. Unless the Congress takes early and vigorous action in the field in which it must act much of the saving that can be made under the proposals made by the Hoover Commission will be lost.

There is an overwhelming demand from the people in my district that the Congress take immediate action to carry out the recommendations of the Hoover Commission. I am sure that every Member of this House has felt this demand from the people of their districts. The motive behind this demand is their desire for relief from the crushing tax burden which they recognize as a creeping paralysis that is gradually killing our national economy. Nor can we blame them for feeling this way. Every morning they pick up their paper; they read that one branch of the Congress has passed an appropriation bill amounting to billions of dollars, which in most cases is several hundred million more than was carried in the previous appropriation. Every little while they read about a new socialistic proposal by the administration which will cost several billions more. They can see no end to increasing Government spending. When the Eightieth Congress, in a fine display of bipartisan action, provided for a Commission to make a thorough study of Government administration and to recommend changes that would bring economies, they saw a ray of hope. The caliber of men that made up the Commission and the conscientious way in which they performed their task has gained their complete confidence. So, when the Hoover Commission estimates that the course it recommends will make possible a saving of $3,000,000,000 in operation of the Government, the people believe it. They may not understand the technical details involved but they believe in the conclusions reached.

Mr. Speaker, our country is heading into an industrial decline. The earnings of individuals and corporations are getting less. There is a sizable increase in unemployment. We will not collect the amount of money in taxes during the next fiscal year that we are collecting this year. Yet, we are appropriating several billion dollars more to spend. When are we going to look this situation in the face? Is bureaucracy the master of its creators, the Congress and the President? It will fight furiously to keep its gluttonous tentacles wrapped around the resources of the people sucking the very lifeblood that flows from their industry. Unless this Congress takes drastic action to put into law the major recommendations of the Commission it set up it will make a fatal error. One of the first and easiest steps it can take is to enact a law to convert the National Military Establishment into an executive department of the Government. The Hoover Commission task force reported fantastic waste in the armed services. Chairman Hoover estimates that a billion and a half could be saved in this one Establishment. I hope the Committee on Armed Services will quickly report a bill and permit this House to act on it during this session.

"If Our Armed Services Are Forever To Be Outbid for the Services of Outstanding Men, Then I Submit That We Shall Entrust Our Security Future to Rejects Content To Make Their Way in a Steady Job at Steady Pay"

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. PRICE. Mr. Speaker, America has produced a number of truly great men.

It is not because of its great resources—coal, iron, and oil. It is not because of its great forests and farms, its hydroelectric plants, and its skyscrapers, that America itself is great.

Our country is preeminent in this world today because of its resources of men of vision, honor, integrity, justice, abilities, and last, but not least, men who love their God as they did their country.

Foremost among these men, in my opinion, stands Gen. Omar N. Bradley, Chief of Staff, United States Army.

UNIVERSITY OF MICHIGAN LIBRARIES

The pen of no man in this generation can express truths, justice, and sincerity with such brevity, frankness, and candor as does the pen of General Bradley.

One of the greatest issues before this Congress today is the need of implementing our armed services with personnel who will spend the billions of dollars that this Congress will appropriate in the years to come. Men who will bring to the United States Navy, the Army, and the Air Force the character, the devotion, and the abilities of General Bradley.

When General Bradley speaks this Congress would do well to listen.

Mr. Speaker, there has just come to my desk a copy of an address made by General Bradley before the Political Study Club of Washington on Tuesday last. It is so replete with factual knowledge, so full of simple, home truths and spoken by one whom every Member of this Congress both loves and reveres that I am inserting that address as part of my remarks in the CONGRESSIONAL RECORD.

It is highly significant that General Bradley chose as his subject for this talk the pay issue now before this Congress. The general spoke as a friend and as a counselor. His speech is that of a wise and a prudent man. I hope that every Member of this House will avail himself of this opportunity to learn General Bradley's viewpoint on this all-important question.

Additionally thereto, I am inserting several editorials and other general news items clipped from the Washington Post and the Washington Star. These are human documents. The editorials are written by disinterested men whose only concern is the security of our Nation. The others are written by the wives and various others in our services. These, too, I commend to the reading of my colleagues.

ADDRESS BY GEN. OMAR N. BRADLEY, CHIEF OF STAFF, UNITED STATES ARMY

When I was asked 3 months ago to meet with you today, I was told to pick my own subject. Because I believe the service-pay issue now before Congress to be of vital importance to the future security of the United States, I have elected to discuss with you the significance of this program.

Like any other submissive American male, I abide trustingly in the wisdom of that advertiser who counsels us never to underestimate the power of a woman. Thus concerned as I am over our failure to convince Congress of the need for up-to-date pay incentives in the armed forces, I freely admit to the motive that prompts me to speak of our plight to their wives today.

If this be a violation of the etiquette for petitioning Congress, then I ask that you ascribe it to faulty flanking tactics. For soldiers are taught to press their advantage long before they are taught their Washington manners.

Were this issue not of far greater significance than Army household budgets, I should hesitate to try your patience with this recitation of our need. Record Federal expenditures for armed security and foreign aid have already plagued the Congress into a dilemma where it must either increase taxes, curtail spending, or suffer a deeper debt.

As this moment the Nation can no longer afford many desirable programs that may benefit its well-being. Rather it must sift its expenditures to cull out those which cannot conscientiously be called essential to our security, health, welfare, and growth.

Magic as is the term "security" in today's distempered world, it must not be exploited to cloak projects other than those of first importance to the safety of the Nation. Therefore, when I plead the essential justification of a military-pay revision at this time, I do so with complete awareness of the urgency I invoke.

For while your armed forces are not starving for the want of butter and eggs, the failure to provide persuasive career incentives is in danger of reducing us to an Army of second-raters. As long as qualified men respond in a free economy to the opportunity for initiative and the prospect of reward, we cannot compete for promising leaders on pay scales that date to the horse-trolley age.

More than any other institution, the Army is in the business of people. If our armed services are forever to be outbid for the services of outstanding men, then I submit that we shall entrust our security future to rejects content to make their way in a steady job at steady pay.

An Army so handicapped in peacetime cannot hope to produce the Marshalls and Eisenhowers it needs in war.

Bargain personnel seldom produce a bargain security system. Yet our Government clings to the theory that it can deal forever in basement prices on the talents of men.

We are in danger of making patriotism a luxury that the most able men can no longer afford. For today a talented young man must choose between a military career and the prospect of greater abundance for his family. By our failure to modernize pay scales, we have told him he can't have both.

As a result of this shortsightedness we have discouraged from the military service both officers and noncommissioned officers with the talents to improve us.

Today we are faced with an emergency that will adjudge the competence of our armed forces 30 years from now. Either we shall leave to our children a heritage of capable military leaders, or we shall hazard their lives on the limitations of second-rate men.

Inferior inducements attract second-rate men. Second-rate men invite second-best security. In war there is no second prize for the runner-up.

However successful our research in science for weapons of defense, those devices can be no better than the men who direct them. If we expend billions on weapon research while pinching on personnel, we may find ourselves headed toward a doomsday economy trap. For weapons in the hands of capable men are weapons that win wars. But weapons in the hands of inept men are weapons that beckon disaster.

Until our armed forces are staffed with men of such superior quality and competence that they multiply in value with the passing of each year, we shall waste much of our Nation's resources in fruitless peacetime training. For unless each officer and noncommissioned officer has capabilities greatly in excess of the responsibility he holds, he is basically an unprofitable part of a military machine.

As leadership standards decline for the lack of sufficient incentives for first-rate men, we shall find ourselves dabbling on day-to-day defenses rather than investing in security for the future. Reservoirs of military leadership are more important to the welfare of this Nation than pickled ships and lay-away planes.

A decline in the cost of living for the first time since the war has created what some observers call an unfortunate psychological stage for the discussion of service pay. However, ours is not fourth round of periodic increases. Instead the proposal before Congress is the first overhaul of military pay scales in 41 years.

Because their wage earners are paid from public funds in the service of their Nation, the families of servicemen have had neither shop stewards nor lobbies to represent their plight. As a result, we find men who after a lifetime of service are compensated at the scales of their fathers in the gas-light age.

Our problem is not a problem of psychological timing. Rather it is the need for correction of a long frozen injustice. Only by showing prospective leaders that service pay affords them fair incentives in this age can we hope to excite in them the desirability of service in the future.

The American people have created their Military Establishment in the image of their own Nation. It is an institution founded upon equal right and upon freedom of opportunity. It is an institution that has permitted me—as the son of a country schoolmaster—to quit my 17-cent-an-hour job on the railroad, to compete for a commission and eventually to succeed General Eisenhower as the Army's Chief of Staff. Yet this is the institution habitually whipped by every man with a grievance as the demigod of oppression, the protector of privilege, and the despoiler of moral young men.

The United States Army has permitted me and thousands like me to pay my way honorably in a career of service to the Nation. It has permitted me to serve in dignity and self-respect all my adult life a Nation for whose institutions the military has taught me greater love and devotion. When I plead for fair reward it is not for the generation of which I am a part. I do not speak as a supplicant for a higher wage for myself.

Instead, I petition the Nation as a spokesman of the service I represent to preserve an equal opportunity for service among the young men of this generation. If we are to entreat them to devote a lifetime to the service, then we must also give them the opportunity to serve with dignity, with honor, and with prospects of an abundant livelihood for themselves and their families.

The need for revision of military pay scales to recruit young leaders in the armed forces has already been supported vigorously by the President, by the Armed Services Committee, and by a Commission from industry headed by Charles R. Hook.

Because the original bill introduced at this session of Congress sought to replace with equity and justice the contradictions and inequities that have developed in military pay, it provided incentive increases at executive levels. Yet, for precisely this reason, the proposal was derogated by some as a "brass hat" bill designed to cushion officers and exclude enlisted men. Critics of the military too often attribute to all officers the malfeasances of a few. Three out of every five dollars in the proposed first year's cost for pay revision were tabbed for enlisted men—most of them leaders in the noncommissioned grades. Approximately one-half of 1 percent would have gone to reward the brass who wear stars.

I had once hoped that we might lay away forever the cruel fiction that officer privilege has splintered the services into castes of have's and have-not's. Yet we are still subjected to the perennal slanders of those who seek success for themselves in civil life and vilify success in the service. We are still belabored by the suspicion that rank in the Army is a reward for villainy. While success in business is revered as achievement, success in the Army is noisily condemned as un-American and undemocratic.

It is time we rejected the cheap emotionalism that panders to the appetites of those in hunt of the services as a whipping boy. It is time we acknowledged that leadership in the armed forces is a virtue that benefits the soldier as well as the Nation he serves. For if we are honestly concerned for the welfare of the American soldier, our first consideration should be for the quality of the men who command him. It is the competence of this leadership and the quality of

this command that may readily spell the difference between his life and death in battle.

In their constant efforts to drive a wedge between officers and men, the self-proclaimed champions of the American GI are doing him his greatest disservice. Our only hope for a military establishment that will safeguard the dignity, protect the rights, and give expression to the human needs of men lies in the recruitment of officers and leaders with the intelligence and compassion to fulfill those wants. Again, I submit, these are the men whom we deny with bargain-basement incentives.

That this Nation is prudently on guard against undue military influence in the conduct of its affairs is comforting evidence of the jealousy with which we prize free government. For while that vigilance does reflect distrust in military power, it also distinguishes the vigor of our democracy and the determination of our people to govern themselves according to the dictates of their conscience.

Because the histories of other nations are smeared with tragic results of the concentration of power in the hands of those with weapons, we have wisely surrounded our military with a fortress of civilian controls.

However, the best guaranty against this concentration of force in the hands of a few is to make certain that the military is possessed of the same fervent love for freedom, the same jealous love for country, that dwells in the most conscientious citizens they are sworn to protect. Our sturdiest guaranty against militarism must be cradled in the Military Establishment itself. To assure this, we must have armed forces composed of men with sensitivity, intellect, and good conscience—men who will nourish faith in the essential nature of freedom to peace in the world—men who will nourish faith in the importance of self-government to happiness in our lives.

When we speak of the armed services as a business—of people, these are the people we want.

[From the Washington Evening Star of May 28, 1949]

THE SERVICEMEN'S SIDE—HOUSE RECOMMITTAL OF MILITARY PAY BILL SEEN AS BLOW TO MORALE OF THE ARMED FORCES

HARDSHIPS OF AN OFFICER'S FAMILY

To the EDITOR OF THE STAR:

So the Army officers' pay bill did not pass the House. Yet these very same men are now trying to get free taxi service in Washington by having shuttle busses run for them. Just an excuse. There are plenty of taxis available. They already get 20 cents a mile for traveling. What does the Army officer get? Seven dollars a day, and every time he leaves town he has to pay extra out of his own pocket.

We are old, Regular Army of 20 years' service. As a lieutenant we looked forward to living nicely on a colonel's salary, which in that day was comparable to a Congressman's. Ours has stayed the same, but how high has his gone? Plenty, and they still are asking for more.

We can't afford to send our children to college on the salary we make. The few generals' wives who can afford fur coats have outside incomes, probably inheritances. A general in the Army has the same position as the president of a corporation, but compare the salary of a general with that of the president of a corporation—a very small pittance. And the general has many more people's interests at heart than the president of a corporation.

I should think these Congressmen would be ashamed. They are just greedy for themselves.

A COLONEL'S WIFE.

UNORGANIZED "SAD SACKS" HANDICAPPED

To the EDITOR OF THE STAR:

With industry preparing for a fourth or fifth round of pay-increase demands, with Congressmen voting themselves a considerable pay increase, how can these very same people deny the pay increase for the men of the armed forces?

If only the servicemen would organize, line up their families and neighbors, and then vote—brother, can't you see some of those same Representatives going all out for their dear friends the servicemen? This seems to be the only language they understand. Their $64 question is, "How many votes will it get me?"

In this case I hope the folks back home who have sons or brothers or sweethearts in the armed forces learn how their elected Representatives voted. To get even with the brass, they denied 1,500,000 men (plus millions of dependents) a pay increase which practically everyone has received except the poor, unorganized, sad sacks of the armed forces.

REGRET US.

DISHEARTENED BY NEGLECT OF CONGRESS

To the EDITOR OF THE STAR:

As a naval officer's wife I have been trained to keep my feelings and my opinions on controversial matters pertaining to the services to myself. However, now that the military pay bill has been defeated I feel constrained, at long last, to speak my piece—and the half will not have been said either. My sense of justice and fairness has been deeply outraged and there must be hundreds of others like myself who feel the same rankling bitterness.

The defeat of this bill must gladden and rejoice the hearts of Communists and fellow "liberals." For years and years, in every conceivable way Communists have sought to undermine the authority and morale in the services. They were notably successful in the Army. The sudden demobilization of the armed forces with the attendant abandonment of millions and millions of dollars' worth of matériel is an example of one of the ways this worked, as was also the rioting of GI's overseas literally crying to go home, in spite of our loss of prestige, "face," and the waste of valuable assets. The Navy and Marine Corps had better success in handling its morale problem, though the infection was started.

As a servicewoman from a long line of Americans who have served honorably in the Navy and in every war since the founding of this country, and as the mother of four sons, one of whom is a midshipman (who entered in competition from the enlisted ranks of the Marine Corps because as Navy people we did not have enough political influence or the affiliations necessary to obtain an appointment), I feel that what we are and what we stand for no longer are appreciated by our fellow citizens. I shall discourage my sons from following this career, and beginning now I shall make plans for life outside the service for us all. And in this I know I am not alone. The seeds of discontent breed a bitter fruit.

Since 1908 there has been no appreciable increase in a naval officer's pay. Furthermore, small prerogatives, considered parts of his compensation, continually have been sniped at and taken away. Even now this is going on in an effort to close the commissaries and ship's service stores.

Frankly, if military men were better paid in cold cash, they would not either need or want these discounts and allowances; nor do we enjoy having to sweat out ways and means of obtaining scholarships for the education of our children in order for them to have the advantages that we feel are due them so as not to be different from the children of our contemporaries who are not in the military service. And it often is necessary for our families to assist us financially with these problems, and to house and shelter us during many long separations. Servicewomen are resourceful and clever at putting up brave fronts and making good appearances, which is deceiving as to the real state of affairs and now has turned into a boomerang to cut us down.

After 25 years of hard work, loyal service, and an unblemished unpassed-over record, what has a man now to show for his career in tangible assets? Certainly very much less than his contemporaries in similar capacity outside the military life. Even General Eisenhower, upon retiring, remarked publicly that he left the service as poor as when he entered it. No; money is not everything, and honor and prestige are valuable assets, but one must also be practical, especially in these expensive days.

Make no mistake about it, naval officers' families have a hard time getting by, raising their children in the standards that have been set for them and to which they would like to become accustomed. I, for one, am weary of the sacrifice and the unrewarding struggle, and I know many, many who now feel just as I do. This is a sad state of affairs in a once-proud service.

Indeed, the military man is now the real forgotten man of our times and his very profession has become discredited in the eyes of his fellow citizens.

Mrs. C.

BREAKING THE SPIRIT OF FIGHTERS

To the EDITOR OF THE STAR:

PAT SUTTON, Representative from Tennessee, having a personal grudge against the services, took his vengeance out on the military pay bill. He was not without help, as there were one or two others who, having served in World War II, delighted in pointing out any bad points they may have encountered during their service period. That the same could be said of any civilian concern was not brought up.

The main point is that those few men were what constituted the strong opposition against the bill, which was worked on for 18 months in order to insure fairness for all, including the enlisted man.

It has been stated that the services have some of the best brains in the country, but it is forgotten that were they in civilian life they would be drawing down salaries worthy of that brain power.

Our standards of living have reached a dangerous level. Many wives of servicemen have had to take jobs in order to supplement their husband's incomes.

If it is the desire of Congress to break the spirit of the men who have served their country, let me say that they have accomplished their purpose.

ARMY WIFE.

THREE FACTORS AGAINST PAY RAISE

To the EDITOR OF THE STAR:

On January 1, 1949, the members of the armed forces of the United States received a reduction in pay. During World War II the Congress enacted legislation which exempted all of the pay of an enlisted man and $1,500 of an officer's pay from income tax. On January 1, 1949, this legislation expired, and, although living costs were far in excess of those which existed at the time such legislation was enacted, the professional military man's pay was reduced by the amount of income tax which this legislation exempted.

On Tuesday, May 24, 1949, the House of Representatives killed a bill which would have provided the men of the military services with an increase commensurate with today's index of living.

The reason for the House of Representatives' action on this bill is attributed by Mr. KILDAY to:

1. Economy-minded Congressmen.
2. Young veterans who wanted to get something off their chests.
3. Liberals who always oppose the military.

In the light of the recommendations by the President and the tremendous expenditures being appropriated by the Congress at this time, it is difficult to conceive of economy as being a real and serious objection to the passage of the bill.

Insofar as young veterans "getting something off their chests" are concerned, it appears from the biased, vindicative, personally prejudiced, and false statements made on the floor of the House that herein lies the real reason for the failure of the bill to pass.

The bill was not considered on the facts upon which it was predicated, nor upon the merits of its contents, nor upon its benefits or value to the United States Government.

This bill was framed from a study and a report made by a committee of intelligent, competent and honest United States citizens—civilians—who conducted an 18 months' investigation prior to submitting it.

It contained fair, adequate and just provisions for a basis of income for men upon whom the citizens of this Nation depend for our protection against very real world aggressors.

The benefits and value of this bill to the United States Government lie in its providing a livelihood for the type of men in whom the security of the United States can be entrusted. E. R. W.

SEES LITTLE CHANCE OR HOPE

To the EDITOR OF THE STAR:

It is with sinking hearts that Army wives hear of the nonpassage of the Service Pay bill.

For the past few years, those of us without substantial outside means have been grimly hanging on in the hope and belief that our plight would be recognized and remedied. We have washed, ironed, cleaned, painted our walls, upholstered our furniture, made our clothes, trimmed our hats—done without ad infinitum, and I for one am just plain tired—tired of knowing we can never afford a vacation, tired of knowing we can't give our grown boys a helping hand, tired of seeing my husband in old shabby clothes, tired of watching him race, morning after morning, to catch the bus for the Pentagon (so I can have our 8-year-old jalopy to drive.

We thought we had our tough years when we were young—we moved when we didn't want to move, lived in shacks where we didn't want to live, hauled our children from school to school, scrimped and saved, thinking that our early sacrifices were all part of the game and middle age would bring a respite of the harassing financial problems.

I love my shiny-pants commando, and I am rebellious that after 32 years of faithful devotion to the service of his country, and so-called success in his chosen profession, he finds himself in such a fix.

No man can work at his best, year after year, without a vacation—no man can work his best with the hope of financial security for his wife growing dimmer and dimmer the higher he climbs the ladder of the caste system, dipping into capital to live. No man can give his best when life is a continual struggle of scrimping and cutting corners in order to pay ordinary living expenses.

It is a short-sighted government that allows its public servants in places of high responsibility to be harassed by financial worries. Does the country want to lower the standard of its military servants, or does it want the Army and Navy to become purely a rich man's game for men of independent means?

A "BRASS" WIFE.

PROSPECTIVE GENERAL DISCOURAGED

To the EDITOR OF THE STAR:

I have just read about the failure of the armed services pay bill to pass the House of Representatives and I am wondering if the seriousness of this vicious and unjust act on the part of certain Members of Congress is realized by the American people.

There will be large numbers of resignations by our best young officers, in addition to a general let-down in efficiency by those who choose to remain in the service.

I have found in battle that there are few good leaders when the going is really rough. It is then the poor GI really needs a top-notch man with guts and intelligence. The vengeful action on the part of the GI Members of Congress in killing this bill unquestionably is going to create the opposite to the effect desired. Instead of the good officers needed when the heat is on, the GI is going to find himself being led by mediocre leaders.

As for the justice of pay increases for officers, let us look at the record: Officers above the rank of captain have less take-home pay now with the current high cost of living than they had in 1908. GI's have had their pay raised five times the original amount.

There are no such things as special privileges for officers any more except the privilege of working 75 to 85 hours a week, which I and many others have been doing since 1941.

Officers continually are being sent overseas and frequently are separated from their families, entailing both personal and financial hardships.

Dependent medical services are being discontinued; commissary costs are equal to and in some instances more than commercial prices; there no longer is any such thing as orderly service; no more quarters on Army posts to amount to anything; living conditions are intolerable; uniform prices are exorbitant; commercial people in every community take Army and Navy officers for every cent they can squeeze out of them; it is practically impossible for a serviceman to make a decent investment.

I have been informed by high authority that I will be considered for promotion to a general's rank some day, but now I do not want any part of it.

A COLONEL.

[From the Washington Post of May 27, 1949]

PAY DEMAGOGUERY

It is hard to determine how much the House decision to shelve the military pay raise was induced by a concern for economy and how much by a phony exploitation of the so-called caste system. Regardless of the reasons, the surprise vote to send the bill back to committee was a serious blow to military morale. If the action is allowed to stand, it will make more difficult the already vexatious problem of keeping career personnel, especially in the lower officer grades where inadequate pay is a major obstacle.

Although the wisdom of this kind of economy is highly questionable, those Congressmen who voted against the bill on that ground have a certain logic to back them up. But those Members who based their action on the vociferous objections that the bill gave larger raises to officers than to enlisted men, were taken in by sheer demagoguery. It is doubtful whether many of the Congressmen who took this view even bothered to read the study on which the bill was based.

Officers, it is true, were to receive larger percentage increases than enlisted men—though every grade but recruit was to receive some raise. This was not a gift to the "brass," but the result of a careful study by a civilian commission which considered military scales for an entire year. The commission took into account industrial practices as well as the nonsalary inducements to military careers. It sought to make military pay commensurate with responsibility and to provide incentives for advancement. In arriving at its recommendations, it considered the fact that enlisted pay has shot up far faster than officers' pay; that whereas a private has had a 400-percent increase in the last 40 years, a major has had barely 20 percent.

The canard that officers are pampered has gone entirely too far. Competent officers are the indispensable core of any army or navy, and without infusions of young blood the military profession in which the country places such great reliance will grow stagnant. The good sense of Congressmen ought to tell them that whether a particular former GI was mistreated or a particular officer received undeserved perquisites has utterly nothing to do with the merits of the pay raise. Political popularity can always be won by catering to the GI's and former GI's who greatly outnumber the officers. But the end result will be not an efficient military arm, but a mob.

[From the Washington Post of May 24, 1949]

MILITARY PAY

The House is scheduled to vote today on the first comprehensive revision of armed-forces pay in more than 40 years. The very scope and purpose of the Kilday bill are reasons enough to support it, for military pay scales and allowances as presently constituted are an impossible patchwork. The Kilday bill follows closely the painstaking recommendations of the Hook Commission appointed by the Secretary of Defense. It provides for badly needed pay raises, but far more important, it provides for them in a new framework evolved after a study of industrial practices and designed to afford a progressive incentive for military careers.

Some criticism has arisen because the bill gives larger increases to officers than to enlisted men. It does so quite properly, for whereas the pay of a private has risen 400 percent since 1906, that of some of the higher ranks of commissioned officers has gone up 20 percent or less. Moreover, there are many inconsistencies in the present pattern. A lieutenant colonel with 30 years' service draws the same pay as a brigadier general. It is imperative in any sensible working relationship to have salary grades commensurate with responsibility. There is yet another factor: A competent officers' corps is fundamental in the Military Establishment. Yet the services are experiencing increasing difficulty in attracting and keeping men with college training. For example, only 1.5 percent of the cadets who entered the Air Force last year were college graduates.

An immediate reason for increasing service pay lies in the fact that military personnel have to all intents and purposes taken a cut since the beginning of this year. The $1,500 income-tax exemption on service pay no longer applies, and this means money out of pocket for men in the higher enlisted grades and all officer grades. Nor is the pay bill an addition to expenditures already contemplated; provision for a pay increase was included in the President's defense budget. It would be foolish to say that money is the only thing that attracts men to military careers, or that military pay can be equated with the remuneration in private industry. But certainly the country has a vital concern at least in providing adequate financial means to maintain the prestige of the honorable profession of arms.

[Letter to the editor from the Washington Post of May 24, 1949]

MILITARY PAY RAISE

I am very much interested in the article by Mr. John Norris in your issue May 21 entitled "House Action on Military Pay Delayed."

UNIVERSITY OF MICHIGAN LIBRARIES

As the wife of an officer who transferred from the reserves to the "regulars" at the conclusion of the war, I have had the experience of trying to balance a domestic budget on income from both military and civilian employment.

First, let me say that the alleged monetary advantages of military life are a myth. I find that $580 a month in the service will only go as far as $450 as a civilian. Transfers every 2 years are expensive. Contrary to popular notions, my husband pays for all his uniforms out of his own pocket and a new uniform costs $80. The PX and commissary are of very little practical help. We have never found any clothing there for our family of five.

Diamond rings and furs at wholesale without tax are pure abstractions for a family in our income brackets. The only advantage of the commissary is its proximity. A comparison of the commissary prices with those of the big super markets shows that the super markets are slightly cheaper—in fact, we do a considerable amount of our marketing at the latter because of the greater variety.

It appears that most of the opposition to the proposed pay increases is directed at the generals and admirals. It should be kept in mind that fewer than one out of every hundred officers is a general or an admiral.

Without an increase, many of us will not be able to afford a career in the armed services any longer. Substantial inducements must be added to the range from major to colonel and lieutenant commander to captain in order to make the service attractive.

SERVICE WIFE.

ANNAPOLIS, MD.

[From the St. Louis Post-Dispatch of June 4, 1949]

MORE PAY FOR THE SERVICES

Bluntly and effectively, Gen. Omar Bradley, Army Chief of Staff, addressed the Political Study Club of Washington this week on the need for military pay rises. The bill that would have met this need was sidetracked in Congress recently although it was the first attempt since 1908 to provide a career pay scale for the armed forces.

It would have added $360,000,000 to service pay checks in the first year and $406,000,000 in the next. Most of the increase would have gone to noncommissioned officers and a goodly proportion to officers.

Approaching the matter from the national security angle, General Bradley said that: "We are faced with an emergency that will adjudge the competence of our armed forces 30 years from now. Either we shall leave to our children a heritage of capable military leaders or we shall hazard their lives on the limitations of second-rate men. Second-rate men invite second-rate security. An Army so handicapped in peacetime cannot hope to produce the Marshalls and Eisenhowers it needs in war."

General Bradley is exactly right. It has too often been forgotten that the officers so frequently dismissed as just "the big brass" have terrific responsibilities in the way of lives, equipment, and matériel. The man responsible for a B–36 squadron, a jet-fighter wing, a 45,000-ton carrier, or a radar base usually receives far less than half the pay of the civilian executive who has responsibility for a much smaller investment.

Because of Federal income tax, a major general receives less dollars today than did a major general of 40 years ago—and today's dollar is worth 36 cents in terms of the buying power of 1908. The $1,500 income-tax exemption of World War II days has been removed.

Without the best of leadership and the most efficient administration, the services are badly handicapped. After some few adjustments, the House Armed Services Committee should bring out the pay-increase bill again.

Spain and the Western Defense System

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an interview granted by Dr. Valentine de Balla, professor of political science and geopolitics at the College of Notre Dame of Maryland as well as at the Loyola College Evening School. My attention was directed to this information, vital to the security of the free world, by the Reverend Dr. Joseph F. Thorning, honorary professor in the Catholic University of Chile, Santiago de Chile, and an editor whose books are available in our more important libraries.

SPAIN AND THE WESTERN DEFENSE SYSTEM

(Radio interview given by Dr. Valentine de Balla, professor of political science and geopolitics at the College of Notre Dame of Maryland, on Station WFMD of the Columbia Broadcasting System in Frederick, Md., on April 14, 1949.)

Question. Dr. de Balla, you spent recently 2 years behind the iron curtain in Soviet controlled land. Do you think the Kremlin intends to continue a policy of aggression?

Answer. Yes; I do. I think Churchill was right when he said that the Kremlin fears more the friendship of the west than its hostility. They cannot allow, as Chuchill said, free and friendly intercourse to grow up between their peoples and the civilization of the west. Their own oppressed peoples would find out what life is like in the free countries and would eliminate their tyrants. The rulers in the Kremlin will try to overwhelm and destroy the free countries as soon as they think they have the appropriate means.

Question. Dr. de Balla, you are a student of European power politics. Do you think the conquest of Europe by the Soviet Union would be a great danger to the United States?

Answer. I am sure it would be a great danger. Although Europe is weak now, it is potentially the greatest industrial force in the world. The weakness of Europe was that its peoples have been divided by national rivalries and by customs barriers. They were not able to build up a system of mass production. But Europe's science has a top place and it has twice as many skilled workers as the United States. If the Soviets were able to unify Europe and organize a totalitarian war production against America, the Kremlin's power would be overwhelming.

Question. So you think the Atlantic Pact is a good policy for the defense of America?

Answer. Yes; I think so. But the present pact is only a first step in that direction. I don't believe that as it stands now the pact is enough. The present European members of the alliance will not be able to ward off a Soviet attack. Other nations will have to be taken into the alliance. In the opinion of our military leaders without Spanish cooperation there can be no successful defense of Europe. Spain has the only reliable and well trained army on the Continent. The Pyrenees are the most formidable line of defense and the Spanish peninsula is the safest landing place for counterattack.

Question. Well, then, Dr. de Balla, why, in your opinion, was Spain excluded from the Atlantic alliance?

Answer. Because of the press and radio propaganda of Reds, pinks, and certain other prejudiced pressure groups. This propaganda created in America a public opinion, which Carlton Hayes, President Roosevelt's Ambassador to Spain, called "ill formed" or "most selfishly directed." The Reds think it will be easy to take over the democracies. But in Spain they got their first beating and so they are furious with Franco. Others are prejudiced against the religious traditions of Spain.

Question. Well, the opponents of Franco say that he is a dictator and we should not cooperate with dictators.

Answer. One might see some reason in this argument if they would not have belied it on other occasions. Did they not cooperate with other dictators? Was not Getulio Vargas, the dictator of Brazil, a welcomed ally? Are there no dictators in South America with whom we recently concluded the American defense pact? Did they not hail in the past Chiang Kai-shek whom they call now a dictator? And did they not hail the most terrible of all dictators, Joseph Stalin, as a gallant ally?

Question. Dr. de Balla, you have been in Spain and also under the rule of the Kremlin. How do the two compare?

Answer. Well, there are certain features in the political set-up of present Spain which are strange to the American mind. I certainly would not like to see anything similar here in America. But if I think back of what I saw behind the iron curtain, then I must say that present Spain is still a paradise in comparison to the Sovietized countries. I was in both South America and in Spain. My impression is that dictatorship in Spain is more or less of the same kind as those of South America. Also there, democracy has a hard road to travel. And, by the way, if we want friendship with South America, it is important to be friendly also with Spain.

Question. Dr. de Balla, what is the essential difference between the Spanish dictatorship and that of the Soviets?

Answer. Well, in Spain there is no political freedom. You can vote the government out of power. You cannot form an opposition party. We in America would certainly not like such a regime. But we must remember that the Spaniards never had a real democracy. The short-lived so-called Republic was just a scramble of the opposing groups to seize power by force. It was full of burning houses, murder, and bayonets. During the civil war the Commissars and Commanders of the so-called Republican forces were Tito, of Yugoslavia, Dimitroff, of Bulgaria, Rakosi, of Hungary, Ana Pauker, of Rumania, and the other Soviet bosses in countries behind the iron curtain today. The great majority of the Spaniards do not know what democracy is, and if they know, they do not have great respect for it. This is true of those who support Franco and also of those who oppose him. The Spaniard is uncompromising in his ideas and does not think much of decisions by majority vote. It is a bad climate for democracy, and so there are no political liberties. But civil liberties are held sacred.

Question. What do you mean by civil liberties, Dr. de Balla?

Answer. I mean that you can do in your private life as you please. The Spaniard is the greatest individualist you have ever seen. He wants to live his own life and he would not tolerate any government interference with it.

Question. And what is the situation under a Communist dictatorship?

Answer. Under a Soviet rule the people have neither political liberty nor civil liberty. The Kremlin is not content to have unopposed political power, but puts itself up as master in the intimate private life of its subjects. I will give you an example. When I was in Budapest, the capital of Red-dominated Hungary, I wanted to go out to my little farm, 80 miles from the city. But one was not allowed to leave the city unless one had a travel permit. People had to stand in line

for a day or more to get the permit from the Red police. Then comes a cross-examination. And they give you the paper only if they are satisfied with your person and the purpose of your travel. And all that was because I wanted to go out 80 miles from the city. And one can only commute to one's place of work if there is a travel permit in the work book. In the same way, you can be thrown out of your own home. There is in every apartment house and over every group of small homes a political house commander. He is a Communist or a fellow-traveler. He is the agent of the Soviet police. It depends on him and the Red housing officer whether or not they throw you out of your home or whether they put into your home some people who have pull with the Red police, in which case you can go and live with your family in a spare room in your own home. In the totalitarian regime of the Soviets you are in every detail of your life at the mercy of the Reds. Now in Spain there is free travel, also for foreigners, like in any democracy. I wish some of those critics of Spain would go there and see for themselves. In Spain you are the master in your home. In Spain you are free to take a job and free to leave it if you want. Not so under the Soviets. In Soviet countries you have to work where they tell you and if you leave your job without permission, you land in a concentration camp. In Spain you can educate your children as you want, you can practice any religion you want, and so on. But not so in the Soviet Union. That's the difference between the two. The Spaniards never had a real democracy, but they always had, and also now have freedom in their private lives. But in the Soviets, life is like in a jail.

Question. Are there any concentration camps in Spain?

Answer. No; there are none. Several years ago they closed up the last one. During and after the civil war the prisoners of war, the leading Reds and anarchists and other violent opponents were put into concentration camps. The civil war was fought with terrible cruelty and hundreds of thousands of civilians were murdered. Therefore Franco screened the prisoners and many were executed or sentenced to prison. Later when order was restored, sweeping amnesties were given. At present there are only about 3,000 political prisoners. On February 14, 1947, Franco invited foreign journalists and anybody who is interested to come to Spain and see for themselves if they can find concentration camps. Even the most hostile reporters admit that there are no more concentration camps.

Question. And what is the situation under the Soviet regime?

Answer. According to our Secretary of the Army Royall at present 13,000,000 people are being exterminated in Soviet Russian slave labor camps. It is a useful device to exterminate political undesirables and to have cheap labor at the same time.

Question. What is the British and French attitude toward Spain?

Answer. Britain recently made a trade agreement with the Spanish Government. And the British are glad that we ostracize Spain, because they can have the Spanish market without American competition. The same is the case with France. Besides, the French General Staff asked Franco if in case of war with Soviet Russia he would allow the retreating French armies to pass through Spain to Africa. So you can see that they do want to cooperate with Spain. But our prejudiced anti-Franco pressure groups want America to be the sucker and ostracize Spain alone.

Question. So you believe, Dr. de Balla, that the inclusion of Spain into the defense system of Europe is a necessity?

Answer. Yes; I do. France and the other small European powers cannot hold the Continent without Spanish backing. For this reason General Marshall, then Secretary of State, proposed last October that Spain should be included into the family of nations. For this reason last year the House of Representatives voted to include Spain into the Marshall plan. For this reason last October Senator GURNEY, after a visit to Spain as chairman of the Senate Armed Services Committee urged a military alliance with Spain. Senator MILLARD H. TYDINGS, the present chairman, has urged the same. Hanson Baldwin, military expert of the New York Times wrote that in the view of our military leaders the security of western Europe never can be guaranteed without Spanish aid. And now may I quote the diplomatic correspondent of the Newsweek magazine:

"American Army and Navy representatives in Spain unanimously believe Spain offers greater reliability as a continental ally than France. With few exceptions, they are not in sympathy with the Franco regime. But as professional soldiers they hate to see cherished equipment poured into a country they believe will not fight, while the tough and reliable manpower of Spain cannot be utilized. Other Americans in Spain are impatient of arguments that the United States should refrain from normalizing relations with Spain in deference to British and French opinion, while the British and French commercial missions in Madrid complete vast transactions to the detriment of American interests."

And in an editorial of the Newsweek:

"Virtually every top man in the United States defense establishment has joined a pressure campaign to persuade the White House to restore diplomatic relations with Spain. Military chiefs see the Iberian Peninsula as the only tenable base on the continent in event of war."

Question. Dr. de Balla, what would happen if we had no foothold on the Continent, which foothold we can hope to achieve only with the help of Spain?

Answer. Secretary of the Army Royall answered this question on April 5: "If in the first stage of any future war we should lose all foothold on the European Continent and in north Africa, then a victory—if achieved at all—would require 10 or 20 years of war—or perhaps more."

For this reason I heartily congratulate Senator HERBERT O'CONOR, of Maryland, who had the courage to propose a few days ago, in spite of the pink, red, and other anti-Spanish propaganda groups, the inclusion of Spain into the Marshall plan and the Atlantic alliance. My congratulations also go to Senator MILLARD TYDINGS for proposing the inclusion of Spain into the western defense system.

How to Save Four Billions a Year

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. REED of New York. Mr. Speaker, it is encouraging to know that there is a rising tide of public sentiment in favor of a reduction in national expenditures. It has been obvious to some of us who have the honor to represent over a long period of years thoughtful and patriotic constituents who at all times have been deeply concerned with the solvency of this country. They want social security and other benefits, but they know that an unbalanced budget, deficit financing, boondoggling, and pouring billions of money abroad is not consistent with demands for all of these things that cost the taxpayers money. With a national debt of $252,000,000,000 or more, a deficit looming large on the horizon in our fiscal affairs, and a threatened tax bill of $4,000,000,000, the time has come for an economy program which should have been put into force long, long ago.

The people want to save the $4,000,000,000 a year which Mr. Herbert Hoover has indicated can be saved if the findings of the committee of which he is chairman can be carried out by Congress. It is about time for the Democratic majority in both branches of the Congress to carry out the program of economy which has been so well and forcefully presented by the one man in this country able in the highest degree to recommend a program of retrenchment.

Under leave to extend, heretofore, granted, I am inserting an interview with Mr. Herbert Hoover, Chairman, Commission on Organization of the Executive Branch of the Government, entitled "How to Save Four Billions a Year," which appeared in the June 3, 1949 issue of United States News and World Report:

HOW TO SAVE FOUR BILLIONS A YEAR

(An interview with Herbert Hoover, Chairman, Commission on Organization of the Executive Branch of the Government)

Question. Are the possible economies that might come, Mr. Hoover, if the recommendations of your Commission are adopted, measurable at this time?

Answer. Assuming the whole program were put into action, it would take a year to legislate it, and it would take some time to get it into operation. No accurate estimates are possible as to the savings. The only indication of quantity in the matter has been an inventory which I made of the views of the heads of our task forces as to the amounts they thought could be saved in their special fields. The aggregate of those estimates is about $4,000,000,000 a year. I have always said that I thought it would be above $3,000,000,000. You could add these estimates up to $5,000,000,000.

Question. That's about as much as you spent in a year when you were President, isn't it?

Answer. Yes. In the meantime, the budget has expanded from $4,000,000,000 to $45,000,000,000 and the employees of the Government from 560,000 to 2,100,000.

Question. Did you recommend eliminating any of the many new functions of Government that have grown up over the years?

Answer. We recommended the consolidation of functions, which would have much the same effect, but we did not think it was our job—in fact it was not within our mandate—to instruct Congress about fundamental functions.

Question. Can you estimate the possible reduction in the number of Federal employees after you have shaken all this down?

Answer. Yes. The task force on personnel worked a whole year. They were a most capable group of men under Mr. John Stevenson, president of the Penn Mutual Life Insurance Co. He and the members were all experienced men in personnel work and familiar with the Government. They concluded that the Federal Government could accomplish exactly the same purposes with about 10 percent less personnel.

UNIVERSITY OF MICHIGAN LIBRARIES

Question. You mean exclusive of military personnel?

Answer. Yes, civilian personnel only.

Question. Would 200,000 Federal workers lose their jobs if your proposals were put into effect?

Answer. No. Mr. Stevenson's group, for instance, pointed out that the turn-over of personnel is about 500,000 a year. If we had a properly organized system of personnel, we could take care of all capable employees during the reduction in turn-over alone.

Question. It is often said that people in the Government can't be fired for lack of efficiency because of red tape. Have you tackled this problem?

Answer. Well, for example, the whole civil service has been surrounded with a mass of red tape that makes it extremely difficult to discharge anybody for sheer inefficiency. They can be discharged if they are caught red-handed in moral turpitude.

But a supervising officer who wishes to remove a Government employee for inefficiency is required to prove it by documentary evidence. The employee then has four different appeals. The supervising officer has to appear four different times to prove his case, and the net result of it is that few supervising officers take the time and trouble to do it. What is more, one of the bases of ratings for classification of salary is the number of employees under a supervising official. Altogether, there is not enough incentive to get rid of the inefficient.

Question. Is there any plan that will take care of that?

Answer. Yes; we outlined amendments for what we call separation of employees. They would protect employees from injustice, but would rid the Government of the inefficient.

Question. Do you think the Presidency, as it has been growing, can be made into a workable job that one man can handle properly, or is the job getting so big that no one man can really do it?

Answer. Well, that is a very difficult question. One thing is certain. On our computation there are 65 agencies reporting directly to the President. The Civil Service Commission and the Budget Bureau say there are about 65. But, in any event, if the President gave them each an hour a week, he would have a 65-hour week on just administrative problems in the agencies that report directly to him, with no time for the major problems of policy. We have attempted to reduce that pressure. We reduced the number of agencies reporting directly to him.

Question. How many did you have reporting directly to you when you were President?

Answer About 50. I tried to get rid of about two-thirds of them, but Congress refused to pass the necessary act for new consolidation.

OLD PROBLEM FOR CONGRESS

Question. A great deal of this background arises out of your own personal contact with the problem, not only as President but as Secretary of Commerce, doesn't it?

Answer. Yes. This problem of organization of the Federal Government began officially under President Taft. Mr. Wilson had a crack at it. Mr. Harding appointed a special commission, of which I was a member, to make recommendations. Mr. Coolidge attempted to do something about it. While I was in the White House I put up a complete program of organization to the Congress. Mr. Roosevelt came along with further commissions and programs. Mr. Truman has tried it.

Something was accomplished from all these efforts but never a completed whole—or even a proximation of it. Congress has always been the stumbling block. However, today Congress is alive to the problem, as witness this Commission, which acts at the initiative of the Congress by unanimous vote and reports to the Congress. This time it is not an administrative action.

Question. How long do you think it will take for this program really to become operative? Do you look for action on it piecemeal?

Answer. It would have to be more or less piecemeal. We have before the Congress the new organization of the military departments. That goes a great deal further than advancing consolidation. It goes right to the roots of their accounting, their budgeting, their procurement, and other fundamentals. That bill has been reported out of the Armed Services Committee in the Senate. We hope it will be adopted by the Congress. That covers one-third of our problem and probably half the waste.

Then we hope that the Congress will take up the housekeeping legislation. That is the root of the whole administrative reform. From it Congress for the first time will be able to get an understanding of what these expenditures are for. Without these housekeeping reforms, there is no hope of economy in the Government.

CONFUSING EXPENSE AND CAPITAL

Question. Is there any way in which the budget would be separated into current operating and capital expenditures?

Answer. We recommend strongly that capital expenditures should be set up entirely separately from operating expenses and of course set out in the budget report to the Congress. That has never been done. There is a total confusion of operating expense with capital expense all over the Government.

Question. Would you charge interest on those capital outlays?

Answer. No. The Government doesn't have to pay itself interest. Of course, if the capital outlay was for earning purposes it should be charged with interest.

One of the novelties of this Government is the fact that a lot of Government corporations have invested their capital in Government bonds, and the net result is that the Government is paying interest to itself. As a matter of fact, they are using that interest to cover part of their expenditures.

Question. What opportunities have you had to gather the feeling or impression of the attitude of Congress—individual Members, that is? Have you talked with many of them about the plans so far? What reaction do you get from Congress about your proposals?

Answer. I've never seen Congress more enthusiastic about anything than this. Most Members consider this Commission their creation. There are the two Committees on Executive Expenditures and they have been especially interested in administrative organization. There is already some legislative accomplishment. But these little vested interests all over the country—every Congressman has one or two of them in his district, and his pressures are for all parts of our plan except the ones affecting those groups.

HOW THE TASK WAS DONE

Question. How did your Commission go about the task of investigating all these Federal functions and agencies?

Answers. The departure of this investigation from all investigations made hitherto was in what we call the task forces. I set up some 24 task forces appointed from independent citizens who had some knowledge of the special problems. For accounting, we set up a group of leading accountants who were familiar with the Government. The task forces were instructed to engage whatever research staff they required and to take a whole year to do the job if necessary. They worked magnificently.

Question. Without pay?

Answer. None of the members of task forces received pay. They did have a paid research staff. We did contract certain jobs to firms whose profession was such investigations. Our task forces brought in a series of reports that were absolutely uninhibited by politics or prejudice or anything else.

All investigations hitherto have been made by hiring mostly research people. We added strength to research by groups of citizens of judgment. They were objective-minded men. One reason why I believe the armed services' organization bill will be enacted is because of the strength of that task force in their evidences to the Congress.

Question. Consisting of people outside the armed services?

Answer. That's right. Ferdinand Eberstadt was the chairman, and that task force included 14 of the ablest citizens you could find in the United States, every one of whom had had contact with war activities of the Government. They were all independent men, none of them in the Government, and they had the best of military advice.

Question. The reorganization bills now before Congress authorize the President to make certain changes by Executive order, which Congress then could veto. Will most of your proposals have to be effected in that way?

Answer. No. There is some illusion about that authority. That authority of the President has practical application in rather a limited sphere. Every one of our major recommendations will require additional legislation beyond what the President can do under those powers. But the President should have those powers.

Question. There is not a great deal of your program, then, that could be carried out in that way?

Answer. No. For instance, in the Post Office—I don't think there is a single one of our recommendations that the President could effect under the powers of that bill.

It is an entirely new set-up from top to bottom that is required in the Post Office. We recommend that the whole postal administration, under the Postmaster General, be placed in a Director of Posts—a permanent official, if possible. We recommend that Congress do away with all the other Senate confirmations in the Post Office—postmasters et al.—so that a boy could rise from being an office boy in Podunk to being postmaster in Chicago, if he was good enough. Those are authorities greater than the President would have under the general bill now in Congress. But that bill is also necessary as a method of giving initiative to many other parts of our recommendations.

Question. How about this problem of appointments to office? Won't we be dependent in the future, as in the past, on the quality of particular appointees?

Answer. Everything depends upon the quality of men that administer the Government. On the other hand, the very best quality of men cannot adequately administer many functions of the Government with the machinery that exists today. Our object was to set up a mechanism by which, if we got good men, they could do a good job.

DEFENSE CHIEF'S HOPELESS JOB

Question. That is, the plan wouldn't assure good men, but good men would make the plan work?

Answer. Good men could make it work, and they can't make large parts of it work now. I defy any man, as Secretary of Defense, to make that Department operate economically or efficiently under the present law and the present set-up. It certainly exhausted one good man trying to do it.

Question. Have you talked this whole thing over at any length with the President?

Answer. Many times.

Question. Is he favorable to it?

Answer. He is very favorable to our plans generally. I do not wish to commit him on particulars.

Question. Isn't an aroused, supporting public opinion the only thing that will put this plan over

Answer. That is exactly right. If the public insists and demands it, then the plans will be realized.

Question. What is the principal obstacle in reorganizing the Government?

Answer. The barriers are that everybody wants to reorganize everybody else in the United States, but he wants to be left alone himself.

Question. That is, the bureaus?

Answer. Not only the bureaus but all their affiliated associations throughout the country. Every one of these bureaus has the backing of some sort of citizens association whose interests lie in promoting it.

Question. Friends or relatives, or those they do favors for?

Answer. No; not that. For example, we have the bankers who are naturally interested in the conduct of the various financial concerns in the Government. Those agencies in some cases are able to command the propaganda activities of the American Bankers Association. There are the Army engineers, with efficient citizens organizations advocating flood-control projects. The Reclamation Bureau has citizens associations. The Forest Service has active citizens associations. All they have to do is to turn on these associations when changes are prepared.

Question. You mean that they can bring pressure to bear on Congress?

Answer. We have a vivid example of it: One Senator alone received 2,000 telegrams of protest on the suspicion that we might suggest consolidating the construction agencies of the Government into one place, which would mean transferring the flood-control and river and harbor construction from the War Department.

Question. Those pressures are growing, not receding, are they not?

Answer. Some of our leading citizens, as counteraction, started an organization to support the Commission's reports. That's something the country has never had before on any of the proposed reorganizations.

Question. You mean an organization that is interested in the principles of reorganization solely, without any selfish interest attached to it?

Answer. Exactly. President Johnson, of Temple University, has accepted the chairmanship of the most impressive body of important citizens that has ever been put together. It is absolutely nonpartisan, as witness former Vice President John Garner on one side and General Dawes, former Vice President, on the other. It includes five former members of Democratic Cabinets and five members of former Republican Cabinets. It embraces the heads of the labor organizations, the farm organizations, chambers of commerce, tax associations, women's clubs, universities, publishers, and many others.

COMMISSION'S 500 AIDES

Question. How many people would you say have been engaged in the work of the Commission?

Answer. Well, there are about 300 members of the task forces, and then there were the research people—I would say about another 200.

Question. Of the $3,000,000,000 that you estimated could be saved, is there any substantial part that could be effected through the exercise by the President of the power that he would be given under the reorganization bills?

Answer. Yes; a very considerable amount could be saved that way, because he would have authority to consolidate functions, do away with overlap and duplication, and abolish the unnecessary bureaus.

Question. So we could get some substantial economy fairly soon?

Answer. Yes.

Question. Wouldn't you say a good deal of the difficulty today is the aftermath of war and war operations in Government?

Answer. Obviously the tremendous growth of the Government had a good part due to war. Nobody would deny that fact. We have all of the additional obligations that were created in the war itself; some of them we never can get rid of. Under the most drastic hope and expectation I wouldn't expect to see the budget again below $25,000,000,000.

Question. The Government never stops growing, does it?

Answer. Well, a bureau's or a government's function is like some kinds of vegetable. They grow up little sprouts all around themselves.

Question. Can you summarize briefly just what your Commission has tried to accomplish?

Answer. The executive agencies have grown up like a series of lean-tos all around the President's power. There is no specific constitutional authority for any department of the Government. Therefore, the whole mechanism is a series of accretions from 160 years of congressional and administrative actions, with not effective plan.

As I said, we have divided the problem into housekeeping problems which apply to all agencies, and into the departmental organizations. As to the latter, we propose to divide their activities effectively into a specific major purpose—a definite mission to each major agency. That idea is not new, but it has never been properly carried out. Today agencies of the same major purpose are scattered over many departments with much overlap and waste. Different purposes are all mixed up as you know.

Question. Have you drawn new lines of authority for the executive arm?

Answer. We established two ideas. One of them is the descent of authority. In the congressional set-up over the years there has been great encroachment into the executive authority. There are some 37 bureaus or commissions in the Government that are presumed to have authority independent of the President.

No doubt they usually would comply with the direction of the President, but they don't have to, at least in their own view. Therefore, we have set up a thesis that we must have a descent of authority, from the President down to the last office boy. Also, we established the idea of an ascent of complete responsibility from the office boy back up to the President.

Question. So that the President would become, in fact, the administrative head of the Government?

Answer. Yes. Under our proposals the President would sit at the top of an administrative staff of some 22 or 23 men with definite steps in delegation of authority.

Question. Do you think we are going to get more centralized power in the Presidency as a result of this?

Answer. No; probably less. We are here considering administrative authority, not political power. It puts him in authority as definite as the president of a corporation vis-a-vis his board of directors, which is the Congress. That is a thoroughly American concept.

Question. His Cabinet would not be the board of directors, then? They would be his agents?

Answer. His Cabinet are in fact his operating vice presidents. They always have been, as a matter of fact. There is no joint responsibility in the American Cabinet.

NO SUBSTITUTE PRESIDENT

Question. Is there any provision for an Executive Vice President, a No. 2 man, in that proposal?

Answer. Before I answer that, I must state that we propose the President should have a capable staff to advise him about policies and one kind of routine or another. But the staff shall have no administrative authority whatever. We are very explicit about that.

The administrative authority should be delegated to the heads of operating agencies. The budget, for instance, is a staff operation of the President's. We object to having any administrative authority in any of those staff agencies. Then we propose to set up each one of the heads in the larger agencies likewise with a staff which has no administrative authority. For instance, we want to set up a budget officer, a personnel officer, a procurement officer, and a publications officer on the staff of each of the important agencies, and we want corresponding men to most of them on the President's staff.

Question. You wouldn't get a No. 2 Executive Vice President who would be familiar with this work, in case anything happened to the President?

Answer. You cannot place any official between your President and these 22 or 23 operating heads of important agencies. That just isn't feasible. They will not accept any such relationship. The President must be able to operate directly with them. An elected officer injected between the President and the Cabinet officers and heads of important agencies would only produce chaos.

Question. The functions of the Vice President would not be changed under this plan?

Answer. No; we haven't made any suggestions about it. We have discussed at great length the idea that the Vice President could be used by the President for special missions. The President, to determine policy, must always assemble temporary bodies of one kind or another, citizens or otherwise, for advice and important other functions. The Vice President might well preside over those groups.

Question. A major purpose of all this, I suppose, is to get efficiency and economy at the same time. Is that right?

Answer. That's right. And a better relationship between the citizen and the Government—to simplify that relationship wherever we can.

Question. At any rate, you are getting a chance to use your talents as a former President. Is there something you could recommend for former Presidents?

Answer. Well, at one time I had hopes that my exclusive Trade Union of Former Presidents would double its membership. Then we could have had more influence on, say, Congress. It looks as if that project has disappeared.

Question. It has been suggested from time to time that former Presidents might go to the Senate. What do you think of that?

Answer. I don't think it would do any harm. I think it would do good. I don't want to go there at my time of life, but I think, as an addition to the efficiency of the Government, it would be greatly worth while for the future. Any former President carries a lot of seasoned experience which would aid the legislative side. It would be a good thing to do.

Question. Could that be done with our Constitution?

Answer. I understand it could be done by statutory law, provided the former President had no vote. He could have the privilege of debate, office assistants, and a salary.

Question. What is this recipe that you have for looking as well as you do, working as hard as you do, at your age? All of us would like to be your age some day. You look as young as you did 10 years ago. How is it done?

Answer. By living a life as near perfect rectitude as the limitations of mankind permit.

UNIVERSITY OF MICHIGAN LIBRARIES

Horse-and-Buggy Voting

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, at the opening of this first session of the Eighty-first Congress, I introduced H. R. 37, a bill to provide for the procurement and installation of mechanism for recording and counting votes in the House of Representatives. So far, no hearing has been scheduled on this bill by the Committee on House Administration, although we soon are to see the start of work to remodel the House Chamber and so plans for installing a voting machine could be more easily and more economically made now than later.

Under leave to extend my remarks, I would like to include this article from the Philadelphia Evening Bulletin, headed "Horse-and-buggy voting still looks best to Congress":

WASHINGTON, May 24.—Congress will install air conditioning, loud-speakers, and noise-absorbing walls when it remodels the House and Senate Chambers, but in one respect it refuses to modernize.

It has no plans afoot to install push-button voting.

Twenty State legislatures are more modern than Congress on this point.

The tedious system of calling the roll will continue to be slow and to color the process of lawmaking in Washington.

Voting-machine salesmen have figured out that Congressmen spend as much as 42 days of a session simply waiting around to answer roll calls.

With the machines, a push on a button would light up green (for yes) or red (for no) lamps on the roll-call boards.

REAL ADVANTAGE

The real advantage of a voting machine for a large legislative assembly is that it changes the system of lawmaking. Lawmakers become more responsive to issues and less under the thumb of little bosses.

Everybody votes on everything. It's no trouble at all to vote.

The present leadership system in Congress and most legislatures has grown up around the idea of subjecting the rank and file of Members to as few roll calls as possible. Committee judgments on points in bills are accepted whenever an appeal to the whole House or Senate might be resented as dilatory, embarrassing, or obstructive.

On the floor of the House bills are considered in Committee of the Whole, and questions are settled by voice vote, by show of hands, or by teller vote in which Congressmen line up to be counted as they march past tellers.

PURPOSE OF ROLL CALLS

Individual views do not show up when questions are settled this way. As a result, formal roll calls in many instances only reflect the desire of one group in Congress to put another group on record with respect to some particularly controversial point. Individual judgments on other points, and often on the fate of the bill itself, are lost in mass voting.

Congress is full of people who wield influence because they have become adept at maneuvering to get roll calls which embarrass their opponents, and to avoid roll calls which might embarrass their friends.

Steering a bill through Congress is a game of strategy and compromise to avoid a roll call if possible, and to have it on a favorable point if a roll call becomes necessary.

Much of this hocus-pocus goes out the window when a voting machine is introduced. Every point can be settled so readily by a record vote that lawmakers become less afraid of voting. They cast so many votes their chances of being misunderstood on one or two are much reduced.

Herman W. Steinkraus

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting the following article from the Nation's Business concerning my good friend, Herman W. Steinkraus, of Westport, Conn., and his recent election as president of the Chamber of Commerce of the United States. Herman Steinkraus is a distinguished symbol of American self-reliance, resourcefulness, and imagination. He is a credit to the town of Westport, to the State of Connecticut, and to the Nation. He will, I know, be a dynamic and constructive president of the chamber. The American people are fortunate that a man of the high caliber and tested ability of Herman Steinkraus is available for such an important post at such a difficult and challenging time.

THE CHAMBER'S NEW PRESIDENT
(By Norman Kuhne)

One of the attributes of men who are leaders is that they arouse strong partisanship. The devotion of their followers is matched only by the antagonism of their adversaries. Herman W. Steinkraus, new president of the Chamber of Commerce of the United States, is no exception.

In Connecticut, where he lives and heads the Bridgeport Brass Co. as president and chairman of the board, some men call him too liberal. Others insist that he's a dyed-in-the-wool reactionary. Although he dislikes labels, this divided opinion convinces Steinkraus that he's effectively pursuing a course of independent action on controversial economic and social issues.

It is evidence, too, that the chamber's new president follows the course he recommends for all businessmen: "Participate in public affairs." Persons who avoid the firing line are seldom shot at.

His own willingness to march toward the sound of the cannon stems from a basic philosophy which he summed up in a recent address:

"We may as well accept the fact that Government is going to play a larger part in business in the future.

"The reason is that the American people have changed. They have begun to look to Government to do more and more for them in connection with such matters as labor-management relations, antitrust actions, and measures to protect the public interest. Government has gone into these fields because of a changing social concept on the part of the American people, and there is no indication that they want history to turn backward in this respect.

"Therefore the only intelligent plan is for businessmen to become much more active in governmental affairs themselves. If they don't, they will see actions taken which may not be to the best interests of the country, and which could have been avoided if they had been there to express their views."

Spelling out this idea, Steinkraus maintains that the continued well-being of private enterprise in the United States depends on its ability to produce ideas and sell itself as well as to produce and sell goods and services. Only to the extent that it effectively can marshal an enlightened public opinion in support of a free economy and free institutions can business stem the rise of a welfare state.

This philosophy is more than a theory applicable in some vague way to that amorphous entity called business as a whole. It is a practical plan of action for individual companies that Bridgeport Brass has used with good results.

The first place where business can clear up misconceptions and develop a better understanding of the profit system is right at home. At the brass company, Steinkraus has organized a system which transmits all pertinent information about corporation policies and operations directly to the full working force. The various echelons, from senior executives to shop foremen, have regular meetings of their own associations to keep abreast of goings-on. A president's letter goes to workers and their families when there are news-worthy developments to report. Steinkraus believes that all his employees should know about company affairs without having to learn about them from the newspapers or back-fence gossip.

All of this to Steinkraus represents good business practice—no more, no less. He sees industry as a team, of which all members have a common objective of maximum production for a high standard of living and a fruitful life. A quarterback can't expect to score touchdowns if he withholds the signals from his linemen.

The same goes for the other tenets of his philosophy that have been translated into practical accomplishments. In addition to its obligation to make a fair profit for its owners a company must provide a decent place to work, at steady jobs and at good pay. It also must do its part to make the community a better place for people to live, and can do so with full appreciation of dollars-and-cents cost accounting.

In 1947, the Bridgeport Brass Co. wanted to provide better recreational facilities for its workers but lacked suitable space. The company worked out an arrangement to acquire, modernize, and equip an old National Guard armory as a community center.

As a result, the workers got a recreational program, the community got a needed improvement, the company reaped a bonus of good will and, from rentals for various events, the project is self-supporting and self-liquidating. Some who scoffed at Steinkraus for investing company money in the project now admit that they wish they had thought of the idea themselves.

Steinkraus got his introduction to labor-management relations—a field in which he has subsequently achieved considerable national prominence—by accident.

That was in the thirties.

A new collective-bargaining agreement was being negotiated. The company president was ill and Steinkraus, then sales vice president, was assigned overnight as a substitute.

His qualifications, if any, consisted of having been born into a family of music lovers—first requisite for musical appreciation is ability to listen.

Steinkraus bolstered this natural talent by reading pertinent books on labor relations and talking to as many people as possible. Then he went to the bargaining table.

Union leaders generally are allergic to industrialists and those in Bridgeport are no exceptions. But at that meeting and since, they found that they could get along with Steinkraus. "He is fair," they say, "and he keeps his word."

As a result, the company has never had a strike or work stoppage, although for a number of years it had to bargain with a left-wing-dominated union and Steinkraus has never yielded his right to criticize what he regards as union weaknesses. He has gone on record many times that unions—because of an understandable desire to perpetuate themselves and build membership—frequently fail the best interests of workers in individual industries and plants. In his own company he believes in fair treatment for labor, and insists on the same from labor, in turn. That theory summarizes his philosophy of industrial relations—that labor and management have a mutual interest, and that both achieve their greatest prosperity by working together on the basis of fair dealings along a two-way street.

WORKED THROUGH SCHOOL

Steinkraus was born in Cleveland, Ohio, on December 16, 1890. He attended the local public schools and was graduated from Western Reserve University, with honors, but no very clear idea of what he planned to do for a living except that he wanted a job in which he could deal with people.

In working his way through school he had sold everything from newspapers to textbooks and liked selling. He served for a time as assistant secretary of the Cleveland Advertising Club, and later with the Cleveland Chamber of Commerce. Then he joined the staff of the Osborn Manufacturing Co., makers of machinery and industrial brushes.

A personal encounter with prejudice, rooted in hearsay, has given Steinkraus an abiding determination to act only on the basis of facts and on insight into the real need for tolerance.

Both of his parents had been born in Germany. Although they had emigrated to the United States because of their dislike of Prussianism, they maintained a continuing interest in their native land and the elder Steinkraus subscribed to a number of German periodicals. When, at the beginning of World War I, young Herman, with some of his college classmates, applied for officers' training he was shocked to learn that his family was said to be pro-German, and that he was considered, therefore, a bad risk for a commission. He enlisted as a private—within a week was promoted to sergeant because he had a good knowledge of military drill acquired as a member of an athletic club. But he had to prove his right to his stripes with boxing gloves when another NCO disputed the ability of a 1-week recruit to handle a platoon. Steinkraus won—and still attributes the victory to a lucky punch.

He served overseas, subsequently rose to captain, and won the Distinguished Service Cross for valor in action in Bois-de-Batheville.

HE LIKES SELLING

After the war he returned to Osborn as a special assistant to the president. But the urge to sell still was with him and, when he asked for a change of assignment, he was offered the post of sales manager. He realized, however, that he would be inviting trouble from the older men working under him if he took the job without a better grounding. So he went on the road to learn the practical problems that confronted the men he would direct.

Later he took the sales managership but the taste of competitive selling had cultivated a yen to go into business for himself. In the twenties he made the break, and established his own sales and warehousing organization to serve as agents for certain manufacturers.

One of the lines he wanted to handle was nonferrous metals. Since he had no choice, he consulted a manufacturers' directory to find a company in this field that was unrepresented in Cleveland. He came up with the Bridgeport Brass Co. His first letters relative to this account brought no action so he took a train to Bridgeport and got an interview with the sales manager.

"What do you know about the brass business?"

"Nothing, except the customers," Steinkraus said. He urged that he could learn the brass business faster than a man unknown in the Cleveland area could develop a following among customers. He got the account.

At that time the refrigerator industry was beginning to bud in Ohio, and Steinkraus soon developed such a substantial volume of business from it that the brass company began to worry about his commissions. It asked him to come on the pay roll instead. The company, at that time, was having its own troubles at the management level, and Steinkraus, although he had promised himself and his family never to work for anyone else again, faced a dilemma. If the company's management problems caused him to lose the account, he wouldn't have much of a business of his own.

He moved to Bridgeport as vice president in charge of sales.

He discovered that his own Cleveland agency had been producing a substantial part of the company's total sales volume. He also found there were many territories in which the company was making no sales because of freight charges, and that much of the company's productive capacity was unused.

Unraveling this tangle further, he discovered that, if output were increased, overhead could be reduced sufficiently so that the company could absorb freight charges and enter the untapped markets throughout the country. This it did.

The sales chart vindicated his judgment. Since Steinkraus has been with the company, sales have gone from $7,000,000 to $75,000,000.

He was elected company president in 1942—at the peak of the war-production drive. Bridgeport Brass earned the Army-Navy E award, with five stars.

In company affairs, as in most things, Steinkraus is something of a perfectionist. He dislikes a job that is only good enough to get by and occasionally has hurt the feelings of his associates by taking them to task for producing less than the best, yet these associates are willing to concede that Steinkraus sets the same standard for himself, and Steinkraus, in turn, is willing to concede that he often is too blunt.

GOOD PLACE TO WORK

Basically, this quality comes from a desire that anything he is associated with be good. One day a remark disturbed him. Someone had said, "People used to say they were proud that they worked at the brass shop. They don't say so now."

His investigation to find out why ended unexpectedly in the washrooms. The company's sanitary facilities had been neglected and conditions were indescribably bad. Factory gates were forbidding and some men said they felt as if they were entering a prison when going to work. These and other bad working conditions were corrected and today the company has an excellent standing with the workers.

Steinkraus credits his Old World heritage for some of the characteristics and the talents that have been useful to him in business and in living. His early religious training may be responsible for his feeling of kinship with others and for his integrity in human relations. Two brothers are clergymen and he himself once considered the ministry. But, with a highly developed sense of the practical, Steinkraus can say, with a chuckle, "It's sort of a shame my brothers didn't go into business. Both have good heads for it."

In his own home, Steinkraus has maintained the family musical traditions. Mrs. Steinkraus (nee Gladys Tibbetts), the daughter of a New England colonial family, whom he married in 1919, is an accomplished musician. His daughter, Ruth, a Vassar graduate, hopes to be a concert pianist. Marjorie, a Stevens graduate, works on a column for a west coast newspaper. His son, William, a Yale man, plays the viola in the Connecticut Symphony Orchestra, an organization which Steinkraus helped found.

Steinkraus is of medium height, with blue eyes and receding gray hair. His trim figure and his energy belie his 58 years. He dresses conservatively, usually in dark suits, wears horn-rimmed glasses, which he takes off and uses to punctuate his conversation when enthusiastic about some subject.

He is an ardent fisherman. His treasured Waltoniana includes some items which reveal his sense of the ridiculous. One of his trophies is a mounted sailfish of minnow dimensions. Another is a photo of himself alongside a prize swordfish which he confesses with a chuckle ("but don't tell my friends") came from the shops of an obliging taxidermist.

Despite his devotion as a family man and his frequent attendance at the Christ and Holy Trinity Church, his associates describe Steinkraus as an amiable companion at stag affairs. He takes a drink or two but self-discipline stops him short of the point of joining the boys in a barroom version of Sweet Adeline. The more accomplished elbow benders among his cronies deplore this restraint because they say that Steinkraus has a good singing voice.

Although he is thankful for his Old World heritage, Steinkraus in every way typifies the spirit of the New World, both in idea and in accomplishment. He is frank to admit that it's useless to deplore the passing of the "good old days," and in some respects believes that we are well done with them. The open-shop attitude of some employers, the idea that a corporation should withhold information about its affairs, that business could grow healthy with a caveat emptor philosophy properly belong to the past, not the present. At the same time, Steinkraus is concerned about too much reliance on Government for things that were formerly accomplished by individual initiative. Although he is active in, and highly respected in, such organizations as the Amercan Legion and the Veterans of Foreign Wars, he disagrees with these groups in their stands for bonuses and pensions. He stands against Federal aid to education and compulsory health insurance.

CRITIC OF SELFISH INTERESTS

Steinkraus is equally critical of businessmen who are beholden to Government for selfish interests and is as outspoken against corporate groups that play "footie" with Uncle Sam for the sake of their Government contracts or subsidies as he is against racketeering labor leaders or citizens with a give-me psychology. In terms of the organizational operations of the Chamber of Commerce of the United States, Herman W. Steinkraus assumes the presidency well equipped to make the world's foremost business organization a more effective instrument in the councils of the Nation.

Early in his career he learned the practical problems of the chamber executive from his own work in Cleveland, and he has seen the chamber movement as a member in Bridgeport. Nationally, he has been a member of the board of directors for 6 years, and

UNIVERSITY OF MICHIGAN LIBRARIES

a vice president for 2 years. On numerous occasions he has represented the chamber as a witness before congressional committees. Recently, when he testified on proposed changes in the labor laws, his presentation was praised by members of both parties for its fairness and eloquence. Though not an orator of the old school, he acquits himself ably in debate and on the speakers' platform.

Asked to comment on the election of Steinkraus to the presidency of the chamber, one of his competitors said, "Steinkraus is going to make you a good president, or die in the attempt—and that d—— Dutchman—well, he's just too stubborn even to say die when there's a job to be done."

World Government

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. BENNETT of Florida. Mr. Speaker, I have today introduced a resolution to define the policy of the United States with regard to the United Nations and with regard to world government. Perhaps this resolution is identical in spirit with ones introduced today by other Members of Congress, but I have felt very deeply that some of the language which I have included should not be omitted. The resolution which I have introduced provides:

(1) That is is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations: (2) that by constitutional convention or by action of the Congress an amendment to the Constitution of the United States should be drafted, debated, and considered for adoption whereby the United States Government can be given specific authority to participate in a world federal government, limited as hereinafter described, to be created by amendment to the United Nations Charter or by a world constitutional convention; and (3) that the powers of such world government should be limited to preserving peace and preventing aggression through the enactment and interpretation of world law, and enforcement thereof by a world police force and other appropriate means.

I have also introduced today a proposed constitutional amendment in the following terms:

The United States Government may participate in a world federal government to enact and interpret world law and to enforce such law by a world police force and other appropriate means, provided that the powers of such world government be limited to the prevention of war and of international aggression, and provided that two-thirds of each House of the Congress of the United States approve the constitution of such limited world government.

An amendment to the constitution of such a world government shall not be binding on the United States if, it increases the limited powers herein specified or if it has not been approved by two-thirds of each House of the Congress of the United States.

Resurgence of German Nationalism

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. JAVITS. Mr. Speaker, I have called to the attention of the House on many occasions before the critically dangerous drive toward nationalism in Germany and the resurgence of Nazi activities there. We now hear reports that this is being made a calculated policy of the Communists in eastern Germany. Let those who once deluded themselves with the idea of making a revived Germany a barrier between east and west delude themselves no longer. On the contrary the German lust for aggression could, if we permit it, lead again, as it has before, to the fatal cataclysm of aggressive war alone or with allies of opportunism. I append hereto a news story which appeared in the New York Times on Sunday, June 5, emphasizing this danger:

"NATIONAL FRONT" IN GERMANY NOW PUSHED BY COMINFORM—DIRECTORS FOR NEW PARTY TACTICS CALL FOR COALESCENCE OF ALL FACTIONS AND GREATER COMMERCE BETWEEN EAST AND WEST

(By C. L. Sulzberger)

PARIS, June 4—Instructions now have been issued by the Communist Information Bureau to international Communist parties of the world to work for the creation of a "national front" in Germany and to seek to facilitate the expansion of commercial relationships between that occupied country and Soviet-controlled eastern Europe.

This confirms suspicions of western diplomats that Moscow's primary objective in lifting the Berlin blockade and agreeing to the Council of Foreign Ministers meeting was to develop east-west trade.

One may presume not only that Soviet Foreign Minister Andrei Y. Vishinsky will gradually develop this strategy during the ensuing council meetings, but that Deputy Premier Georgi M. Malenkov is laying down a similar line to the current Cominform gathering at Prague.

The new party line has been developed through the Cominform journal, For a Lasting Peace, for a Peoples' Democracy, which is published in Bucharest. In the June 1 issue, this paper publishes an article by Otto Grotewohl, cochairman of the Communist-controlled Socialist Unity Party of Germany.

Politically Herr Grotewohl informs world communism through the Cominform journal that the old tactic of seeking to obtain political control through a Communist bloc has been terminated. The Stalinist tactic is now to work for a "national front."

This paper is the propaganda and agitation bible of world communism and its line is official—and "permanent until changed."

Herr Grotewohl discloses the Soviet Union's real objective at the council meeting by saying: "Economic unity is imperative if the country's (Germany's) productive forces are to be fully utilized * * *.

"German industry also needs a market and the abolition of restrictions on German exports. In this respect the strengthening of trade relations with eastern and southeastern Europe is particularly important for Germany."

Reading between the lines one deduces that eastern and southeastern Europe are likewise in need of western German exports and that Herr Grotewohl has been instructed to work to that end.

MORE TRADE WITH WEST SOUGHT

It is known that the Soviet 5-year plan is not working out according to schedule and that satellite states, such as Poland and Czechoslovakia, are in bad economic shape. They not only seek to obtain more trade with the west but even are hinting that they would like credits to facilitate purchases.

While the rudimentary elements of this switch in policy were unfolded for the benefit of the German people at the recent People's Congress, Herr Grotewohl now discloses how far communism is ready to make concessions to gather strength.

He writes that it is more important than ever to unite the people regardless of their party or social status for the struggle for a united Germany. The German People's Congress must become a large-scale mass movement.

By advocating a national front of this type, Communist leaders now are opening a way for the support of the well-to-do as well as the working classes and of all parties, apparently, including former Nazis.

In other words, after recent political failures in Germany, the Cominform has decided to try to re-create the old popular-front type of tactic employed during the 1930's but with a nationalist emphasis—something peculiarly appealing to the German mentality.

The cynicism of this temporary swerve in tactics—not objectives—is evident. Up to now, since the formation of the Cominform almost 2 years ago, only two types of political organization have been favored: People's democracy, and socialism, meaning the system applied in the U. S. S. R.

Marshal Tito still is being excoriated for allegedly using the people's or national front method.

One may speculate that officially, if not actually, Russia is abandoning temporarily its desire to prepare to establish a form of people's democracy in the eastern zone. Such a form would be the initial stage on the road to sovietization.

The official Russian periodical, Soviet State and Law, in its issue No. 1 for 1949 says:

"The Soviet state is a state of victorious socialism, which is building communism; the people's democratic state is at present in a transitional stage from capitalism to the socialist period. The people's democratic state and the Soviet state today are therefore states of the same type and between them is only a difference of degree in historical development."

It is evident that the Cominform now realizes that the position in Germany is such politically that all such ideology must momentarily be abandoned and camouflaged. The national front now being sought may in the end tend to develop certain chauvinistic (although non-racist) resemblances to another national movement that died May 8, 1945, called National Socialism.

Amendment to Antitrust Laws

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. MULTER. Mr. Speaker, I have today introduced a bill to amend the

antitrust laws so as to more clearly set forth the intent of Congress and in order to prevent evasions of the antitrust laws which have become rampant in recent years, particularly among exporters who are desirous of rebuilding European cartels.

In 1918 we enacted an amendment to the antitrust laws so as to put domestic exporters on an equal footing with foreign governments which controlled monopolies within their own countries and with those trusts in foreign countries which existed there by sanction of their own foreign governments.

In order to permit our domestic exporters to compete with those practices it was found necessary to permit them to combine their capital resources and trading facilities and exempt such combinations from prosecution under the antitrust laws.

It was never intended that such device should be used to throttle domestic competition or to prevent exporters who were not members of the combination from dealing in the same products with foreign trade.

In recent years in deliberate violation of the intent of the statute various industries, particularly in the chemical fields, have used the exemption granted them by the statute as an excuse to kill off all local competition. They thus effectively prevented any exporters who are not members of the combination from acquiring the combination's products.

My bill does not change the law but merely clarifies the statute so as to show that it was always the intent of Congress to prevent such nefarious practices.

The bill reads as follows:

A bill to amend the act entitled "An act to promote export trade, and for other purposes," approved April 10, 1918, to provide that no export trade association shall restrict any foreign buyer from dealing directly, or through an agent of his own selection, with any producer, manufacturer, or seller

Be it enacted, etc., That section 2 of the act entitled "An act to promote export trade, and for other purposes," approved April 10, 1918 (15 U. S. C., sec. 62), is hereby amended to read as follows:

"SEC. 2. Nothing contained in the act entitled 'An act to protect trade and commerce against unlawful restraints and monopolies,' approved July 2, 1890, as amended, shall be construed as declaring to be illegal an association entered into for the sole purpose of engaging in export trade and actually engaged solely in such export trade, or an agreement made or act done in the course of export trade by such association: *Provided*, That such association, agreement, or act is not in restraint of trade within the United States, and is not in restraint of the export trade of any domestic competitor of such association: *Provided further*, That such association does not, either in the United States or elsewhere, enter into any agreement, understanding, or conspiracy, or do any act (1) which artificially or intentionally enhances or depresses prices within the United States of commodities of the class exported by such association, (2) which substantially lessens competition within the United States or otherwise restrains trade therein, or (3) which in any manner prohibits, restricts, or impedes any foreign buyer from purchasing, negotiating purchases, or otherwise dealing directly, or through any agent of such buyer's own selection, with any person, firm, or corporation which mines, produces, manufactures, sells, or deals in goods, wares, or merchandise."

Mr. Speaker, I trust it will be promptly reported to the House for passage.

WLS Celebrates Its Twenty-fifth Anniversary

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. YATES. Mr. Speaker, a great public servant of Chicago and the Middle West, radio station WLS, the Prairie Farmer station, is observing its twenty-fifth anniversary. Throughout the past quarter century WLS has achieved a position of great esteem in the broadcasting industry. Much of this is due to its excellent pioneering efforts in the field of radio service to farmers. With its clear channel, WLS is able to reach out and cover vast farm areas and small towns which otherwise would have little or no radio service. WLS and the farmers of Illinois and other Middle Western States have become fast friends, for few stations, if any, can equal WLS in its service to rural America. As a Member of Congress from Chicago, I want to recognize another feature of excellence in the WLS operation. While devoting much time to farm programs, it has never once neglected its public service duties to the people of Chicago and vicinity, giving generously of its time and contributing the skill of its staff to a host of worthy programs and community projects so vital to that great metropolitan area. It is because of such stations as WLS that radio in the United States is without a peer in the world.

For 25 years WLS has been serving listeners in Midwest America. This stewardship of responsibility has been recognized by listeners, the radio industry, and the press. Here are but a few press comments about WLS as a station and its much-imitated national barn dance.

THE STATION

Congratulations to WLS on their continued public service to radio listeners. The station has long been well at the top in public favor. Its programs with their appeal to folks in both metropolitan and rural areas label WLS the true American station (Chicago Sun-Times).

WLS wants, tries, claims to be, and is the farmers' own station * * * sees as the farmer sees, feels as he feels. Dinner Bell Time is unquestionably the country's oldest and best-loved farm program. Farmers believe in WLS (Pageant magazine).

For the time of your life, dial WLS. This station has undoubtedly the most splendid array of artists ever grouped together. We agree, with numerous thousands of other people, that this crew puts on the best programs ever to emanate from a broadcasting studio, barring none (Wellston (Ohio) Sentinel).

Its success has been due largely to its policy of sticking to programs that make their appeal to what might be termed the "average" air audience—folks that like the old folk songs, clean humor, sentimental music and homey sketches (Billboard).

Listeners write to WLS as they would write to a friend or cousin (Read magazine).

WLS intended its service for the farmer, but the city people listened in, and liked it so well that something of an urban demand for farm music and farm humor has sprung up (Christian Science Monitor).

WLS a public servant in the Midwest (Time magazine).

THE NATIONAL BARN DANCE

A phenomenon in the brief perspective of radio history is the ever popular National Barn Dance * * * the barn dance typifies the success story of WLS (Life magazine).

Keynote of the program's widespread national popularity is that the music is truly representative of American life (Chicago Sun-Times).

The National Barn Dance originated by Station WLS in Chicago maintains perhaps a higher level of talent than any other (Facts magazine).

The patrons (at Eighth Street Theater) were folksy souls from the farm lands of Illinois and neighboring States (Chicago Herald-American).

Probably the closest that radio will ever get to authentic Americana is the National Barn Dance * * * a portrait of the rustic heart of America (Newsweek magazine).

From the first night the program was a sellout * * * barn dance fans are still flocking to the performances (Coronet magazine).

There are dozens of local barn dances, but the WLS National Barn Dance is the daddy of them all * * * a form of entertainment and humor which strikes a sentimental chord in every American heart (Read magazine).

The Housing Bill

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. JAVITS. Mr. Speaker, rarely has a measure had the widespread support which the housing bill waiting to receive consideration by the House now has; yet it is one of the major social derelictions of our time that this bill has not been passed as yet 4 years after the war.

I append hereto a statement by the board of christian education of the Presbyterian Church in the United States of America on this subject:

PHILADELPHIA, PA., *June 1, 1949.*

MY DEAR CONGRESSMAN: Below you will find a copy of the action of our national body on the subject of housing. This action was taken on May 25, 1949, at the regular meeting of the general assembly, Presbyterian Church, United States of America. This body is made up of over 800 commissioners representing about 8,500 churches throughout the United States.

Respectfully submitted.

FERN M. COLBORN,
Assistant Secretary, Division of Social Education and Action, Presbyterian Board of Christian Education, Presbyterian Church, U. S. A.

UNIVERSITY OF MICHIGAN LIBRARIES

STATEMENT ON HOUSING

Housing: The inability of private enterprise and the failure of our Government to provide adequate housing for our citizens has led to unhealthful conditions, broken homes, delinquency, and crime. Christian people are often unaware of the conditions under which others of their fellow citizens are forced to live. We recommend that our churches, in cooperation with other community agencies, conduct surveys of housing conditions in their own communities and initiate whatever steps may be necessary to stimulate private industry to develop housing for the families of lower middle income, and encourage local government authorities to proceed with a slum clearance and public-housing program for low-income families. We urge Congress to adopt legislation to provide a Federal housing and slum clearance program. We recommend that the general assembly communicate with the committees of Congress in charge of legislation securing these ends.

American Merchant Marine

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. BATTLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a statement made by Mr. Albert Stapp before the Merchant Marine and Fisheries Committee on May 31, 1949. Mr. Stapp made this statement for the American Legion as the national chairman of the legion's Merchant Marine Committee. Mr. Stapp is an outstanding citizen of Birmingham and has served ably as State commander of the American Legion of Alabama.

The statement follows:

Mr. Chairman and members of the committee; my name is Albert B. Stapp. I am chairman of the national merchant marine committee, national security commission, the American Legion. The American Legion represents more than 3,000,000 veterans and 1,000,000 women of the American Legion Auxiliary.

I am appearing in support of proposed legislation now before this committee.

The American merchant marine is no new found love of ours. The American Legion for many years has given attention to American shipping, realizing that it is an essential military auxiliary as well as a guaranty of economic security. When war came upon us in 1917, our Nation was unable to provide an adequate merchant fleet for military auxiliary purposes. We were dependent upon the merchant ships of other nations, but even these were not available in sufficient quantities for our commercial purposes alone. Only through a super-expensive shipbuilding program, could we meet our own demands. As a result of this lesson, Legionnaires throughout the years have urged upon the Congress the necessity for adopting a sound, well-rounded program of replacement in our merchant fleet.

Beginning with our national convention at Kansas City in 1921, and at 27 national American Legion conventions thereafter, we have continuously advocated the building, operation, and maintenance of a United States merchant marine adequate to meet the needs of the armed forces in time of war or national emergency, and to serve the commercial requirements of our Nation in time of peace.

It is noteworthy to look back over these national American Legion conventions to see how our recommendations have been consistent with the verdict of history.

The 1922 convention at New Orleans urged enactment of legislation to provide subsidies to the American merchant marine to overcome the disparity in operating costs with foreign competitors, as well as asking that at least 50 percent of the trade of this Nation be carried in American ships flying the American flag and manned by American officers and men.

The 1923 convention urged that "all practical steps be taken to build up the American merchant marine to a size commensurate with the size of the Navy and proportionate to the size and wealth of this Nation."

The 1927 convention in Paris, France, urged enactment of legislation to provide a merchant marine of proper strength to serve the requirements of our industry and agriculture, and at the same time be an auxiliary to our armed forces as a guaranty of peace.

In Boston in 1930, at Detroit in 1931, in St. Louis in 1935, the American Legion kept repeating its plea for a strong American merchant marine, as well as to urge all of its members to patronize ships of the United States merchant marine for the purpose of travel and trade.

The American Legion's continuous advocacy of a strong American merchant marine helped bring into being the Merchant Marine Act of 1936, often called the Magna Carta of the merchant marine. We have since continuously supported that act, feeling it to be the basis for our present day modern merchant fleet.

At the end of the war with Germany, and again after the defeat of Japan, the American Legion again recognized the indispensability and vital necessity of a strong merchant marine, and our organization declared:

"We demand the preservation of our American merchant marine as a vital arm of our national defense, to serve adequately the domestic and foreign commerce of the United States, and as a necessity in sustaining our greatly enlarged world responsibilities."

By 1946 it was apparent to the American Legion that all Americans should be made aware of the necessity for a strong American merchant marine. The national convention in 1946 at San Francisco instructed the national organization to carry on an informational program relative to the merchant marine and its importance to our national welfare.

Since that time by means of radio programs, booklets and other media of information, the national headquarters of the American Legion has carried out an extensive educational campaign to acquaint not only Legionnaires but all segments of the American public with the importance of our merchant marine. We think this informational and educational program has been outstandingly successful. We are proud to have been of such important service to our great Nation which, today, more than ever before, depends upon a strong and adequate American merchant marine.

By the time of our national convention held October 1948, in Miami, Fla., the following facts had become alarmingly apparent to the American Legion:

1. We are dangerously short of passenger ships, convertible to troop transports in event of emergency. Assuming another emergency of World War II proportions, it appears with the reconversion of all existing passenger and combination passenger-cargo ships, and with the utilization of the transports held by the armed services, our combined troop lifting capacity would fall short of the estimated military requirements by about one-half.

As an emergency measure this shortage could be partially met by the conversion of cargo ships. To those of us in the American Legion who were transported in World War II on slow and hastily converted vessels of this type, such a makeshift method is entirely unacceptable. The increased effectiveness of the latest submarines in itself would dictate against such utilizations in event of emergency.

2. Our domestic privately-owned dry cargo fleet, more than 400 ships in 1939 and always near at hand so they can be pressed into emergency service at once, has declined to about 75 such vessels today.

3. The amount of our own foreign trade carried in American merchant ships has been constantly decreasing since the end of World War II. The number of active merchant vessels have also decreased alarmingly. Until Congress acted with dispatch and emphasis, our Government appeared to be more desirous of sending ECA cargoes in foreign ships than in our own.

4. We have permitted our shipbuilding facilities to become depleted to the extent that a valuable nucleus of management and skills may not be available in event a major world emergency should bring its sudden and tremendous shipbuilding demands. Even with the order or construction of six new passenger vessels and a number of tankers, employees in our shipyards are below the minimum number estimated by our military forces as necessary for the nucleus which can be expanded in event of need.

5. Since the end of World War II, and until Congress prohibited our Government sold more than 1,100 of our war-built ships to foreign nations to help them rehabilitate their merchant fleets. At the same time our generosity in providing large quantities of our resources has enabled many of these same nations to carry on the large and expensive shipbuilding programs they now have under way.

6. We fought a world war and spent billions of dollars and thousands of lives to defeat our enemies, and yet we find an apparent willingness on the part of our Government to help reestablish the merchant fleets of our former enemies.

It has seemed to us in the American Legion that a Congress which has been so quick and so generous in helping foreign nations reestablish their merchant fleets, will not lose sight of the necessity for helping our own American merchant marine.

Cognizant of these and other detrimental factors to a strong and adequate merchant marine, the American Legion has put itself on record that our merchant marine be immediately developed to sustain the position of the United States in order that we may discharge our responsibility in world leadership.

We are confident that the present inadequacies in our merchant fleet can be corrected by a program of sufficient farsightedness, effectively designed to support in time of national emergency our armed forces, and to maintain our efforts to keep the peace.

The national merchant marine committee of the American Legion has examined the various long-range programs submitted to this committee in the form of proposed legislation. We are in accord with any program designed in the public interest. We have advocated such programs by resolutions adopted at many of the past national American Legion conventions.

The American Legion is not submitting a specific legislative program. It is our feeling that such a task is properly the responsibility of this committee of Congress, in whom we have the utmost confidence. We do believe in, however, and support, the legislative proposal now before you as being in the best interests of this Nation.

We feel this committee should approve this legislation. Upon enactment it will encourage private capital to enter into the construction, maintenance, and operation of United States merchant ships in both domestic and foreign commerce. We can then meet the national defense and economic security requirement of our Nation.

The American Legion has profited by the experiences of two great wars. We want no more taking of chances with our American merchant marine. We want the American flag to fly at the mastheads of the world's largest and finest fleet of merchant ships. We want a fleet of merchant ships to be used for commerce, and ready in time of national emergency to be auxiliary to our armed services. Nothing short of that is safe.

The American Legion relies upon this committee of Congress to approve legislation enabling this Nation to possess, operate, and maintain such an American merchant marine.

Tidelands Oil

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article by Harold L. Ickes which appeared in the New Republic for May 16, 1949:

TIDELANDS OIL

(By Harold L. Ickes)

There is a growing public interest in the proposal that this writer has been urging for some time, that the tidelands oil in California and elsewhere be used for the generally acknowledged need for Federal aid to education. On April 14 the General Assembly of the State of Rhode Island adopted resolution S. 94 "urging Congress to support the Ickes plan for a Federal educational trust to be administered in behalf of Federal aid to State education." At the direction of the General Assembly, the Honorable Armand H. Cote, secretary of state, has made me the proud possessor of a certified copy of this resolution.

It takes a long time for a new idea to incubate, but the action of the Rhode Island Legislature is not the first sign that the proposal to use for education the national wealth we have in our tidelands oil has met with approval. We have known that the foundation stone of our form of government is the widely diffused education of our citizens. But with taxes mounting in order to prepare for war and then to fight it, if it comes—to say nothing of healing the ravages of war and mending and pensioning its victims—the very States that contain the greater number of illiterates have been reluctant to tax themselves even for education. Of course it would be easy to slough off this obligation by saying that if the people of the State will not tax themselves for the maintenance of their schools, no obligation rests upon the Federal Government to make up the deficiency.

But would this be true? Should the Nation condemn millions of its citizens to an inadequate education, or to none at all, because certain States are so poor, or think they are, that they cannot raise by taxation the money necessary for better teachers and more adequate school facilities? My own answer is in the negative. I believe that where there is a case of clear inability to meet by local taxes the educational needs of any State, the Government should make up the difference. After all, it is as true of the Nation as it is of a machine that it is no stronger than the weakest of its parts. And no greater harm could threaten us than a creeping illiteracy, as the result of which we could not produce men for the professions, or to man machines, or take their place in time of war. No State should be allowed, by failing to tax itself to the fullest extent possible for educational purposes, to shirk a primary duty because it can look to the Federal Treasury to do for it what it will not do for itself. But it seems to me that, under a well-managed trusteeship, facts could not be hidden which would make it clear to what extent, if at all, a State needs outside help to make first-class citizens.

The resolution above referred to, by the General Assembly of Rhode Island, is not the only indication of an increasing interest in tidelands oil as a source of school revenue. As might have been expected, the aberrant Senator McCARRAN of Nevada has been pushing a bill to give title to the tidelands to the abutting States. Senator McCARRAN looks upon Federal property as something to give away to favored and prosperous friends. However, it seems to be a foregone conclusion that this is one foray in the accomplishment of which Senator McCARRAN will not be able to gratify his penchant for giving property belonging to all of the people to a favored few. And then there is the bill introduced with the approval of the Attorney General and the Secretary of the Interior. Its effect would be to give good Federal leases to the oil interests now holding bad State leases, without cost to them but at the expense of those applicants for tidelands leases who, in good faith, filed applications for leases in the belief that title to the tidelands was in the United States, just as the Supreme Court, in the California case, subsequently found it to be.

Middle ground in this interesting controversy, upon the happy solution of which the future of our schools may depend, has been taken by Representative CASE of South Dakota. It is the traditional compromise made by the husband when he yields to his wife's opposite point of view. CASE has introduced a bill which would appear, on its surface, to be a compromise but which in fact is no compromise at all. He proposes to establish a national reserve of the submerged lands from 1 mile offshore to the end of United States jurisdiction, which apparently would be to the edge of the Continental Shelf. But, within this 1-mile extension, the private companies could continue to extract Federal oil, apparently without compensation to the Government. With the shore line and an extension of 1 mile beyond in the hands of the States—and therefore of the private oil interests—how could the United States get at its oil beyond the proposed 1-mile extension? I am assuming that CASE, who is a reputable legislator, is proceeding in good faith in proposing such a solution, but I suspect that some practical oilman has bemused him.

CASE's bill further provides that the national reserves be divided among the school districts of the country. Apparently he is unaware of the frauds that have been committed in connection with prior grants of public lands to school districts. Millions upon millions of dollars that might have been used for educational purposes have been wasted or misappropriated. It has already been suggested that Congress order a comprehensive investigation of what has happened in the past to Federal grants for school purposes in the various States before considering a proposal that would probably mean more graft, more mismanagement, and more blatant knavery.

The Federal Government itself should take over and manage, as trustees, for the benefit of all of the schools of the country, in proportion to their needs, this rich treasure of oil that, in the California case, the Supreme Court has said belongs to all of the people.

Memorial Day Address

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include the speech I delivered at the annual Memorial Day exercises at Westboro, Mass., on May 30, 1949.

The address follows:

It is a real honor to join with you in these exercises of tribute to our war dead.

Since the Civil War, our people have set aside Memorial day to give homage to the memory of our departed heroes of all wars. On this day the American people are congregating in gatherings like this all over the Nation in remembrance of the sacrifice of the brave men whose blood has saturated battlefields in every part of the globe so that we might continue to breathe the clean air of freedom.

In our contemplation of their supreme sacrifice we are reminded of their love for the emblem of our freedom—Old Glory. Yes; the flag that floats from the flagpole today is practically the same flag over which the men in the blue and gray fought.

It is the same flag that flew with Washington's troops, when blood stained the snow at Valley Forge; the same flag that went with Jackson to New Orleans. It had fewer stars then, but it was the same Stars and Stripes. It was the same flag that went with Taylor and Scott to Mexico; the same flag that Grant raised at Appomattox. It is the flag that Dewey and Schley and Sampson flew over the Spanish possessions in 1898, and the same flag that Pershing carried to the shores of the Rhine.

This is the flag that the Marines raised on Iwo Jima, and the flag that went with Eisenhower to north Africa, to Normandy, and then across the Rhine, the flag that MacArthur raised again over the Philippines and which now flies in Japan. It has flown on all the seas of the earth and all the continents on the globe. With the help of God it will fly high forever over our land, signifying to our own and to all peoples everywhere, that freedom shall never die.

The lives of our departed heroes have served to shield, not only our own country, but the entire democratic peoples of the world.

By our presence here this morning we are availing ourselves of the patriotic privilege of rededicating our services to the United States, and what it stands for—freedom, justice, liberty, and democracy.

From time immemorial the human race has fought for liberty and freedom. However, it is in our own beloved country, thank God, that the greatest victory has been reached. Our Constitution, our principles of democracy, our representative form of government, reveal the highest achievement of individual dignity and liberty.

Persecuted peoples of every race and creed; from every nation in every corner of the globe have come to America to enjoy the fruits and blessings of a living democracy. It is these benefits and privileges that have

UNIVERSITY OF MICHIGAN LIBRARIES

been retained for us by the life blood of those who died in battle. We must not fail to preserve the glorious heritage they left to us.

This task calls for some sacrifices on our part but total sacrifice was the price our departed comrades paid for the security we now have.

To show real appreciation of their sacrifice supreme, we must make every day a remembrance day. When the heroes we honor this morning gave their lives for us, they also gave us the solemn obligation to keep America safe and the torch of freedom alight on this earth.

The challenge of this hour and time is the accomplishment of peace, in a confused and still war-weary world. The will of Divine Providence has placed upon America the responsibility of leadership. We have never failed in war and we must not fail in this crucial moment of our Nation's destiny.

We are not loath to deal in realities in time of war. When the perils of war surround us, when nations are engaged in mortal combat and men fight to kill, the purpose is clear and the issue is single. We must win the war; so much is certain, and that is sufficient to call forth the realism and summon the courage of an entire people.

But when the heat of battle is over there seems to arise an unwillingness to face the facts. With this unwillingness comes a human desire to accomplish, overnight, at a peace table, what has not yet been accomplished in all recorded history.

The problems of peace are equally as grim and urgent as the problems of war. If we do not remain alert to our duties, heroism gives way to lethargy, self-sacrifice to self-indulgence, and national pride to national indolence. Let us not abandon our efforts for peace, for if we do, we must inevitably accept the universal destruction of an atomic war.

At the same time, we must make it clear that we do not propose to stand by and see our war aims abandoned, small helpless nations overrun, American democracy challenged, freedom everywhere threatened with extinction.

We in America are not warmongers and we have never been militaristic, but we must remain strong and secure against the possibilities of aggression, either militaristic or ideological. America must be ready to meet every contingency. Our defense system, sustained always by the determination of our people and our great productive strength, must be maintained until we are able to prevail upon other nations to accept universal disarmament and judicial settlement of international disputes, as a substitute for the terrible destruction of war.

We cannot be blind to the fact that our country is gravely beset by threats of subversive movements. Subtle attacks, by propaganda, and campaigns designed to undermine the faith of our people, are being directed against our form of government, our economic and political systems, our educational system, our civil liberties and, yes, even our social and family life.

These same radical groups are endeavoring by various means to spread discontent among our veterans, but their efforts are doomed to failure. Those, who fought for America in war, will protect and preserve America in peace. They will assume the vigorous civil leadership in our communities which is vitally necessary to combat the activities of these subversive influences. Our veterans can be depended on to wage unceasing opposition to communistic movements because they, above all others, have sacrificed so much for liberty, dearly appraise its true value.

Our beloved country has been called to a position of leadership in this atomic age; a leadership that is economic, political, and social. In this position of leadership, we are faced with the responsibility of rebuilding bleeding, suffering humanity and advancing the peace of the world.

The greatest tribute we can realistically pay to our departed comrades is to meet that challenge with unflinching courage and purpose. Let us, with the help of Almighty God, carry on the work of preserving freedom here and throughout the world in order to insure that our heroic dead shall not have died in vain.

Statement by Dr. Paul J. Raver Before Senate Subcommittee on Appropriations

EXTENSION OF REMARKS
OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Dr. Paul J. Raver, Administrator, Bonneville Power Administration, before the Senate Subcommittee on Appropriations on June 4, 1949:

The House hearings covering the Interior Department appropriation bill for 1950 contain a statement by Mr. J. E. Corette, vice president, Montana Power Co., expressing the opposition of his company to the Interior Department's budget requests to provide certain power facilities in Montana. His statement, including the text of a prepared document, appears on pages 877 to 890, inclusive, of part 2 of the House hearings on the Interior Department's appropriation bill for 1950.

On the major points of issue, the testimony presented is so contrary to fact and so faulty as to lead to highly erroneous conclusions. Further, the testimony is refuted by recent engineering studies made by Ebasco Services, Inc., a subsidiary of the Electric Bond & Share Co. The Ebasco Services studies support the Administration's proposals for interconnecting Spokane, Hungry Horse, and Anaconda, Mont. If left unchallenged, the testimony of Mr. Corette could have a damaging effect on the Federal power program in the Northwest. The Bonneville Power Administration therefore feels obliged to submit for the record its analysis of the salient features of Mr. Corette's statement, insofar as it applies to the Administration's plans, correcting the statement where facts are concerned and pointing out unsupported or faulty conclusions.

Frequent reference will be made in this statement to the engineering report prepared by Ebasco Services, Inc., July 1948, entitled, "Transmission Interchange Capacity—Washington-Montana Areas." This report was prepared for the Washington Water Power Co. by Ebasco in collaboration with engineers of the Bonneville Power Administration, and engineers of the Pacific Power & Light Co., and of the Washington Water Power Co. The primary purpose of this Ebasco report is set forth in the first paragraph of the summary as follows:

"Primary purpose of this report is to present and analyze results of a network calculator study of transmission requirements between Washington and Montana under conditions of interchange that will permit maximum use of water storage facilities in the Northwest power pool. A secondary purpose is to investigate local transmission facilities in western Montana and eastern Washington as influenced by interchange requirements and peak-load demands in August and December of 1950 and 1953."

The Ebasco report supports the necessity of a high capacity transmission line from Spokane to Hungry Horse; and to Anaconda, Mont., where it would be interconnected with the Montana Power Co. system. The need for additional transmission capacity into the Anaconda area is evident from the following statement in the Ebasco report (pp. 27 and 28):

"At least one additional circuit south from Kerr will be required in December of 1953 to dispose of Hungry Horse generation. Under this condition, the single 154-kilovolt circuit now in service would carry a load of 90 megawatts. Even though such a load might be carried without exceeding thermal or steady-state stability limits, it appears that, from the standpoint of system reliability, another circuit should be added in order to protect power supply to the south at the time when all generation on the system is required to carry the load. In August of 1953 it might be practical to operate circuits nearer their thermal and steady-state limits because spare generating capacity would be available on the system. However, if maintenance schedules or other considerations appear to be limiting the amount of reserve available, then the problem of reliability would again indicate that additional transmission outlets from Kerr are required."

The Ebasco report also shows the desirability of interconnecting the 230,000-volt Spokane-Kerr line with the Montana system at Burke, Idaho, and Kerr Dam (calculating board studies Nos. 11 and 12 in the report).

The Ebasco report has a further statement on the need for additional transmission capacity into the Anaconda area, quoted as follows (p. A-57):

"In Montana the greatest portion of the system load is concentrated in the Anaconda area, and most of the power sources feed into Kerr so that an additional Kerr-Anaconda 220-kilovolt circuit is also required in order to prevent overloading of the existing 154-kilovolt line while making full use of the Washington-Montana 220-kilovolt line.

"It should be noted that with the assumed generating conditions of this study it would be necessary to load the existing Kerr-Missoula section beyond its thermal limit (approximately 180 kilovolt-amperes) if the additional Kerr-Anaconda line were not in service."

ANALYSIS OF STATEMENT OF J. E. CORETTE

Analysis of the testimony given by Mr. J. E. Corette before the House Interior Department Appropriations Committee is as follows:

Testimony, page 877: Submits book called Congress Should Not Build Unnecessary Power Lines—Facts Presented by the Montana Power Co., February 1949. Purpose of book is to support company's position that:

1. Spokane-Kerr-Anaconda transmission line and switching facilities should not be built;

2. Hungry Horse-Kerr No. 2 transmission line should not be built.

Comment: The administration disagrees with certain of the so-called "facts" presented by the Montana Power Co. to support its opposition to the building of the Federal transmission facilities in the company's territory. In this connection, the term "Spokane-Kerr-Anaconda" 230,000 volt transmission line is somewhat of a misnomer, although the Kerr Dam site has been used generally to indicate a point on the Spokane-Hungry Horse line at which switching would be installed for the branch to Anaconda. Actually, present plans indicate that this line will not come closer than 20 miles of Kerr Dam.

Testimony, page 877: "The basic reasons why these appropriations should not be granted are—

"(A) The territory to be served by each line already has an ample supply of power, and there is no reason to spend taxpayers' money to build lines into areas adequately served.

"(B) The appropriations requested by Bonneville Power Administration are to bring power into a surplus power area instead of making that power available in the Oregon-Washington area where street lights are out and people and industries are daily curtailing their use of power at great personal and financial sacrifice.

"(C) If Congress adopts the suggestions made in this presentation, it will save tens of millions of dollars of Federal taxpayers' money."

Comment: (A) Spokane-Hungry Horse and Kerr-Anaconda transmission lines and switching facilities must be built (a) to carry much needed power from Hungry Horse Dam to load centers in Oregon, Washington, and Montana; (b) to integrate power resources in Montana, Washington, and Oregon for the benefit of the whole region; (c) to permit the Government to realize on its investment in the Hungry Horse project which otherwise would be largely wasted. Elsewhere in his testimony, Mr. Corrette concedes that the Spokane-Hungry Horse line is required. The major argument in this respect is that the line should not be routed via Kerr Dam but, rather, via the proposed Libby Dam site. It is not our purpose to build the line via Kerr but rather, over the most feasible route taking into account present and future conditions. The route which will probably be used follows the course shown in budget presentation except that it will be some distance away from Kerr Dam (about 20 miles). This route is superior to the one proposed by Montana Power Co., as will be shown later.

(B) The charge, that the appropriations requested would be used to bring power into a surplus power area and deprive the power short area in Oregon and Washington, must refer to the Kerr-Anaconda line as the Spokane-Kerr-Hungry Horse line, or its equivalent, would obviously be needed to take Hungry Horse power into Oregon and Washington. Looking at the Kerr-Anaconda line, recognition must be given to conditions in 1952, not last year or this year, since the line will not be completed until late in 1952. By that time the Kerr-Anaconda line will be needed to serve loads in Montana. The Ebasco report previously referred to makes it very clear that this is the engineering judgment of those making this study. It should be observed that the Ebasco report does not take into account any major new industrial load such as the proposed phosphate development in the Anaconda area.

The Montana Power Co.'s proposal in effect would deprive western Montana of Hungry Horse power. On the contrary, we believe that western Montana has first claim to this power. Furthermore, economical marketing of Hungry Horse power requires that a substantial block be sold in western Montana.

(C) The statement that the Government will save tens of millions of dollars through omission of these facilities is wrong. The Spokane-Hungry Horse-Anaconda lines are necessary to supply the power requirements of the area and to integrate the power resources of the Northwest. The cost of these facilities will be repaid to the Government pursuant to law. In fact, the facilities will be unusually profitable to the Government since they will permit coordinated operation of Hungry Horse and other Government plants adding tremendously to the firm power capability of the Government's power system.

Testimony, page 878:

"LIBBY LINES INTEGRATE PROJECTS

"We raise no objection to integrating Hungry Horse, Libby Dam, and Grand Coulee, but strongly urge that they should be interconnected by the Libby transmission lines across northern Montana, as shown on the Bonneville map in the 308 report. No other plan of interconnection would be economical."

Comment: Libby Dam is not authorized, and according to present schedules will not be generating power until May 1959. It is too early to make specific transmission plans with reference to this dam except those that can be correlated with the short-range and immediate program.

Testimony, page 878: "The proposed Bonneville lines by way of Libby Dam are obviously the best suited for the purpose of interconnecting Hungry Horse and Grand Coulee and also will supply construction power to Libby. When Libby Dam is completed it will be integrated with the rest of the system through these same lines."

Comment: The proposed Bonneville lines by way of Libby Dam are not as well suited for the purpose of interconnecting Hungry Horse and Grand Coulee as the proposed line routed near Kerr Dam. So far as supplying construction power at Libby Dam is concerned, it would be too costly to serve this construction power from a high-capacity 230,000-volt line, such as would be required for an interconnecting line. A more economical and practicable plan is to serve the construction load at Libby from the 115,000-volt line under construction into this area to serve local distribution agencies. Bonneville's authorized program, now under way, provides for building a 115,000-volt line from Sandpoint, via Bonners Ferry, to Troy. This line can be extended to Libby and elsewhere as required and justified.

Testimony, page 878: "The proposed lines from Spokane to Kerr Dam to Anaconda merely duplicates and parallels existing transmission facilities of the Montana Power Co. and can have no purpose other than to supply power loads which the Montana Power Co. would otherwise serve."

Comment: This statement is completely contradicted by the Ebasco report previously quoted. These studies show, for the assumed conditions (that is, with the proposed 230,000-volt facilities paralleling the existing facilities), the proposed 230,000-volt line from Spokane to Montana will be carrying as much as 250,000 kilowatts while at the same time the existing parallel facilities will be carrying their maximum capacity of 100,000 kilowatts. Similarly, the proposed 230,000-volt line to the Anaconda area will be carrying over 100,000 kilowatts while the existing line from Kerr Dam to Anaconda would be loaded to within 30,000 kilowatts of its maximum capacity.

Testimony, page 878:

"LIBBY LINES WERE ECONOMICAL

"The Hungry Horse-Libby-Spokane route is approximately 46 miles shorter than the Hungry Horse-Kerr-Spokane route which will result in a substantial saving in construction, operation, and maintenance costs. In addition, to have a separate line by way of Kerr Dam would materially increase Bonneville's expenses, because it would require separate operating and maintenance crews for that line. Several lines constructed along the Libby route, as shown on the map, can be operated and maintained together, thereby reducing expenses to a minimum."

Comment: Studies based on field reconnaissance by Bonneville engineers show that the Hungry Horse-Libby-Spokane route would cost approximately $2,000,000 more than the line over the proposed route. Moreover, because of difficult terrain and lack of accessibility, it would not be practicable to construct the Spokane-Libby-Hungry Horse line by December 1952, whereas a line over the proposed route could be constructed by that date. The contention that several lines over one right-of-way can be maintained more cheaply than the same lines over separate rights-of-way has little significance since any savings would be small. Furthermore, with the amounts of power eventually to be considered in the Montana area, two separate rights-of-way may be desirable from the standpoint of service reliability. Finally, the route proposed by Bonneville is shown by the Ebasco report to be desirable for the company's own purposes. This Ebasco report advocates the interconnection of the new 230 kilovolt line with Montana Power Co.'s existing system at Burke, Idaho, and at Kerr Dam, and states that "an additional Kerr-Anaconda 220-kilovolt circuit is also required." This would be possible only if the route proposed by Bonneville were followed.

Testimony, page 879:

"POWER SHOULD BE DELIVERED WHERE NEEDED

"From these facts, the only conclusions that can be drawn are:

"1. That if the Spokane-Kerr-Anaconda No. 1 line is built, during part of each year Grand Coulee power will be transmitted 400 miles to Anaconda, Mont., where there is already plenty of power, when the people of Washington and Oregon are short of and begging for power. Such power could be utilized in the Anaconda area only to displace power being served from the Montana Power Co. lines.

"2. That during the balance of the year Hungry Horse power will be transmitted a distance of 228 miles to Anaconda, where there is surplus power from the system of the Montana Power Co., instead of being transmitted 198 miles to Washington, where the power shortage exists."

Comment: Bonneville Power Administration disagrees with the company's position that substantially all of Hungry Horse power should be exported to Washington and Oregon. We believe that western Montana should have the first claim on Hungry Horse power for developing the resources of this area. Export of Hungry Horse power for industrial development in Oregon and Washington in our opinion would not be in accord with the equitable claims of the people of western Montana for use of this power.

Bonneville Power Administration also points out that by 1952 and 1953, when Hungry Horse power becomes available, the power loads in western Montana will have grown to such an extent that there will be a demand for this power in that area. The location of this increased demand will, to a large extent, be somewhere in the Anaconda area, particularly if opportunity is taken of the availability of low-cost power from Hungry Horse to develop western Montana's phosphate resources. Bonneville Power Administration believes, from the contacts which it has had with the phosphorus and fertilizer industries, that there is a substantial market for electric power to be used in phophate processing. The development of this industry would be of substantial benefit to western Montana and, in fact, to the entire West.

Our conclusions as to the need for additional transmission capacity into the Anaconda area by 1952 are supported by the conclusions of the Ebasco report previously quoted. The statement that Hungry Horse power, if delivered to Anaconda, would only displace power served by the Montana Power Co.'s lines is refuted by the Ebasco report.

Testimony, page 897:

"EXISTING INTERCONNECTIONS ADEQUATE

"When Hungry Horse is completed and in operation, this No. 1 line (present Hungry Horse-Kerr 115,000-volt line) can be used to interconnect Hungry Horse and the Bonneville transmission system with the Montana Power Co. system at Kerr Dam. This interconnection will make it possible to take advantage of all benefits that can result from interconnecting the power plants in Oregon, Washington, and northwestern Montana with the system of the Montana Power Co."

Comment: The present Hungry Horse-Kerr 115,000-volt line is hopelessly inadequate for interconnection purposes. The Ebasco report shows approximately 250,000 kilowatts

UNIVERSITY OF MICHIGAN LIBRARIES

of power, under the assumed condition of operation, being delivered from the Bonneville system into the Montana system. The capacity of the Hungry Horse-Kerr 115,000-volt line at most is only 75,000 kilowatts.

Testimony, page 879: "In addition, the Montana Power Co. system is already interconnected with the Bonneville transmission system by the two 100,000-volt transmission lines extending from Thompson Falls through Idaho and into Washington."

Comment: It has been shown elsewhere that present interconnections with the Montana Power Co. system are already loaded to capacity and additional transmission facilities must be built to transmit Hungry Horse power. Bonneville's plans for such facilities best meet the needs of the region.

Testimony, page 863:

"CONCLUSION

"There is a power surplus in Montana. There is a power shortage in Washington and Oregon. The proposed Bonneville line from Spokane, Wash., to Kerr Dam to Anaconda, Mont., and the proposed line from Hungry Horse to Kerr Dam can only be used to displace power in the Anaconda area, now supplied by the Montana Power Co. That power is needed in Washington and Oregon."

Comment: It is idle to speak of present-day power shortages or surpluses when considering the Spokane, Hungry Horse, Anaconda 230,000-volt transmission lines because these lines will not be completed at the earliest until late in 1952. For the conditions assumed when these facilities will be in operation, the conclusions of Montana Power Co. are completely in error as shown by the engineering studies of the Bonneville Power Administration and Ebasco Services, Inc. These studies prove conclusively the need for the 230,000-volt facilities interconnecting Spokane, Hungry Horse power plant, and Anaconda, Mont., as proposed by the Bonneville Power Administration. Furthermore statements of the Montana Power Co. regarding future "power surplus" can be discounted in the light of their historical pessimism in forecasting power loads. This pessimistic attitude is demonstrated by an estimate prepared by the company and published by the coordinating committee of the Northwest power pool late in November 1947. Their estimate forecast total peak requirements of the Montana Power Co. system in the year 1956 would amount to 354,000 kilowatts. Just 13 months after the estimate had been made—in December 1948—the peak requirements of the Montana Power Co. equalled 354,000 kilowatts. In other words, in a single year the power requirements of the Montana Power Co. grew as much as the company estimated they would grow in 10 years.

The Shame of Washington

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Herald Tribune of June 5, 1949, is a true but indeed a very sad commentary upon our National Capital:

THE SHAME OF WASHINGTON

Now the whole story about Dr. Ralph J. Bunche emerges. The United Nations mediator who brought peace to Palestine rejected the other day an appointment as Assistant Secretary of State. He preferred to stick with the United Nations as chief director of the Trusteeship Council. And besides, the UN salary is $11,000 tax free, plus $3,000 for expenses. An Assistant Secretary of State gets only $10,000, out of which taxes must be paid. Again the government was unable to hire the best man for an important job, a chronic and lamentable situation.

But this was not the full explanation. Our National Capital, for all its obligations as a world center, is in reality a rather backward regional community. The full ragbag of segregation, discrimination, and racial prejudice rules in Washington. Dr. Bunche knows it very well. He raised himself by his bootstraps, he is a doctor of philosophy from Harvard, he helped to draft the UN Charter, he is a political scientist of world standing. General Donovan once called him "a walking colonial institute." It all comes to nothing in Washington, where one of the leading hotels barred a cultural meeting which had invited Dr. Bunche as chief speaker. Such is the artificial and primitive state of affairs in Washington, which causes Dr. Bunche to comment: "No Negro finds Jim Crow congenial. I am a Negro." And the fact that such considerations should influence an outstanding citizen to decline a call to high national service is reason for every American to engage in serious self-examination.

Dr. Bunche is only one man, but his case is utterly simple. We profess to be a democracy, but here is a sour contradiction. In the District of Columbia, of all places, we should be making better headway toward the goal of true equality. Washington is not local property, it is the pride and responsibility of all Americans. We think it is high time that President Truman and Congress, as elected delegates of all the people, got to work on changing Washington into a national city.

Articles by Thomas L. Stokes

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. DINGELL. Mr. Speaker, I want to preserve in the RECORD for future reference and for corrective congressional action the substance of the articles written by Thomas L. Stokes which appeared in the Washington Evening Star on May 13 and 16 captioned "New wrinkle" and "Civil-service purging."

If what Mr. Stokes unveils is true, and I am certain that it is, then it is imperative that Congress act with promptness and determination to correct a dangerous innovation insidiously advanced by the paid spokesmen for special and pernicious interests through the medium of the Administrative Procedure Act of 1946. The act should be amended or, better still, repealed.

The protection accorded the American people as a whole, through the establishment of independent agencies and commissions is being nullified and in devious and reprehensible ways circumvented by paid hirelings of rapacious interests which otherwise were being held in check by the Federal Trade Commission, the Interstate Commerce Commission and other proven agencies of the Government whose efforts have been devoted to the common good.

Every thoughtful member of this House should read and carefully analyze the dangerous implications pointed out so clearly by Mr. Stokes' disclosures. Then prepare ourselves we must for corrective action against usurpation by predatory interests boring from within.

[From the Washington Evening Star of May 13, 1949]

NEW WRINKLE—SPECIAL INTERESTS DECLARED OPERATING THROUGH CIVIL SERVICE COMMISSION

(By Thomas L. Stokes)

Attention has been called here recently to the importance to the public of independent commissions and agencies created by Congress from time to time and delegated to administer and interpret laws passed by Congress to protect the public interest.

It has been shown how special private interests have sought to influence commission policy in their behalf through appointment of members sympathetic with their viewpoint, or by blocking appointees they did not like.

Now a new wrinkle has come to light which Congress has been asked to investigate whereby private, outside interests have brought their influence to bear on these commissions and agencies under the guise of improving administrative procedure. They have operated, strangely enough, through the Civil Service Commission.

DELEGATED AUTHORITY

It comes about this way. The Civil Service Commission, under the Administrative Procedure Act of 1946, appointed a Board of Examiners to which it delegated authority not contained in that act or given it by any statute past or present, to scrutinize every trial examiner employed by commissions and agencies, disqualify those that do not meet the board's standards, and recommend new applicants.

This board, with the approval of the Civil Service Commission, recently has disqualified numbers of examiners, most of them veteran, experienced officials, in various commissions and agencies, who are to lose their jobs or be demoted, subject to appeal in which they are permitted only to submit "new evidence." Examinations were cursory in many cases, and information on which employees were disqualified is kept secret and the sources of information are withheld. Loyalty, it should be pointed out, is not an issue in these cases.

The personnel of the board gives an interesting clue. Aside from one Civil Service Commission employee, Wilson Matthews, the other five are from outside Government. Four are prominent members of the American Bar Association which had much influence in the Administrative Procedure Act, two of them former ABA presidents. The connections of three of these, their attitudes and attitudes of the ABA Journal suggest background for their decisions on Government employees.

REPRESENT INTERESTS

Carl McFarland, the chairman, is general counsel of the National Manufacturers' Association, and represents big private interests before the Government, as do two others, Joseph W. Henderson, who has represented industrial clients before the National Labor Relations Board, and Willis Smith. The last two are former ABA presidents. The other two members are State supreme court justices, Laurance M. Hyde, Missouri, and Douglas L. Edmonds, California.

A petition for a congressional investigation of the whole procedure involved has been

presented to Vice President BARKLEY and Speaker of the House RAYBURN by the Association of Interstate Commerce Commission Practitioners, representing lawyers who practice before the Interstate Commerce Commission. The petition bitterly denounces the disqualification of 12 ICC trial examiners, a fourth of the whole staff of examiners, veteran civil servants, describing the Civil Service Commission's action as "subversive of constitutional guaranties and democratic principles and ideals" and adding "the police-state type of investigation has no place in American institutions."

Other explosions are expected from other quarters.

[From the Washington Evening Star of May 16, 1949]

CIVIL SERVICE PURGING—BOARD WEEDING OUT TRIAL EXAMINERS CALLED CHILD OF BAR GROUP HIERARCHY

(By Thomas L. Stokes)

The background of the United States Civil Service Commission's action in delegating broad powers, which it does not itself possess, to a special board of examiners to open up the lists of trial examiners in governmental commissions and agencies, weed out, disqualify, and replace, previously discussed here, is very important for an understanding of how it can adversely affect the public interest.

As revealed hitherto, this board has disqualified, subject to removal or demotion, numerous trial examiners, a category of officials very vital in the area of commission government, which is, itself, most important, for these commissions administer and interpret laws passed by Congress. Trial examiners are judges, in effect, who gather evidence and hold hearings preliminary to decisions and acts by the commissions and special agencies themselves.

Obviously such power to purge officials could be used to affect public policy, and this intent is clearly indicated in the background and viewpoint of influential members of the six-man board, of whom three are lawyers representing big private interests, two State supreme court justices, and only one, a Civil Service Commission representative, from the Government.

BAR GROUP'S ROLE CITED

How this all-powerful board came into being is significant. Here we go back to a hierarchy of the American Bar Association, extremely conservative and not representative of the association as a whole, which was influential in enactment of the Administrative Procedures Act of 1946.

The Civil Service Commission is authorized to appoint advisory boards to assist it in carrying out this act. But pressure was brought upon the Commission by this bar association hierarchy through Senator WILEY, Republican, Wisconsin, as chairman of the Senate Judiciary Committee in the Eightieth Congress, to appoint instead a board with broad powers literally to fire and hire, which is beyond even the Commission's authority as it is being exercised, and, it may be said, exercised arbitrarily. Although the Federal Trial Examiners Conference composed of hearing examiners in Federal agencies submitted a list of people prominent in Government and private life from which it suggested that the Board be chosen, pressure again was brought through Senator WILEY upon the Commission, with the result that the Board with its powerful big private-interest influence was named.

Carl McFarland, chairman, was prominent in activity for the Administrative Procedures Act, as well as member of a preliminary board that fixed standards. He has represented private interests before the Government and is now counsel for the National Association of Manufactures in the suit that big-business organization brought against the Government to challenge the Lobby Registration Act, though not general counsel of NAM as previously stated here. Two other members, Joseph W. Henderson and Willis Smith, both former American Bar Association presidents, likewise have represented corporate interests before the Government and both have been publicly very critical of the National Labor Relations Board.

REVEALED OWN SLANT

Mr. McFarland, in a progress report to the bar association on the administrative procedures bill back in 1945, revealed his own particular slant as to private interests involved. He said that while business and industry generally confine themselves to the question of whether certain adminstrative and legislative power should be conferred, when these issues arose, and did not propose appropriate methods of regulation, the American Bar Association "is in a position to supply these omissions" which, he added, "may result in protection through the years." It may be injected here that the purging now attempted could affect public policy for years.

His statement would seem to champion business and industrial interests, which is prefectly proper in its place but hardly the sort of attitude for one passing upon Commission personnel and hiring and firing in view of the role of these commissions to protect the public interest, not any special interest.

This would also seem to be the attitude of Senator WILEY, judging from a letter he wrote to the Civil Service Commission, reprinted in the American Bar Association Journal, in which he expressed concern that commission examiner posts might be filled by men "who lack the approach of private enterprise in their work."

The Hardwood Story

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks, I include the following article and resolution passed by the members of the National Hardwood Lumber Association:

THE HARDWOOD STORY

The Bureau of Census figures for 1947 show that there were 48,148 sawmills operating in the hardwood-producing area of the United States. Of this number 39,109 mills produced part or all hardwoods. Any factor adversely affecting the hardwood production of these mills necessarily results in an immediate increase in unemployment and further results in the curtailing of the earnings of those yet employed.

Historically, we exported an average of over 300,000,000 board feet of hardwood per year. Disappearance of the major portion of this export market creates immediately a stagnation within the hardwood industry, glutting the domestic markets and creating serious economic repercussions. There never has been, nor is there now, an adequate demand in our domestic markets for those particular grades and species that—customarily and traditionally—have moved in export trade. As it is impossible to cut a hardwood log without producing these export items, the entire pattern around which the hardwood industry has been built centers around these export items.

1. Since the inception of the Marshall plan (with the exception of one small purchase in December 1948), there has been what amounts to an economic boycott against United States hardwoods. A large part of the hardwoods exported during 1948 were either orders carried over from the previous year or purchases made before the Marshall plan became effective.

2. The United States hardwood export market is being diverted to countries behind the iron curtain as most of the hardwoods now being imported into England are coming from these countries. A recent trade agreement made by the United Kingdom calls for the shipment of large quantities of hardwoods from these sources.

3. While American dollars may not have been used to pay for these hardwood purchases in western Europe, the hardwood industry feels that were it not for commitments under ECA sterling would not be available for the purchase of hardwoods from these sources.

4. Most of the hardwood lumber now being imported into England from sources other than the United States are of an inferior quality as compared with American hardwoods and the actual cost in sterling to the British consumer is more than the cost of well-manufactured, seasoned, and properly graded American hardwoods.

5. The present method of buying hardwoods with sterling is wasteful. For example: In May of this year the United Kingdom purchased oak boules from France. The boule is simply a log sawn through and through and strapped together untrimmed. The price of a boule was 11s. 6d. per cubic foot, f. a. s. France. This is the equivalent of $191 per thousand board feet. The highest grade and best quality of United States oak can be delivered to United Kingdom ports for less money.

The British program which calls for (1) sustaining a lumber industry in Communist-dominated countries, (2) the importation of logs into Britain for manufacture in that country, and (3) the purchase of inferior quality lumber from the European Continent, appears uneconomical and undoubtedly will fail in its purpose.

While the hardwood industry is in sympathy with the over-all ECA program, it bitterly resents being taxed to support an uneconomical theory that can result only in the destruction of its own business.

Whereas prior to World War II the exports of hardwood lumber from the United States to the United Kingdom and to other western European countries constituted approximately 300,000,000 board feet per year; and

Whereas the hardwood lumber industry in the United States has been the principal supplier of these countries for more than 50 years, with quality and price consistently competitive; and

Whereas for all practical purposes the United Kingdom and other countries recipient of Economic Cooperation Administration funds have ceased purchasing hardwood lumber from the United States; and

Whereas a cessation of the movement of United States hardwoods to European countries—especially to the United Kingdom markets—is causing widespread shut-downs of hardwood manufacturing plants, thus resulting in increasing unemployment; and

Whereas the lack of hardwood exports from the United States is largely due to the fact that the United Kingdom and other European countries are buying their hardwood lumber from countries behind the iron curtain, and from other countries: Now, therefore, be it

Resolved, That the National Lumber Exporters Association, at a special meeting this 10th day of May 1949, in Washington, D. C.,

UNIVERSITY OF MICHIGAN LIBRARIES

deplores the evident distortion of this historical trade pattern; be it further

Resolved, That we strongly urge that the Economic Cooperation Administration shall adopt a policy, effective immediately, which will result in the ERP-recipient nations purchasing their hardwood lumber requirements from the United States in the same ratio as their purchases were from the United States and all other countries during the period 1936-39.

Three Sober Judges

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Post of June 6, 1949, is worthy of widespread circulation:

THREE SOBER JUDGES

It was Don Quixote, we believe, who first insisted that he was as sober as a judge and the legend of judicial abstinence has been cited in many taverns since that time. We can name at least three judges now presiding over widely publicized cases, however, who may justifiably take a nip at nightfall as they ponder each day's agony. Seldom has the sanctity of the courtroom been as meaningful and rarely have the intrusions been as insistent and irresponsible as in three current political trials. Consider the problem of Judge Samuel Kaufman who is conducting the trial of Alger Hiss. The proceeding had been moving smoothly with the rival lawyers restrained and relevant, the jury swiftly chosen and the courtroom atmosphere calm. But the Journal-American, an afternoon newspaper published by William Randolph Hearst, has decided to take the law into its own hands. Over the week end the J-A published a loathsome attack on Kaufman headlined "New Deal aided Hiss trial judge" and implying as sharply as the laws of libel permit that Kaufman is unfit to direct a trial in which the destiny of a young New Dealer is at stake. The essay sounded like a prelude of dirtier things to come. Obviously the J-A feels Hiss' fate should be in the hands of a tribunal run by a sober, dispassionate judge like Representative J. PARNELL THOMAS, who is unavoidably involved in legal troubles of his own; the decorum of Kaufman's courtroom offers too sharp a contrast with old un-American (committee) custom. While the J-A is striving to put the finger on Kaufman, Henry A. Wallace has abruptly joined the crusade against Judge Harold Medina, who has the misfortune to find himself on the bench at the Communist trial. Regardless of the legal issues (and we strongly believe that prosecution for advocacy of ideas is dangerous business) the performance of the defense attorneys has been deliberately and cynically obstructionist. Although we are reluctant to voice any comment on a current proceeding, the provocative behavior of the barristers on the Communist side can hardly escape editorial notice. It has not been paralleled since the rowdy courtroom exhibition staged by some of the defense lawyers in the wartime conspiracy trial against United States pro-Fascists—a trial which ended in the death of Judge Edward C. Eicher. Now comes a moment in the Communist trial when Medina holds three of the defendants in contempt. The legal point may be arguable and it will be reviewed, but Medina's action scarcely warrants Wallace's frenzied and foolish charge that "America is plunging with frightening speed toward a native brand of fascism and Judge Medina's action puts us one step farther along this dangerous course." The mimeograph machine has a reminiscent sound. While Messrs. Kaufman and Medina are being pushed around, however, the man on the toughest spot today is Judge Albert O. Reeves, who must decide before nightfall whether to let the prosecution of Judith Coplon continue in view of the Government's refusal to produce in open court some of the top-secret documents involved in the case. The issue may reduce the whole concept of secrecy to its final incongruity. If the Government is sustained, the basic American notion of fair trial will be inescapably altered. Juries may be compelled to accept a prosecutor's word for the signficance and relevance of evidence. Defendants may be denied the chance to riddle key exhibits. Yet if the defense position is upheld Judge Reeves will be accused of giving aid and comfort to alleged conspirators.

The judge who calls them as he sees them knows who will throw the next pop bottle.

As Things Look Now

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. CRAWFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit a memorandum entitled "As Things Look Now." This memorandum has been prepared by Mr. Paul O. Peters, who has for many years had access to much official information here in Washington and who spends a great deal of time and energy doing survey work for the public and for individuals. I believe that a great many people will be interested in reading the comments submitted by Mr. Peters, and in having before them his analysis of current trends.

The memorandum follows:

AS THINGS LOOK NOW

There is much to indicate that a depression of one kind or another is now breathing down our necks, because:

1. United States industrial output has fallen for the fifth month in a row, and the Federal Reserve Board's index is at the lowest level since July 1947;

2. Inventories of both consumer and durable goods have reached new peaks, with consumer demand falling sharply;

3. The expected spring buying rush in furniture and household goods failed to materialize;

4. Railroad-car builders for the first time in years find themselves without orders for new cars;

5. Pig-iron production is at a rate in excess of the current demand, as Republic Steel closes one of its five Cleveland blast furnaces;

6. The seasonal rise in agricultural employment has not been sufficient to halt the upward trend in unemployment;

7. The uncertainty with respect to legislation affecting the social and economic life of the Nation which may be enacted by the Eighty-first Congress is having a depressing effect on general business activity, especially planning for the future; and

8. Continued demands by President Truman for new taxes is causing more than ordinary caution with respect to investment of equity capital.

ON THE FOREIGN FRONT

It should be clear to all Americans that our State Department (with the approval of the administration) has—

1. Abandoned and forsaken all warnings of Washington, and other statesmen, that this Nation avoid entangling alliances with foreign governments and are about to—

2. Involve the United States in the so-called Atlantic Pact, which merely opens a new door to the United States Treasury for the purpose of rearming Europe as the first step in restoring the old balance-of-power policies of Gladstone and Bismarck.

THE COMMERCE DEPARTMENT

In support of President Truman's "global fair deal," the Department of Commerce is out to increase American exports by $1,000,000,000 more a year, although most European nations now have unfavorable trade balances, and no prospects in sight now or in the future to pay for additional goods or services with dollars other than those we give or loan to them.

The one worlders and economic internationalists want United States guaranties for American capital investments abroad.

The National Foreign Trade Council of New York want new treaties of friendship, commerce, and navigation with all countries (the U. S. S. R. possibly excepted but not mentioned), and tax exemptions here on earnings from investment of American capital in other countries. They also believe that private capital is available for economically sound agricultural and industrial projects in other countries, but—

"that to the extent that private funds prove not to be adequate * * * that additional funds might be furnished by the United States through advances by the Export-Import Bank, whose lending powers should be increased if necessary, and whose loans should be limited to assisting projects which have been thoroughly investigated and are found to be economically sound."

EUROPEAN COOPERATION ADMINISTRATION

Set up to continue the aid and relief given European nations during the war under lend-lease and UNNRA, projects which cost the overburdened taxpayers more than $27,000,000,000, this agency (ECA) for distributing United States largess has been given a new and strong endorsement by the House of Representatives, which on May 26, 1949, with but 220 of the 435 Members present, by a teller vote of 193 to 27 gave approval to an appropriation bill carrying the huge amount of $5,500,000,000 to be spent in 1 year or less to continue our relief and rehabilitation adventures all over the globe.

Disguised as a fight against communism, some economists claim it is the administration's only defense against a domestic economic slump, caused primarily by the inflation brought about by deficit financing, and syphoning off of domestic production for more than 6 years.

Consider, as you read, the day when 220 Members of Congress appropriate $5,500,000,000 without a record vote, and ask yourself who said "taxation without representation"?

REPORT ON EUROPEAN RECOVERY

Mr. Gunnar Myrdal, Executive Secretary, United Nations Economic Commission, has formally reported:

1. That if and when ECA is ended, the United States will find itself with surpluses and excess productive capacities for commodities for which it has helped to develop new sources of supply in other parts of the world, particularly Europe;

2. That United States exports to Europe by 1953 will be reduced below the depression level of 1938;

3. That Europe still will be short of dollars to cover imports from the United States; and that

4. When ECA is ended, the United States will have to start all over again on some scheme such as long-term lending (or outright grants-in-aid) to generate a predictable and steady flow of American dollars to the outside world.

All of which means of course that this country will be expected to continue the role of Santa Claus to Europe for years upon years without end, unless and until our own economy goes bust. It can happen here.

THE TAX SITUATION

Social uplifters and one-worlders working together may not be able to wreck the domestic economy, but combined with the pressure groups in the United States who recommend political housing, socialized medicine, fair labor practices that sometimes are unfair, minimum wages of 75 cents an hour, and increased social security from the cradle to the grave, or from womb to tomb, can wreck our economy because these schemes are the essentials of the socialistic state the thesis of which may be briefly stated: "From each according to his means, to all according to their need."

WE AGREE

Harvard professor of business economics, Joseph L. Snider, thinks industrial production and wholesale prices may fall 25 percent below the 1948 peaks before 1949 ends. The economic trend line which stood at 190 in January 1946 has sunk to 152.1 as of April 28, 1949. Expressed in dollars this slump means a production loss of over $9,000,000,000 for the first quarter of 1949 compared with the last quarter of 1948.

GOP-BYRDS

The Machinist, published weekly by the National Association of Machinists, from Washington, D. C., in the issue of May 1, 1949, carried a full page illustrated story titled "How to Tell a Democrat From a GOP-Byrd."

This article indicates that of 119 Democratic Representatives in the House of Representatives from 14 Southern States, only 46 voted Democratic while 73 voted Republican.

The new label "GOP-Byrds" undoubtedly has strengthened the hands of all economy minded Democratic Members of Congress, especially the group called Dixiecrats. Coupled with President Truman's statement to a group of veterans that there were too many Byrds in Congress, it looks as though the coalition will now close ranks to thwart the major portion of the Fair Deal social program of the administration for this session of the Congress.

FOOTNOTE.—The Democrats can rely on a voting majority with respect to controversial legislation, only if they can continue to hold 12 freshmen Congressmen in line, who distributed geographically are from Alabama 1; Florida 1; Kentucky 2; Oklahoma 3; Texas 1; Virginia 1; and Tennessee 2.

NO LESSON FOR SPENDERS IN COLLAPSE OF CHINA NATIONALISTS

The $2,000,000,000 or thereabouts spent or authorized for the military and economic rehabilitation of Nationalistic China, apparently is gone with the wind. The Communists will take over, and our own State Department in all probability will revise their policies to "do business" with the "responsible government" of China, meaning the Reds.

PREDICTION

No new taxes by the Eighty-first Congress at this session. Perhaps some tax relief later for small corporations. Pressure for more revenue is highest at State levels to get more money to match Federal fund available under cooperative arrangements.

In 1932 there were 18 ways in which the States and local units could get Federal funds under cooperative arrangements.

In 1948 there were 57 projects to distribute Federal funds, all requiring some measure of Federal control. Of such is our bureaucracy built.

Edmund Burke (1774) said: "All that is necessary for the triumph of evil is that good men do nothing."

A POEM FROM ENGLAND

"THE GODS OF THE COPYBOOK HEADINGS

"In the 1945 elections, We were promised abundance for all,
By robbing selected Peter to pay for collective Paul;
But, though we had plenty of money, there was nothing our money could buy,
And the gods of the copybook headings said: 'If you don't work you die.'
Then the gods of the market tumbled, and their smooth-tongued wizards withdrew,
And the hearts of the meanest were humbled and began to believe it was true:
That all is not gold that glitters, and two and two make four—
And the gods of the copybook headings limped up to explain it once more.
As it will be in the future, it was at the birth of man,
There are only four things certain since social progress began;
That the dog returns to his vomit, and the sow returns to her mire,
And the burnt fool's bandaged finger goes wabbling back to the fire:
And after this is accomplished, and the brave new world begins
When all men are paid for existing and no man must pay for his sins,
As surely as water will wet us, as surely as fire will burn
The gods of the copybook headings with terror and slaughter return."

Quoted in the House of Commons April 11, 1949, from poem after Kipling written in 1919 with first four lines revised.

United States Foreign Policy—Dr. Edwin Borchard Says United States No Longer Has a Free Hand

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Dr. Edwin Borchard is a noted authority on international law. In a recent article in the American Journal of International Law he wrote an article on United States foreign policy. The Members of this House should be interested in his views on what is transpiring in our foreign policy. He calls attention to the fact that John Basset Moore in his forthcoming memoirs characterizes this policy as "insane." Under leave to extend my remarks, I am including the article in question:

UNITED STATES FOREIGN POLICY

That I am not in sympathy with aims and procedure adopted by this Government is apparent to all readers. It will be more novel to learn that John Bassett Moore in at least three places of his forthcoming memoirs characterizes the policy of this Government—if it can be called a policy—as insane. That means more for the reader than an ordinary invective. The ordinary reader must know that John Bassett Moore was a man of great moderation who used strong words but rarely. His opinion on a question of international law or policy is rated among the highest in this country. No one was more familiar with our history than he was.

Whatever the truth about American policy, the policy of alliances is a clear departure from the warning issued by George Washington in his Farewell Address. The reversal of American policy from nonintervention to a commitment to intervention in foreign quarrels is so violent a departure from the past that it must justify itself by extraordinary benefit to the United States. Who can assert that the policy of intervention has produced laudatory results? The decision of the United States to remain out of the League of Nations has been traversed by Mr. Hull and his successors. The flouting of the founders of this country has brought returns which will strike the average citizen as extraordinary. Even if the plans worked out successfully, a burden of proof rests upon its proponents which cannot be met in a practical world. But when it is observed that the League of Nations no longer exists and the United Nations is regarded with dissatisfaction on all sides, it is especially harmful to the United States. One of the curious consequences which speaks volumes is that the American taxpayer knows so little about what is going on or seems unable to determine that the expenditure of American money means high taxes to the citizen. The United Nations is an improved League, and its friends must pay for the ignominy brought upon it by the interventionists.

A war with Russia must be prevented in the interests of the United States. While no one knows when a government becomes bankrupt, it is a certainty that large sums must be appropriated to this purpose. Even if it could be asserted that the United States would be a victor in that war, it would not convince the ordinary man that communism is a disappointment and failure. We would undoubtedly spoil the Russian experiment, and we might ourselves find the American experiment unworkable. That would be an unfortunate result, but, it will probably be agreed, this existing civilization cannot stand another war without revolutionizing its basic principles. It seems unfortunate that the United States no longer has a free hand, which is all that isolationism has ever meant. The eight volumes of Moore's Digest of International Law are a standing refutation that there ever existed isolationism in the Hull sense of that word. To follow up our intervention by a treaty of alliance with five countries or more is to place American intervention in the hands of other people, a policy that can hardly be regarded as useful to us. It must always be remembered by its proponents that the existence of the United States is at issue. Thus far we have Russia denouncing the United States as an aggressor, and we reciprocate the impeachment. Aggressor is a word that can be used at random because it signifies nothing. It is an epithet hurled at the opponent for such use as the popular propaganda may have in view. But if it means anything, it is a charge that the status quo is under attack. All those in favor of the status quo must stick together. All opponents of the status quo also must stick together. The result is a world war, which, I have already suggested, this civilization cannot tolerate.

Of all the senseless wars which have been fought, a war by the United States against Russia and its principles would constitute a blunder of the first order. Perhaps war has reached the stage of diminishing returns through the discoveries of science. I would not knowingly subscribe to this view, but it is admitted that war is so expensive that it is not practical. But if nations pursue policies which can only lead to distemper, the charge must be refuted, whoever is engaged

UNIVERSITY OF MICHIGAN LIBRARIES

in war. In China we seem to have displayed the value of neutrality in foreign quarrels, be they civil or international. We backed up our selection of the wrong horse by taking from the American taxpayer some $3,000,000,000. Is this a defensible policy?

Although I am opposed to alliances, which only increase the risks of politics, I must confess, as a matter of law, that the United States is competent to enter into an alliance. Article VI of the Constitution does not authorize the Supreme Court to examine the question of the constitutionality of treaties, although every treaty thus far in issue has been held constitutional. Any treaty that is made on the authority of the United States, so long as it conforms to the restrictions contained in the Constitution itself, is a valid commitment. It becomes the duty of the Senate to carry out a treaty of the United States. That is all there is in the doubts harbored by Senators CONNALLY and VANDENBERG as reported in the press. Besides, one can say from history that the power of Congress to declare war is misleading. The President has the capacity to write any notes he sees fit, and thus far he has been enabled to go to Congress and ask it to back him. Congress has never refused such a draft.

EDWIN BORCHARD.

Another Legal Reason Why the Garrison Dam Pool Cannot Be Operated To Contain 23,000,000 Acre-Feet

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. BURDICK. Mr. Speaker, there is one more important reason why the Garrison Dam pool cannot be operated so as to contain 23,000,000 acre-feet under the present law. When the law creating the authority for the dam was passed, Public Law 534, there was an important amendment placed in it which reads as follows:

> The use for navigation, in connection with the operation and maintenance of such works herein authorized for construction, of waters arising in States lying wholly or partly west of the ninety-eighth meridian, shall be only such use as does not conflict with any beneficial consumptive use, present or future, in States lying wholly or partly west of the ninety-eighth meridian, of such waters for domestic, municipal, irrigation, mining, or industrial purposes.

One of the arguments of General Pick is that unless he can have a high pool there will be no water for a 9-foot channel from Sioux City to the mouth of the Missouri. It is obvious, therefore, that unless the dam can be built without interfering with the present or future uses of the waters west of the ninety-eighth meridian, that there will be no navigation waters.

Can anyone contend successfully that flooding of three irrigation projects above the dam will not be a violation of this condition in the law? General Pick does not answer this, but avoids the law by saying he has thought out how to get around the law—he will build dikes around irrigation projects, cities and railroads. There is nothing said about dikes in the law, for the reason that Congress knew when the law was passed that no dike can be built on the Missouri River bottoms that will not prevent seepage, and that this seepage sours the lands and makes them unfit for cultivation. Not only is this true, but there is no security against a breaking of the dikes, as experience has shown in Oregon, Galveston, Tex., and elsewhere. Yet, General Pick is willing to do anything within his power to get 6,000,000 more acre-feet, which he said he found after getting a better look at the country. He has, however, missed a lot of valuable water. On the upper end of Cow Creek, Williams County, about 200 acre-feet could be saved if the elevation of the dam was placed at 1,866 feet. He would have as much right to "capture," as he says, this 200 acre-feet as he has to "capture" the 6,000,000 acre-feet which he missed the first time over.

It seems strange that one man can be placed in a position where his own notions and whims are to govern his action instead of the wishes of thousands of people who will suffer from his unreasonable course of action.

It is about time we looked into the record of General Pick. He is the all-powerful and I presume that anyone who questions his knowledge will be howled at and barked at by his powerful lobby. The fact remains that we should know more about him. It is reported to me by an officer of the armed forces that he was engaged in building a military highway in India over which General Pick was in authority. What was done there by General Pick, if this report is correct, throws much doubt on his ability. I have asked the Secretary of the Army to give me his record, but all I received in reply was a statement that General Pick was decorated for his work. That officer who supplied this information is still living in North Dakota. An investigation of General Pick and his connection with the building of the dam at Garrison should be held. His dictatorial policy of buying land without authority of law should be included, and a check made of what money has been expended on this dam and for what purpose, and a study made of his dike system.

All this controversy could be ended if General Pick would follow the law and build a dam to contain 17,000,000 acre-feet, as he, himself, originally proposed. When experience has demonstrated that the dam is safe and more impounded water can economically for the whole country be impounded, it will be an easy matter to put up the spillways. The foundation of the dam and the main structure need not be changed in the slightest. The next 25 to 40 years should determine the question. In the meantime, 100,000 acres of the best land in the West can be farmed and the tax structures of the various counties disrupted as little as possible. This is not what General Pick wants—he wants to cram his program through regardless of any or all consequences, and regardless of damages to thousands of citizens of North Dakota.

CVA Article Misleading

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Bend (Oreg.) Bulletin of May 23, 1949:

THIS WEEK'S DAVIDSON ARTICLE

This Week is a magazine published by the New York Herald Tribune and included as a section of that newspaper's Sunday edition. It is also distributed as a Sunday magazine section by other papers to which it is sold by the New York publisher. One of these papers is the Oregon Journal.

As is to be expected the edition distributed by the Herald Tribune contains more pages and more advertising than that used in smaller cities. It contains more reading matter as well and we have been struck by the fact that in the issue of May 15 there is a CVA article by Assistant Secretary Davidson, of the Interior Department, that was not included in the magazine furnished the Journal.

We imagine that this was not the choice of the Journal. We assume that the Portland paper takes what is supplied to it. We should like to know, however, by whom and on what basis the nonuse of this Davidson article in the Northwest came about. Whatever the facts readers of the Journal have lacked the opportunity of examining the argument that the Secretary advances.

This, we think, is unfortunate. It would be better if the people most intimately concerned—the people of the Northwest—could see and pass judgment for themselves on the misleading arguments that Davidson offers.

One such argument is with respect to Columbia River floods that, Davidson suggests, will be controlled by CVA dams. Here are his words:

"Dams can also control floods—like the one which last year swept away the homes and jobs of 18,000 people in Vanport, Oreg. But above all, CVA spells kilowatts in an area where coal and oil are expensive and electricity is often used to heat houses."

The impression conveyed by that first quoted sentence is that floods on the Columbia like that of last year are of frequent occurrence. That, of course, is not the fact. It was 50 years ago that a flood of the extent of last year's occurred. It may be 50 years before there is another but in any case the dams now planned will be as effective if built by the agencies that now operate on the river. A CVA, in other words, is not needed for flood control. As the Oregonian said last year the 1948 flood offers no argument for a CVA.

Now look back at that quoted sentence and note the assertion that the flood swept away the jobs of 18,000 people in Vanport. That statement is a simple untruth. The residents of Vanport lost their homes, yes. Not all of them lost their jobs by any means. Is Secretary Davidson—or his ghost writer—trying to be fair and accurate?

Look at the sentence about kilowatts and note that earlier in the article it is said that:

"Most of the Nation's phosphate fertilizer lies there (in the Columbia watershed) needing only electric power to exploit it."

These words are intended to lead the reader to believe that only by a CVA will kilowatts be provided, and, moreover, that CVA kilowatts are needed to develop that fertilizer.

Well, the phosphate beds are in Idaho. The Idaho Power Co. is providing all necessary power for the production of fertilizer from two plants, and is prepared to continue and enlarge its service. Why does not Mr. Davidson tell his readers these facts instead of leading them to believe that CVA power is needed for this phosphate-fertilizer production?

One, and we think, the chief reason, is the fact that the real design behind the proposed CVA is the enlargement of the field of public power and the extinction of private enterprise. That is why Davidson tries to make it appear that a CVA is necessary. Why else was the Department of the Interior in the quandary reported last year over the application of the Idaho company for a permit to cross public land with its power line? A chief purpose of that line was to supply power to fertilizer plants. Did the Department hesitation reflect a desire to promote fertilizer production or was there some other reason?

Let Mr. Davidson reply.

Readjustment Allowances Under GI Bill of Rights

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. ELLIOTT. Mr. Speaker, the right of most veterans of World War II to receive readjustment allowances under the GI bill of rights will expire on July 25, 1949.

On yesterday, I introduced in the House a bill to extend readjustment-allowance benefits under the GI bill to July 25, 1953.

Readjustment allowances were originally provided for a period of 4 years—to July 25, 1949—on the theory that this 4 years would cover the most serious readjustment problems—whether economic or psychological—to be faced by veterans of World War II.

Fortunately, the first 4 years following the end of World War II have been, generally speaking, years of unprecedented prosperity in this country. We have, up to this time, not had the severe readjustment problems that the framers of the original law foresaw. This is borne out by the fact that one-half of the veterans of World War II have not claimed of their Government 1 nickel in readjustment allowances.

The greatest unemployment crisis which we have had since World War II is just now beginning. To allow the readjustment allowance program to lapse on July 25, 1949, would be unfair, in that the lapse would come at the time when readjustment allowances are coming to be needed most. Many of our veterans are having difficulty now in finding jobs. Many of those that have jobs are losing them because of curtailed production, something that they have no control over. I hope this Congress will see fit to continue these allowances for unemployed veterans and for self-employed vetearns—earning less than $100 per month.

In a recession—and we all hope and pray that we will not have a serious recession—the veteran who during the war lost several years from his normal life and occupation is the first to suffer. He is the first to lose a job because of his comparative lack of experience or seniority.

Those veterans who lose their jobs will need their allowances now.

This legislation is the only major legislation now before Congress that deals with unemployment. I hope we can enact this legislation into law. It is needed, and it is just.

I understand that only 6 percent of the veterans of World War II have used up their eligibility for readjustment allowance benefits. That means that 94 percent of our veterans are still eligible. Great numbers of these veterans have been unable to acquire benefit rights under any State unemployment compensation program. Among these are veterans who are still in hospitals, those who have been attending school, and those who have been working in employment which is not covered by State unemployment compensation laws. This last group includes domestic servants, agricultural workers, governmental employees, and employees of firms which employ less than eight persons. In the event that these veterans become unemployed they will not have the protection of any type of job insurance after July 25, 1949.

Mr. Speaker, as a part of my remarks I am including a copy of the bill which I introduced yesterday providing for the extension of readjustment allowances to July 25, 1953:

A bill to amend the Servicemen's Readjustment Act of 1944 to extend the period during which readjustment allowances may be paid

Be it enacted, etc., That subsection (a) of section 700 of the Servicemen's Readjustment Act of 1944, as amended, is hereby amended—

(1) By striking out "(2) occurs not later than 2 years after discharge or release or the termination of the war" and inserting in lieu thereof "(2) occurs not later than 2 years after discharge or release or July 25, 1953; and

(2) By striking out: *"Provided further,* That no readjustment allowance shall be payable for any week commencing more than 5 years after the termination of hostilities in the present war."

Mr. Speaker, I also include as a part of my remarks Senate Joint Resolution 17, recently passed by the Alabama Legislature memorializing Congress to extend the readjustment allowance benefits of the GI bill of rights:

Senate Joint Resolution 17

Joint resolution memoralizing Congress to extend the rights and privileges of veterans of World War II under title V of the Servicemen's Readjustment Act of 1944

Whereas the right of most veterans of World War II to receive readjustment allowances under title V of the Federal Servicemen's Readjustment Act of 1944 (known as the GI bill of rights) expires July 25, 1949; and

Whereas only about one-half of unemployed Alabama veterans of World War II have rights to benefits under the Alabama unemployment compensation; and

Whereas unemployment amongst Alabama veterans is increasing; and

Whereas economic conditions in the near future may be such as to cause great hardship and financial distress to such veterans and their families: Now, therefore, be it

Resolved, That the Legislature of the State of Alabama do herewith memorialize and petition the Eighty-first Congress of the United States of America now in session in the city of Washington, D. C., to extend the rights and privileges of veterans of World War II under title V of the Servicemen's Readjustment Act of 1944; be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the Vice President, the Speaker of the House of Representatives, and to each Congressman and Senator from the State of Alabama and the members of the Veterans' Affairs Committee of the House.

Mr. Speaker, I am also including as a part of my remarks a letter from Garvin Drummond, post commander, and Harry B. Sherer, post adjutant, of Woods-Smith Post, No. 9, of the American Legion, Jasper, Ala., in which post I hold membership, calling my attention to a resolution on this most important subject:

WOODS POST, NO. 9,
THE AMERICAN LEGION,
Jasper, Ala., May 4, 1949.

Hon. CARL ELLIOTT,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR COMRADE: We, the membership of Woods-Smith Post, No. 9, being assembled in our regular first Monday night meeting, Monday night, May 2, 1949, did unanimously pass the following resolution:

"*Resolved*, That we desire the Congress and Senate of the United States of America to extend the readjustment allowance privileges of the GI bill of rights, until all World War II veterans have had an opportunity to file for and draw their total benefits under the law or for the life of the veteran.

"That a copy of this resolution be sent to our Congressman and a copy to each of our two Senators, making known our desires."

Respectfully submitted.

GARVIN DRUMMOND,
Post Commander.
HARRY B. SHERER,
Post Adjutant.

CVA Opposed by Wildlife Federation

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution submitted by the Idaho Wildlife Federation and adopted by the National Wildlife Federation at its annual meeting assembled at Washington, D. C., March 6, 1949:

Whereas the National Wildlife Federation favors the maximum feasible conservation of America's natural resources; and

Whereas we believe that the creation of any Federal valley authority would interfere with the inherent rights of States in the management and conservation of their natural resources; and

UNIVERSITY OF MICHIGAN LIBRARIES

Whereas there are now before the Congress of the United States bills to create additional valley authorities: Therefore be it

Resolved, That the National Wildlife Federation, a national organization in regular annual meeting assembled at Washington, D. C., March 6, 1949, is unalterably opposed to the creation of any additional Federal regional or valley authorities as being unjustified, unnecessary, and a dangerous departure from our American form of government.

Address of Hon. Clarence J. Brown, of Ohio

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address delivered by my friend and colleague the Honorable CLARENCE J. BROWN, of the Seventh District of Ohio, before the annual meeting of the Connecticut Public Expenditure Council at Hartford, Conn., on the evening of June 6, 1949.

I hope that this address will be widely read. In it Congressman BROWN makes a revealing and eloquent plea for prompt and vigorous implementation of the Hoover Commission reports. It is urgent and vital that we take action to eliminate waste and to increase efficiency in the executive branch of our Government.

The address follows:

Mr. Toastmaster, Governor Bowles, members of the Connecticut Public Expenditure Council, ladies and gentlemen, when the executive director of your council and my good friend, Carter Atkins, invited me to speak to you this evening, I accepted promptly. I considered the invitation an honor and a privilege, and its acceptance a pleasure, for it gives the opportunity to see old friends again and perhaps to make some contribution to the good work in which this council and all of you present are engaged on behalf of better government.

I am especially pleased and very much honored in having three of my colleagues in the House present tonight, your great Congressman at Large and my good friend, ANTONI SADLAK, another close friend, Congresaman JOHN LODGE, and my distinguished colleague from across the aisle, Mrs. CHASE GOING WOODHOUSE. I am also happy to see in the audience one of my old friends who formerly represented Connecticut in the House of Representatives, Horace Seely-Brown. Connecticut is to be congratulated on the splendid representation it has, and has had, in the Congress of the United States.

The subject assigned me for tonight is: Government, Your Servant Or Your Master?

There was a time in our history when such a question was a purely academic or hypothetical one. But in recent years it has become the very practical and all-important question of the day. Governments—at least all free governments—have always been brought into being to serve the people who created them. In every free government the individual citizen is always the master, but when the position of citizen and government has been reversed, and the government becomes the master, it is no longer a free government—and those living under such a government are no longer free. Need I remind you of that which history teaches us—that free and representative governments always face greater danger of destruction from within than from without?

There are many kinds of masters. There has been one great Master of all, who gave His life for the salvation of men. But there have been other masters, too—such as the Mussolinis, the Hitlers, and the Stalins—who rule by cruelty and oppression over those who are actual slaves, either physical or political.

Down through the ages a never-ending battle has been waged between slavery and freedom. On one side have been alined those seeking to control the lives and activities of their fellow men, and on the other side those who have sought and fought for liberty under law for themselves and their families.

There are many ways in which men can be enslaved. High taxes and a huge public debt can enslave the citizen to his government and bring about the loss of his liberty and freedom. The average American now has from one to two days' wages taken out of each week's earnings to pay for the cost of government. Just let any of you next week try to take home all of your pay. You will find you cannot do it, for much of your earnings are withheld by a beneficent government to pay income taxes, or under a promise to take care of you in your old age. If some of the legislation now pending in the Congress is enacted into law, more will be withheld to pay for your lumbago, your grocery bills, or what have you.

During the present fiscal year, which ends the last day of this month, our Federal Government will spend approximately $40,000,000,000 of your money and will increase the public debt by another billion or so. It will cost the American taxpayers somewhere between forty-three and forty-five billion dollars to run their Nation's Government during the coming fiscal year. All of this in peacetime, 4 years and more after the fighting stopped. Compare these figures, if you will, with the highest Federal expenditures of any prewar year—less than nine and one-half billion dollars—when we were spending our way back into prosperity.

Let me hasten to say I am not blaming any one President or any one Congress for that which has happened and is happening. In fact, all of us are to blame to some extent—the President, the Congress, and the American people themselves.

In the last 25 years we have seen the number of Federal employees grow from around 500,000 to the total of approximately 2,200,000 now on the public pay roll. We have seen the departments, divisions, and bureaus of the Government mushroom from 158 to nearly 2,500.

Our Federal Government is a vast enterprise—by far the largest in the Nation. It employs, as I said a moment ago, nearly 2,200,000 civilians in addition to more than the 1,500,000 in the armed services; a total of approximately 6 percent of our employed population.

Our Federal Government annually costs each American between $275 and $300, and it now owes the average American family of four somewhere between $7,000 and $8,000. It issues regular periodical checks to over 15,000,000 American citizens, or to more than 10 percent of our entire population. It now gives substantially every medical care and attention to more than 24,000,000—or almost 20 percent of our population.

The Federal Government now reaches directly into every American home. It is a partner in every successful business concern, and, technically at least, sits in on every friendly Saturday night poker game and takes its share of the winnings.

While—in view of my youthful appearance—it may be hard for you to believe it, I was Lieutenant Governor of my home State of Ohio more than 30 years ago. Since then, I have spent practically all of my time in the dual capacity of public servant and newspaper publisher. So I have a sort of a split personality—not exactly along the lines of Dr. Jekyll and Mr. Hyde—but as a newspaper publisher I have long been a taxpayer and a critic of governmental waste and extravagance, while as a public official perhaps it can be said I have been a tax-spender and, therefore, the object of public criticism.

As a result of my experience in and out of public office, and in the hope that something could be done to correct evident deficencies, I reached the conclusion it was time some outside agency be established to take an overall look-see at our Government. World War II, which had brought such a great expansion and growth in our governmental structure, was over. The time had come to cut the Federal Government back down to size. So, I studied carefully all the various efforts which had been made in the past to reorganize the Government, and in January 1947, I introduced in the House H. R. 775, a bill to create the Commission on Organization of the Executive Branch of the Government—for it is in the executive branch that approximately 99 percent of all Government expenditures are made. After I had prepared H. R. 775, I discussed its content and purpose with Senator LODGE, of Massachusetts. The Senator agreed fully that the time had come for action and introduced a similar, or companion, bill in the Senate.

With the splendid help of Senator LODGE, H. R. 775 was enacted into law by the Eightieth Congress in the early summer of 1947. It provided for the creation of a 12-man, bipartisan commission, 4 members of which were to be appointed by the President, 4 by the President pro tempore of the Senate, and 4 by the Speaker of the House of Representatives, with 6 members coming from private life and 6 from public life. The Commission was organized at the White House in August of 1947, at a meeting presided over by President Truman. Herbert Hoover, the only living ex-President of the United States, who had been named a member of the Commission by Speaker of the House JOSEPH W. MARTIN, the great legislator from your neighboring State of Massachusetts, was chosen as chairman. Under his inspired leadership, the Commission and nearly 500 other Americans went over our Federal Government with a fine-toothed comb for more than 20 months, completing their labors on Thursday, May 26, when the Commission submitted its final report to the Congress and the President.

Right here I would like to pause for a moment to pay tribute to America's greatest and most beloved elder statesman—Herbert Hoover. Just think of it—here was a man who had held the highest office in the gift of his people—a man well past the three score and ten mark in life, suffering from a painful disability incurred while circling the earth in the service of his country—a man sufficiently well endowed with worldly goods as to permit him to take his leisure—forgetting himself and all else to answer his country's call and to accept an important new assignment. As chairman of our Commission, he has guided its every activity. The brilliance of his mind, the greatness of his understanding, the broadness of his experience, the strength of his spirit, the friendliness of his heart, and the patience of Job enabled him to give to our commission the leadership it had to have to successfully accomplish its task. While all of us on the Commission worked long and arduously, Herbert Hoover outworked each and every one of us. He has grown in the minds and in the hearts of the American

people. They are beginning to appreciate Herbert Hoover's great services to them, to his country, and to all humanity. A Nation's gratitude goes with him, now that he has completed his last official duties as Chairman of our Commission and once more retires to private life.

Others besides Mr. Hoover who served on the Commission were Dean Acheson, Secretary of State; the late James V. Forrestal, Secretary of National Defense; Arthur S. Flemming, former Chairman of the Civil Service Commission and now president of Ohio Wesleyan University; Joseph P. Kennedy, former Ambassador to Great Britain; James H. Rowe, Jr., former White House Secretary and Assistant Attorney General; Dr. James K. Pollock, professor of political science, University of Michigan; George H. Mead, industrialist of Ohio; Senators Aiken, of Vermont and McClellan, of Arkansas; our former colleague in the House, Carter Manasco, of Alabama, and your humble speaker.

It was soon determined we needed all the help we could get, and that the best way to proceed would be to organize task forces to study the various departments, functions, and activities of the Government in an effort to find means and methods of obtaining greater economy and efficiency in the conduct of public business. Twenty-four of these task forces were set up, and more than 300 great Americans, each an outstanding leader in his own field, were drafted to serve on them—and when I say drafted, I do mean drafted.

I have seen Herbert Hoover call in leading citizens and have heard him say to them, "This country has been good to you, just as it has been good to me. It has permitted you to rise from humble beginnings to become the head of a great organization. You have your affairs in good shape. Your country needs you now. You can afford to give it the next 6 months of your time. You are being drafted into the public service." The only excuse for refusing Mr. Hoover and the Commission would accept was that of ill health.

Those who served on these task forces are entitled to the undying gratitude of our people. Most of them worked without compensation. Many of them not only refused reimbursement for expenses incurred, but furnished their own technical and secretarial help without cost to the Government. And what a magnificent job they have done! Their 24 task-force reports are the only sources in existence from which can be obtained detailed information on the way our Federal Government operates. The authoritative material and information submitted by these task forces will long serve as a guide to direct the work of future Congresses and Federal officials. The Commission, sitting day after day, poured over these task-force reports, heard the testimony of their members, and carefully studied their suggestions and recommendations.

In turn, the Commission has submitted to the Congress 19 separate reports of its own, containing 318 specific recommendations as to how we can obtain greater economy and efficiency in the operation of our Federal Government. If these recommendations are made effective, the cost of operating the Federal Government can be reduced by at least $3,000,000,000 a year, and, in my opinion, perhaps by as much as $5,000,000,000.

What were some of the things the task forces and our Commission found wrong with the Government?

Well, for instance, the budget document—a huge book of 1,670 pages—from which it is almost impossible to determine the real cost of any of the various programs of the Government. One title in the Veterans' Administration budget is merely "Salaries and expenses, $848,897,000." In another is a small item for "Carfare and bicycle allowance." To determine the cost of some operations you would have to look for, and would find, 20 or 30 different items in different portions and sections of the budget. If you did not miss any items, and would add all of them, you might possibly be able to determine the actual cost of some governmental operations.

In its accounting, the Federal Government now maintains three, and often four, separate and complete sets of books, which frequently do not agree one with the other.

Personnel supervisors are often compensated according to the number of employees under them, rather than for the efficient and economic way in which they function. So it does not take the supervisor, who has had a new baby arrive in his home and needs a little extra income, very long to learn that, by adding a dozen employees, he can get an extra $50 in monthly pay. Incidentally, under present archaic regulations, it now takes as long as 18 months to discharge an unsatisfactory civil service employee, after many lengthy hearings which usually result in the discharging officer, rather than the unsatisfactory worker, being put on trial. No wonder some department heads have told us 10 percent of their employees do little work and should be discharged, but that it is too much trouble to get rid of them.

More than half of the purchases made by the Federal Government are of items costing less than $10; yet it costs the taxpayers $11.28 to process each purchase order.

The same situation exists in the public works programs of the Government. Two different Federal agencies recently surveyed the same projected dam at the same site on the same river and announced the result of their surveys on the same day, at a roughly estimated cost of $250,000 per survey, for two similar dams, with one estimated to cost $385,000,000 and the other $434,000,000. According to a task force report, Federal money has been spent on irrigation dams at a cost of $3,500 per acre for every acre of land which could possibly be irrigated by the new dam.

New Government hospitals were found to be under construction in cities or communities where other Government hospitals were being closed for lack of patients. In one Government hospital visit, more doctors than patients were found, and in a number of hospitals less than 50 per cent of the beds were occupied. Yet, the hospital building program was going madly on.

Down in Social Security a task force found almost 5,000 Government employees are engaged in posting detailed actuarial records which have no real value, since the system was changed 10 years ago.

Another study showed that in numerous instances as many as five separate agencies of the Department of Agriculture were attempting to advise the same farmer at the same time how to run the same farm.

In the National Defense Establishment a $30,000,000 error was found in a $39,000,000 budget request. Many hundreds of tanks could not be located or accounted for, and a few ships seem to have disappeared somewhere. When a request for an appropriation of $100,000 each to modernize scores of huge tanks was looked into, it was found these tanks had already been transferred to another branch of the National Defense Establishment where they had been modernized for $4,800 each.

In another Government office the individual work load was fixed at handling 12 items per day. A commission investigator, who was quietly watching the operation, noted the average worker could easily handle five items in an hour without overstrain.

In the insurance section of the Veterans' Administration the work load per employee is only one-fourth of that which pertains in private insurance companies for comparable transactions.

On the financial front the Government often pays interest on its own money.

In the Post Office Department a penny postcard, on the average costs the Government two and one-half cents for printing and delivery.

I could go on "ad nauseam," giving you thousands of examples of waste, extravagance, and poor management in the Federal Government.

The Hoover Commission has pointed out what can be done about it and how such situations can be cured. It is now up to the President, the Congress, and to you, the people of the United States, to decide how badly you want the job done.

About 20 percent of the recommendations of the Hoover Commission can be made effective by executive or administrative order. Between 30 and 40 percent can be accomplished by the President through the submission of reorganization plans to the Congress under the authority conferred by the Reorganization Act of 1949. The remainder of the Commission's recommendations can only be made effective through the enactment of new Federal statutes or a change in our present laws.

I am indeed happy to be able to report to you tonight that it appears likely many of the reforms recommended by the Hoover Commission will be put into effect reasonably soon. President Truman has advised us that he is supporting the work of the Commission, and that he now has a number of reorganization plans ready to send to Congress within a "few days." He has already sent several messages to Capitol Hill, proposing and urging enactment of new laws to carry out the Hoover Commission recommendations. The Congress has passed, and the President has signed, a new law for the reorganization of the State Department. My three distinguished colleagues from Connecticut who are sitting at the banquet table here tonight all supported the bill for the reorganization of the State Department, which, incidentally, your Congressman, JOHN LODGE, as a member of the Foreign Affairs Committee, helped prepare. The Senate has approved and sent to the House a bill for the reorganization of the National Defense Establishment, which, if enacted, will result in the saving, in operational costs alone, of approximately one and one-half billion dollars a year.

The House now has before it a bill to reorganize the procurement activities of the Federal Government, and to create an Office of General Services in which will be consolidated many present agencies and bureaus, making possible much greater economy and efficiency.

So, we are moving along, but it will take time to accomplish all of the results we desire. The great work cannot be finished in a day. It will take many months, and perhaps even years, to complete the task, but if you, the people, continue to give the same almost unanimous support to the recommendations of our Commission that you have to our efforts in the past, then really worth-while results will be brought about.

Why is it so important to get greater economy and efficiency in the Federal Government—and in our State and local governments? Well, my friends, it is economic history that no government, or no national economy, has ever survived where as much as 40 percent of the people's income has been taken away from them in the form of taxes

UNIVERSITY OF MICHIGAN LIBRARIES

to support the Government. The crash has always come before the over-all tax burden reached 40 percent of the national income.

Today the cost of government to our people—Federal, State, and local—averages nearly 33 percent of their total income. We have reached the danger point. We are within at least 7 percent of the point where all other economies and governments have failed, and it now appears we are facing a probable decline in our national income. A Treasury report has just been released showing that for the first 5 months of 1949 our Federal revenue receipts have been $15,400,000,000 as compared to $18,800,000,000 received during the first 5 months of 1948. So, it is of the utmost importance—in fact, the future of our people and our country depends upon it—that we take prompt and drastic action to cut the cost of Government, and, at the same time, to make it more efficient and effective.

Let me congratulate you who are here tonight on the great work you have started in your State. Connecticut was the first State in the Union to name an official commission to study the State government for reorganization purposes. A number of other States are now taking similar action. Connecticut has lead the way. I wish you godspeed in your efforts. Let us be the masters of our Government, rather than to have the Government as our master.

War Excise Taxes on Transportation and Communications Are an Unjust Peacetime Burden—Should Be Repealed

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. McDONOUGH. Mr. Speaker, the high wartime excise taxes levied on communications and on transportation are discriminatory in nature, and have burdened commercial users of these facilities and curtailed all nonessential use.

These taxes were imposed during the war to discourage the use of our overburdened communications and transportation facilities as well as to raise needed revenue for the prosecution of the war. But the war is over and the taxes remain in effect even though at the time they were enacted there was an implied promise that they would be removed at the termination of the war.

The communication tax is higher than any of the other so-called luxury taxes, and there is no justification for this discrimination. Phone service and the use of telegram and cable facilities are not luxuries but are business and social necessities, and the tax on them is based on no sound principle of taxation and is without justification now. These taxes especially penalize commercial firms in the western section of our Nation far removed from the centers of population which must use telephone and telegraph facilities for the pursuit of their business since the taxes are a percentage of the rate which in turn is largely based on distance. In the case of telephone service, the tax has presented an additional deterrent to the extension of rural lines.

The present excise tax on the transportation of both property and persons operates as a sales tax upon an essential service that is not a luxury and has to be used repeatedly by large sections of the population. Commercial travelers and business commuters must pay the same tax as persons who travel for pleasure. The tax on property transportation has tended to raise the price of commodities and to an extent greater than the amount of the tax since the tax is included in each percentage mark-up in the course of movement of goods from producer to consumer.

In the transportation tax, as in the communications tax, the Western States are discriminated against. The taxes add to the competitive disadvantages under which western agriculture, mining, manufacturing, and other industries are already laboring by reason of being far-removed from the great eastern markets and centers. These taxes also exert an adverse effect upon the Western States tourist business, which has been the source of substantial annual revenue to these States.

I believe that the wartime excise taxes on communications and transportation are excessive and should now be removed to prevent further discrimination against the citizens of our Western States. I have introduced legislation to repeal these taxes, H. R. 205, H. R. 207, and H. R. 208, of which I urge favorable consideration.

The Mountain-Pacific States Conference of Public Service Commissions recently adopted a resolution concerning these taxes, as follows:

RESOLUTION OPPOSING TAXES BASED ON A PERCENTAGE OF CHARGES PAID FOR TRANSPORTATION AND COMMUNICATION SERVICES

Whereas existing revenue acts provide for taxes on freight and passenger transportation and communication services on basis of percentages of the charges paid for such services; and

Whereas experience has shown that taxes based upon a percentage of the charges paid fall much more heavily upon the people of the 11 Western States than upon those of other areas; that such taxes substantially add to the competitive disadvantages under which western agriculture, mining, manufacturing, and other industries, are already laboring by reason of being far-removed from the great eastern markets and centers; that such taxes exert an adverse effect upon the Western States tourist business, which has been the source of substantial annual revenue; and that, on the whole, such taxes are grossly unfair and unduly prejudicial to the people of the 11 Western States; and

Whereas, by reason of the large volume of transportation performed by private carriers which are exempt from tax, a further discrimination exists not only in the 11 Western States but throughout the entire country; and

Whereas this conference has, on numerous occasions, gone on record in opposition to the afore-mentioned discriminatory features of the existing revenue acts: Therefore be it

Resolved, That the members of the Mountain-Pacific States Conference of Public Service Commissions, in regular session at San Francisco, Calif., on May 5 and 6, 1949, reaffirm the position they have heretofore taken and again earnestly urge the Congress to amend the existing revenue acts so as to remove the aforesaid discrimination.

I hereby certify that the foregoing resolution was duly introduced, passed, and adopted at a regular session of the Mountain-Pacific States Conference of Public Service Commissions held at San Francisco, Calif., on May 5 and 6, 1949.

HOWARD FREAS, *Secretary.*

Taxes collected on communications and transportation in each of the 11 Mountain Pacific States and the grand totals of such taxes for fiscal year ended June 30, 1948

	Transportation taxes	Communication taxes	Total of both classes of taxes
Arizona	$409,023	$68,659	$477,682
California	44,820,690	50,466,510	95,287,200
Colorado	4,371,763	10,868,342	15,240,105
Idaho	552,273	70,000	622,273
Montana	628,368	111,206	739,574
Nevada	149,707	286,536	436,243
New Mexico	435,806	49,077	484,883
Oregon	3,180,528	448,328	3,628,856
Utah	941,582	50,438	992,020
Washington	4,531,440	1,727,539	6,258,979
Wyoming	205,048	37,163	242,211
Total of 11 States	60,226,226	64,183,800	124,410,026
Total United States	582,299,227	468,776,068	1,051,075,295

NOTE.—Compiled from Annual Report of Collector of Internal Revenue, U. S. Treasury Department, Fiscal Year Ended June 30, 1948.

I am also including the substance of the bills which I have introduced for the removal of these taxes:

[H. R. 205, 81st Cong., 1st sess.]

A bill to repeal the tax on transportation of property

Be it enacted, etc., That subchapter E of chapter 30 of the Internal Revenue Code (relating to the tax on transportation of property) is hereby repealed.

SEC. 2. The amendment made by this act shall apply to amounts paid on or after the first day of the first month which begins more than 20 days after the date of the enactment of this act for transportation on or after such first day.

[H. R. 207, 81st Cong., 1st sess.]

A bill to repeal the tax on certain telegraph, telephone, radio, and cable facilities

Be it enacted, etc., That paragraphs (1) and (2) of section 3465 (a) of the Internal Revenue Code (relating to imposition and rate of tax) are hereby repealed.

SEC. 2. The amendment made by this act shall apply in the case of amounts paid pursuant to bills rendered on or after the first day of the first month which begins more than 20 days after the date of the enactment of this act for services for which no previous bill was rendered, except that such an amendment shall not apply with respect to such services as were rendered more than 2 months before the first day of the first month which begins more than 20 days after the date of the enactment of this act.

[H. R. 208, 81st Cong., 1st sess.]

A bill to repeal the tax on transportation of persons

Be it enacted, etc., That subchapter C of chapter 30 of the Internal Revenue Code (relating to the tax on transportation of persons) is hereby repealed.

SEC. 2. The amendment made by this act shall apply to amounts paid after the date of the enactment of this act for transportation after such date.

The National Guard

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. JONES of Missouri. Mr. Speaker, in the consideration of our armed services, I have been led to believe that at times we overlook the importance of one branch of the service, which throughout the years, both in times of peace and in times of war, but particularly in times of local emergencies, has been called upon and has responded with an efficiency that has demonstrated the importance and worth-whileness of this service.

I am, of course, referring to our National Guard, which despite the fact that it has been kicked about, and has consistently borne the brunt of every economy move, and otherwise treated as an unwanted stepchild whose presence is endured, yet has time and again risen to the emergency of the hour to bring forth the plaudits of an appreciative public.

As one who has enjoyed—and I emphasize and repeat "enjoyed" many years of service in the National Guard, and who has contributed more than 5 years to another volunteer reserve military force, the Missouri State Guard which was active while the National Guard of Missouri was in Federal service during World War II, I have read with no small degree of pride where the One Hundred Fortieth Infantry, my old National Guard regiment, has been called upon to furnish a provisional company to act as an honor guard for President Truman when he attends the Thirty-fifth Division reunion at Little Rock, Ark., on June 10, 11, and 12.

In connection with these remarks I would like to read from a news release which appeared in many of the newspapers of my district last week, telling of recent activities and services of the One Hundred Fortieth Infantry which gives some indication of the versatility of these peacetime soldiers who contribute so generously of their time and ability with small compensation, and who in most instances are motivated by a patriotic desire to serve their home community, their State and their Nation in times of peace, in order that they may be prepared to render the greatest service of which they are capable in times of a national emergency.

THE NATIONAL GUARD'S VERSATILITY ILLUSTRATED

CAPE GIRARDEAU, June 1.—The versatility of the National Guard was graphically illustrated this week when the One Hundred Fortieth Infantry, Missouri National Guard, just relieved from disaster relief duty was called upon to furnish an honor guard for the President of the United States.

Saturday evening, May 21, the citizens of Cape Girardeau, Mo., arose horrified from their dinner tables to witness a vicious tornado that skipped around the city for 7 minutes. Cutting a zigzag path, the roaring cyclone, leveling buildings, splintering great trees, destroying all in its path, left a devastated wake of broken bodies and buildings. The score totaled 23 dead and over 130 injured, with property damage running into the millions. Even with the high winds passed, there were very real hazards present. High-tension wires, broken by the impact of the tornado were spitting sparks not far distant from the spot where a 13,000-gallon gasoline tank emptied its contents over the streets jammed bumper-to-bumper with automobiles, their worried occupants seeking safety. Virtually all roads were blocked and traffic was at a standstill. Communications were out in a large section of the community of 20,000. Confusion was the rule and panic lurked in the area. Local medical service, fire departments, and policemen were hampered by the enormity of the situation and the difficulty of movement. The situation was desperate.

SERVICE TO STORM VICTIMS

Headquarters Company and Service Company, One Hundred and Fortieth Infantry, the two units of the Missouri National Guard located in Cape Girardeau immediately put their alert plans into operation. Most of the key personnel of both companies, including those charged with handling communications, rations, and food, munitions, and administration, were conducting week-end range firing at the rifle range at Arcadia, 70 miles distant. These key people returned to Cape Girardeau as soon as they had been advised of the seriousness of the disaster. Despite the breakdown of communications and the complete tie-up of traffic, the units were mobilized within a few hours and within 15 minutes after the alert call went out, approximately 80 men were assembled at the armory. These troops were assigned to two seriously damaged areas and patrolled those parts throughout the night. A command post was established at regimental headquarters and maintained radio contact with the two devastated areas under guard.

In the meantime, relief personnel stationed at the armory, assisted in quartering refugees from the storm which were evacuated and housed in the armory. Guardsmen were busy for the next few days, protecting property, establishing a mess for the military personnel as well as for the refugees, and erecting a tent camp for military personnel near the armory. For 3 days and nights, men from the One Hundred and Fortieth Infantry performed the many duties necessary in a disaster area, ranging from traffic control to the prevention of looting.

Guard assistance was recognized by Mayor Ford in a letter which read in part: "It is difficult at this time to even try to evaluate your services to the city and the people whose property you were protecting, but I am sure that you and your men know the appreciation that the people of this city feel for your assistance."

GUARD FOR PRESIDENT

No sooner had the One Hundred and Fortieth Infantry been relieved of disaster duties than a call came down to assemble a provisional company to act as honor guard for President Truman during the Thirty-fifth Division reunion at Little Rock, Ark., June 10, 11, and 12. This assignment required a troop movement of over 200 miles from southeast Missouri to the heart of Arkansas. Quarters and messing facilities are also a prerequisite to a movement of this kind extending over several days. Uniforms had to be cleaned and pressed, helmet liners painted, food secured, gasoline provided, trucks checked over and a host of other last-minute details considered to insure that the honor guard arrived spic and span for this privileged duty. In a full-time military organization these are minor problems, but in a group which is essentially civilian, whose members spend only a portion of their time in military training, these problems are more difficult. That these arrangements proceed efficiently and smoothly is a tribute to the versatility of this new National Guard.

Formation of the Republican Party

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. KEEFE. Mr. Speaker, on February 28, 1854, at the city of Ripon, Wis., representatives from all the well-known political parties gathered together to discuss the dominant issue of slavery. At this meeting a resolution was passed to the effect that if the Kansas-Nebraska bill passed the Senate, old party organizations would be discarded and a new party to be called the Republican Party should be formed. Thereafter the Senate of the United States passed the Kansas-Nebraska bill on March 3. On March 20, an enlarged meeting was held in which men of all parties participated. As a result of this meeting, the name of the new party was formally adopted, and plans were inaugurated to place the new party before the people of the entire Nation.

The first Republican State mass convention which adopted a platform was held at Jackson, Mich., on July 6, 1854. Thus, the political idea that was born in the city of Ripon was implemented by collective action on the part of men from all political parties in the State of Michigan. Spurred by the dramatic editorials of Horace Greeley, the new party as thus formed attracted the immediate attention of people all over the North. I believe it is of interest to briefly review the historic facts relating to the formation of the Republican Party.

While the two major political organizations in this country have for some time been firmly established as the Republican and Democratic Parties, this condition did not always prevail in the 160-year history of the United States under the Constitution.

First there was the Federalist Party, which functioned during the first 25 years of the Nation's history under the leadership of such outstanding patriots as Washington, Hamilton, and Adams. This party drew its main suport from commercial, financial, and manufacturing groups which were strongest supporters of the Constitution. By 1792 Jefferson, Madison, and others had organized anti-Federalist and agrarian groups into a Democrat-Republican Party which later became known simply as the Democratic Party under the leadership of Jackson. During the 1830's the Whig Party developed as the rival of the Jacksonian Democrats.

UNIVERSITY OF MICHIGAN LIBRARIES

From the 1830's to the Civil War one of the burning public issues was the question of slavery. The Whig Party hedged on the matter, avoiding a clear-cut commitment. The Democrats were divided into northern and southern factions over the issue with the southern proslavery interests in control of the party. When the leaders of the old line parties failed to act, splinter groups appeared such as the Liberty Party in 1840, the Barnburners in 1844 and the Free Soil Party in 1848.

The Whigs, Democrats, and Free Soilers were the principal political groups in existence in 1854 when Stephen A. Douglas, Senator from Illinois, touched off the smoldering political powder keg with his bill to create two new Territories of Kansas and Nebraska and permit them to enter the Union with or without slavery as their constitutions might provide.

Antislavery forces feared this measure would upset the balance and open the door to the extension of slavery in the new territories of the West. They accepted the Kansas-Nebraska bill as a challenge and determined to resist it with a new alinement of parties.

While the Congress debated the Kansas-Nebraska bill people gathered at schoolhouses and churches in the North and warmly discussed the proposal. The meetings attracted the remnants of the Whig Party, some of the northern Democrats and most of the supporters of the Free Soil Party. Together they formed the Republican Party of today.

No doubt many local meetings were held, but Ripon, Wis., is generally credited with being the birthplace of the Republican Party.

William Starr Myers, the Princeton University historian, states in his book The Republican Party—a history that—

Probably the meeting which especially deserves the credit for leading the way in the organization of the new party was that held at Ripon, Fond du Lac County, Wis.; and Mr. Alvan E. Bovay, a prominent member of the Whig Party who lived in that town, was the prime mover in calling the convention, and also in the use of the name Republican for the new party.

Mr. Bovay, who later held the rank of major in the Nineteenth Wisconsin Infantry in the Civil War, was born in the State of New York in 1818 and lived for a while in New York City. He later became a lawyer and settled in Ripon in 1850. In 1852 Mr. Bovay, while on a visit to New York City, said to Horace Greeley, with whom he long had been acquainted, that inevitably there must be a new party formed on the basis of the exclusion of slavery from the territories. Greeley asked him what he would name the new party, and Bovay replied, "Republican."

While the Kansas-Nebraska bill was before Congress, he wrote Greeley on February 26, 1854 saying: Your paper is now a power in the land. Advocate calling together in every church and schoolhouse in the free States all the opponents of the Kansas-Nebraska bill, no matter what their party affiliations. Urge them to forget previous political names and organizations, and band together under the name I suggested to you at Lovejoy's Hotel in 1852. I mean the name Republican. It is the only one that will serve all purposes present and future—the only one that will live and last" Greeley approached such a decision only by slow stages, but on June 24, after the Kansas-Nebraska bill had been enacted he suggested the name Republican in an editorial article in the Tribune.

Meanwhile Bovay had been at work in a practical manner. Along with two other men of Ripon, a Mr. Bowen and a Mr. Baker, who were respectively a Democrat and a Free Soiler, he issued a call for a public meeting to consider the situation caused by the legislation then pending in Congress. This meeting took place in the Congregational church in Ripon on February 28, 1854, and a resolution was passed to the effect that if this legislation should pass, old party organizations must be disregarded and a new party, to be called the Republican, should be formed, based solely on the issue of opposition to the extension of slavery.

It will be remembered that the Kansas-Nebraska bill passed the Senate on March 3. The Ripon leaders decided not to wait longer but called a second meeting for March 20, in which men of all parties were to participate. Mr. Bovay wrote, many years later, that he went from house to house and shop to shop and halted men on the street to get their names for the meeting of March 20, 1854. At that time there were not more than a hundred votes in Ripon, and by a vast deal of earnest talking I obtained 53 of them. * * * We went into the little meeting held in a schoolhouse Whigs, Free Soilers, and Democrats. We came out of it Republicans, and we were the first Republicans in the Union.

Gordon S. P. Kleeberg, LL. D., Ph. D., in his book entitled "The Formation of the Republican Party as a National Political Organization" also credits Ripon, Wis., with being the birthplace of the party. He wrote:

One of the earliest, if not the earliest, of the movements that contemplated definite action toward the formation of a new party, took place in Ripon, Wis., on February 28, 1854. After a thorough canvass, conference, and general comparison of views, initiated by Dr. Alvan E. Bovay, a prominent member of the Whig Party, among the Whigs, Free Soilers, and Democrats of that township, a call was issued signed by himself representing the Whigs, and by a representative of each of the other two parties, for a Republican meeting to consider the grave issues which were assuming an aspect of such alarming importance. The meeting was largely attended by persons of both sexes from the town and surrounding country, and a resolution was adopted that, if the Nebraska bill then pending in the Senate should pass, they would "throw old party organizations to the wind and organize a new party on the sole issue of nonextension of slavery." At a second meeting held on the 20th of March, 1854, shortly after the passage of the bill, in the same place, by formal vote of the assembly, the town committees of Whig and Free Soil Parties were dissolved and a committee of five, consisting of three Whigs, one Free Soiler, and a Democrat, were chosen to begin the work of forming a new party. * * *

The first Republican State mass convention which adopted a platform and nominated a full State ticket was held at Jackson, Mich., on July 6, 1854.

Many other eminent historians credit Ripon, Wis., with the distinction of being the birthplace of the Republican Party, including ex-Vice President Henry Wilson, who personally investigated the facts prior to 1874 when most of the witnesses were available.

The historian, Rhodes, in volume XL of his monumental History of the United States, recognizes the meetings of 1854 held at Ripon as "the earliest that looked to the new party movement under the name Republican."

Charles A. Beard, in his Rise of American Civilization writes in reference to the party movement at the time the agitation against the Kansas-Nebraska bill of 1854 that—

In February of that year, a number of Whigs and Democrats assembled at Ripon, Wis., and resolved that a new party must be formed if the bill passed. When the expected event occurred, the Ripon insurgents created a fusion committee and chose the name "Republican" as the title of their young political association. In July, a Michigan convention composed of kindred elements demanded the repeal of the Kansas-Nebraska Act.

David Saville Muzzey and Dr. Edward Stanwood were other distinguished writers who referred to the Ripon meeting as the first of the party and the official History of the Republican National Convention held in St. Louis in 1896 accepted Ripon's claims without qualification.

During his lifetime Major Bovay, who suggested the name "Republican," was interviewed many times and impressed himself upon his interviewers as a creditable witness whose testimony was accepted unreservedly. As evidence of this the following are given as some of the articles giving full recognition to the claims of Ripon and to Mr. Bovay as the founder of a great party: The Commercial Advertiser, January 16, 1897; Leslie's Weekly, June 18, 1896; Chautauquan, November 1897; St. Louis Democrat, 1889; Evening Wisconsin, November 11, 1899; and Metropolitan Magazine, August 1900.

The new party, launched at Ripon in 1854, met with amazing success from the start. The Republican State tickets were elected in Michigan and Wisconsin in that first year, 1854. The next year a Republican Governor of Ohio, Salmon P. Chase, was elected. Eleven Republican Senators were sent to Washington and anti-Nebraska majorities were secured in 15 States. At the first national convention of the party, held in Philadelphia in 1856, Gen. John C. Fremont was nominated for the Presidency on a platform opposing slavery extension, advocating improvement of rivers and harbors, and the building of a transcontinental railroad. In spite of ineffective organization in many Eastern States and no support at all from the South, Fremont received 114 electoral votes against 174 for Buchanan, Democrat.

By 1858 the new Republican Party had rallied sufficient strength to elect a plurality of the Members of the House of Representatives. Then in 1860, although the Republican Party had been in existence for only a brief 6 years, it won the Presidential election for one of the greatest men of history—Abraham Lincoln, of Illinois. Running on a platform similar to that of 1856 but also advocating a homestead law and a protective tariff, Lincoln polled 180 electoral votes, while Breckenridge, of the southern Democratic faction, received 72, Douglas, of the northern Democrats 12, and Bell, of the Constitution-Union Party 39.

Mr. Speaker, an organized effort of spontaneous origin is developing throughout the country to establish in the city of Ripon a suitable memorial preserving for posterity the building in which the original meeting herein described was held. There is no disposition to detract from the historic part played by the Republicans of the great State of Michigan who met under the oaks in the month of July of 1854 and formally endorsed the proposals adopted prior thereto at the meeting held in the city of Ripon. I trust that the people of America will support the efforts to develop a lasting memorial at the city of Ripon, Wis., commemorating the birth there of the Republican Party.

The Real Estate Lobby's Propaganda Versus the Actual Housing Situation

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. KENNEDY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an article which deals again with the critical housing shortage:

THE REAL ESTATE LOBBY'S PROPAGANDA VERSUS THE ACTUAL HOUSING SITUATION

If a recent arrival from Mars were to sit down soberly and read through the stack of pamphlets now flooding forth from the organizations who oppose H. R. 4009, the public housing and slum clearance bill, he would get a most inspiring picture of the American housing situation.

He would learn that our housing shortage has been solved, and that it was solely due to rent control anyway; that our slums are rapidly disappearing (or indeed that we never really had any except for a few degraded families who preferred to live that way); and that practically everybody who wants a new house can go right out and buy one from an ordinary private builder.

He would discover that the American residential-building business is a marvel of efficiency, stability, and sturdy independence, and that the only possible threat to ever greater progress in the future, to still more, better and cheaper homes for the American people, lies in such legislation as that under consideration in Congress today.

The visitor from Mars would probably wonder why, under such circumstances, anybody bothered to write or promote housing legislation at all, and thus incur the disfavor of such pillars of the public interest as the Washington Realtors Housing Committee (NAREB) and the Savings and Loan League. For even a Martian would probably know that very few people in the United States have any desire to attack private enterprise per se or to get the Government involved in things unnecessarily.

Now I hardly need to point out to my colleagues in the House of Representatives that if our visitor, attracted by this rosy picture, should decide to send for his family and settle permanently on our shores, he would be due for a slight shock, to say the least, when he came to set up housekeeping. Even were his income in the upper brackets, he might not find it so easy to secure the kind of home he had been led to expect. But if he were just an ordinary Martian-American earning, say, $2,500 to $5,000, he would have very serious difficulty indeed in almost every city in the country—above all if he had the old-fashioned patriotic urge to raise a large family of good American citizens. And if his income was down at the level where about a third of American families must subsist, say, under $2,500 as a national average, the chances are he would have to get along in a dilapidated old dwelling embodying few if any of the famous modern advantages of the American way of life, if indeed he could find a home of any kind.

Our visitor would feel pretty sour about that pretty picture painted by the real-estate lobby, and he would understand all too well why we are discussing housing legislation with such fervor.

It doesn't take either a hypothetical Martian or hard-boiled statistics to punch holes in the propaganda spread around by those who oppose the housing bill. Many a distinguished Congressman understands the actualities of the housing situation from his own bitter personal experience. But since these fallacies propagated by the real-estate lobby are likely to form the groundwork for the entire strategy of the opposition in floor debate, doubtless, including a long series of complicated and confusing amendments, perhaps a brief résumé of the actual facts of the housing situation, by contrast with these lies and illusions, may be worth while.

THE SHORTAGE IS NOT BEING SOLVED BY PRIVATE ENTERPRISE

"There is no housing shortage in this country," blithely reported a Dow survey last month. Or, as the United States Chamber of Commerce headlines it "Acute housing problem over."

All of the bona fide evidence tends to prove that the shortage is still just about as bad as ever, particularly in our larger centers of population. The census reported 2,200,000 married couples living in other families' households or in transient quarters at the end of 1948. In very few of the larger cities has the building rate even caught up with the current rate of increase in families, let alone making up for arrears, a fact emphasized over and over in well-supported local testimony before congressional committees. The Family Service Agency of America made a recent survey among its local agencies all across the country which indicated that the general housing situation is little, if any, better than it was a year ago. As a measure of the severity of the housing shortage, 31 percent of the family agencies said that the need for homes in their communities was greater than a year ago, and 52 percent said the demand was about the same. Only 17 percent noted some improvement.

Perhaps the best evidence that the shortage is still acute in the extreme can be found in a recent Gallup poll (March 14, 1949, release). The people were asked a very simple question: "What do you think is the most important problem facing this section of the country today?" And in almost every region the people named housing as second only to the high cost of living.

And now what's happening? Instead of speeding up as it should, the home building rate is steadily falling off. We're further than ever from a solution of the shortage.

THE SLUMS ARE STILL WITH US AND STILL INCREASING

Fallacy No. 2 was concocted by the Producers Council's imaginative researchers. In a pamphlet entitled "Our Housing Improvement Since 1940" here is what they say: "There has been a spectacular improvement in the quality and usability of the existing supply of housing, so that far fewer families today are living under conditions that can be described as 'substandard' than at any past time." This remarkable deduction was arrived at by a truly spectacular manipulation of some very thin and questionable data.

Since the 1940 census of housing, however, a number of cities have made very refined and exhaustive door-to-door and room-by-room surveys of their slums and blighted areas, using the most scientific procedures ever yet devised, the appraisal method for measuring the quality of housing, sponsored by the American Public Health Association. And in every city for which the results are available—New Haven, Philadelphia, Milwaukee, and also in Baltimore where another type of method was used—it is clear that the homes requiring outright demolition in the interests of public health and welfare are about the same or a larger number than appeared to be the case in 1940. An interesting and conclusive analysis of the Milwaukee survey, highlighting these sad conclusions, was inserted in the CONGRESSIONAL RECORD on April 14 by Congressman BIEMILLER, of Wisconsin.

SPECULATIVE BUILDERS ARE ONLY REACHING THE RICHEST THIRD OF THE POPULATION, AND THE ECONOMY HOUSE IS NO ANSWER

Of all the claims made by real-estate propagandists, one of the most fantastic is the notion that private builders are producing homes within the reach of everybody's pocketbooks. About a year ago the Construction Industry Information Committee issued a release saying, "the private building industry provided new homes in proper proportions during 1947 for families in every income group except the lowest tenth and the highest fifth of the country's income brackets." The false and fancy statistics on which this ridiculous claim was made were refuted and discredited at the time in a statement which I included in the CONGRESSIONAL RECORD on March 15, 1948.

But now Mr. Robert Gerholz, chairman of the Realtors' Washington Committee of the National Association of Real Estate Boards, says blandly that "the building industry is returning to its prewar pattern of construction for all income brackets wherever the demand exists, with the natural emphasis on the economy house" (April 15, 1949).

Well, even the Federal Housing Administration admits that the median income of nonfarm families is around $3,000, and that a family with $3,000 should not pay more than $6,000 for a house, in some cases less. Which means that at least half of our nonfarm families would need houses costing less than $6,000 if they were to buy on the speculative market.

And even $6,000 houses are very few and far between, despite all the economy house promotional fanfare, and even if you could find one it would very likely be an unfinished shell, a tiny box not big enought for a garage or a few cows let alone a normal family with two or three children. A good analysis of this economy house, and its dangerously low-living standards, was inserted in the CONGRESSIONAL RECORD by Congressman MITCHELL, of Washington, on May 9, 1949. This analysis proves that the economy house experience is no argument for lowering the cost limitations for public housing as included in H. R. 4009. Quite the contrary, it proves beyond question that they must be maintained as is.

But in any case, all the evidence shows that the speculative builders, today as well as throughout the past several decades, hardly ever reach a family that is not in the top third income bracket.

"What is happening in the field from $6,000 to $9,000 houses," said Senator CAIN, of Washington, during the Senate hearings on the housing bill to a Midwestern bank president, representing the American Bankers Association. "I see no houses in that field in the fourth Federal reserve district," was the reply.

And here is what Mayor Van Antwerp, of Detroit, said at the recent convention of the

UNIVERSITY OF MICHIGAN LIBRARIES

United States conference of mayors in Washington:

"How many times during the past 3 years have you read in the real-estate section of your Sunday paper that the private home builders were on the verge of producing the low-cost home on a volume basis? Officials of the FHA and the heads of the home builders associations have been singing this theme song for years. The current version of this campaign is the FHA-sponsored $6,000 economy house. During the year 1948, more than 90 percent of all new homes built in Detroit were priced in the $10,000 and higher brackets. Most so-called economy houses on careful scrutiny turn out to be either a glorified garage or a partially completed house constructed in Mudville several miles beyond the corporate limits of your city."

A REAL HOUSING PROGRAM WAS BADLY NEEDED IN 1946, 1947, AND 1948; IT'S AN ABSOLUTE NECESSITY TODAY

All during the campaign against the Wagner-Ellender-Taft bill of the Seventy-ninth Congress, and the Taft-Ellender-Wagner bill of the Eightieth Congress, the real-estate lobby played one tune in perfect unison. "Public housing and slum clearance would be inflationary." Often the intended impression was that they were not against the principle of better housing and getting rid of slums. Oh, no, indeed, but not now. This is the wrong time.

And most of the 1949 antihousing bill pamphlets which have been strewn around by the thousands still sing the same song. The implication throughout is summed up by the United States Savings and Loan League in a little leaflet called the Dangers of Public Housing, as follows: "Billions more would be added to our dangerously high Federal debt and more fuel—more credit—would be thrown on the flames of inflation."

But when it came to battling against rent controls, or getting easier credit for speculative building, the tune was entirely different. The Washington Newsletter of the National Association of Home Builders for March 9, 1949, remarked that "there are disturbing signs of a slackening in the tempo of housing production in recent months. * * * The time has come when national policy must be directed, not to the problem of checking inflation, but to the problem of preventing deflation in our economy." So this was the line in the hearings on rent control. And now the quick change around is complete as the opponents of H. R. 4009 advance economy as their major ally in their attempt to defeat the measure.

So it's the same story either way. No use fixing the roof when it isn't raining, and you can't fix it when it is raining.

But the truth, by contrast with this double talk, is quite different.

If we need housing, we need housing. And if we have needed a bold housing program ever since 1945, we need it doubly now. For by now it is absolutely clear as crystal that private enterprise will not and cannot solve the housing shortage by itself, that private enterprise will not and cannot get rid of the slums, that private home-building enterprise can only serve a very limited segment of the housing market, has already met most of that market for the immediate present, and is therefore declining.

The Bureau of Labor Statistics reported that in the first quarter of 1949 the "starts" in nonfarm dwelling construction were 12 percent under the number started in the same period last year. This single fact, together with other downward shifts visible in our economy at present, simply makes the need for housing legislation as imperative from the over-all fiscal viewpoint as it always has been from the social viewpoint.

The evidence is all in: There are 20,000,000 words of it in congressional hearings since 1944. The people want it. On April 24 Elmo Roper summed up the results of local and Nation-wide opinion surveys on housing as follows: "If there is a mandate for the Eighty-first Congress on any issue, the mandate on housing is perhaps the clearest of all. The people want their Congress to expedite the building of new homes. Majorities want a program of slum clearance and low-cost public housing."

Let's get busy and pass H. R. 4009, which will shortly be before this body.

Milton Horace West

MEMORIAL ADDRESS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1949

On the life, character, and public service of Hon. MILTON HORACE WEST, late a Representative from the State of Texas

Mr. KEOGH. Mr. Speaker, MILTON H. WEST was one of the most conscientious and effective legislators to have been sent to the House from Texas, which has produced so many vigorous public servants in the National Legislature.

He was destined to follow to Congress one of the most respected and beloved of Texans—John Nance Garner. When Mr. Garner, who had been Speaker, resigned his seat in the House to become Vice President, Mr. WEST was chosen in a special election, April 22, 1933. His task was a difficult one. But he did not suffer by comparison with his illustrious predecessor.

MILTON WEST had a solid Texas background, and it stood him in good stead, assisting him in maintaining balance among the swirling currents of controversy in Washington.

A native of El Rancho, Tex., he attended the West Texas Military Academy in San Antonio. Then, at 22, he enlisted in Company C of the Frontier Battalion of the Texas Rangers. That was in 1911. In this superb, rigorous service, he spent nearly 2 years.

Attracted by the law, he gave up his role in its enforcement to study its interpretation. In a law office in Floresville, Tex., he received a sound, practical grounding in the legal principles of his Nation and his State. He was admitted to the Texas bar in 1915 and began practice in Floresville, where he remained until 1917. In that year, he moved to Brownsville, which was to remain his home until his untimely death.

Mr. WEST maintained a successful practice in Brownsville and became a highly regarded member of the community. In 1922, he offered his legal talents to the public as a whole in the election for district attorney. His qualifications were recognized at once, and the voters chose him as prosecutor for the Twenty-eighth Judicial District of Texas. He discharged the responsibilities of his post capably and served until 1925. After a brief return to private life, he became a prosecutor again in 1927 as assistant district attorney for the same district.

Then, in 1930, he resigned to be a candidate for the State legislature. He was successful and had useful service in that body until his election to the House.

MILTON WEST displayed early in his congressional career a grasp of the intricate and vital problems of Government finance. During much of his time on Capitol Hill, he was occupied with the tedious but supremely important task of finding adequate revenue to operate the huge Federal establishment. In his years as a member of the Ways and Means Committee of the House, his colleagues came increasingly to rely on his sound judgment.

He not only had an important hand in writing numerous tax measures in the program of internal revenue raising, but also found time to make exhaustive studies of the tariff structure.

Despite the ill health of his last years, he strove to discharge his responsibilities to the best of his ability. He continued to give his district effective representation and still was a valued Member of the House when, in January 1948, he made the announcement that saddened his friends, both in Texas and in Washington. MILTON WEST declared at that time that he would not be a candidate for reelection.

When he died, October 28, 1948, the House lost one of its most valued legislative workmen. He brought to Congress a methodical, discerning mind, a high devotion to responsibility, and a modesty and friendliness which combined in his passing to produce a sharp sense of loss among his colleagues and a deep feeling of sympathy for his widow and lawyer son.

Low-Income Housing

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. KENNEDY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include herewith a statement made by the Right Reverend Monsignor John O'Grady, secretary of the National Conference of Catholic Charities, before the House Committee on Banking and Currency, on H. R. 4009:

STATEMENT OF RT. REV. MSGR. JOHN O'GRADY, SECRETARY, NATIONAL CONFERENCE OF CATHOLIC CHARITIES, BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY, CONSIDERING H. R. 4009, MAY 9, 1949

Those of us who campaigned for the United States Housing Act of 1937 regarded it as part of a program to provide decent housing for families in the low-income brackets. We have endeavored to evaluate the program from the standpoint of this basic objective. In our campaign for H. R. 4009 we want to emphasize the same basic objective. I am not appearing before this committee therefore to ask for governmental housing for single people, for the aged, for

retired people. I have come to make a plea for actual wage-earning families in the low-income brackets.

I have always been strongly opposed to a needs test for the admission of families to public-housing units. I believe that a needs test is demoralizing. I believe that bringing together into one community a considerable number of relief families would create a very unnatural community. I believe that the community so created would bear many of the earmarks of a poorhouse. It would not have the kind of leadership that a community needs for the fullest development of its members. Very many relief families are broken families. Usually the head of the family has been separated from the home by death, divorce, or desertion. There is nobody in such a family who can take any large part in community activities.

PUBLIC HOUSING—A PREPARATION FOR HOME OWNERSHIP

Those of us who have been interested in public housing have always regarded it as a means of building up families, of improving their standard of life. We have therefore regarded their period of residence in the public-housing project as a sort of preparation for home ownership and I have been impressed during my visits to public-housing projects in Chicago and Cleveland during the past 2 weeks with the number of residents who are really preparing themselves for home ownership. They were not satisfied to remain permanently in the projects. They wanted to realize the ideal of every American, namely, the ownership of their own home. Here are some illustrations that I secured from a housing project in Cleveland during the past week.

The A family—husband, wife, and three preschool boys—moved into a dwelling in the public-housing project in 1938. Mr. A was employed in the shipping department of a wholesale hardware store at a salary of $1,500 per year. The family participated in the activities at the community center which in addition to social evenings included classes in budgeting, homemaking, child care, etc. When better employment was available, Mr. A accepted a job with increased earnings. With the experience of having learned to live within a limited budget, the family was able to save enough money by February 1945 to purchase a home. This meant effort and sacrifice for by 1945 there were six sons in the family and over the years of higher income there was proportionately higher rent. The A family purchased a well-built old house on a large lot in the suburbs. A chicken house was also included.

The B family—husband and wife—moved into the project in 1939. Mr. B was a clerk in a telegraph office with salary of $1,176. Both Mr. and Mrs. B were interested in civic and community activities. During the war when the Nation became garden-minded, they were among the first gardeners on the 20 x 20 plats provided by the project. The family's financial condition improved and when Mr. B was accepted as an employee of the United States post office in 1945, they made a down payment on a pretty badly neglected house in a nearby town. Neighbors from the project helped Mr. and Mrs. B put the property in condition. It was only necessary for them to employ help for skilled jobs such as plumbing and electrical repairs.

It has been the basic ideal of the managers of public-housing projects all over the country to encourage a spirit of self-help among the occupants. They keep on reminding the people that they should be looking ahead to the time when they would own their own homes. For this reason the public-housing projects are concerned basically with ordinary low-income wage-earning families. They've been concerned principally with families above the poverty level rather than with those that have already reached this level.

PROVISION FOR LARGE FAMILIES

As I have moved around in the various public-housing projects in different cities in the United States, I have been greatly concerned about what I have heard in regard to one-room or two-room units. I kept on asking the managers of these projects why it was they had so many one-room and two-room units. They have reminded me that this was due to the cost limitations imposed by the United States Housing Act of 1937. The cost limits imposed by the act ranged from $1,000 to $1,250 per room depending on the size of the city. I am glad to know that H. R. 4009 provides a uniform cost limitation of $1,750. In order to meet the higher cost in some areas the public-housing authority would be authorized to increase cost limitations by not more than $750 per room. This increase in cost limits is made necessary by the increased cost of construction today compared with 1937. It is also made necessary by the increased need for providing housing for large families. This is a situation that we must consider more and more realistically. We must keep it in mind not only in public housing but also in private housing with loans insured by the Federal Housing Administration.

I am sure that this committee has been reminded of the general prejudice against families with children in privately operated housing projects throughout the entire country. This is something to which we must constantly keep on calling the attention of the American people. It is one of the great threats to family life in our country. A recent report of the Baltimore Housing Authority showed that 173 units advertised for rent on a particular day, two-thirds had restrictions on children. In more than four-fifths of the 116 units with restrictions on children, no children at all were permitted and in the remaining fifth tenants were not accepted if they had more than one child.

BASIC OBJECTIVES OF PUBLIC HOUSING PROGRAM

In all the discussions of this bill as it moves through the Congress I hope it will be made clear that it is designed fundamentally to meet the housing needs of ordinary families with children, in the low-earning income brackets. The agencies charged with the administration of the program will also have to be steadily reminded of its fundamental objectives. The proper administration of this section of the bill would provide a constant reminder to privately financed and operated housing projects of the importance of adequate family housing facilities in the life of the Nation. This is a topic that calls for much greater attention than it is receiving at the present time. I wonder how one can house families in the 13-foot economy houses that are being built in a number of cities at the present time?

I would commend this topic for discussion and study by the National Association of Real Estate Boards, the National Association of Home Builders, and to the Producers' Council. I wonder how far their economy houses are designed to meet the need of our country.

There is a great deal of experience available in regard to the types of common activities carried on in normal American homes at the present time that would be invaluable in planning future housing programs. This is one of the fields that might be explored by the Housing and Home Finance Agency under the research program provided for in H. R. 4009.

PRESENT INCOME LEVELS FOR ADMISSION TO PROJECTS TOO LOW

From my observations of the operation of public housing projects I feel that the local authorities have been quite conservative in setting the income levels necessary for admission to the projects as well as the levels necessary for continued occupancy. I feel that the income levels set in a great many communities are making it difficult for ordinary wage earners in the low-income brackets to secure admission to the projects. The income level in Chicago is $2,100 a year. In Chicago, however, the lowest income for unskilled wage earners ranges around $2,200. The highest income for admission to the housing projects in Cleveland is $1,900, whereas unskilled wage earners in Cleveland are earning $2,000 or more. Those in charge of the housing projects constantly emphasize the larger problems brought about by the increase in the number of relief families in the projects.

THE BALTIMORE HOUSING SANITATION AND REPAIR PROGRAM

Those who are opposed to public housing apparently have discovered a new substitute within the past week. For the million and fifty thousand public housing units provided for in H. R. 4009 they would substitute a large sanitation program similar to the one that has been in operation in Baltimore during the past 2 years. However, they underestimate the enormous difficulties involved in getting such a program under way. The propaganda leaves one with the impression that all that is necessary is for the city health departments to announce their determination to enforce rigidly their sanitary codes within the next few weeks and then go out and condemn all the houses that do not measure up to these codes. The question might readily be asked what will the city do with the people who are living in these unsanitary homes at the present time. The only reason why the codes are not being enforced is because housing is not available for the people who are living in the slums. Baltimore has been able to put over its program first because of the educational campaign conducted by the Baltimore Sun in 1945. As a result of this campaign the city health department was able to secure a staff in 1947 which took over the housing sanitation and repair program. It would have been an easy matter for them to have immediately gone out and condemned their 65,000 substandard housing units. Instead of this, they organized an educational program to get the owners to make repairs necessary to bring the houses up to minimum standards. They prevailed on them to cut down the old wooden fences in their back yards; then induced them to clean up the filth and refuse. In place of filthy back yards they have substituted play centers for the children. The old wooden fences have been replaced by wire fences inside of which the tenants have been encouraged to develop their own flower gardens.

In going over the houses that have been repaired under the leadership of the Baltimore Health Department one is impressed with the character of the houses—some were very well built originally and are still in good structural condition. This group represents the type of houses that will have to be used by Baltimore and other cities for many years to come. There is another type of house that was originally poorly constructed and was permitted to deteriorate through the years. Owners were receiving good incomes from these houses without making any repairs. The walls were very dirty, the roofs leaked, the stairways were rickety and unsafe. Many of them had no inside toilets. Under the housing sanitation and repair program these houses were given a minimum amount of repair. Inside toilets were built, stairways were made safe, roofs were repaired. In a number of instances the tenants were encouraged by what the landlords had done, to do excellent paint jobs on the houses. This has been one of the striking characteristics of the Baltimore program—the land-

UNIVERSITY OF MICHIGAN LIBRARIES

lords have shown an interest in improving their houses and the tenants have been encouraged by their example to go them one better.

As I discussed the sanitation and repair program with a number of people in various sections of Baltimore, I met some home owners who have been influenced by the repair program in their neighborhoods to make improvements in their own properties. For instance, one home owner told me that the health department had ordered him to tear down the old wooden fence to the rear of his home. He said that he was going to build a new wire fence and have a flower garden like those of his neighbors. "You know," he said, "this neighborhood looks so much better. The people seem to be taking a pride in keeping it clean. The health department has done us a great service."

The housing sanitation and repair program in Baltimore has not been carried out by landlords without profit to themselves. They have had permission from the local rent control board to increase the rents. From what I could gather from my tour of inspection the increase in rents varied all the way from 20 to 75 percent. This represented a considerable increase but the tenants didn't seem to complain about it; they seemed to take the attitude that things were so much better, it was worth it.

The Baltimore program has been built on a solid educational foundation and the people in the city are interested in it. The city government has been wide awake to its possibilities. There has been very close collaboration on the part of the health department, the housing authority, and the police department in carrying out the program.

The Baltimore program should be studied by other cities in the United States. It has many possibilities. It has very distinct assets in the use of the existing housing resources. It cannot, however, by any stretch of the imagination, be regarded as a substitute for a long-range and greatly expanded public housing program such as is contemplated under H. R. 4009. Many of the houses that have been repaired will have to be torn down within a few years. They have really outlived their usefulness. The housing sanitation and repair program does not meet the acute housing shortage for the people in the low-income groups in Baltimore any more than it would meet their needs in any city in the United States. Baltimore has been going ahead with the slum-clearing program. It can and must redevelop home areas within its boundaries. A great many public improvements are being held up because there is no place to house the people that must be displaced by these improvements. The Baltimore program is to a very considerable extent a temporary device. It will make certain slum areas a little better until such time as the city is ready to provide new housing for their inhabitants. It has made owners of slum properties more conscious of their obligations to keep these properties in habitable condition. It has made the citizens more conscious of the serious housing conditions that have confronted them for many years.

FARM HOUSING

Farm housing is an essential part of any national housing program. We have slums in the country as well as in the city. We have some five million marginal farmers who have inadequate farms and inadequate farm equipment. We have large numbers of tenants and share croppers living under the most primitive conditions and operating under a one-crop economy. The Farmers Home Administration is making a far-reaching contribution in building up more adequate programs for marginal farmers. It is helping large numbers of tenant farmers to grow their own subsistence crops, to improve their agricultural methods, and to attain more security of tenure. Under the Bankhead-Jones Act it is also helping to build up a program of farm ownership. The farm-housing title of H. R. 4009 will be a very useful addition to the program already administered by the Farmers Home Administration.

On the farm, the house occupies a different position from the one that it occupies in the city. In the country, the house in which the family lives is an essential part of the farm economy. Housing for the family cannot be separated from housing for livestock. Housing is an essential part of the farm plan. In the administration of the farm-housing section of H. R. 4009, the Department of Agriculture and the Farmers Home Administration will want to consider the farmers housing as part of an over-all plan. They will want to make sure that the farmer, in addition to proper housing, has an adequate amount of tillable land, that he is taking the necessary steps to build up his land, that he has adequate farm equipment, that he is developing adequate subsistence for his family and for his livestock. I am sure that in making grants or loans for the improvement of the homes of tenant farmers or share croppers the Administration will see to it that proper steps are taken for the improvement of the working conditions and standards of life of the tenants and the share croppers.

MIGRATORY AGRICULTURAL WORKERS

There is an aspect of farm housing which I am sure this committee is not overlooking. It involves the question of housing for nearly a million migratory agricultural workers who are engaged every year in harvesting quality fruit and agricultural crops. These workers are compelled each year to migrate long distances. They live in broken-down shacks that have been abandoned for many years or on the roadsides and in the ditches. They set up temporary shelters on the nearest available space.

In recent years the Government has erected some 52 permanent camps for migratory workers. Congress has now ordered the Department of Agriculture to dispose of these camps. In a number of places, the Department has leased the camps to local housing authorities or to farm owners and operators. I would recommend that the camps be turned over to the public housing authority in the Housing and Home Finance Agency, to be disposed of in the same way as the urban housing projects and the temporary housing projects built during the war.

SLUM CLEARANCE AND COMMUNITY DEVELOPMENT AND REDEVELOPMENT

The title of this bill dealing with slum clearance and community development and redevelopment is bound to have a far-reaching influence on the future development of American cities and on American community life as a whole. We are all aware of the process of deterioration that has been at work in American cities in recent years. We know what the slums have meant in undermining family life and the welfare of American communities. Some progress has been made in recent years in the elimination of slums. Many cities have made considerable progress in improving their downtown areas. So far, however, American cities have not been able to make any far-reaching plans for their redevelopment.

While deteriorating at their centers, American cities have spread out over wider and wider areas. The cost of maintaining blighted areas has far exceeded the tax returns in these areas. The extension of the cities over larger areas has increased by leaps and bounds the cost of all utilities and services.

The increase of traffic in the past few years has really brought the problems of urban redevelopment to a crisis. It has necessitated the development of a larger number of high-speed highways. It has meant the building of more bridges. These two developments have called for the elimination of a considerable number of housing units and cities have been compelled to take steps for the rehousing of the people displaced by these new improvements.

The demand for new hospitals and school facilities and for more playgrounds has made it necessary to eliminate a very considerable number of housing units. This also has presented cities with problems of relocation.

Since the war a great many new city developments have been held up because the cities had no means of relocating the people living in the areas.

In recent years an increasing number of our cities have been going ahead with plans for redevelopment. They have been using their right to acquire, by process of eminent domain, privately owned land for public purposes and also for resale to private builders. The slum-clearance and community development and redevelopment provisions of H. R. 4009 will therefore fulfill a long-felt need in American cities. The bill would permit the Federal Government to pay two-thirds of the difference between the present value of the land and its value after it has been cleared and made ready for rebuilding. It should be made clear in the legislative history of this bill that the land should be available for purchase not only for public housing, private housing, and general public facilities such as schools and recreation, but also for the facilities of voluntary groups including churches, private schools, and other facilities operated by voluntary groups that are regarded as part of the pattern of American community life.

PUBLIC HOUSING PROGRAM CONFINED TO LOW-INCOME GROUP

Title II of H. R. 4009 deals exclusively with low-rent public housing. It provides for a large-scale public-housing program to meet the needs of families in the lower-wage brackets. It should be made clear in all our discussions of this bill that public housing should be confined to low-income groups. I want to make it clear that I am absolutely and irrevocably opposed to public housing for middle-income groups. Now, if this is the intent of H. R. 4009, how can it be reconciled with section 506, dealing with the conversion of State low-rent or veterans' housing projects. As I understand it, these projects now are designed to serve the needs of the middle-income groups. Now, if H. R. 4009 is to enter into the field of housing for middle-income groups in the States in which these projects have been developed, why not in all the other States? In all our discussions of these projects in the States in which they have been set up, it was my understanding that they were to serve the needs of groups above those covered by low-rent public housing. I believe I have said enough to make my point of view clear about the desirability of converting State low-rent veterans' housing projects to make them available for assistance under H. R. 4009.

MEETING THE NEEDS OF MIDDLE-INCOME GROUPS

As I understand it, there has been virtually unanimous agreement among the public interest groups that have concerned themselves about housing, in regard to the program for middle-income groups. The representatives of the A. F. of L. and the CIO have made it clear that they do not want a subsidy for middle-income groups and I am sure that they are speaking for their members. They want Government to aid voluntary cooperative effort in this field. They want direct Federal loans on the basis of 100 percent of the value of the project; they want the going Federal rate of interest; they want a mortgage life of 60 years, or the useful life of the houses; they want an independent constituent agency within the

framework of the Housing and Home Finance Agency. This program is being supported quite generally by public interest groups throughout the Nation. I want to add my support to it, and the support of the various social and charitable organizations of our church, for which I speak.

The committee already has a bill that was introduced by one of its members, Congressman BUCHANAN, of Pennsylvania, which pretty well represents the thinking of the public-interest groups in regard to middle-income families. The bill needs a few amendments in order to bring it up to date with the latest developments.

HOUSING RESEARCH

There seems to be universal agreement in regard to title III of H. R. 4009, dealing with housing research. All recent discussions of housing show the need for more research in the field. As I pointed out earlier, we need to have more research, not only on the technological aspects of housing, on methods of developing new materials, improved methods of building on site, but also on the characteristics of the housing supply, of the extent to which housing reached in recent years has been designed to serve the needs of families. We need more comprehensive local studies of housing; we need studies of the possibilities of voluntary cooperative effort in the housing field; we need more studies of rural housing as a part of a farm program and as a part of a constructive rural social program.

CITIZEN INTEREST IN HOUSING

One of the most encouraging signs of the times is the broadening of citizen interest in the housing field. This interest needs to be further stimulated on the local level. We need more and more interest on the part of the church in housing. It should be one of the important responsibilities of the various churches to stimulate more and more interest in constructive housing programs in their neighborhoods and in their communities.

LABOR'S INTEREST

It is encouraging to note the increased interest of labor in the housing field. It is naturally of vital concern to labor, as their participation is not only a contribution to their own members but also to the community as a whole. It is also encouraging to note the increasing interest of the veterans' organizations in constructive housing programs.

A CHALLENGE TO BUILDING ORGANIZATIONS

It is our hope now that the National Association of Real Estate Boards, the National Association of Home Builders, and the Producers' Council, as well as all the other building organizations, will join with labor and with the veterans' groups in promoting a cooperative housing program for middle-income groups. While they have opposed public housing for low-income groups, they have not been able to present any truly constructive suggestions on alternatives. Now they have an opportunity of joining with other groups in consigning public housing to its original objective and of struggling for the promotion of voluntary cooperative housing for the middle-income groups.

Treatment of Youthful Offenders

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. KEATING. Mr. Speaker, the period in life between 16 and 21 years of age is a focal source of crime. Thus, although those in this age bracket only constitute 15 percent of our population above the age of 15, they are responsible for about 36 percent of our robberies, 42 percent of our burglaries, and 53 percent of our automobile thefts. Boys from 17 to 21, inclusive, are arrested for major crimes (homicide, robbery, assault, burglary, larceny, and rape) in greater numbers than those of any other 5-year-age group. They are arrested for serious crimes three times as often as adults age 35 to 39 and six times as often as those 45 to 49.

More offenders are of age 21 than any other age. Twenty-year-olds come next and 19-year-olds next. Release from school with its attendant dislocations, vocational maladjustments, physical alterations, all these and other factors contribute to the result. Unquestionably, however, our existing methods of treating the criminally inclined youths are inadequate. Altogether too large a percentage of those released from existing reformatories and penal institutions ultimately become hardened criminals. Indeed, one sometimes wonders whether such institutions are not breeding places rather than burial grounds for criminal tendencies. Youth mixes with maturity, the novice with the old hand, the impressionable with the hardened. Substantial strides have been made in recent years toward a more scientific treatment of youthful offenders against Federal laws. Some classification and segregation of classes of delinquents is to be found. Through the effective work of probation officers, rehabilitation has frequently been effected. Nevertheless, much improvement along these lines is needed if we are to achieve anything approaching reasonable success in the solution of this important national problem.

To that end I have introduced today a bill to provide a comprehensive correction system for juvenile delinquents. It amends chapter 403 of title 18 of the United States Code, entitled "Crimes and Criminal Procedure," in the following principal respects:

The age of those subject to the provisions covering special treatment is raised from 18 to 21.

Under existing law, if a juvenile is found to be a delinquent and is committed to the custody of the Attorney General, the statute is silent regarding his treatment. This bill provides that the Attorney General shall establish classification centers and agencies. These centers shall make a complete study of each juvenile delinquent committed to the Attorney General, including a mental and physical examination, to ascertain his personal traits, his capacities, pertinent circumstances of his school, family life, any previous delinquency or criminal experience, and any mental or physical defect or other factor which may contribute to his delinquency. Within 30 days, the center shall forward to the Attorney General a report of its findings with respect to the juvenile delinquent and its recommendations as to his disposition.

It is further provided that these youthful offenders shall undergo treatment in institutions of either maximum, medium, or minimum security. These might include established penal institutions or reformatories or training schools, hospitals, farms, foster homes, forestry and other camps, and any other agencies which might provide the necessary variations of treatment.

An important additional provision requires that any such institutions and agencies under the control of the Department of Justice for the treatment of such delinquents shall be used only for that purpose insofar as practicable and that such delinquents shall be segregated from other offenders. It is also stipulated that the various classes of delinquents shall be segregated according to their need for treatment.

In the section of existing law dealing with their arrest and detention, there have been incorporated provisions which find their counterpart in the youthful offender law of the State of New York, which has pioneered in progressive legislation on this subject.

It is provided that no admission or confession made by a juvenile to the arresting officer, committing magistrate, the marshal, the district court, or any person designated to conduct an examination or investigation shall be admissible as evidence against him, except to the extent that the district court may take any such statement into consideration for the purpose of determining the probation or commitment of the juvenile if he has been adjudged delinquent.

Furthermore, the records of any youthful offender, including fingerprints, photographs, and physical description, shall not be open to public inspection, but shall be retained as confidential matter. A district court order shall be necessary to obtain an inspection of such records.

Finally, the bill provides for a chief parole officer, appointed by the attorney general, to supervise and administer the parole system with respect to juvenile delinquents in accordance with the policies laid down by the board of parole.

Hon. Daniel J. O'Mara, the county judge of the county of Monroe, N. Y., who was the father of the New York State law dealing with this subject, has written me that since the youthful offender law became effective it has been successful in approximately 85 percent of the cases and that only 15 percent of those adjudicated as youthful offenders have again become involved in criminal activities.

In contrast to this fine record is a study made covering the inmates of one of the Federal reformitories showing that during 5 years subsequent to parole from that institution approximately 80 percent of those whose conduct record could be traced were again offenders and 44 percent committed such serious crimes that they were sentenced to penal institutions.

It is difficult to trace the records of offenders with accuracy, but it is roughly estimated that at the present time 70 percent of our youthful offenders develop into hardened criminals. This is an indictment not alone of them, but of us. It has been demonstrated that

UNIVERSITY OF MICHIGAN LIBRARIES

this percentage can conservatively be reversed and that 70 percent can be rehabilitated and be made useful members of society. This problem raised by the small but unfortunate segment of our young people who fall into antisocial tendencies presents an inspiring challenge—a saving in dollars and cents, yes, but vastly more important, a saving of human values and a strengthening of the basic foundations of our society. We should do our ful' part to make the youth of today worthy successors to the priceless heritage which we enjoy in our free institutions and our American way of life. The bill which I have today introduced is intended to be a step in this direction.

National Conference on American Foreign Policy

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herewith a letter to the editor of the Evening Star, contained in the April 2, 1949, issue, signed by Bernard Weitzer, national legislative representative of the Jewish War Veterans of the United States:

PRAISES STATE DEPARTMENT CONFERENCE

To the EDITOR OF THE STAR:

I had the pleasure recently, of attending a 3-day conference held in the State Department, March 17–19. Back of the simple program title "National Conference on American Foreign Policy" is one of those illustrations of American democracy at work which would be astonishing anywhere else in the world and utterly impossible behind the iron curtain where they constantly jeer at American democracy. In attendance were representatives of some 200 civilian organizations—veterans organizations, church groups, educational organizations, professional societies, labor unions, trade associations, almost very kind of group which has any interest in public affairs.

Before these representatives appeared Secretary of State Dean Acheson and his top colleagues such as James E. Webb, Under Secretary of State; Willard L. Thorp, Assistant Secretary for Economic Affairs; Dean Rusk, Assistant Secretary for Political Affairs; Charles E. Bohlen, Counselor to the Department; Ernest A. Gross, Assistant Secretary for Congressional Relations; George V. Allen, Assistant Secretary for Public Affairs; Philip C. Jessup, ambassador at large, and many other top-ranking officials of our State Department.

These public servants were there not merely to render a full and frank accounting of their handling of foreign policy and to explain how and why those policies were instituted and the way in which they were being carried out but also to answer any and all questions, many of which were searching and critical. They made clear that they were seeking the reactions, the comments, and the guidance of the plain citizens of the country in formulating and carrying out foreign policy.

Can anyone imagine Mr. Vishinsky and his lieutenants conducting such a program in the Kremlin, answering questions and receiving criticisms from their citizens?

BERNARD WEITZER,
National Legislative Representative, Jewish War Veterans of the United States of America.

New York Times Supports Modification of Superseniority Provisions of Veterans' Preference Act

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. KLEIN. Mr. Speaker, since February 7 I have had pending before the House H. R. 2446, a moderate proposal for modifying the so-called superseniority laid down in the Veterans' Preference Act of 1944 in such a way as to make the Civil Service System and the mandates of the Veterans' Preference Act less incompatible. A similar proposal, S. 660, differing from my bill in some particulars but aiming at the same end, is pending in the other body.

I feel quite sure that there is not a Member on this floor who has not acquired a personal acquaintance with the inequities of absolute veteran preference in relation to career employees of the Federal Government. Furthermore, the act is deficient in not giving priority in retention to badly disabled veterans regardless of status.

The only modification of prevailing practice in my measure is in security of tenure. Veterans' preference in computing eligibility ratings would remain untouched.

I have been pleased to discover that opposition from veteran organizations has been on a high level, and from individuals not only on a high level of debate but very sparse. Indeed, a few veterans have agreed as to the merits of the bill.

Now I am happy to lay before the House the active support and endorsement of the principles of H. R. 2446, of the New York Times, which is perhaps the most influential newspaper in the United States among national leaders of all walks of life. Many Members of Congress will be surprised, if they will read the Veterans' Preference Act carefully, to discover how sweeping are its provisions.

I hope that al. Members will read the editorial from the New York Times of June 6, 1949, the text of which follows:

VETERANS' PREFERENCE

Under the Veterans' Preference Act of 1944 veterans receive virtually an absolute preference in Federal job retention. No provision is made for length of service, efficiency ratings, or special qualifications which nonveteran employees may possess. In any reduction of personnel, such as is now in progress, a veteran having achieved a permanent status of even a day's duration must be retained until all nonveterans in his classification have been discharged.

The law violates several concepts we have been taught to regard, among them the principle of equality of opportunity and the civil-service ideal that ability should be the criterion in public employment. It infringes the concept of administrative responsibility, for how can an administrator be called to account when he cannot retain employees on the basis of their worth?

In creating this preference during the war, Congress seemed to forget that many persons were either too young or too old to go to war, that millions of military age were "frozen" in essential jobs, and that the sacrifices of some at home may have been as great as that of many for whom the blanket preference was conferred. Eight thousand dismissals have been ordered in the Veterans' Administration. Among those dismissed in the claims division of the New York regional office is the widowed mother of a Navy veteran who has served faithfully for 23 years.

While powerful voices will defend a law that permits such discrimination, we feel sure there are many veterans who regard their patriotic service as a matter of citizenship and not as something that in perpetuity entitles them to preferment. No question is involved here of the duty to care properly for the war disabled.

Career employees have obtained through Representative ARTHUR KLEIN a bill that would retain the veterans' point advantage on appointments and would leave intact preference in retention for amputees and blind veterans. Able-bodied veterans, however, would have preference in retention only for the first 7 years of service and thereafter would compete on a merit basis with nonveteran career employees. It would be naive to expect Congress to rescind all the preference in the present law. It should be willing, however, to make the slight concessions to the careerists that the Klein bill provides

Mr. Speaker, I believe that many Members would like to know just what the language of this bill, so highly spoken of by the Times, provides, and accordingly I am including the brief text of the measure. I do want to say that I am not married to this precise language; what I do hope for is actual passage in this session of a new law which will do two things: Protect the equities of the permanent classified civil-service employees in this country, and in so doing protect the merit system we have been so long in building; and give greater protection in tenure to the veterans who have disability ratings of 60 percent or more, since these men are virtually unemployable in private enterprises.

The text of H. R. 2446 follows:

H. R. 2446

A bill to amend the Veterans' Preference Act of 1944 and to preserve the equities of permanent classified civil-service employees of the United States

Be it enacted, etc., That section 12 of Public Law 359, Seventy-eighth Congress, approved June 27, 1944, is hereby amended to read as follows:

"SEC. 12. In any reduction in personnel in any civilian service of any Federal agency, competing employees shall be released in accordance with Civil Service Commission regulations which shall give due effect to tenure of employment, military preference, length of service, and efficiency ratings: *Provided*, That the length of time spent in active service in the armed forces of the United States of each such employee shall be credited in computing length of total service: *Provided further*, That preference employees whose efficiency ratings are 'good'

or better shall be retained in preference to all other competing employees with less then 7 years of total service and that preference employees whose efficiency ratings are below 'good' shall be retained in preference to competing nonpreference employees with less than 7 years of total service who have equal or lower efficiency ratings: *Provided further,* That when any or all of the functions of any agency are transferred to, or when any agency is replaced by, some other agency, or agencies, that preference employees whose efficiency ratings are 'good' or better in the function or functions transferred or in the agency which is replaced by some other agency shall first be transferred to the replacing agency, or agencies, for employment in positions for which they are qualified, in preference to all other competing employees with less than 7 years of total service, and that all other competing employees shall then be transferred to the replacing agency or agencies, for employment in positions for which they are qualified, competing on an equal basis in accordance with length of service, tenure of employment, and efficiency ratings, before such agency, or agencies, shall appoint additional employees from any other source for such positions: *And provided further,* That, notwithstanding the above, any preference employee who has suffered the loss or the loss of use of a limb or an eye or both as a result of service in the armed forces of the United States, or who is receiving or entitled to receive disability compensation for a disability or disabilities 60 percent or more, whose efficiency rating is 'good' or better, shall be retained or transferred in preference to all other preference or nonpreference employees, regardless of the length of service of such employees."

John Holmes Overton

MEMORIAL ADDRESS
OF
HON. KEN REGAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1949

On the life, character, and public service of Hon. JOHN HOLMES OVERTON, late a Senator from the State of Louisiana

Mr. REGAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following prayer in memorial to the late Senator JOHN HOLMES OVERTON:

A PRAYER FOR INSERTION IN THE CONGRESSIONAL RECORD IN MEMORIAL TO THE LATE SENATOR JOHN H. OVERTON

(Prepared at the request of Senator WILLIAM LANGER)

O God, in whom we live and move and have our being, we thank Thee for those who have finished their term of service in this earthly life and have left for us a good name and an inspiring example, and the fruit of their labors for the welfare of the state and the good of their fellow men. The souls of the righteous are in Thy hand. We thank Thee that Thou art righteous and just and that the least unselfish service rendered in Thy name will not be forgotten of Thee. We thank Thee for the imperishableness of all that is noble or worthy, and that despite all our earthly illusions of success and failure, every pure thought, every generous wish, every heartfelt word, still lives, and like the ripples in a stream goes broadening on through all time.

We thank Thee that our country has never lacked great and useful and wise leaders, and we praise Thee for the record and service of our departed colleague, JOHN OVERTON.

May the good causes which he espoused prevail and his good deeds be remembered and followed. May we all in our several measures and ways, like him, faithfully serve in our appointed duty, and may there never be lacking in this legislative body the fidelity and patriotism of which Thy departed servant has left for us so salient an example. We ask in the name and through the merits of Jesus Christ our Lord. Amen.

Palestine and Jerusalem—No Provision for Christians in That Area

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a copy of a letter by the Reverend Weston, Anglican bishop in Jerusalem, addressed to the United Nations Conciliation Commission, Lausanne, Switzerland, under date of May 20, 1949, and also a copy of a letter from Timotheus, patriarch of Jerusalem, and others, addressed to the Secretary General, United Nations Organization, under date of May 12, 1949.

Mr. Speaker, this matter of the partition of Palestine and Jerusalem is highly important not only to the Jews and Muslims but to the Christian community as well. Bishop Weston points out that the existing partition has given a great deal to the Jew and left something for the Muslim but it has given nothing to the Christian but rather taken away most of what he had, and has left him little beyond a tolerated existence. Also, that under the present division the Arab quarters of the new state which have been ceded to or taken by the Jews are almost entirely the Christian Arab quarters. The German colony and other sections, now in Jewish hands, was Christian church property, on which the shrines and monasteries of the old city depended for their maintenance. It appears to be the universal feeling among Palestinian Christians that the nominally Christian powers of the west have almost cynically abandoned them to their fate because they are a politically inarticulate minority and will not in any case create civil disturbance.

Mr. Speaker, these remarks are not intended to state the Christian case for internationalization and for the benefit of the Christian only, but, as Bishop Weston has further stated, it is best for Jerusalem and Palestine as a whole. To partition Jerusalem now is to jettison all prior plans that had been made for internationalization of the city, and it is to render any other plans forever impossible. This is to deprive one of the spiritual centers of the world forever of any chance of a worthy physical setting.

ST. GEORGE'S CLOSE,
Jerusalem, May 20, 1949.

UNITED NATIONS CONCILIATION COMMISSION,
Lausanne, Switzerland.

GENTLEMEN: It is a matter of profound regret to me that owing to my temporary absence in England during most of April I had no opportunity to call upon the Commission in person, though I was glad to have the chance of a brief and unofficial conversation with Mr. Etheridge in Jerusalem in March. I write now because I am told by your remaining staff in Jerusalem that you would welcome a statement of my views in writing on the possible internationalization of Jerusalem. May I add that if, even at this late stage, the Commission should wish to see and put questions to me, I should be prepared to come to Lausanne for that purpose.

I would first call your attention to resolution 16 of the Lambeth Conference of last year, passed unanimously by a gathering of 329 bishops of the Anglican communion throughout the world, including 68 from the United States of America. As a member of that conference, I subscribe entirely to the resolution, which runs as follows:

"The conference feels deep concern for the future of Palestine; it prays that good order and peace may be restored to the land sacred to millions of Christians as well as to Muslims and Jews. It greatly appreciates the efforts made to restore peace and expresses its sympathy with all of every race, and particularly Christians of every church, who are suffering.

"The conference appeals to the nations of the world to deal with the problem not as one of expediency—political, strategic, or economic—but as a moral and spiritual question that touches a nerve center of the world's religious life. And for that reason it urges the United Nations to place Jerusalem and its immediate environs under permanent international control, with freedom of access to sacred places secured for the adherents of the three religions."

Nor is this a view of the Anglican Church only. The Near East Committee of the Foreign Missions Conference of the United States of America, and the Near and Middle East Committee of the Conference of Missionary Societies in Great Britain and Ireland, both of them bodies representing all the major non-Roman churches in their respective countries, have passed almost identical resolutions urging that Jerusalem be preserved as an international zone; while His Holiness the Pope, in his Good Friday encyclical, asked among other things for (1) an international regime for Jerusalem and its environs, (2) protection for all the holy places, in every part of Palestine, with a guaranty of free access thereto and of peaceful sojourn for the pilgrims.[1]

One is justified therefore in claiming that internationalization is desired by the overwhelming majority of the Christians of the world. If the voice of eastern Christianity has been less clearly heard, it is largely because eastern Christianity, muzzled under centuries of Muslim domination, has now, even if Jerusalem be internationalized, again to look forward either to Muslim or Jewish control in almost the whole Middle East. In spite of declarations of human rights, in spite of religious-freedom clauses in constitutions and treaties, in spite even of the notable pronouncement of Sir Mohammed Zafrullah Khan to the United Nations General Assembly (Paris, December 10, 1948), eastern Christendom knows well that religious freedom as interpreted in the west is a thing almost unknown in the Middle East, and indeed a thing contrary to the religious law alike of Islam and Judaism, which attaches civil penalties, e. g., loss of inheritance, to conversion to Christianity. It is within my own personal knowledge that the voice of local Christianity has been largely unheard by previous commissions on Palestine because local Christians dared not say what they really thought. And however much one may regret and deprecate such fear, one knows that it was not, and is not, groundless.

[1] Quoted from Weekly Times, April 20, 1949.

UNIVERSITY OF MICHIGAN LIBRARIES

It would seem that the only possible alternative to internationalization is the partition of the Holy City as well as the Holy Land—a partition which will presumably follow something like the present dividing line between the two armies. Granted that the practical and administrative difficulties of internationalization are great, will not the difficulties of any such partition be greater? With different languages, currencies, and laws, with widely divergent and, at the moment, bitterly antagonistic cultures and civilizations, and with a very marked difference both in standard of living and cost of living, any attempt to partition the city in peacetime is bound to lead not only to immeasurable inconvenience to peaceable citizens, and particularly foreigners, but also to an almost unimaginable orgy of smuggling, blockade running, currency-control evasion, and every form of underground profiteering, at which the less scrupulous on both sides would seek to outwit each other as well as the law. It is not a promising prospect for a city which for centuries has been, and should ever remain, a place of pilgrimage for non-Palestinians of every race and creed.

The problem is frequently spoken and written about as if it were primarily one of the preservation of the holy places. In my own view, there are six points which should be made clear:

1. There is no agreed definition of the term "holy place" and no agreed schedule of what are or are not holy places.

2. The specifically Christian holy places commonly alluded to as such are in no immediate danger either from Muslim or Jew, though the risk of friction between Christian bodies must be sadly admitted.

3. But there remains considerable risk of future conflict over places that are holy to more than one of the creeds.

4. It is quite untrue to say, as has often been said, that all the holy places are in the old city, and would, therefore, be safeguarded if the old city alone were internationalized.

5. There will in any case be an inescapable demand for some supra-national tribunal to protect and adjudicate on holy places, not only inside but outside Jerusalem—for example, Bethlehem, Nazareth, Jacob's Well, the Sea of Galilee.

6. Any such body would have its task very greatly facilitated if it were charged outright with the civil administration of the Jerusalem-Bethlehem area.[2]

But more than all these I would urge that the matter is not a problem of holy places alone. Important as they are, the possibility for the Christian to live his life in reasonable social and economic security and practice his creed "as of right and not on sufferance," is something far greater. The existing partition of Palestine and Jerusalem has given a great deal to the Jew and left something for the Moslem: It has given nothing to the Christian but rather taken away most of what he had, and left him little beyond a tolerated existence. It is significant that on the present division the Arab quarters of the new city which have been ceded to or taken by the Jews are almost entirely the Christian Arab quarters—the German colony, the Greek colony, Qatamon, the Upper Baka'a, and Talbiyeh, while much of the central part of the new city, now in Jewish hands, was Christian church property, on which the shrines and monasteries of the old city depended for their maintenance. Frankly, it is the universal feeling among Palestinian Christians that the nominally Christian powers of the west have almost cynically abandoned them to their fate because they are a politically inarticulate minority and will not in any case create civil disturbance.

But if I have tried to state the Christian case for internationalization, I should not wish it to be thought that this is only for the benefit of the Christian. I believe it to be the best for Jerusalem and for Palestine as a whole. "Jerusalem is built as a city that is at unity in itself." One of the last publications of the mandatory government was a book of plans for the future physical development of the city. To partition Jerusalem now is not only to jettison those plans; it is to render any other plans forever impossible, to deprive one of the spiritual centers of the world forever of any chance of a worthy physical setting.

Further, in a strife that has lasted for millenia between Isaac and Ishmael, Esau and Jacob, it is submitted that the Christian element has a valuable part to play as mediator. Previous commissions on Palestine have pointed out that only in Christian schools were Arabs and Jews found learning to work and play together. On the present partition basis, Christians (both Arab and Jewish) are being squeezed out of a country altogether; with an adequate international enclave—a laboratory in which to work out the world's problems of social reconciliation—the Christian element could and would return with new hope and new vigor, to help as a solvent of one of the world's oldest and deepest hatreds.

Believe me to be, gentlemen,
Yours faithfully,

WESTON,
Anglican Bishop in Jerusalem.

JERUSALEM, *May 12, 1949.*

The SECRETARY GENERAL, UNITED NATIONS ORGANIZATION.

SIR: As representing various Christian communities in Jerusalem, Palestine, and Transjordan, we are deeply interested in the question of the Palestine refugees, many of whom indeed are of our own flocks, displaced from those parts of Jerusalem and Palestine which are now in Jewish occupation. We are profoundly grateful for the material aid which has been rendered by the United Nations, first through Sir Raphael Cilento's committee, and now through that presided over by Mr. Griffis. The latter informed us quite definitely last January that the present relief scheme was planned to last only until the end of August, when presumably it would cease altogether whether any scheme of permanent resettlement had been devised or not. Now, however, we are informed that in all probability the available resources may enable the scheme to be continued for another 3 months.

We have ourselves endeavored to cooperate, so far as our resources allowed, with the work of the United Nations Organization, as with the International Red Cross, the League of Red Cross Societies, and the American Society of Friends, who are acting as its distributing agents. And we desire now to make representations with the utmost emphasis that to discontinue material aid at the end of November—i. e., just when the most severe climatic conditions begin and when the suffering of the underhoused and underclothed and underfed will be most intense—would amount to little short of what has come to be known as genocide.

If it is not possible before the coming winter either to come to some permanent settlement for the return of refugees to their own towns, villages, and lands, or, alternatively, to establish them elsewhere under conditions where they can earn their own living, then it is in our judgment absolutely essential that relief measures, not less but if anything in greater quantity and efficiency than those now in force, should be maintained at least through another winter.

We have the honor to be, sir,
Yours most respectfully,

TIMOTHEUS,
Patriarch of Jerusalem.
VINCENT GELAT,
Auxiliary Bishop of the Latin Patriarchate (R. C.)
JACOBUS,
Coptic Archbishop of Jerusalem and the Near East.
GUREGH II,
Armenian Patriarch of Jerusalem.
MEMHER KIDANA MARIAM,
Principal of the Ethiopian Convent.
Rev. F. T. BOULOS S. GELPH,
Vicar of the Syrian Metropolitan of Palestine and Transjordan.
WESTON,
Anglican Bishop in Jerusalem.

---

[2] In this connection, I believe there would be a very strong desire for the neutral area to be extended to include the Christian town of Ramallah and the neighboring Christian villages of Bir Zeit and Jifnah.

Basing-Point Issue Analyzed by the Commentator—Mr. W. K. Kelsey "Debunks" Freight Absorption Arguments—the Detroit News' Ace Journalist Questions Legislation Designed To Repeal Laws Which Compel Competition—Supreme Court Has Merely Upheld FTC Enforcement of Fair Trade Laws, Mr. Kelsey Asserts

---

EXTENSION OF REMARKS
OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. GROSS. Mr. Speaker, I have been greatly interested in the discussions of the basing-point system of pricing. The fact that the basing-point system enables a few members in many of our basic industries to create a monopoly causes me grave concern. In my work in the journalistic field in my native State of Iowa, I have learned of many of the methods which certain industries employ to suppress competition and control markets.

THE COMMENTATOR SPEAKS OUT AGAINST THE BASING-POINT SYSTEM

An article by Mr. W. K. Kelsey, appearing on the editorial page of the Detroit News for May 25, 1949, points out the restraining and monopolistic aspects of the basing-point system. Mr. Kelsey also effectively punctures the phony balloon of freight absorption as wafted about by the cement and steel industries in describing the basing-point system. I hope Mr. Kelsey's entire article will be carefully read by all of my colleagues. But particularly I call attention to the last paragraph of the article, in which Mr. Kelsey says:

The Commentator repeats that the gist of the matter is that Congress has passed laws to compel competition, the FTC has been enforcing these statutes, and the courts have upheld the FTC. If the people of the United States don't want competition in business, all they have to do is elect Members of Congress who will repeal that legislation. Maybe they have already elected them, unwittingly.

BASING-POINT ISSUE NOT A PARTISAN ONE

For my part, the issue has no partisan overtones. It is, to me, strictly a matter of the preservation of our free-enterprise system. It is strictly a matter of keeping open the channels of trade, wherein free competition, free markets, and free prices prevail and where smaller business enterprises may thrive and prosper.

Frankly, I am extremely skeptical of any legislation which permissively gives big business a cocked gun to aim at our antitrust enforcement agencies. Mr. Kelsey's article follows:

[From the Detroit News of May 25, 1949]

THE COMMENTATOR

(By W. K. Kelsey)

Irate defenders of the basing-point system of fixing prices have been blaming the Supreme Court for finding it illegal, and the Federal Trade Commission for attacking it on the ground that it constitutes conspiracy in restraint of trade.

The truth is that the FTC has been trying to enforce the statutes as it reads them, and the Supreme Court has merely held that the FTC's lawyers have read them correctly.

If businessmen don't like the laws passed by Congress to maintain competition, their remedy is to get the laws changed, not to assail the agencies of Government which interpret and enforce them.

This is prelude to a report in the Wall Street Journal that Pittsburgh is making a mighty effort to induce industries to locate in that city and its environs. It says:

"Pittsburgh's industrial and political leaders are well aware that the city turns out more steel than her fabricating companies consume, and they see trouble ahead unless new steel-using industries locate here.

"In boom years when supply is short, like the past decade, Pittsburgh's economy is not hurt by this 'oversupply' of steel. It can be sold to consumers in all parts of the country. But as the Nation's prosperity wave recedes, consumers will hunt mills nearer their plants to cut freight costs, and Pittsburgh's steel makers will have a hard time peddling their metal outside the area.

"Under the old basing-point system of pricing, Pittsburgh producers were able to sell their steel in other areas at competitive prices by absorbing freight costs themselves. But they generally discarded this system last year after the Supreme Court ruled it was illegal as used by the cement companies, so the burden of high freight costs falls on distant customers. With this price disadvantage—and steel getting harder to sell—Pittsburgh must find new customers close at hand."

Yeah. Or cut prices, and really compete.

WHO ABSORBS FREIGHT RATES?

A word as to the absorption of freight rates by the seller, under the basing-point system. Here is a quotation from a letter the Commentator has received from a defender of the practice:

"The heart of the basing-point system is that the seller farther from the buyer will absorb the difference in his freight charges and what the charges would be if the materials were sold and shipped by the nearest seller to that buyer. This means, for example, that the Detroit customer buying iron and steel could buy his iron at Cleveland, the nearest producer, or Pittsburgh, farther away, at the same delivered price to him in Detroit."

True; and he could buy it from a Detroit producer at the same price. All of which means that the price was fixed so that the seller would not lose by paying the freight to any point within the basing-point area. Who, then, paid the freight which was "absorbed" by the seller? The natural deduction is that most of it was paid by his nearby customers.

Therefore, Pittsburgh can now put up this argument:

"Locate your industry here, next door to the mills, because now you can buy f. o. b. mill at a price which doesn't include freight charges. You don't have to pay a price which would enable the mill to sell profitably in Cleveland or Detroit, since the buyers there are now paying their own freight."

BASING POINTS AND CONSPIRACY

How could the basing-point system be maintained without conspiracy on the part of sellers?

The magazine Business Week took up that question recently with Thurman Arnold, the Government's trust-buster in 1938–43. Mr. Arnold said:

"I don't think there ever has been the rule that you have to catch two people talking together before you can prove conspiracy. * * * A conspiracy is an illegal combination, or an illegal agreement, or an illegal concert of action. * * * I think if you read the opinion"—of the Supreme Court in the Rigid Steel Conduit case—"it was the same old one—that the producers were utilizing the basing-point system as a method of controlling prices. And the court said they can't do this.

"Now it often happens in an antitrust case that where machinery has been set up which has been used to control prices, the court will break down the machinery. * * * For instance, there has been a very famous oil case. There we had a policy on the part of the oil company not to deal with jobbers who weren't gentlemen. And it just so curiously happened that none of the gentlemanly jobbers they selected were price cutters. They may have fooled even themselves. They may have honestly wanted only gentlemen as jobbers, and at the same time have been convinced that anyone who cut prices was not a gentleman.

"But there was also the fact that an artificial differential was kept between high-test and low-test gasoline at 2 cents. Prices were kept stable because they were using this method of fixing prices. Again we had no evidence of a meeting. Yet this organization was enjoined by the court."

WHAT MAY HAPPEN TO INDEPENDENTS

Mr. Arnold continued in this happy vein: "Now in one case investigated by the TNEC the big concerns testified that they were making the price independently, and the small people testified they followed them only because they knew that the big organizations knew so much about prices, and they must be the wise boys, and so the prices were the same.

"I got one of the independents off to the side, and I said: 'Now this won't be made part of the record * * * just tell me privately what would happen to you if you didn't follw the prices of the major companies.' And he said: 'That is something, Mr. Arnold, which I expect never to learn from personal experience.' "

Business Week asked if he would say that "per se the basing-point system is a conspiracy?"

Mr. Arnold replied: "I would say that if you wanted to put in a basing-point system and did it on your own, there is nothing that would prevent you. But I would also say that it is unquestionably true that the basing-point system has been used as a method of not only fixing prices but fixing production."

The Commentator repeats that the gist of the matter is that Congress has passed laws to compel competition, the FTC has been enforcing these statutes, and the courts have upheld the FTC. If the people of the United States don't want competition in business, all they have to do is elect Members of Congress who will repeal that legislation. Maybe they have already elected them, unwittingly.

The North Atlantic Pact in International Law

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. THOMAS of Utah. Mr. President, because of its timeliness, I ask unanimous consent to have inserted in the Appendix of the RECORD an address on the subject of the North Atlantic Pact in international law delivered by George A. Finch, vice president of the American Society of International Law, before the annual meeting of the society, Washington, D. C., April 29, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The negotiation of the North Atlantic Pact gives rise to several leading questions: First, why, with the United Nations Charter in force and the Organization engaged in a multitude of activities in many parts of the world, is such a new treaty necessary? Secretary of State Dean Acheson, in a Nation-wide radio address on March 18 frankly answered this question by stating that the United Nations "is not working as effectively as we hoped because one of its members has attempted to prevent it from working. By obstructive tactics and the misuse of the veto, the Soviet Union has seriously interfered with the work of the Security Council in maintaining international peace and security."

Why, it may next be asked, has it been possible for a single nation to interfere with carrying out the primary purpose of the United Nations? The answer to this question lies in the weakness of the provisions of the Charter with respect to the prevention of breaches of the peace and the suppression of acts of aggression. The most important powers of the Security Council are found in article 39 of the Charter, as follows:

"The Security Council shall determine the existence of any threat to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken * * * to maintain or restore international peace and security."

The article, it will be noted, provides no criterion to be applied by the Security Council in arriving at its determinations, and, moreover, each such determination is subject to the veto of any one of the great powers members of the Security Council.

Secretary of State Stettinius, in his report to the President as Chairman of the United States Delegation to the San Francisco Conference on the United Nations, revealed that "One of the most significant lines upon which the debate concerning the liberty of action of the Council proceeded, was that which concerned the proposed inclusion in the Charter of provisions with respect to determination of acts of aggression." Various amendments, he disclosed, were proposed on the subject, some of which offered "sharply defined eventualities (such as invasion of, or attack on, another state, interfering with its internal affairs, etc.), in which the Council would be bound to determine by a formula not only the existence of aggression but also the identity of the aggressor." Mr. Stettinius then reports that "The United States delegation, believing that the acceptance of such a concept was most undesirable, played an active part in opposing the amend-

UNIVERSITY OF MICHIGAN LIBRARIES

ments."[1] In justification of what has turned out to be this most unfortunate attitude of the American delegation, the report of Mr. Stettinius stated that "The general duties of the Security Council are clear, and reliance upon the fulfillment of these duties is based, as it must inevitably be, on the good faith of its members." Law is established to step in when good faith is abused. In placing certain members of the United Nations above the law of the Charter, law was abandoned pro tanto. In so doing the drafters of the Charter ignored the advice of the great jurists of international law. One typical statement of the many by international law writers over the years will suffice: "To secure by law, throughout the world, the maintenance of right against the aggression of the national wrongdoer, is the primary object of the commonwealth of States, and the great duty of the society or societies. Obedience to the law is as necessary for the liberty of states as it is for the liberty of individuals."[2]

The North Atlantic treaty reaffirms the faith of the signatories in the purposes and principles of the Charter and their determination to live up to them. Article 5 states that in agreeing to resist armed attack the signatories of the pact will exercise the right of individual or collective self-defense recognized by article 51 of the Charter of the United Nations. An account of the circumstances under which article 51 came to be inserted in the charter will be useful in arriving at the meaning of the North Atlantic Pact in the light of developments subsequent to the signing of the charter.

In the Dumbarton Oaks proposals laid before the San Francisco Conference by the Great Powers as the basis for discussion, regional arrangements were not precluded, but enforcement action under them could not be undertaken without the previous authorization of the Security Council. After the Yalta agreement on voting procedure in the Security Council gave the veto to any great power in enforcement action, it became obvious that the effectiveness of regional arrangements, as well as of the United Nations itself, would depend upon the arbitrary will of any one of the Great Powers possessing the veto. This development was alarming, particularly to the nations of the Western Hemisphere, which were unwilling to risk the future of the inter-American system to the whim of a great European or Asiatic power. From the days of President Monroe, who proclaimed the doctrine bearing his name, and Simon Bolivar, who called a conference at Panama 3 years later to proclaim a similar doctrine for Latin America, a system of hemispheric defense has evolved which culminated in the Act of Chapultepec signed at Mexico City on March 6, 1945, a few weeks before the convening of the United Nations Conference at San Francisco.

By this regional arrangement for international peace and security in the Western Hemisphere, the principles asserted by Monroe and Bolivar were intercontinentalized into the following formula: "Every attack of a state against the integrity of the inviolability of the territory, or against the sovereignty or political independence of an American state shall be considered as an act of aggression against the other states which sign this act." This general definition of aggression was supplemented with the following particulars: "In any case, invasion by armed forces of one state into the territory of another trespassing boundaries established by treaty and demarcated in accordance therewith shall constitute an act of aggression." This difference in formulae for determining acts of aggression constituted another point of departure at San Francisco between the Latin-American nations and the Great Powers in the attempt to reach agreement on the final drafting of the Charter of the United Nations.

The conference became deadlocked over the relationship of the Pan American system to the proposed world security system and the personal intervention of President Truman became necessary before the deadlock was broken. By his direction, Secretary of State Stettinius informed the Latin American Foreign Ministers at San Francisco on May 15 that following the close of hostilities the United States would propose that the Act of Chapultepec be made permanent in treaty form. The United States delegation thereupon introduced an amendment which now appears as article 51 of the Charter.[3]

President Truman's promise to the Latin-American nations was fulfilled in the Inter-American Treaty of Reciprocal Assistance signed at Rio de Janeiro on September 2, 1947. In its proscription of aggression, the Rio Treaty follows the Act of Chapultepec and not the United Nations Charter.

Secretary of State Marshall and Senator VANDENBERG were delegates of the United States to the Rio Conference. Upon their return to this country Secretary Marshall stated that the Rio Treaty was the most encouraging and stimulating international action since the close of hostilities. Senator VANDENBERG declared the treaty to be a milestone of incalculable importance and a tremendously significant and progressive pattern for others to follow. "Verily," he said, "the Rio Treaty is sunlight in a dark world."

Within 6 months after the signature of the Inter-American Treaty at Rio de Janeiro, Belgium, France, Great Britain, Luxemburg, and the Netherlands signed at Brussels on March 17, 1948, a treaty of economic, social, and cultural collaboration and collective self-defense, which, on the last-mentioned subject, contains provisions in accordance with article 51 of the United Nations Charter.

This progressive development of regional arrangements for collective self-defense received the official imprimatur of the United States Senate in a resolution introduced by Senator VANDENBERG from the Committee on Foreign Relations and adopted on June 11, 1948, by the overwhelming vote of 64 to 4. The Vandenberg resolution is unusual in that it is an instance of the Senate advising the President in advance of its views on foreign policy and informing him of the particular objectives the Government might pursue in this field. The negotiations for the North Atlantic Pact were initiated in accordance with this advice of the United States Senate.

Since the text of the treaty was made public a number of differing comments have been ventured as to its meaning. Whatever else may be said as to its significance, there is no doubt that it was planned and is intended to be an extension into the North Atlantic area of the principles and purposes of the Rio Pact. While the phraseologies of the two pacts are not identical, they are sufficiently specific to accomplish the same purpose; that is, of notifying potential aggressors in advance that certain acts will be considered aggression.

The parties to the North Atlantic Pact agree "that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all" (art. V). The geographic region and other elements of such an armed attack are stated with precision, and each of the parties agrees to assist the party or parties so attacked "by taking forthwith, individually and in concert with the other parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area," all "in exercise of the right of individual or collective self-defense recognized by article 51 of the Charter of the United Nations" (art. V). Like the Rio and Brussels Pacts, the North Atlantic Pact provides that any measures taken under it as the result of an armed attack shall be immediately reported to the Security Council of the United Nations and that such measures shall be terminated when the Security Council has taken the action necessary to maintain and restore international peace and security.

An appraisal of the real significance of the North Atlantic Pact cannot be made without a brief consideration of its place in the modern development of international law. From the Treaties of Westphalia of 1648 which formalized the transition from the Holy Roman Empire to the free association of sovereign national states upon which the present international states system is founded the law of nations was regarded as based upon the principles of contract and violations of the contract were subjected to civil sanctions by way of damages and reparations. No sense of injury to the international community as such or of penal liability for breach of the law was conceived of. When the United States became independent and was admitted to the family of nations, it followed the European view that international relations were a matter of contract and, following the advice of President Washington and Thomas Jefferson, this country elected to remain neutral in the wars of Europe. As late as the beginning of World War II, the President of the United States formally proclaimed the neutrality of the United States as each belligerent entered that war before we ourselves officially entered it following the attack on Pearl Harbor. While the United States was neutral in World War I, Elihu Root, president of this society, pointed out the great weakness in the system of law governing international relations and declared that "a radical change in the attitude of nations toward violations of law is necessary. * * * Threats to the peace and order of the community of nations must be deemed a violation of the right of every civilized nation to have the law maintained and a legal injury to every nation." In his opinion, rules might be "so framed that a policy of aggression cannot be worked out except through open violation of law which will meet the protest and condemnation of the world at large, backed by whatever means shall have been devised for law enforcement." Mr. Root's warning was heeded in the Covenant of the League of Nations when it provided that "any war or threat of war whether immediately affecting any of the members of the League or not, is hereby declared a matter of concern to the whole League, and the League shall take any action that may be deemed wise and effectual to safeguard the peace of nations." The actual existence of an international community had been pointed out many times by writers on international law since Grotius and even by some of his predecessors. Official formal recognition was given by the First Peace Conference at The Hague of 1899 which expressly recognized the solidarity uniting the members of the society of civilized nations. It has taken two devastating world wars to bring home to governments and their peoples the vital necessity in the closely related family of nations of the modern world of safeguarding the peace and protecting the interests of the whole family.

Once we recognize that the maintenance of international peace is vitally necessary for

See also, Report to the President by the Chairman of the United States delegation, op. cit., pp. 101–108.

the protection of all members of the international community, the next step follows just as logically as has happened in the formation of civil societies of all degrees of civilization from the most primitive times to the present. The primary purpose of all government is the protection and welfare of the persons composing it by the community acting in the name of all. The first requisite of such a society is to forbid personal attacks by or upon the members. Any violation of this law is regarded not only as a violation of personal right but of the public peace. Police forces and courts are provided to prevent or punish such violations.

From the point of view of preserving the international peace, the community of nations has not as yet taken the first step necessary to protect its members. I am not referring at this time to the establishment of an international police force or of an international penal court. Before enforcement instrumentalities are brought into being, there must be a law to enforce. Such a law was not provided by either the Covenant of the League of Nations or the Charter of the United Nations. Even the Pact of Paris for the Renunciation of War concluded in 1928, which was widely heralded as outlawing war, simply renounced war as an instrument of national policy and was promptly circumvented by aggressor nations waging war without a previous declaration.

The prime requisite to the establishment of a community of states under the protection of an enforceable international peace is the unambiguous denouncement of breaches of the peace and acts of aggression as violations of the law of the community. To leave the definition of such violations to ex post facto determination by a political group such as the Security Council of the United Nations, one of which may veto the very existence of a violation however flagrant it may be, or to ex post bello decision by a victor against the vanquished only, is a perversion of legal process which by no stretch of the imagination can lead to the establishment of international peace founded upon law and justice.

At Chapultepec the American nations led the way by proclaiming the outlawry of aggression in specific terms. The Rio Treaty confirmed and made permanent this law of the American Hemisphere. The North Atlantic Pact is expansion of the legal order of the Americas to the fellow members of the North Atlantic community on the other rim of the Atlantic Ocean. As was pointed out by President Truman and Secretary of State Acheson, the pact had its roots in the common heritage and civilization of people living on both shores of the North Atlantic Ocean. These people have ties not only of cultural background, but of a common ingrained faith in the worth of the individual, in the principles of democracy, and in the rule of law. Two world wars have taught them that their security is inextricably linked together; that an attack on any one of them is an attack on all.

The implementation of these regional arrangements is to be entrusted to councils of representatives of the respective groups.

The councils will be bound by the definition of acts of aggression embodied in the pacts, and no member will be in a position to veto the existence of known facts. The function of each council is to devise measures to resist armed attack and restore peace. The character of the defensive measures to be taken will depend upon the nature of the threat. Ordinary breaches of the peace are handled by one or two policemen; occasionally it is necessary to send for the riot squad. Serious disturbances may require the calling out of the militia, and when the national safety is threatened, the Army is the last resort. The duty of each member to take such measures is laid down in the pacts. The refusal of any contracting party to fulfill its obligations would not prevent the other parties from proceeding with the enforcement of the treaty. This is in great contrast with the United Nations Charter provisions concerning the Security Council where one of the Great Powers can prevent not only action by the Organization, but at the same time claim that enforcement action without the approval of the Security Council would be in violation of the Charter.

Aggressions in the form not of armed attack, but, for example, of subversive infiltration, have not been overlooked, and the pacts require consultation of the parties, whenever, in the opinion of one of them, the territorial integrity, political independence or security of any of them is threatened.

These pacts are designed to bring about conditions which it was hoped and expected would be accomplished by the United Nations. Due largely to the insistence of the Latin-American delegates to the San Francisco Conference that the Inter-American system which had functioned for over 50 years be not immediately subordinated to an untried experiment in world organization, and to the timely intervention of President Truman, article 51 was reluctantly inserted in the Charter. It has proved to be the strongest pillar of support for the whole collective security system. Is it too much to hope that by the negotiation of more regional security pacts there will eventually be developed such a preponderance of international-law-abiding nations and peoples as to make it possible to unite them all again under a United Nations Charter capable of discharging the great trust confided to it.

Grain Storage Program

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. POLK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the announcement by the Secretary of Agriculture, Charles F. Brannan, concerning the grain-storage program.

It is, indeed, fortunate for the farmers of the United States that the President has signed the bill restoring to the Commodity Credit Corporation authority to assist farmers to store their grain and other products. The CCC had this authority until it was taken away by the Eightieth Congress, thus depriving farmers of a very valuable service.

On January 18, 1949, I introduced a bill, H. R. 1657, to restore the farm-storage authority to the CCC and the law just signed by the President contains the authorization provided in the bill I introduced in January.

In this connection, I wish to call your attention to the following statement issued yesterday by Secretary Brannan concerning the grain-storage program:

The President has just signed a bill restoring to the Commodity Credit Corporation the authority, held by the Corporation from its inception until last year, to assist farmers to store their grain and other products and to provide storage for these commodities when they are turned over to the Corporation in the conduct of the authorized price-support programs.

The Department of Agriculture has been prepared to attack the grain-storage problem at any time it regained the authority to do so. It is now in position to go ahead, and is taking immediate action.

The wheat crop is already being harvested in the southwestern part of the country, and it is too late now to do all of the things we had planned earlier as part of a broad program to handle peak grain-harvest periods and to carry out our year-around price-support obligation. However, the Department will move at once to put into effect as much of the program as possible at this time.

Three major steps have been specially and realistically adapted to meet the immediate situation and to prepare for the grain-storage problems which are almost certain to develop as crops are harvested during the next several months. These steps are:

1. Because wheat is already being harvested in the Southwest, and because farmers are finding it difficult to make use of available commercial storage, CCC will temporarily liberalize the provisions of its price-support grain-loan program. This will make it possible for grain farmers to take advantage of the protection offered by the support program, even though adequate storage facilities are not immediately available to them.

In all areas where climatic conditions make it possible to store wheat for short periods on the ground in the open, or in other temporary ways which are available to farmers, CCC will grant distress grain loans immediately. These distress loans will be granted with the definite understanding that the farmer himself is to build or acquire satisfactory farm-storage facilities within not more than 90 days. When he does, and the wheat is properly housed, the distress loan will become a regular loan under the CCC price-support program.

Seventy-five percent of the full support level will be advanced to the farmer at the time he takes out the distress loan. He will receive the balance of the full price-support loan when the grain is in his new storage facility. Determination of grade and quality will be made at the time the grain is put under the distress loan. The quantity will be estimated at the time the distress loan is granted, and it will be finally checked and determined when the grain goes into the permanent storage. The farmer will not be responsible for changes in grade and quality which may occur during the period of the distress loan.

In areas where it is not feasible for farmers to leave wheat in the open or in other temporary storage, and where adequate storage facilities are not available to them, the CCC itself will undertake to find suitable emergency storage. It will use Government-owned war-surplus facilities where available or take other special measures to get the wheat under cover. This will make it possible for farmers in such areas to take advantage of the distress-loan provisions, on the same general basis as those where the climate is drier and under comparable requirements for acquisition of additional farm storage.

State and county committees of the Production and Marketing Administration will be given full information about the distress loan procedures immediately. Farmers should check with their local committees before taking steps to qualify under this program.

2. In an effort to mobilize the maximum production capacity for farm storage facilities, the manufacturers and suppliers of on-the-farm type of grain-storage facilities are invited to meet with officials in conference room 218-A at the Department of Agriculture in Washington at 10 a. m. on June 10. At that time, a survey will be made of the capacity of each to produce and deliver, and areas of greatest need will be defined. The Department hopes to complete previous discussions with these suppliers to pave the way for the early delivery of the maximum

UNIVERSITY OF MICHIGAN LIBRARIES

amount of storage and storage materials, so that farmers will be able to purchase and erect facilities as rapidly as possible.

Local dealers and representatives of manufacturers will not be by-passed in this effort to speed up delivery. On the contrary, all available information as to names of suppliers as well as the types and quantities of storage facilities which can be produced by the different suppliers will be made available to the State and county PMA committees. These committees will then be able to help local distributors bring to the attention of all grain farmers the availability of different types of structures, costs, and other pertinent information.

As part of this effort to increase farm storage quickly, CCC will make loans to farmers for the purchase or construction of farm storage to the extent of 85 percent of the cost of the facility. These loans, bearing interest at the rate of 4 percent a year, will be payable in five annual installments, or earlier at the farmer's option.

In addition, and as a part of the farm-storage loan program, the Department will include a provision for deferment of repayments in a year when the farmer, because of conditions over which he has no control, is not in position to utilize the storage space. To illustrate, in the event of crop failure in an area, payments for that year will be deferred—in effect extending for a year the time during which the total storage loan is to be repaid. The PMA committees will be responsible for determining the local justification for such deferrals.

In connection with assistance available to farmers in paying off farm storage loans, or otherwise financing new storage capacity, I want to call particular attention to the re-sealing provisions which were announced in May. Any farmer who has had wheat, corn, oats, or barley under storage loans can re-seal the grain, extending the commodity loan for another year and keeping the grain in its present storage position. CCC will pay him fixed storage fees for keeping this grain for the Corporation for the extended period.

Those who have listed these same grains under the purchase agreement option of the price-support program can also put the grain under loan for the coming year, thus qualifying for the same storage fees if the grain is eventually delivered to CCC. These storage fees will help pay the cost of any new and additional storage the farmer acquires. The re-seal payments should serve as a definite incentive for added farm storage, promoting more orderly marketing of 1949 grain crops and permitting farmers to take full advantage of price supports.

3. It is anticipated that CCC will be required to carry over considerable grain stocks from year to year, both as a result of its price-support operations and in providing for carry-over of part of the necessary reserve supply in the national interest. CCC will therefore contract for storage facilities to be placed on lease or purchase sites at strategic points throughout the country, for storage of CCC-owned or controlled grain stocks when other facilities are not available.

The Corporation at present owns approximately 45,000,000 bushels capacity of bin-type storage and believes that about an additional 50,000,000 bushels of comparable storage, properly located, will materially assist in meeting storage needs for the immediate future. This additional storage for CCC stocks will help make it possible for farmers, grain dealers, and the railroads to handle the volumes of grain coming in at the peak of harvest.

This CCC storage is intended to supplement existing facilities only to the extent necessary to help meet urgent current needs. The bins or other storage facilities on these sites, when not needed by the Corporation, will be subject to lease by farmers or groups of farmers. We regard the CCC bin-purchase approach to the grain-storage problem as a temporary measure, made necessary by the lack of time in which to meet situations which are immediately ahead.

Considering the over-all storage question, Department surveys show that there is need for more elevator-type storage to handle our grain supplies efficiently in the harvest seasons and years ahead. There is obviously not time to do much in this direction to help with 1949 grain crops, but it is expected that cooperative and other commercial interests, recognizing the future storage needs, will start the necessary construction programs through the usual channels of individual initiative.

Federal Housing

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

AMERICAN VETERANS OF WORLD WAR II,
Clarinda, Iowa, June 5, 1949.

Hon. BEN F. JENSEN,
House Office Building,
Washington, D. C.:

Whereas at the regular and duly authorized meeting of the Seventh District, Amvets, held this 5th day of June 1949, in Clarinda, Iowa, it is hereby brought to attention that a high-pressure lobbying campaign designed to add from $500 to $2,000 to the over-all cost of an $8,000 GI home is under way in Washington, D. C, with the aid and connivance of individual representatives of some veterans organizations, masquerading under a veterans' organization front, backing the passage of a bill introduced by Representative HOLIFIELD, California, and a similar bill, S. 616, by Senator ELBERT THOMAS of Utah, and

Whereas millions and millions of dollars of additional interest money for bankers and lenders to be taken from needy and worthy veterans and their families is the stake in this campaign, it is hereby resolved that the members of this Seventh District, Amvets, request the Honorable BEN F. JENSEN to use the influence of his good offices to stop these unfair attempts to work a financial hardship against the War Veterans and their families.

KENNETH B. BOYD,
Commander, Seventh District, Amvets.

Federal Housing

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. JENSEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

BEACONSFIELD, Iowa, *July 27, 1948.*
Congressman JENSEN,
Washington, D. C.

DEAR SIR: The President wants a housing plan passed. He and his followers have allowed Americans to be house shy for years in order to force through Government control of housing with all its evil effects.

We need new houses, more modern than any built today or liable to be built under Government sponsorship. We need these built by private capital, on a mass-production basis on factory assembly lines. To get this we need repeal of all the laws that are stifling private enterprise along these lines.

There is one little law that would suddenly open up many houses in every community today and would give work in every community to worthy people. It would prevent the degeneration of present homes.

In every community are many people who own their own homes but little else, and are supported by the old-age pension. These people live alone in a house big enough for several people, often only a bit of change would make the house into two apartments.

The law as is gives the owner no incentive to rent a room or to alter the house and gives no money to fix up the place. So the person lives alone in a house that gets in worse and worse condition. By the time the county gets it, it is worth little.

Now if any extra income is made the amount is taken out of the pension. I would have the law changed to allow the person to keep this rent money, but half of it must go toward improving the place. This would make the place in better condition when the owner dies. Someone should be ready with plans for remodeling old places into apartments and be ready to supervise the job but there should be no compulsion about doing any of it.

This would open up rooms, apartments, whole houses in every town in United States of America overnight, and ease the housing situation. But still the laws hampering building by private enterprise should be changed to make up-to-the-minute houses, factory made on the production line possible.

I would also like to see a change made in the Old Age Pension Act to give the money to every person at a certain age, regardless of how much wealth they may have and whether or not they quit their jobs. Make it an honorary gift for having lived that long, and add a dollar a month each year as older folks can earn less and need more cash. The money should not be a flat sum fixed by law, but a cost-of-living-decently sum, altered to fix circumstances. It should provide decent but not elaborate shelter, give plenty for good nourishing meals, a bit for clothing and incidental., health care. Then at death I would have a whole year's income given so as to give what they term "a decent funeral."

This would take away the fear in every heart that maybe the savings would not last and that old age might find one destitute.

Some may say it would take away all incentive for saving and that saving and being independent is the American way of life. It would not take away all incentive for saving, just the incentive for fear hoarding. That not know how much will still be needed feeling. My own mother, Mrs. Joe Doubet, of Clearfield, will be 90 this fall. She still fears to spend overly much because she might get down and be ill for a long time, requiring heavy expenses. Maybe the money would not last and she might be hungry or destitute at the last.

If people did not have to do fear hoarding for essentials at the sunset years then they would spend more freely. Spending, not hoarding, is the key to the new way of life in America. During the early days when almost everyone farmed then each must save for himself. Today when more work in factories than on farms and the factories must shut down when spending slows down, then constant circulation of money is more important than hoarding. I lived in Detroit for

many years and know what fear was in the hearts of the factory people. A long shutdown meant real hardships.

Taking the stigma from pension money and giving it to everyone at a certain age, whether they were rich or poor, working or not working, would not cost so much more than the present system because it would do away with all supervision officials. Giving it out on a monthly basis, as at present to those who had to depend on it and could not wait even one extra month, but semimonthly, quarterly, semiyearly, or yearly basis to as many as possible would keep the clerical expense down to a minimum. Probably many now getting it on a monthly basis could go on a semimonthly basis.

I know that many, many white-collar workers are in favor of such a plan. Many more would favor it if it were put up to them. Stop a moment and figure how it would be a benefit to the various people you know. People who would almost rather starve than take the pension under present set-up. Visualize how much it would mean to people to have everyone spending more freely, so that work would be more steady. For my part I think I would start the pension at 60 with maybe half the cost of living, increasing each year. There are many who would retire at 60 if they had just a bit of a boost to their income. Maybe retiring from their heavy job to a semiheavy one. That would add to the number of jobs open for younger people. The added flow of money would add to jobs for all.

Thank you for listening, and for giving careful consideration to my ideas. I have also written Senator VANDENBERG.

Very truly yours,

Mrs. FLORENCE GUNN.

Hourly Wage Returns to the Farm Operators Engaged in Various Types of American Agriculture

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, during this period of consideration of labor and agricultural legislation, I wish to present the following official table from the Bureau of Agricultural Economics of the United States Department of Agriculture:

Commercial family-operated farms, by type, 1930–47

Year	Dairy farms		Corn Belt				Spring-wheat farms (northern plains)			Winter-wheat farms (southern plains)		Cotton farms			Cattle ranches, intermountain region
	Central New York	Southern Wisconsin	Cash-grain	Hog-beef fattening	Hog-beef raising	Hog-dairy	Wheat-corn livestock	Wheat-small grain livestock	Wheat-roughage livestock	Wheat	Wheat-grain sorghum	Southern plains	Black prairie	Delta of Mississippi	
	Dollars	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*	*Dollars*

This 19-year study of the hourly wage returns for all labor has been conducted by Dr. Wiley Goodsell of the Bureau of Agricultural Economics of the United States Department of Agriculture, and I have followed this study for many years. I think that a careful study of this table will contribute to our thinking in connection with the Hope bill, Aiken bill, and the proposed Brannan plan, and will also indicate to some extent our responsibilities to minimum-wage legislation.

While I do not wish to discuss all of the angles developed by this study, I

UNIVERSITY OF MICHIGAN LIBRARIES

would like to call your attention to some of the facts that are revealed by the table. You will note that in the thirties the Government did not really feed and clothe the people, because the American farmer was the greatest contributor toward feeding and clothing the American people. For example, the farm-labor hourly wage return on a typical, not average, southern Wisconsin dairy farm was less than 13 cents per hour. In 1939, the seventh year of the "more abundant life" the hourly wage was only 14 cents per hour. You will also note that the hourly wage return for all labor for the hog-beef raising farm was less than 11 cents per hour, and for the hog-dairy farm the hourly wage return was 15 cents per hour. Please note that in the Black Prairie cotton farm of Mississippi the average hourly wage return from 1930 to 1940 was only 16 cents per hour. A large percentage of this hourly wage return represents payments from the United States Treasury. The winter wheat and spring wheat areas showed a very favorable hourly wage return during the war years when wheat was $2 to $3 per bushel, but just note the prewar hourly wage returns. And note the 7-cents-per-hour wage return in the southern plains in 1939, the seventh year of the "more abundant life."

If the labor returns are to be supported for the owner of the land, is not the hired farm laborer entitled to a comparable consideration? If the present support program is continued it would indicate a support from 50 to 60 cents per hour. If any support program is to be under the absolute control of the Secretary of Agriculture, will he not determine the hourly wage return for labor and the wage scale of ever farmer?

This table when studied carefully gives a basis and background for many angles in connection with American agriculture.

This Can Be Stopped

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Island Argus of May 26, 1949:

THIS CAN BE STOPPED

While the Army Department has been issuing appeals and sending out advertisements for doctors, it has made no effort to end the unconscionable duplication of medical services which were exposed in the Hoover Commission report. It is up to Congress to compel action.

Here are just a couple of incidents of extravagance as described in Barron's Weekly (republished in the Reader's Digest):

"In New York City there are 11 major Federal hospitals in the metropolitan area, with a total capacity of 8,257 beds. When surveyed, they held 5,330 patients. To care for them, 7,000 persons were employed, including 630 full-time physicians. Four of these hospitals could be closed at a considerable saving, and better medical care would result. Nevertheless, three Federal agencies are now building or planning for New York, five additional hospitals at a cost of $105,000,000.

"There are 13 Federal hospitals in the San Francisco area. Seven could probably be closed. With all patients concentrated in the remaining six, occupancy would still be only 54 percent of capacity. The new Navy hospital in Moffett field had an average of two patients a day during the fiscal year 1948. However, present plans look to the construction of three more Federal hospitals, with 3,000 beds, at a cost of perhaps $70,000,000."

There are many other cases like these. And this is just one phase of governmental extravagance. It is difficult to confront such evidence without reaching the conclusion that extravagance has become an almost incurable habit in some governmental agencies and that a major surgical operation will be required to end it. The Hoover report shows how the operating should be done.

We heard a Senator say in a radio debate that economizing under the Hoover report is difficult because many things must be left to administration rather than legislation. This is nonsense. Congress has frequently attached conditions to appropriations, as it did in holding up development of the Jackson Hole Monument by specifying that the funds be used only for fire control. It could forbid the expenditure of any more funds for hospitals unless the Budget Bureau received proof that all opportunities for ending duplication had been exhausted.

The opportuiity is clear. It is time for action, to protect not only the taxpayers but those agencies that are operating efficiently, for unless something is done to reform the wasteful agencies there will be a violent public revulsion against every branch of Government, especially Congress.

Compulsory National Health Insurance

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 8 (legislative day of Thursday, June 2), 1949

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on the subject of the proposed compulsory national health insurance law, before the National Conference of County Medical Society Officers, at Atlantic City, N. J., on June 5, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The advocates of the proposed compulsory national health insurance law have given it a most flattering and appealing label, but one that is equally deceptive. The title "health insurance" is an attractive and persuasive window dressing. The evil is in the substance of the proposal.

Congress cannot legislate compulsory good health for the American people. There are some fields of service, of course, in which the Federal Government can and should properly participate by aiding the medical profession and the public in preventing disease, in carrying on scientific research and experimentation, and by helping to provide the hospitals and clinical facilities necessary for the care and treatment of those who are ill. Beyond those limits it cannot very well go without invading the inalienable rights of the individual and regimenting the medical profession.

The word "compulsory" connotes the use of force. The true meaning of this word and its implications, when used to coerce or to restrict freedom, are shocking to all senses of justice and propriety of a free people. As applied in this proposed law and as it would operate, compulsion violates the very essence of the American version of personal liberty.

A compulsory health program requires not only submission of the person but demands surrender of the individual's will to the master authority. It denies freedom of choice in the exercise of the inherent right of a human being to act independently and of his own free will in the all-important matter and duty of preservation of the health and life of himself and that of his family.

The right to life, liberty, and the pursuit of happiness was established by a bloody revolution of nearly two centuries ago. That right has since been defended and maintained by the bloodshed of countless thousands of patriotic Americans on battlefields on the land, on the sea, and in the air all over the world. This sacred and indestructible right will be abridged if this doctrine of state authority and paternalism over the minds and consciences and actions of American citizens should be adopted. That is the fundamental principle that is involved in this political and legislative issue now before the Congress and the American people.

This issue, in my opinion, may well prove to be the supreme test—the test that will determine whether the moral stamina, self-reliance, and character of the American people have so deteriorated that they can now be seduced into approving and accepting the socialization of medical science in the vain expectation that it will prove to be a health utopia. If this is such a test, then our Nation is being weighed in the balances and it will surely be found wanting if our people make the wrong decision.

In full recognition of some faults and shortcomings of your profession, and with no purpose of exaggeration or intent to flatter, it is my observation that American medical skill and science are unequalled and that the general health of the American people is unexcelled anywhere in the world. This happy state of affairs is not a bestowed gratuity. It did not happen by mere chance any more than did our present social standards, cultural attainments, and our economic growth and power as a Nation occur by accident. All of those are rooted in the freedoms proclaimed in the Declaration of Independence and guaranteed in the Constitution and the Bill of Rights.

Our national tree, now nearly 2 centuries old, has grown to be a mighty oak in the forest of nations. It towers above all others with its great branches of advantages and superiority, climbing and reaching toward the celestial skies. All other trees in the forest suffer by comparison. Ours is rooted in the soil of liberty and human freedom. If we sever the roots from the tree, the branches thereof will wither away, the trunk will decay, and the tree itself will surely die.

When our forefathers embarked upon the establishment of this Nation as a land of the free, the greatest enterprise in human history, they dedicated to that cause their lives, their fortunes, and their sacred honor. The righteousness of their crusade received the sanction of providence; and divine approbation, we should acknowledge, has continued to abide with us until this good day.

Truly our cultural attainments, our social standards, and our great economic might and power are the fruits of freedom of worship, freedom of thought, freedom of speech, and

freedom of action. Our capitalistic or free enterprise system that permits the choice by the individual of vocation and labor in the pursuit of a livelihood, the stimulant of competition, and the assurance—or at least the hope—of reward for individual enterprise and thrift, have inspired the initiative that is most responsible for our prosperity and progress on a national scale.

Those are the basic reasons why America has grown, why we have prospered, and why our productive industrial capacity today equals that of all the rest of the world combined. They are also the predominant factors in the field of professional attainments, including those in your profession who have dedicated their energies, their talents, and their lives to the science of medicine.

There is one other factor that should be strongly emphasized and that is the relationship between the individual citizen and the state under our system of government, wherein the government is the servant and not the master. We must keep it that way. The power and final authority must ever be reposed in the people themselves. Our past faith in these righteous principles has been abundantly rewarded. It has been crowned with a success and preeminence that is now an envied heritage which it is our obligation and responsibility to perpetuate for the glory of civilization and the benefit of all mankind.

In this proposed legislation the American people are being subjected to an alluring temptation. This scheme envisions full governmental responsibility. As the guardian and protector of our health, the Government promises to everyone all medical care free of cost except for possibly a few pennies a day withheld from wages and salaries. The people will immediately expect—and technically they will be within their rights—the highest quality of medical skill, hospitalization, nursing accommodations, and other necessities, including free medicine for all their ills, both imaginary and real.

The program being compulsory—that is, the individual has no alternative except to participate in it—the Government will be morally bound to assume the full obligation. If this is not state socialism and paternalism, then I do not know what kind of an "ism" it is, but I do know that it is a radical departure from the Americanism that is identified with our heritage of freedom. A compulsory health insurance law, or state medicine, in my judgment, is a doctrine and practice that is inseparable from the police state philosophy of government. It is evil in concept and it will become cruel in practice. If we embrace this philosophy, in due season we shall certainly eat the fruits of it. It will operate over here just as it has elsewhere and with the same results.

And what will such an obligation cost to fulfill? Estimates at present, which are little more than irresponsible guesses, are that it will cost from six to ten billions of dollars annually. If we undertake it and our experience compares with others who have tried it, we can well expect it to cost not less than twelve to fifteen billions of dollars annually and possibly a great deal more.

Can we rely upon the assurances given by its advocates that the cost of the program can be financed without an undue burden of taxation? In my opinion, estimates of cost now being given to us are as inaccurate as the philosophy of this character of paternalism is unsound. Every participant in the program once it is established—and that means ultimately all of the 150 million Americans—will demand the best and the most from it. To provide the best and the most for all who demand it will incur expenditures greatly in excess of any estimates now given if present standards of medical services are made available and present rates of compensation to doctors and related professions are maintained. If they are not maintained and the quality and standards are reduced, the doctors will not be the only victims. The American people will be the real sufferers.

We are assured that the patient can have the doctor of his choice. Once this program is firmly established, some few who can maintain their independence may continue to have their personal physician, but those within the program will have no other alternative except to rely on it for the care of their health. They will be dependent upon the State. Under the most favorable circumstances the choice of a physician may be available to them, but I am of the opinion that ultimately a choice will become the exception and will cease to be the rule, once the program is firmly imposed. Because, when bureaucracy rides high, when the State becomes the master and administrator of any "compulsory" program, the choice and authority rest with the Government and not with the individual. The State commands; the individual submits and obeys.

We are promised this program will provide adequate medical service for all—to those who can and to those who cannot now afford to pay for it. I am quite skeptical about this assurance. The welfare promises of state paternalistic authority have never been fulfilled by other governments except for temporary periods of convenience, and they will not be kept when they are made over here to the American people.

We are also told that our people will be free to participate or not to participate in this program. But that is not true. At least 80 percent of the people will have no choice. They will be compelled to contribute directly from their earnings whether they use the services or not, and they will have to depend upon it once it is the law of the land. Indeed, the other 20 percent will be compelled indirectly to support the program, because the compulsory financial contributions of the 80 percent will be inadequate to do so, and the only alternative will be to tax the other 20 percent sufficiently to make up the deficit. Yes, the program is definitely compulsory for all—for everyone.

What are the prospects for continued progress in the science of medicine when most of our doctors for all practical purposes are in fact employees of the state? Where will be the incentive for men in your profession to do the tedious research and experimentation and endure the deprivations that long hours of labor and concentration of mind and body entail? I emphasize again that progress in your profession like progress in industry, education, and standards of living in America has been made because here human beings have been free. If we permit the medical profession to become a pawn of a bureaucratic system of regimentation, the incentive for private initiative will be tremendously impaired. Compulsory health insurance will surely make the doctor subordinate to some bureau chief or administrator in the National Capital.

There is something else of great importance, I think the American people will have to give up for this state promised and guaranteed health insurance. The relationship of doctor and patient in a free society is something sacred. Until now it has remained inviolate. But how confidential will this relationship remain under a compulsory health insurance program? If you doctors work for the state, you will surely have to make reports to a government agency. The records you compile on your patients will in effect be government property. When the patient gives you the history of her case and you make a record of it, that patient will have disclosed not only to you, as her personal physician, her secrets in sacred confidence, but she will have also disclosed to a curious bureaucracy on a higher echelon of authority than the doctor who performs the service, those secrets of a personal nature which should be her inherent and God-given right to reveal to no one except to one in her confidence and to one of her choice.

It is impossible in a single address to enumerate and cover all of the aspects of evil and irrevocable harm that are involved in this deceptive compulsory health scheme. But before I conclude I wish to relate this proposal to the general problems and legislative program now before the Congress.

We have an annual budget now of approximately $42,000,000,000. This budget we are finding it difficult, if not impossible, to reduce. It is pretty well conceded by all competent authorities, those in government and those on the outside, that during the next fiscal year the cost of the Federal Government will exceed revenues by at least $3,000,000,000.

The proposed compulsory health insurance program is only one of many spending proposals now before the Congress, which, if enacted into law, will tremendously increase governmental costs and add new obligations that will have to be met by additional appropriations each year. If this compulsory health insurance program is enacted into law along with some 10 or 12 other proposals that are now pending, we can expect within 5 years after their enactment that the cost of operating the Federal Government will be at least $60,000,000,000 annually. Taxes will have to be increased accordingly if sound fiscal policies are to be maintained. I do not believe that our economy justifies, or that it will sustain, another $20,000,000,000 taxtake from the earnings of the American people. In my judgment, that much additional taxation, whether taken from pay rolls or otherwise, would be confiscatory and would destroy our free-enterprise system.

When our free-enterprise system is destroyed or is so crippled that there is no longer any incentive left for private initiative and private capital investments, then there is no alternative except socialism or communism. Measures such as the proposed compulsory health insurance and others that create state paternalism are simply carrying us further down the road to socialism. We cannot reduce taxes or the cost of government by continuously enacting more laws that call for additional expenditures of money.

I am reminded of the sound philosophy of Thomas Jefferson and the warning contained therein, expressed more than 100 years ago, when he said:

"I place economy among the first and most important virtues and public debt as the greatest of dangers to be feared. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty or profusion and servitude. If we run into such debts, we must be taxed in our meat and drink, in our necessities and in our comforts, in our labors and in our amusements. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them, they will be happy."

Government, as we know, has become wasteful. We have a staggering public debt that appears to be perpetual. We are already taxed in our meat and drink, in our necessities and in our comforts, in our labors and in our amusements. The Congress is now asked to increase taxes, to take more of the earnings of the American people away from them under the pretense of caring for them. According to the philosophy of Thomas Jefferson, to which I subscribe, that is not the road to happiness. Higher taxes and more spending will bring neither prosperity nor security. They will impose burdens a free people cannot carry, and the

UNIVERSITY OF MICHIGAN LIBRARIES

result will be subservience and servitude of the individual to the rulers of the state.

If we in America turn to the left and forsake the righteous principles of personal liberty and freedom and substitute therefor the iniquitous philosophy of state paternalism, we shall not escape just retribution.

I cannot view the present, remember the past, or contemplate the future and our ultimate destiny without recalling and meditating upon that proverbial scripture that "Righteousness exalteth a nation, but sin is a reproach to any people." I accept that as divine truth, and I do not believe that the action or temporary successes of demagogs and hypocrites can either refute or destroy it. It may be crushed to earth, but it shall surely rise again.

One Hundred Percent of Parity and the Brannan Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 8 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "I Am for 100 Percent of Parity and the Brannan Plan," recently delivered by me over the radio.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am for 100 percent of parity—and the Brannan plan. I want to say here and now, and with all the force at my command, that I am for an agricultural program that gives farmers parity. By that I mean 100 percent of parity—not 90 or 99 percent of parity. One hundred percent of parity is what is needed, and right now. The farm program put forward by Hon. Charles Brannan, Secretary of Agriculture, and now being considered by the Congress, aims at an income standard that would result in approximately parity for our Nation's farmers. But that is only a start. Achievement of the parity objective still would not close the wide gap between farm and nonfarm income. As an ultimate goal, a target to shoot at, parity is not enough.

We must remember that parity is a synthetic, an artificial, measuring device. It has been figured out by economists and statisticians. These swivel-chair operations are necessary and all right as far as they go. But they do not go far enough. We must recognize parity for what it really is—a stopgap yardstick. We must not be misled into thinking that its full measure brings the living standards of farm families anywhere near those of the rest of the Nation.

No amount of fancy figures and statistics and calculations can measure the need of our farm population for better housing; for electric power; for telephone service; for health and educational facilities. All fair-minded folks agree on this but in some respects we are moving backward.

In 1920, for example, 46 percent of our then 68,000 farms in North Dakota had telephone service. The percentage of North Dakota farms which have telephones today is 33 percent—a drop of 13 percent. In other words, two-thirds of North Dakota's farmers are helpless in the face of emergencies.

Parity won't bring the doctor to a child suddenly fallen ill on a farm or ranch where there is no telephone. Parity won't be any help where there has been an accident or a fire has broken out, but I, WILLIAM LANGER, as one United States Senator, am endeavoring to get the billion-dollar appropriation bill passed to get rural telephones to all the Nation's farms.

I want to make it crystal clear that I do not make these arguments for a high and stable farm income out of selfish interest for the farmer. The farmer does not want any favors, nor does he need them. Arguments for equality of living standards are nothing more than arguments for our respect and dignity as a Nation. And there is nothing the whole Nation needs more than an even break for the farmer. An income standard for the farm, equal to that over the Nation, inevitably would mean general and continued prosperity for the country as a whole. Our economy rests on the land. When this foundation crumbles, our economic structure cannot stand.

Near-sighted special interests who argue against this fundamental truth are foolishly and ignorantly talking with the wind. Nothing proves them in error so dramatically as recent history, within the memory of us all.

The plain fact is that farm prices historically lead the way down in a depression, and go lower than all the rest. Farmers in the past have responded to sharp price drops by increasing, or at least maintaining production, thereby keeping the country well fed but compounding their own troubles. Industry does precisely the opposite—production is cut; prices are maintained. In the 4-year period, 1929 through 1932, prices of principal farm commodities dropped by 56 percent while production stayed the same. But prices of leading industrial items, on the other hand, were cut only $5\frac{3}{10}$ percent while production was slashed more than 70 percent. You farmers all know that while what you raised went down to very low prices, that farm machinery which had gone to new high heights during World War I stayed right up there after the war was over and is up there today—far above 100 percent parity. But eventually and inevitably the whole structure collapsed.

That cannot happen again if our democracy is to survive. The farm plan proposed by Secretary Brannan aims at preventing a depression before it happens by maintaining parity of farm income. That makes so much sense we have never tried it. I will continue to argue—as I have argued for many years in the past—that we should try it. At the same time, we should recognize that parity as we now understand it is only a start toward the eventual goal of true equality in living standards for the people on our farms.

Jackson Day Dinner Address by Associate Justice of the Supreme Court of Hawaii, Louis Le Baron

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Wednesday, June 8 (legislative day of Thursday, June 2), 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Honorable Louis Le Baron, associate justice of the Supreme Court of Hawaii, to the Democratic Party of Hawaii at its Jackson Day dinner on February 24, 1949, in Honolulu.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For the past 20 years since the founding of the Jackson Club it has been my ambition to address the Democratic Party of Hawaii in memory of Andrew Jackson. This ambition was nurtured on family history. My great-grandfather, William Taylor Barry, was a lifelong friend of Andrew Jackson, and as a tribute to that friendship named his first-born son Andrew Jackson Barry, who grew up to become my grandfather. My great-grandfather had been Chief Justice of the Supreme Court of Kentucky. He was Kentucky's secretary of state. He delivered his State to Jackson in the Presidential campaign of 1828 and served in Jackson's Cabinet. In my home today is a pair of silver sugar tongs made from various coins which Andrew Jackson had from time to time tossed to his little namesake, Andrew Jackson Barry, on his many visits to the boy's home in Kentucky. The molding of those tongs is symbolic of my family's continued admiration of the sterling qualities of its beloved "Old Hickory."

There could not be a more fitting time to do public honor to the memory of Andrew Jackson, coming as it does so soon after the great victory of 1948, when Harry S. Truman was first elected President of the United States. That victory has but one parallel in American history. It is the victory of 1828, when Andrew Jackson was first elected President of the United States. During the campaign of 1828 every newspaper, college professor, banker, and other intelligent person "in the know" predicted that Adams would be elected to the Presidency, as their prototypes a hundred and twenty years later predicted that Dewey would. The parallel, however, does not stop there. Both victories were victories of the people themselves over those who feared and distrusted them. In short, both were victories of the Democratic Party, which, both nationally and locally, has steadfastly held to the Jeffersonian principle that "nothing is unchangeable but the inherent and inalienable rights of man," and consistently believed that it should identify itself with the people, have confidence in them, cherish and consider them the most honest and safe (although perhaps not the most wise) depository of the public interests.

Jackson, like Truman, believed this fervently. During the short 8 years of his Presidency, Jackson put that principle and belief into practice. He threw down the bars that hedged the people from effective participation in the conduct of their own Government. He destroyed the sinister alliance between politics and finance that was swiftly reducing the people to economic serfdom. He became a veritable sword against disunion and shattered the nullification movement, which had brought the people to the brink of civil war, thereby postponing for some thirty-odd years the day when a half million Americans had to die to preserve the Union. In his proclamation against the acts of nullification taken by his former home State, Jackson declared that "armed disunion is treason," and that powerful stand pointed the way to Abraham Lincoln when he subsequently entered upon his task of holding the United States together.

Jackson is one of the finest symbols of a free man who ever lived in a free climate and moved in a free society. No other land than America could have produced him. His parents were immigrants, his father a linen draper from Belfast, Ireland, who died a few months before his son Andrew was born on the western frontier of North Carolina.

Shortly thereafter, Andrew Jackson's widowed mother took her three small children to South Carolina, where she reared and supported them by working as a housekeeper in the home of relatives. Young Andrew faced a rugged world and fought for every advantage from the time of birth to the day of his death. His was a roaring career, resounding to the roars of cheering multitudes, of musketry, of artillery. He was a great duelist, a great soldier, and a great statesman. He was fiery, quixotic, honest, and loyal, but withal a man who had a code and lived up to it. But he did not cringe, he did not fawn, he did not carry water on both shoulders. When he lost—and he lost heavily and frequently—he paid without whimpering. He loved a woman and lost her, and of all his innumerable wounds that hurt the worst and the longest. Even a superficial examination of the record of his life reveals that few men who have figured largely in public affairs have exhibited more conspicuously the traits common to all humanity.

Thomas Jefferson envisioned that a free society of free men would be the strongest government on earth, an example toward which the whole future of man would gravitate, but Andrew Jackson demonstrated that that experiment worked. When Jefferson acquired the great Louisiana Territory and increased the domain of the United States by 140 percent, there were many who wailed in despair. They said that our country would be too big for union, too sordid for patriotism, too democratic for liberty, and that the weight and importance of the Eastern States would be destroyed. They merely voiced the old fear and distrust of the people on the theory that the greater their number the greater the danger. They particularly feared the rough and tough denizens of the western plains, the descendants of whom easterners in later year contemptuously dubbed "the sons of wild jackasses." The momentum of Jefferson's "empire of liberty," however, was too great to be so contained and fenced within the original States. In step with the Nation's destiny of world leadership, Jackson at the Battle of New Orleans repelled foreign invasion and in the White House proved to the world that democracy was a growing and vital force. Since then new stars out of the west have been added to the flag and the empire of liberty has rolled across and beyond a vast continent. Hawaii is a part of that empire and today stands at the threshold of statehood awaiting its opportunity to assume the responsibility of a State as a sister to the other 48 States of the Union. The empire of liberty is thus acquiring its full stature and its fruits are strengthening democratic nations everywhere. Jefferson's dream has become a reality and the burdened and oppressed throughout the world know that America's free society of free men holds the answer to their problems. We must keep faith. We cannot falter.

So long as truth prevails over falsehood, the foundation of this Nation will be secure. The potency of America's faith rests on the proposition that its people shall know the truth and the truth shall make them free. The strength of America lies in the righteousness of its people and an enlightened public opinion expressed in free elections and by secret ballot. Keep the ideals of Jefferson and Jackson alive and democracy will always flourish like the green bay tree, to which no subversive parasite can attach.

What American would trade his glorious heritage for a system where the sons of darkness can torture men of God and enslave the workingman? What American would give comfort to an agent of a malevolent foreign power who insidiously attempts to destroy our people as a Nation, whether that agent acts wittingly or unwittingly? No real American would do so knowingly, no matter what glittering promises are held out to him. Truth alone swings wide the door to freedom, which is nothing more than truth in action. It has been said, and truly, that while it is possible to send a message around the world in a fraction of a second, it requires generations to drive an idea through a quarter of an inch of human skull. Thank God that the idea of a free society of free men has penetrated the present-day American skull and that there can be no iron curtain in this land. But every American has the personal concern not to be deceived where the public order is at stake and to be distrustful of those of doubtful loyalty and of those who dare not deny allegiance to a God-hating ideology of an alien government. Every American has the solemn obligation to welcome the truth and help hold its torch high so that the vile things which thrive in the darkness may be clearly seen for what they are. The satisfaction of this reasonable service is all that is necessary, and that is the American way.

The victory of 1948 being comparable to that of 1828, let us pray that its gains may be preserved, that Almighty God guide and strengthen His servant, Harry S. Truman, against the Nation's enemies, both foreign and domestic, as He guided and strengthened His servant, Andrew Jackson.

In revering the memory of Andrew Jackson, we do not purport to live in the past, but are dedicating our lives to the living principles which make our Nation the greatest on earth, and by which that Nation may solve the problems of the present and prepare for the future. The immigrant linen draper's son touched the height of human glory by never attempting to win freedom by appeasement, but fought for it with fearless and unswerving loyalty, giving no quarter and asking for none. This Nation through a revitalized Democratic Party must do likewise.

"For no man escapes
When freedom fails,
The best of men rot
In filthy jails;
And they who cried:
'Appease, appease,'
Are hanged by men
They tried to please."

Address by Paul A. Strachan Before American Federation of Physically Handicapped

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 8 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Paul A. Strachan, national president of the American Federation of the Physically Handicapped, before the Tri-State Conference of Handicapped, at Pittsburgh, Pa., on May 22, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Mayor Lawrence, distinguished guests, and members of AFPH, it is peculiarly appropriate that we associate "physically handicapped" with the city of Pittsburgh, because Pittsburgh is frequently called the Vulcan of America and it will be recalled that in ancient mythology Vulcan was distinguished for two things: One, being husband of the Goddess Venus, and the other, being the greatest smith of his, or any other time. But he had an additional attribute: He was physically handicapped.

So, while today Pittsburgh is a giant in strength, like Vulcan of old, it has its weaknesses, and in the metropolitan area of where I am now standing, of the approximate 2,000,000 population, about 1 in 4, in some degree, is physically handicapped, or, 500,000 disabled—many of them seriously.

That localizes a problem which is national in scope and which, I firmly believe, can only be dealt with nationally, because the problems of the handicapped in Pittsburgh, are the same as the problems of the handicapped in Detroit, Chicago, Denver, San Francisco, Los Angeles, Houston, New Orleans, Atlanta, St. Louis, Cleveland, Cincinnati, Philadelphia, Baltimore, New York, or Boston. While figures on the total number of handicapped in the United States vary, according to source, yet it is estimated that there are as many as 55,000,000, and no fewer than 28,000,000—with approximately 7,000,000 in the category of the totally and permanently disabled.

The annual toll of injuries, alone, is appalling. For the period of the past 10 years, we have the following:

Year	Total	Fatal	Permanent-total	Permanent-partial	Temporary-total
1939	1,603,500	14,900	1,500	109,400	1,477,700
1940	1,889,700	16,500	1,600	89,600	1,782,000
1941	2,180,200	17,500	1,700	100,000	2,060,400
1942	2,267,700	18,100	1,800	100,800	2,147,000
1943	2,414,000	18,400	1,700	108,000	2,285,900
1944	2,230,400	15,900	1,700	94,800	2,118,400
1945	2,020,300	16,500	1,800	88,100	1,913,900
1946	2,056,000	16,500	1,800	92,400	1,945,300
1947	2,059,000	17,000	1,700	90,000	1,950,300
1948 [1]	1,960,000	16,500	1,800	83,700	1,858,000

[1] Preliminary.

DEFINITIONS

Work injury: An injury which occurred in the course of and arose out of employment.

Fatality: An injury which resulted in death during the reported year.

Permanent-total disability: An injury which renders the injured person unable to engage in any normal occupation for the remainder of his life. Includes by definition the loss or permanent loss of use of (a) both eyes; or (b) one eye and one hand, or arm, or leg, or foot; or (c) any two of the following not on the same limb; hand, arm, foot, or leg.

Permanent-partial disability: The loss of any member or part of a member of the body, or any permanent impairment of a function of the body or part thereof in any degree less than permanent, partial, total disability.

Temporary-total disability: Any injury which does not result in death or permanent disability, but which renders the injured person unable to work for one or more days after the day of injury.

PERTINENT TOTALS

For the 10-year period, 1939–48:	
Fatalities	167,800
Permanent-total disabilities	17,200
Permanent-partial disabilities	957,000
Temporary-total disabilities	19,538,800
Grand total	20,680,800
For the war years, 1942–45:	
Fatalities	68,900
Permanent-total disabilities	7,000
Permanent-partial disabilities	391,300
Temporary-total disabilities	8,463,200
Grand total	8,932,400

UNIVERSITY OF MICHIGAN LIBRARIES

PERMANENT IMPAIRMENTS

In a discussion of handicapped workers, the most important of the above figures are those relating to permanent-total disabilities and permanent-partial disabilities, as these cases are the ones which impose lasting handicaps upon the injured persons. The permanent-total disabilities are, of course, the very serious cases which exclude the injured persons from practically every normal employment. Some of these persons cannot be rehabilitated for any work, and the others present very difficult rehabilitation problems.

The permanent-partial disability cases range from minor disabilities which present very slight employment hindrances, to more serious impairments which call for extensive retraining to make the injured person employable. The available data does not indicate the degree of handicap resulting from these disabilities, but it is possible to make rough estimates as to the part of the body affected by these impairments. These estimates must be used with caution, however, because manufacturing is the only industrial area for which the distribution by part of body affected is available. In applying the manufacturing distribution to the grand totals it has to be assumed that injuries to the nonmanufacturing industries follow the same general pattern as is manufacturing. This, of course, may be questioned, but there appears to be no substantial grounds for not accepting the assumption as valid.

By applying the manufacturing ratios to the total estimated volume of permanent-partial disability cases for the past 10 years, it is possible to say that these cases were distributed approximately as follows:

Permanent impairments to—	
An arm	29,600
A hand or fingers	742,500
A leg	26,000
A foot or toes	68,000
An eye	45,200
Other parts of body	45,700
Total (10 years)	957,000

These estimates of impairments to particular parts of the body represent unpublished figures, but are based upon the general figures shown in the regular reports of the United States Bureau of Labor Statistics, the Director of which is my able, experienced friend, Ewan Clague, and this agency prepared these tables and information at my request.

With further reference to the five war years, on the industrial front there were 11,112,600 total injuries, and 88,100 fatalities, while in the various branches of the armed forces there were:

	Killed and died	Wounded in action
Navy	48,667	33,670
Marine Corps	21,711	63,919
Coast Guard	1,039	968
Army	225,155	571,822
Total	296,602	670,379
Total military casualties	966,981	

There, you have the picture, a picture which, if understood, should burn its message into your very souls in letters of fire of the meaning of the greatest problem before this country today—what to do with its millions of physically handicapped.

It is a fact that there is no rehabilitation program worthy of the name. Even in your great State of Pennsylvania, for several months, there was no money in your bureau of rehabilitation for case work, because its funds had been exhausted. It had lots of company, as, for some twenty-odd months, recently, some 30 of the States were in similar condition.

What, then, can we do about it? This tremendous problem cannot be solved by taking the millions of handicapped to—let us say—the chamber of commerce, the National Association of Manufacturers, or organized labor, veterans, farm, women, educational, religious, civic, fraternal, or any other single large organization in America and say, "Here, you rehabilitate the 28,000,000 handicapped. You treat them, medically; train them educationally and vocationally, and place them in suitable employment." No—this job is too big for anything other than Government—and I mean "big Government," to handle. And, even Government must have the active support and cooperation of all groups if any plan is to succeed on any level—Federal State, or local community.

What specific plan can we follow? Well, some of us believe that any plan, to be successful, must be 100 percent Federal, in operation. There are others who contend that it should only be done by the States. Still another group says "Government should stay out of this field and leave it to private agencies and individuals." I do not share that belief because the evidence, overwhelmingly, proves that such a plan is chimerical. It has never worked in the past, and I am convinced it will not work in future.

Still another group believes that joint action of the Federal and State Governments is necessary. As a practical proposition, at this juncture, I endorse the Federal-State joint-program method. At least, it is now and has been in operation, for the past 30 years. It is, of course, wholly and woefully inadequate to do the job, but we have had enough experience with it to see, in many respects, its weaknesses, and can devise remedies therefor.

Our federation, which in the 8 years of its existence, I am proud to say, has initiated and carried forward, in the public interest, more programs for handicapped than any organization in American history over a comparable period of time—has given long study to this problem. I may say that I have been identified with this field for 35 years, and was one of the three who put the first Federal Vocational Training Act, from which all subsequent legislation in this field has stemmed, on the books, some 30 years ago—the two others being the late Arthur Holder, and N. P. Alifas, of the International Association of Machinists. But, I approach this matter humbly, in the light of how little—rather than how much—I know, but, at least with the advantage of a practical experience and range of knowledge of the varied problems of handicapped people gained from personal acquaintance.

So we have developed a bill, now pending in Congress, and introduced in the Senate by our good friend, Senator JOHN J. SPARKMAN, with 17 eminent Senators, including Pennsylvania's senior Senator, FRANCIS J. MYERS, and, 13 Members of the House of Representatives, one of whom is your own neighbor, the beloved AUGUSTINE B. KELLEY, of Greensburg.

Just before leaving Washington for Pittsburgh, I called upon Gus, since I had been advised by my dear friend JOHN W. MCCORMACK, House majority leader, that Gus had just been appointed as chairman of the House Committee on Education and Labor's subcommittee on the handicapped. I told Gus that I would meet many of his old friends, among them, His Honor, David Lawrence, as well as members of AFPH, whom he has met at our past meetings here, and in Washington. I asked, "Gus, have you any word I can take to them?" He said, "Paul, tell them we shall open hearings on our bill, the Federal Commission on Services for the Physically Handicapped, on Monday, July 11, and I ask for the wholehearted collaboration and support of every organization, group, and individual, who wants the Congress of the United States to bring out an effective, streamlined bill, that will meet the needs of our handicapped people. I am especially sensitive in this matter, because, my State and my district, as well as the great city of Pittsburgh, in particular, have large numbers of handicapped, and we must do what is necessary and possible, to ameliorate this condition at once."

I am most happy to convey this news to you from GUS KELLEY. It is a great victory for the handicapped to get hearings, now, at all, because, today, the Congress is laboring under a heavier load of legislation than I have ever seen before in the 35 years I've been acquainted with it, and the agenda of Senate and House committees are filled, completely, with hearings to be held. I believe, in this, that Almighty God has smiled upon our labors, and I am humbly grateful to Him, and to our good friends who battle valiantly for us.

The bill to establish a Federal Commission on Services for the Physically Handicapped as stated, is the result of an evolutionary, not revolutionary, process, and it developed from the experience of many years. Briefly, it provides for:

1 Maximum extension of medical services; education and training; vocational guidance; and full employment opportunities to citizens handicapped by physical or mental disabilities.

2. More effective coordination of the functions of the thirty-odd Federal agencies which now have, each, a piece of the rehabilitation and employment program for handicapped.

3. Establishes a Federal Interagency Committee on Rehabilitation and Employment of Handicapped.

4. Establishes a National Commission on Employment of Handicapped to be composed of organizations and individuals outside Government, to foster employment of handicapped.

5. Provides for establishment of cooperative enterprises for handicapped.

6. Provides $60 a month grants for totally and permanently disabled citizens.

7. Provides educational grants for bedbound, or those confined to homes and institutions, who require special training.

8. Establishes the Federal Services to Handicapped Revolving Loan Fund, with $10,000,000, from which fund States may borrow money at such times as their own funds for vocational rehabilitation are exhausted.

9. Establishes a Division for Handicapped in the United States Civil Service Commission.

10. Promotes safety programs designed to eliminate and prevent conditions tending to promote injuries and disease in public buildings, institutions, and parks.

This is the most comprehensive legislation for the physically handicapped ever introduced in Congress. It does not, in fact, create an additional agency, but uses an existing agency as a base; changes its meaningless name; gives it means and power, in a sane, practical way, to do the vitally important job on behalf of millions of handicapped citizens, and it maintains the present Federal-State relationship.

This, my friends, is the program we are offering for public approval. The need for it has long been established. The means to effectuate it are at hand, if we will but use them. Congress, like Barkis, "is willin'," but, frankly, it must be shown that public sentiment is behind this legislation. I most respectively urge that all of you lend full support to this measure, and advise your Senators and Representatives to get behind the bill, which is the antithesis of past and present do-nothing policies, and supplants them with a dynamic, forward-looking program. I concede that no bill is perfect and

this one, no doubt, can and will be greatly improved, upon hearings, but it is a long start in the right direction, even though it is about 50 years behind where a program should be in this country.

The city of Pittsburgh, indeed, the whole State of Pennsylvania has much to gain by passage of this bill and I hope there will be no misunderstandings about its purposes. It simply links up, in a logical way, and on the basis of 30 years' experience, a Federal, State, and local community program. It does not impose any "great brains" from Washington, or elsewhere, upon Pittsburgh or any other outside city, but it does set up certain standards which, like a good post-office service, must be accepted and applied universally, if such service is to succeed in accomplishing its purpose.

Since this problem is going to be with us, in greater or lesser degree, for all time, because, unfortunately, each age produces its own handicapped and there is no millennium in sight as yet, I fervently hope that you will give this matter your most careful attention.

I deeply appreciate the great honor conferred upon me here, tonight, and wish to say that, as long as life remains, I shall continue this fight to advance the social and economic welfare of our 28,000,000 American handicapped.

I thank you.

The Brannan Farm-Income-Support Program

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 8 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Congress Leans Toward Brannan Plan," published in the Bismarck (N. Dak.) Capital of May 27, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS LEANS TOWARD BRANNAN PLAN

Lines are being formed at Washington for a battle over the kind of a farm-income-support program to be followed in the years ahead. No important element in Congress takes the position that there should not be such a program. The only difference of opinion is with regard to the methods that should be used and the extent of the support.

Farm support is being looked upon more and more as a vital part of the American economic system, rather than as a subsidy for the benefit of agriculture. It is generally recognized that the Government must maintain a constructive program that will protect not only the farmer but the whole economy from the effects of an output of farm products greater than the market can absorb at a fair and equitable price.

The question Congress is going to decide either this year or next is whether the present law providing for a flexible price-support plan shall be continued with some modifications, or whether a program along the line of the recent Brannan proposal shall be enacted.

The law now provides for loans to the farmer, or other measures, designed to support prices up to maximum of 90 percent of parity. If the price goes up the farmer can sell, pay off the loan, and benefit from the difference. If the price goes down the farmer keeps the loan money and the Government gets the commodity. In the case of some commodities the grower can secure a purchase agreement under which the Government promises to pay the support price at a future date.

Under the Brannan proposal, however, prices of perishable farm products would be permitted to seek their own level at the market place. Then the producer would be given a Government check covering the difference between the average market price received and the fair-income price. In most years this program would result in lower prices for consumers.

The cost in either case will be met by the taxpayer. Opponents of the Brannan plan contend that it would cost far more than the present program. But supporters of the plan say the average consumer would pay less than under the present law. They charge that under the present program the consumer pays twice—once when he buys farm products at the high support price and again when he foots the tax bill necessary to carry out the support program.

Under the Brannan proposal the consumer would pay the cost of the program in taxes but would pay less for farm products in the market place. The plan would apply to meat, dairy products, vegetables, poultry, and other perishables. Storable commodities like grain, cotton, tobacco, wool, flaxseed, etc., would continue to be supported under the loan and price-support program now in effect.

Reports from Washington indicate that the Brannan proposal may possibly be adopted for hogs, and perhaps one or two other commodities, at the present session of Congress. The rest of the program with some modifications appears to have at least a fair chance of enactment in 1950. Seasoned observers are of the opinion that legislation designed to provide low prices for consumers and a high level of income for producers will have almost irresistible appeal in an election year.

South Dakota, Today's Land of Opportunity

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 8 (legislative day of Thursday, June 2), 1949

Mr. MUNDT. Mr. President, for the past 10 or 12 years, nature has been magnificently generous with South Dakota and our normally great farm State has demonstrated a productivity which is virtually unequaled and unexcelled by any other area of America's rich farm belt.

The Greater South Dakota Association, through its central office in Huron, has recently compiled some statistics from official Department of Agriculture figures which are both striking and significant. These current statistics, Mr. President, demonstrate that of the 12 great North Central States which comprise the bread basket of the United States—and the world—South Dakota ranks first in six of the most important production enterprises of concern to the food consumers of America.

In another six important factors demonstrating not only the lush productivity of South Dakota, but also its high per capita wealth and income and its enviable economic position, South Dakota ranks second among all of the North Central States.

Mr. President, a study of these statistics will help citizens generally to understand why South Dakota has consistently ranked first among all the 48 States of this Republic, not only in the per capita purchase of E bonds, but also as having the lowest redemption rate of any State when it comes to the cashing of Government bonds.

I ask unanimous consent that the statistics be printed in the RECORD, followed by a brief statement.

There being no objection, the statistics and statement were ordered to be printed in the RECORD, as follows:

Here, for all to see and study, are the detailed statistics which help to measure South Dakota's might:

Among the 12 States comprising the north central area of America, South Dakota now ranks first in each of the following factors:

1. In the average number of cattle and calves on farms on January 1, 1949.
2. In the average number of sheep on farms, January 1, 1949.
3. In the average value of all cattle on farms, January 1, 1949.
4. In the average value of all livestock on farms on January 1, 1949.
5. In the average production of rye per farm in 1948.
6. In the 12-year average production of oats per farm.

Among the 12 States comprising the north central area of America, North Dakota now ranks second in each of the following factors:

1. In the average value of hay produced per farm in 1948.
2. In the total number of livestock per farm on January 1, 1949.
3. In the percent increase in average gross income per farm, 1948 over 1940.
4. In the percent gain in retail sales, 1948 over 1939.
5. In 1948 average retail sales per family.
6. In the average combined production per farm of corn, oats, wheat, barley, hay, flax, soybeans, rye, and potatoes in 1948.

Ambitious young men and women with red blood in their veins and high hopes in their hearts are invited to South Dakota's opportunity land. There they can make their fortunes and enjoy the opportunity and security which operate in an environment of 100-percent Americanism populated by patriotic, progressive, energetic, friendly people. Drones, dullards, and free-riders are not invited but those who believe in America's great private-enterprise system and political and economic independence should pay South Dakota a visit this summer. Don't come with a suitcase—bring along your wardrobe trunk since the chances are 9 out of 10 you'll want to buy a home or get a job and settle down in opportunity land for life.

Address by Hon. Louis J. Johnson

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an address delivered by the Honorable Louis J. Johnson, Secretary of Defense, to the National

UNIVERSITY OF MICHIGAN LIBRARIES

Board of Insurance Underwriters in New York City on the evening of May 26, 1949. The address is a most scholarly one and I know it will be of general interest to the country.

ADDRESS BY LOUIS JOHNSON, SECRETARY OF DEFENSE

I bring you tonight a special message from the President of the United States, and I am deeply honored to have the privilege of reading it to you. Here is President Truman's message:

"Mr. W. E. MALLALIEU,
"General Manager, National Board of Fire Underwriters.

"DEAR MR. MALLALIEU: Thank you for your kind invitation to attend the eighty-third annual meeting of the National Board of Fire Underwriters. I regret that it is not possible for me to be present.

"I am glad of this opportunity to commend your organization for the outstanding leadership you have shown in the fields of building codes, fire statistics, fire-insurance education, fire prevention, and other related activities. You have made many valuable contributions toward reducing the huge human and economic losses suffered in this country year after year because of fires.

"Please convey to those attending the banquet my best wishes for a very successful meeting.

"Very sincerely yours,
"HARRY S. TRUMAN."

In commending the National Board of Fire Underwriters, the President called attention to your distinctive achievement in the field of building codes. In my talk I want to take this theme of building codes and expand it on a universal basis. I want to apply it to another code of deep concern to every man, woman, and child in America—a code aimed at national, indeed world, security.

The United States is engaged today in the building of an epoch-making code—an international code of conduct among the free living peoples of the Western World designed to insure us against war, and the threat of war.

I use the term "insurance" here advisedly. It is a word that you especially understand. Note that we are talking about insurance, not about guaranties. Human nature and the world being what it is, there can be no literal guaranty of peace today in the foreseeable future. Another generation tomorrow, as yesterday, may be called upon to fight an aggressor.

All we can do is to utilize all our statesmanship and good will and energy to reduce the possibility of war breaking out, to a minimum, and to make sure that if it does break out, that our country will be alert and powerful enough to demolish the enemy as quickly as possible. Therefore, there must be, and there can be, an America so strong that no nation that calculates risk dare attack us; and no aggressive nation that miscalculates will succeed in its sinister designs.

Our international building code for world peace rests on the firm foundations of western civilization. Its keystone is the Marshall plan, whereby a Europe practically in wreckage from World War II has resolutely and successfully undertaken the long and painful task of economic recovery. Since revolution and war breed on hunger and chaos, economic recovery had to be the first step in our program for security.

In the short time it has been in operation, the Marshall plan is already paying dividends. Our investment in the peoples of Europe has brought substantial returns. There is peace in western Europe today.

True, little islands of discontent may still have root inside some of the established governments of western Europe; but the basic fear of aggression either from outside or from within their democratic structures has been substantially allayed and, in some cases, utterly dispelled.

With revival of economic productive activity under the Marshall plan, European nations themselves began to realize that a pact was needed among them, for mutual protection against aggressors. The first step in this regard was taken with the signing of the Brussels Pact, in which the western European nations took a long step toward collective self-defense. The United States did not join in this regional pact which was limited to the nations of western Europe. We have, however, been in close touch with the activities of the Brussels Pact organization.

During the summer of 1948, however, conversations were begun between this Government and European governments making up a community of the North Atlantic area, aimed at a broader objective than that envisaged by the Brussels Pact. From these talks there has now come an agreement historic in its significance as a new Magna Carta for peace, which we call the North Atlantic Pact.

Representatives of 11 western European countries, and of the United States, signed the treaty. When ratified, this document will band together 12 nations of the North Atlantic community, to tell would-be aggressors that an attack on one of the signatory nations is an attack on all. By this treaty, the will to resist domination is reborn in western Europe and the North Atlantic area, and vigorously restated to the world by signatory powers.

It must be understood that the Atlantic Pact is no lopsided document from which only the European signers will benefit. This treaty is just as vital to the United States security as it is to the smallest signatory government. It is for us a first line of our own defense, because, once launched, campaigns of warring dictators fix no limits to their course. Their aim is world conquest. Every nation gobbled up on the way is merely a new platform from which to launch new, stronger advances.

United States security, therefore, demands a strong union of peaceful democratic governments to prevent such aggression at the source, as it were, to defeat it promptly if these countries cannot prevent its breaking out in the first place.

Plans for American military assistance to Europe follow as a natural and necessary sequence to the North Atlantic Pact. Cosigners of the pact, as well as other free nations, such as Greece and Turkey, want to build up their own defenses as quickly as possible. But they are not yet strong enough to move forward steadily with their necessary economic recovery and at the same time expend their resources for defensive rearmament. The military assistance program would assist in bridging the gap.

To recapitulate: The Marshall plan is rapidly restoring the economic life of western Europe. The North Atlantic Pact will go far toward strengthening the will to resist aggression. The military assistance program will further this determination. Under this program freedom-loving nations of Europe would obtain urgently needed military aid from the only democratic arsenal in the world now capable of assisting them in the colossal task of reconstituting their armed forces.

With the North Atlantic Pact, we serve notice on the world that we have a great stake in the peace of Europe, and that we are alert to the implications of aggressive acts that may disturb that peace. In signing the pact, we declare to the world that the security of our land is inseparably bound to the freedom of the peoples of western Europe. This treaty marshals to the cause of freedom more than 300,000,000 people rooted in a tradition against tyranny and oppression which is dedicated to defy the pressure of any aggressor. Any attempted conquest of 1 of the 12 pact signers binds the other 11 to act to restore peace.

Such a pledge, coming from democratic peoples who over the years have earned the reputation of living up to their commitments, should make aggressors on their fancied road to conquest, stop, look, and listen.

But aggressors often fail to read the signs. They are not always logical. On the contrary, because to them treaties and agreements may be considered worthless bits of paper, they attribute similar sinister attitudes to others—and they never seem to learn. They forget the blood that free people have always shed to carry out their solemn promises. But we have faith in promises of free peoples. And therefore we must give them the sinews of battle to help them resist an aggressor. That is why we propose to embark on a military aid program—aid, not only for the nations who joined in the Atlantic Pact, but for Greece and for Turkey, and other free nations too.

All these peoples have already shown great courage and their will to resist aggression. Now we must provide them with a greater strength with which to resist.

All of us who have studied history know the ways of an aggressor. His technique does not appear to change over the centuries. His aim is to divide and conquer. He exploits the weak and the hesitant. He exploits to his own advantage the will for peace possessed by the decent people of the world. His thirst for power is insatiable. To him a partial victory is often but an armistice—a moment to reconnoiter, prepare and regroup, for another offensive. But he does respect one thing—and only one thing—strength. The Atlantic Pact, plus military aid, gives us strength—the will power, manpower, and matériel—and strategically located positions from which to employ all these sinews of battle should the European peace be again disturbed by an aggressor.

The United States of America and the freedom-loving peoples of Europe have thus formed a partnership in the business of peace—not a silent partnership with hidden objectives—but a bold, open covenant, openly arrived at, to give us the best possible insurance against war. It is a partnership to which all members are making substantial contribution. We are giving a great deal, but in considering what we are called upon to give, we must not overlook the assets that our European partners are bringing into this unique cooperative venture 300 million intelligent people including 140 million capable Americans with a tradition of democracy of free enterprise, possessed of raw materials in substantial quantity.

To those assets we propose to add the strength and prestige of the United States of America. We would contribute the finished equipment with which our partners may defend themselves, and therefore also us. We would give the necessary military advice and technical assistance to enable them to use these defensive weapons to their best advantage. Each European government opposed to aggression and bound firmly to the tenets of democracy has an honorable place in this partnership of freedom to which each contributes to the best of his means and ability.

Military aid to our European partners will cost money. It cannot be taken from the funds allotted in our Federal budget to the armed services because these already are pared down to a point where further paring may imperil our security. Military aid must be an additional premium on our policy for peace insurance which we must pay.

The cost of the first year, just short of a billion and a half dollars, is truly an appreciable sum. The added security that

we will buy with that money, however, justifies the additional expense. Insurance, substantial insurance, effective insurance, as you so clearly understand, does not come cheap. Military aid will put an added crimp in our pocketbook, but it is a crimp we can take without loss of freedom, without effect on our standards of living, without serious strain on our economy, and without appreciable diminution of our material resources. The insurance policy is sound. It is a premium well worth paying.

Our program holds the promise of peace and security. It will create, I am confident, in President Truman's words, "the condition that will lead eventually to personal freedom and happiness to all mankind." For a chance at that kind of world, we certainly can and should be willing to take in an extra notch in our belts.

In some circles, the Atlantic Pact and the military aid program may be regarded as departures from the American traditional policy against entangling alliances. And on the surface, at least, it may appear as though we were turning our backs on the wise counsel of our first illustrious President. But reflection will show this is unwaranted. For George Washington was above all a practical statesman. He was prescribing a code of conduct for the world as he knew it—a people thousands of miles in distance and many weeks in time from the Continent of Europe. He was thinking of alliances as they were known in his day—alliances for military conquests in foreign areas.

The North Atlantic Treaty is in no sense an alliance for conquest. It is a pact for defense, a pact for peace in a twentieth century world. It is exactly the kind of pact that would have appealed to our forefathers who were practical idealists. We want no war. We plan no conquest. But we are determined that there will be no more Pearl Harbors directed against the United States or any other government that is willing to stand up and be counted with us in a pact for freedom, democracy, and peace.

Meeting Our Problems in Light of the American Tradition

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. YATES. Mr. Speaker, Mr. Marshall Field, the publisher of the Chicago Sun-Times and one of our Nation's truly great liberals, on May 25, 1949, delivered the convocation address at the University of Wisconsin.

It is an excellent statement of a truly beneficent social philosophy, one which has significant application to many of the legislative matters now before us, and I sincerely hope that it will have careful consideration.

The address follows:

MEETING OUR PROBLEMS IN LIGHT OF THE AMERICAN TRADITION

It is a great pleasure to be here on your beautiful campus on such a lovely spring evening. I am not unaware that the season and the environment combine to offer attractive alternatives to any speaker. I am also mindful that in a very few weeks a number of you will be graduating. You will get your full share of inspirational advice and guidance, and I am most hesitant to add to your quota. I have been on both the sending and receiving end of commencement day addresses in my time and I have not yet decided which is the most painful.

My job is publishing a metropolitan newspaper, not speech-making. The best place for anyone in the newspaper business is not up on a platform telling other people what he thinks, but down in the audience, listening for ideas, for suggestions, for criticisms. The problems we face in this country today depend for their solution upon informed group action. You are, and will increasingly be, important members of groups that will make decisions affecting all of us. I hope that you will not hesitate to write to me, to tell me of your own ideas and to let me have your reactions to my discussion tonight.

It is a splendid idea, this meeting devoted to the recognition of leadership in the campus community. The hope of recognition is one of our best and most effective human drives. It has nothing to do with cheap fame or notoriety. It goes a lot deeper than that. Men will work long hours with small tangible rewards if they believe that there is real value in what they are doing. The essential value of the work itself is the important thing. And public recognition helps to keep those values from being obscured by propaganda, or the exploitation of special interests.

Certainly it is not enough to recognize leadership for the sake of leadership alone. Hitler and Mussolini were recognized leaders but the values they represented were false and contained the seeds of their own destruction.

Nor is it enough to recognize personality. Our press and radio give daily recognition to hundreds of personalities because, for a brief moment, they are legitimate news. But many personalities represent no values at all beyond those which have been artfully rigged for them.

The importance of recognition lies in the fact that it gives us a chance to reaffirm and pay tribute to basic values that are important in the kind of society we are trying to achieve. If a man seems bigger than the cause he represents, there is good reason to question the values of both the man and the cause.

There are fads and fashions in values, as well as in every other field. There are times when certain values are pushed in the background, sometimes by accident, but more frequently by design. There are times when values are deliberately distorted in the hope that people will accept some unreasonable facsimile as a substitute.

But essential values cannot be destroyed, no matter where they may be found or how desperately issues may be confused.

I am thinking specifically of the values inherent in our American liberal tradition. It is one of the great social traditions, and it owes so much to the people of Wisconsin who made it work at a time when many people doubted its lasting value.

This liberal tradition that has led to our progress is a long tradition, and it embraces the best in our political system without regard to party. It goes back to the founders of the Republic. It has come down to us through men like Jefferson, Lincoln, Theodore Roosevelt, Wilson, and Franklin D. Roosevelt.

Since the end of the war the values of that tradition have again been under attack. There has been a retreat from liberalism in America, and it would be less than common sense to deny the evidence. We are plagued with what might be called a fear of democratic processes. It is reflected in a fear of change, a fear of facing facts, a fear of the vast potentialities of America itself. The evidence is all about us—in the temporary triumph of lobbies for special interests, in the panicky hunt for Communists, and in the petty filibustering tactics that made it possible to hold up the President in his program of civil rights. All this in spite of the fact that the country voted overwhelmingly for a progressive policy last November. I would like to suggest, parenthetically, that we have made a serious tactical error when we let this question be called one of "civil rights." What is really at stake, what most of the people really want is implementation of "human rights" for all Americans. A human right is more compelling than a civil right any day in the week.

There has been an attempt to create an impression of confusion among liberals themselves. It has been sugested that they have no cohesion, that liberals either have no program or a program that is too unrealistic to be useful.

Some of this criticism was inevitable. The liberal in America deals less in symbols than in facts. He is not an extremist, either of the left or of the right. He belongs to no camp except his own, although he has often been found among both Republicans and Democrats.

Not long ago one of the great eastern newspapers opened its editorial columns to the public in an effort to get a satisfactory definition of a liberal. There were scores of suggestions, some of them rather involved, and some fairly close to the point.

But to my mind, this was an excellent public service. A great many people have become confused by the liberalism of nineteenth-century England, which was inextricably involved with laissez faire. I doubt if complete laissez faire can be thought practical or desirable by any thinking, educated person today.

A liberal today, it seems to me, is a person who believes in people, who believes in their judgment and who believes in getting done the things people want done. As Thomas Jefferson once said, "Men, according to their constitutions, and the circumstances in which they are placed, differ honestly in opinion." Some, he said, "fear the people and wish to transfer all the power to the higher classes of society." The others "consider the people as the safest depository of power in the last resort; they cherish them, therefore, and wish to leave in them all the powers to the exercise of which they are competent."

There, in a nutshell, is the great area of conflict, and always has been—swinging now this way, and now that, but historically always gaining for the people.

One of the disadvantages that a liberal suffers under is that he doesn't start by picking out a road; he starts with people and their problems. In other words, if the people of America need and want new homes, and if nobody seems ready to build them, your real liberal goes about trying to get them. And he is not afraid to use the powers delegated to the Government by the people to help get things done cooperatively.

Today there is a growing trend toward attempting to fit democracy into a dogma. Democracy is threatened with hardening of the arteries. Our own vigorous growth as a democracy should warn us away from such an effort. For democracy is not dogmatic. Democracy is dynamic. It is subject to change, responsive to new challenges, unafraid of future problems. That has always been the American way.

But that is why democracy is so hard to sell ideologically. Democracy cannot be sold as rigid dogma. It cannot even be maintained dogmatically. It can only be sold effectively against competing systems throughout the world by precept and example.

Democracy cannot be imposed by armed force. Armament and defensive alliances alone cannot solve our basic problem, which is to achieve peaceful prosperity on a global scale. Of course, America should be prepared to defend itself and to help defend its friendly neighbors. Perhaps the ability to

UNIVERSITY OF MICHIGAN LIBRARIES

make sacrifices to do that is the final test of democratic people. But an armament program that dwarfs or supersedes economic reconstruction is no substitute for what we need today if the advantages of democracy are to be sold abroad.

In the long run the question of which social system will succeed best will be settled by the system which best meets the needs of the people. Democracy, I am convinced, meets that challenge anywhere in the world.

In a democracy it is inherent that definitions are necessarily personal things, subject to personal interpretation. Each man can only quote his own, never quite sure that he is right, and always ready to modify or change it.

I believe that a liberal is not instinctively against the status quo just for the sake of change. But when he calls for a change, he wants a change for the better, a change that will benefit all the people, not just a few who happen to be in power or to seek more power.

Samuel Grafton recently made an excellent point when he said that "Your conservative cannot rest if a theory is violated. Your liberal cannot rest if a problem is unsolved."

People who are fundamentally afraid of progress are apt to depend on sloganeering, instead of action, when they come up against basic issues. Such symbols as "unity" and "free enterprise"—both highly desirable goals—can be used as slogans, not to get things done, but simply to confuse an issue. Facility in sloganeering may seem impressive but it doesn't always work. It was tried last November, for example, and the result was that unexpectedly large numbers of people turned to a man and a program that to them denoted progress toward their own aspirations.

The critics of democracy in America would like liberals a lot better if they abandoned one of the qualities that gives them real strength. That quality is flexibility as to methods, while never abandoning their principles. The liberal is flexible in his approach to critical problems and he is flexible in working out solutions. There is no need to condemn either capitalism or socialism dogmatically. If capitalistic processes offer the greatest promise of meeting specific needs, the liberal will endorse those processes and work to extend them. But if a project, as for example the Tennessee Valley Authority, is seen to be bringing manifold benefits to a great section of the country, there is little use debating whether or not it is socialistic; the liberal is going to try to bring flood control and power to just as many parts of the country as become feasible.

Adolph Berle has recently pointed out in a book called Saving American Capitalism that the average citizen is unimpressed by theoretical debates on the role of the state in the national economy. The average citizen doesn't care whether essential services are provided by Government or by private enterprise so long as the service is good, the product moderately priced, and the organization courteous. But he is afraid of concentrated power, either in the hands of a centralized bureaucracy or in the hands of a centralized corporate monopoly.

The liberal is a propagandist for no one but the people and human freedoms. The importance of this cannot be minimized today when all our media of communication are subject to pressures in behalf of one group against another. The liberal's position thus becomes that of a frequently unpopular critic, and in the nature of things he will appear contradictory at times.

If bureaucracy in Government tends to become arbitrary, he will be found fighting the battle of individual freedom. If an individual or group tend to monopolize power under any slogan, including that of free enterprise, he will call upon the representatives of the people to police them. His criticism is constructive, but it is constant and it has an irritating, stimulating quality that is essential to general progress but threatening to special interest. Democracy's goal is full development and efficient use of all our resources for all the people. And society, like an individual athlete or artist, cannot develop without constant self-examination and continuous plotting of new objectives.

I suggested that the liberal is flexible not only in his approach to basic problems but in his solution. I think this is a measure of the realism with which all of our great liberals have worked successfully in the past. The record of third-party movements in this country offers a clue to this realism. It seems to me that the liberal has a special political sense which enables him to support third-party movements when they represent the best in the liberal tradition and to reject them when they don't. "Fighting Bob" La Follette's career, for example, revitalized and inspired the liberal tradition in America at a time when it was badly in need of restatement. And the La Follette third party got votes during one of the most reactionary periods in recent American history.

Henry Wallace's third party last fall may have started out in the liberal tradition, but it did no more than make a start. It was not a practical movement at any time and the voters recognized that fact.

What this means, I believe, is that liberalism in America has essential values whose preservation is important to every American. The pendulum may swing temporarily but the history of America is a record of continuous progress. We have gone through periods of reaction and we have gorged ourselves on menus of conservatism more than once. But these periods have always been followed by progressive ones. There has always been a corps of good sense which has recognized the essential values of democracy and has refused to give ground to die-hard reactionaries or fanatical left-wingers.

Because of this the liberal movement has had a stabilizing effect on our political development that cannot be matched anywhere else in the world. In spite of terrific pressure from both sides, we have never gone very far to the right or to the left in America. The liberal, by attracting attention to the dangers which lie at either extreme, has been a major factor in keeping us from complete domination by either a system of statism or monopoly.

What about immediate objectives, you may ask. What is the liberal program in the American tradition for today? Is there a program? Of course, there is.

Perhaps it has never been proclaimed in a manifesto or formalized in an imposing document. Perhaps not all liberals are in complete agreement on specifics of the program.

Such formalities are hardly necessary.

The liberal program will never come out of a committee room. It has already been published many times, many ways, often by people who are not conscious of political objectives.

Every veteran who has been unable to find decent housing for himself and his family has helped write that program. Every housewife who had to skimp or bypass food counters when price controls were lifted has helped to write that program. Every member of a minority group in our population who has been denied job equality because of race or color has helped to write that program. Every skilled workman who sold apples on street corners 17 and 18 years ago helped to write that program. All those people who for lack of access to adequate medical care were unable to enter the armed services, or to support themselves and their families helped to write that program. Those of our children who have been denied the education they deserve helped to write that program, too.

For the liberal program is a statement of the basic needs of the people in a society which has resources more than ample to meet those needs.

First, the liberal wants every human being in America to have the rights and the dignity that our laws says he is entitled to.

Second, the liberal wants an economy that works all the time. Human freedom cannot thrive in the atmosphere of severe economic depression—all the powers of our country working cooperatively must keep production going.

Third, he believes that a way must be found to provide adequate housing for those whom the private capitalist has never been able to provide.

Fourth, he wants to do everything possible to provide the access of everybody to the best possible health that medical science has the skill to furnish.

Fifth, he wants national policy that will give every child in America a chance to acquire the education that will equip him to become a good citizen.

These are not visionary goals. The important thing to remember is that they are not only realistic objectives—objectives that are good for America—they are also objectives on which liberals are working constructively right now. These objectives have already been translated in specific legislative proposals. They will not be attained overnight, but the fight to enact them, to make them effective, is being advanced slowly but surely in the fact of unrelenting opposition.

Only defeatists and pessimists can believe sincerely that these goals cannot be achieved.

These defeatists will be the spiritual descendants of all the die-hards who have instinctively and blindly opposed the liberal movement since this Nation was founded. They will have forgotten that the Bill of Rights, extension of the suffrage, child-labor legislation, wages-and-hours laws, reform of the banking system and of the exchange system—and every other productive measure—were once nothing more than goals of the liberal movement.

In America, the die-hards give up reluctantly, but the liberals have always won in the long run.

Underlying the main objectives of such a program is something bigger than a mere statement of objectives. It is a belief in the fundamental greatness of our natural and human resources and a profound respect for those resources.

The liberals have always claimed that America could be a better, a more productive, a more satisfying place in which to live at any particular moment. And they have proved their point time and time again. Our war-production record was only a single dramatic proof of the fact that America still does not know its own strength, still does not know how great it can be. The conservatives scoffed when liberals suggested that our postwar employment could approach the 60,000,000 mark. Yet the record shows that we topped that figure after the war.

Obviously, all that needs to be done must be done within the productive capacity of the country—but I take that to be enormous, if the national income is reasonably and justly distributed. Financial pundits have cried "Wolf" so often at the assumption of responsibilities by the Government, that I doubt whether the American people become unduly disturbed when the capacity of the country is put behind projects that increase the general well-being.

The liberal today wants to plan for a better American tomorrow. If necessary, he wants to be prepared to face the consequences of economic troubles abroad which may affect our own economy. The essential thing is that he does not want to trust to luck, he wants to plan. The watchword of one of the grand old statesmen of liberalism, Justice Louis Brandeis, used to be:

"Get the facts." The American of today wants to get the facts, too, and wants to use them to avoid the disastrous waste of national wealth and national morale that would result from another depression.

We are getting the facts—facts about the need for a more stable economy, for better housing, for better health, for education and for human rights. And we are using those facts in sound planning in the public interest.

There are those who say that planning is not desirable, that it destroys freedom and initiative and that we should not organize for well-being in time of peace as we do for victory in time of war.

There are those, in other words, who would hold out for the freedom to have depressions, the freedom to be sick, the freedom to enjoy low educational standards.

The liberal says that efficient planning and efficient organization get more things done and provide a base for personal freedom and initiative that can be achieved in no other way. This does not mean a superimposed economic strait-jacket, as some people would have you suppose. The liberal says that the experience of business and industry itself proves what planning and organization can do not only in turning out more and better products but in giving the individual worker more free time and better ways in which to use that time.

Certainly the men who are being honored tonight came forward to leadership and to recognition not by accident but through planning and efficient use of their best natural values.

I join all of you in paying tribute not only to these campus leaders but, more importantly, to the progressive values they represent. We can use such men and such values in increasing measure in the world today.

Why do I discuss these questions with you tonight? Because I believe that the world situation has forced them to a position of the greatest urgency. We have no dogma, no ideology to sell. We have to prove what a group of free people, each free to make his own contribution in ideas, in political maturity and productive capacity, can do. And we have no time to lose. We are being watched by unnumbered millions who have yet to make up their minds. The decisions they will make—and the part we play in determining what those decisions will be—can influence the course of history for generations to come.

The Challenge of the Republican Party

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered at the annual State convention of Young Republicans at Hotel Garde in New Haven, Conn., Saturday, June 4, 1949:

THE CHALLENGE OF THE REPUBLICAN PARTY

First, I want to say how happy I am to address the Young Republicans of Connecticut and to discuss with them the challenge of the Republican Party. After the 1948 elections, the feeling that the Republican Party is a lost cause is widespread. I am happy to be here today to voice my opinion that the Republican Party is not the deadwood that its opponents would make it out to be, but it is still the political party of fine ideologies responsible for the growth and progress of our great country.

It is true that the sad chapters of the history of the last 16 years have made our opponents and defeatists refer to the Republican Party as a floating ship that just can't come to shore; a ship with a crew that is dormant or unaware of its course; a ship without a navigator or maybe with too many navigators trying to steer it into port. Whatever the opinions of these people may be, this floating ship, the Republican Party, will not sink, for it is constructed of the finest timbers of principle that mankind could select. Founded by the great liberator, Abraham Lincoln, the Republican Party continued to grow on the inspiring American tradition of liberty, opportunity, and justice for all. The Republican Party has served as a beacon light for all freedom-loving people.

Our task—the task of the Young Republicans—is to bring that ship to port again. The Republican Party must come into power because it is the only party that can save this country from the state toward which it is drifting today—the state of ownership by the Federal Government of all major productive resources of the Nation. The Republican Party alone can save democracy. Abraham Lincoln, in explaining democracy, said: "The legitimate object of government is to do for a community of people what they need to have done, but cannot do at all or cannot do well for themselves in their separate and individual capacities. In all that the people individually can do as well for themselves, the Government ought not to interfere." This policy is embodied in the Republican platform, and if America is to remain a bastion of democracy, we, the Young Republican Party, must come to its rescue.

Before we can assume leadership on a Nation-wide scale again, however, we as a party must gain enough strength within ourselves to restore our confidence. We must blot out of our minds the sad events of the last few years and reorganize in a spirit that will lead us to victory. I propose a reorganization of our party along three major lines.

In view of the saying that "a chain is as strong as its weakest link," I propose first a membership drive on a State-wide basis. This drive would tie in with the plans of the Republican National Committee which seeks to increase the Republican vote in the 1950 congressional elections and the 1952 Presidential elections. The nucleus of this drive may be worked out in each individual Republican club. The Republican strategy committee suggests that each Republican individually enroll 10 new Republican voters. The Republican Party can argue that in the 1948 elections a total of 45,000,000 Americans out of 93,000,000 potential voters did not vote. Members can convince their friends that a free America cannot survive with one-half voting and one-half not voting. Democracy is everybody's job.

A membership drive, especially in the State of Connecticut, can be motivated by the fact that the Republican Party offers a challenge for new leaderships, which any one of you here, or any one of the Republicans whom you are out to enlist will be able to assume sooner or later. Competent leadership is essential to any party. The time has come when the party should groom many men to assume offices in its State or Government, rather than to despair for the lack of a strong man with vote-getting abilities.

However, it is not enough to increase in number alone. The second step in reorganizing the Republican Party, in my opinion, should include a liberal and widespread interpretation of the party platform. By liberal interpretation I mean that the Republicans should get away from the conservatism of their grandfathers in carrying out the principles of their party. They should be more flexible in their thoughts and ways. I wish to quote Abraham Lincoln again, who said: "The dogmas of the quiet past are inadequate to the stormy present. As our case is new, so must we think anew and act anew. We must disenthrall ourselves." The saying is appropriate to our times. The principles of the Republican Party always remain the same, but the administration of these principles must fit in with the pace of the times.

We should also spread the principles of our platform more freely in order to prove how they differ from those of the present party in power. Our platform states that "a competitive system furnishes vital opportunity for youth and for all enterprising citizens; it makes possible the production power which is the unique weapon of our national defense; and is the mainspring of material well-being and political freedom." We all know that our country's growth was due to the equitable sharing of our country's bounty. We all know that America's progress was due to the equal opportunities it offered every individual. These opportunities should be extended to the American people today through farm cooperatives, labor unions, group insurance, hospitalization plans, community chest funds, and private enterprises that are the American way of life. This way of life must be preserved, and the Republican Party is challenged to the task.

Every individual club unit can go out and tell the 45,000,000 people who didn't vote in the last election what the clear and simple Republican principles are in contrast to the social-state program of the Democrats. Every Republican must have the courage to spread the word that his party is trying to protect and guard the rights of every American by advocating freedom against slavery; economy in government; opportunity for both the individual citizen and the Nation to grow and prosper under the free-enterprise system; also lower taxes by a readjustment of our tax system to increase exemptions in the lower brackets—this can be accomplished only if we retain our present tax rate and reduce it by economies. The Republican Party also insists on the kind of government that would grant the right to every citizen to earn a decent living under decent conditions, without being subjected to the coercive yoke of either the employer or the labor boss. The Republican Party believes in encouraging and helping every man in making provisions for his old age, medical care, and housing, with the Government stepping in only to prevent hardship and suffering. These principles stand for the American way of life, the American system of free enterprise, in striking contrast to the welfare program of the Democrats, who would have the Government take care of your medical bills, your education, your industry, and your housing facilities.

In short, the keynote of the Republican Party platform is the question of freedom; whether the American people will remain free to enjoy the highest plane of living under a democratic form of government or whether they will become slaves of the Government. This is a serious problem for every American. If he wishes to remain free, he can expect economy in government. If he wishes to become a slave of the Government, he can expect higher taxes. Our Government is run today at a cost of $45,000,000,000 a year, five times as much as was spent in any peacetime year under Roosevelt. If the social-state program proposed by the present administration is carried out, it will call for an additional $20,000,000,000, and these $20,000,000,000 are coming out of the taxpayers' pockets.

The Democrats cannot promise free housing, free medical care, free education, free insurance because every American will have to pay for these privileges. Every American will become enslaved by costly government and a huge public debt and eventually lose

UNIVERSITY OF MICHIGAN LIBRARIES

his freedom. And, when he loses freedom in his way of life, he loses freedom in every form—freedom of worship, freedom of speech, freedom to work out his own destiny. The people of the Soviet Union can tell you what that loss of freedom means.

The Republican Party was born on the principle of freedom and it alone can save this country from the slavery toward which it is drifting. It is important, therefore, that every Republican take upon himself the task of repeating again and again our party doctrine and its aims in the 1950 and 1952 elections to make the people understand that they must not exchange their freedom of opportunity and freedom of action for a share in the share alike social state of the Democrats.

The third step in the reorganization of the Republican Party should be a revival of spirit and enthusiasm. The apathy of our voters last November has cost us the price of an election. This cannot happen again. Every Republican must become imbued with a spirit of victory and spread his enthusiasm among the 45,000,000 voters who failed to show up at the polls last November 2. He must convince all the so-called disinterested people that their failure to vote is dangerous to them individually and to democracy as a whole. Their failure to show up at the polls last November has made it possible for a President to be elected by a minority of voters for the first time since 1916. This occurrence is dangerous indeed, for as I stated before, a free American cannot survive with one-half voting and one-half not voting.

The Republicans have a program of which they can be proud. What they need now is the courage to fight for the principles which made this country great and strong, happy, and prosperous; the envy of all the world.

The Republicans can open their fight by standing behind their leaders, their representatives in government, who are trying to adhere to their party platform in the face of serious opposition and criticism. For instance, your Members of Congress are under severe attack today for not falling in line with administration forces. They are under constant pressure from minority groups, who threaten to oust them out of office for voting the Republican way on labor, housing, education, and other important legislation. A Republican, until he is a me-too man, enjoys no peace today. He has to put up with the bitter criticisms of labor bosses and administration followers, who promise not to stop their campaign of vilification until they remove him from the scene.

I'd like to add here that there is only one type of Republican today, the loyal Republican who tries to carry out his party platform according to the best dictates of his conscience. The true Republican is the target of many factions, and he must be given moral support by his own party members. Each club in this organization can help stand behind their representatives by spreading the word that they are carrying out not only the principles of their party platform, but also the mandate of the people of the last election. If they are to be criticized for not falling in line with the administration on major issues, it's because the people of Connecticut gave their mandate last November 2 to Mr. Dewey by a plurality of almost 15,000 votes. They did not support Mr. Truman's program so completely and so overwhelmingly, as his forces and other pressure groups would have us believe.

Let me assure you that the Republicans, although in the minority today, are trying to do a good job. The moral support of their party will give these men added incentive and courage that will bring victory in 1950 and 1952.

Fellow Republicans of Connecticut, this is the call to arms. This is not a time to despair and brood over the bitter past. Rather, this is the time to plan a Republican victory in the coming election. Through membership drives, we will increase our number and our strength. Through widespread interpretation of our party doctrines, we will educate the American people that our party is the party of freedom, the party that can guarantee them a democratic form of government. And last of all, by inciting enthusiasm and spirit in our members and voters, we shall go out and work for victory.

Thus, fully prepared, the Republican Party will be able not only to achieve victory but also to meet the challenge of the future. It will not be easy work by any means. Once the plan of reorganization is adopted, it must be carried out in every precinct, for it is in the precincts that the elections are won. We cannot win on a State-wide basis or on a Nation-wide basis unless we can win the elections at home. I assure you that the reorganization of the party will require every available effort from now until November 1950 * * * but, with the simple technique of getting a list of registered voters first, and then covering the precinct from house to house to find out who the Republicans are, who voted and who didn't, who should have registered and did not, I am sure that the task will prove to be both pleasant and rewarding.

I appeal to all of you, Young Republicans, to initiate the drive to victory in 1950 and 1952. Abraham Lincoln, father of the Republican Party, set out to save the Union. The mission of the Republican Party today is to save democracy. We cannot wait until it is too late. We want our children to be able to know and enjoy the same kind of freedom as we did * * * freedom of speech, freedom of religion, and freedom to make their own destiny. We want them to live in a country that is strong * * * a country that will continue to lead the world in leadership, and, most of all, in peace. It is important, therefore, that we, as a party, come into our own again and preserve the sacred principles on which our Nation grew and prospered. The future of America is the challenge of the Republican Party today.

How To Wreck Reorganization

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 7, 1949:

HOW TO WRECK REORGANIZATION

There is no surer way to wreck the Hoover Commission's Government reorganization program than to drag it into politics. Although the Republican National Committee has disclaimed any intention of playing politics with the bipartisan program, several of its recent broadcasts on reorganization certainly had that effect. The harm done may be largely repaired by Mr. Hoover's prompt and vigorous repudiation of the broadcasts. Advocates of governmental reform will hope so, at any rate.

The way in which excerpts from certain transcribed addresses by former President Hoover were "dubbed into" the purely political scripts reflect no credit on the radio department of the Republican National Committee. According to Mr. Hoover, he has given permission to various organizations to rebroadcast the full statements which he made in a series of nonpartisan reorganization broadcasts last April, but he did not approve their being rebroadcast in part, with additions of political import. Apparently Mr. Hoover's first knowledge of what was being done with his remarks came when Democratic National Chairman HOWARD MCGRATH protested such use in a public statement. Senator MCGRATH was justified in objecting.

As Mr. Hoover pointed out in disavowing the GOP broadcasts, the Commission on Organization of the Executive Branch of the Government was bipartisan in membership and nonpartisan in its approach to and handling of the difficult reorganization issue. The complete objectivity of the Commission's findings and recommendations has been evident in all of its reports. It would be extremely unfortunate if these reports were to become involved in political controversy of the type provoked by the Republican broadcasts. Reorganization, with bipartisan support, is having enough trouble as it is in getting through Congress. It will stand no chance at all if it should become a political football.

The Poll Tax

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend my remarks I include the following statement which I recently submitted to the Committee on House Administration:

Mr. Chairman and members of the subcommittee, I appear today in opposition to the Norton bill to prohibit the States from imposing a poll tax as a prerequisite to voting. Two questions arise:

1. The question of the poll tax itself—its merit as government policy.

2. The question of procedure, involving an interpretation of the Federal Constitution, and consideration of State-Federal relations.

One may oppose the poll tax and still consistently ask the Congress not to invade the authority of the States in determining qualifications of voters.

I shall not consume the time of the subcommittee in a detailed statement on the constitutional question. It is familiar to members of the committee and has been thoroughly documented in previous statements. The language of section 2 of article I of the Federal Constitution is very clear. It is as follows:

"The House of Representatives shall be composed of Members chosen every second year by the people of the several States and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature."

The only other provision of the Constitution which has any reference to this question is found in section 4 of the same article and which reads as follows:

UNIVERSITY OF MICHIGAN LIBRARIES

"The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations except as to the places of choosing Senators."

In a leading case, *Breedlove* v. *Suttles* (302 U. S. 277), the Supreme Court of the United States held that State officers had not acted illegally in refusing to register a person to vote for failure to pay the required poll tax. Another Federal case is that of *Pirtle* v. *Brown* (118 F. (2d ed.) 218), in which certiorari was denied by the Supreme Court. The Court held that the right to vote is contingent upon such terms as the State wants to impose. An excellent treatise on the constitutional phase of this subject was presented by Mr. J. F. Orton of the New York bar to the Senate Committee on Rules and Administration of the Eightieth Congress and it is found at page 26 of the hearings on H. R. 29 which that committee conducted in May 1948. I believe that all proponents of Federal action outlawing the poll tax agree that at least it is of doubtful constitutionality. It seems to me that the language of the Constitution itself is so clear that advocates of a Federal statute are in a weak position in insisting that the United States Supreme Court has never had an opportunity to say whether or not under section 4 of article I Congress might affirmatively determine that voting rights should not be so restricted. The fact that no case of like character has arisen is proof that previous Congresses recognized the clear intention of the framers not to deal with voting qualifications in section 4.

I cannot believe that this committee will want to determine such a momentous issue without a clear constitutional authority for such action, particularly, since so many of the States have, by voluntary action, repealed the tax as part of their election machinery, and the trend is in that direction.

Mr. Chairman, I speak as one who does not favor the poll tax as a voting requirement. I have opposed it in my State because I believe it is a deterrent to wide participation in elections and further because it has proved to be an advantage to political machines. In many of the States confusion has arisen because of detailed and sometimes conflicting provisions relating to assessment and payment of the tax and this has resulted in disfranchisement. There are occasions when block purchasing of poll-tax receipts has operated to enfranchise the dishonest poor and to disenfranchise the honest poor.

It seems to me that the real objections to the poll tax are moral rather than economic or social. There are claims that the abandonment of the poll tax results in an increased participation though one must guard against attaching too much significance to this argument. One of the leading authorities on this subject, Dr. V. O. Key, Jr., of Johns Hopkins University, says that it is an error to assume that the entire increase in voting after repeal in those States that no longer use the poll tax should be attributed to its elimination. Dr. Keys says, for example, that the increase in voting in Georgia is to be credited to the white primary decision rather than to the repeal of the tax. Dr. Key says that it would require a good many years for the full effect of the elimination of the tax to be felt. I would like to submit for inclusion in the hearings, tables that show the vote in Georgia, Louisiana, and Florida over a period of years. These figures will bear out Dr. Key's conclusion.

Mr. Chairman, it is utterly impossible to consider this proposal without viewing the entire civil rights controversy. The prohibition of the poll tax was proposed to the Congress as a part of the President's comprehensive civil-rights program. In a speech to the House on February 2, I set forth what I regard as valid objections to this program but I conceded that there is merit in some of the President's recommendations. I realize, further, that the proposal has widespread support throughout the Nation and since the Southern States are chiefly concerned with these proposed measures, I have taken it upon myself to study this conflict in an effort to determine the moral basis for a compromise. I am moved to do this because the issues are decisive and this is an hour for unity and cooperation if we are to save democratic institutions.

As a part of the compromise of the entire controversy, I have proposed that the seven States retaining the poll tax give ground. No matter how strong the theoretical arguments in favor of their right to retain this qualification, it is obvious that the rest of the Nation has decided the case against us. In the last test in the House there were only 12 Members from non-Southern States who voted against statutory repeal. We are a part of the national community, and I believe we should submit to the desire of the people of the nonpoll-tax States that there be uniformity on this question of a tax for the voting privilege.

But I am just as sure thaat we are entitled to insist upon an honorable and proper method for achieving that end, and this is in reality the crux of the question. Faith in government, in its integrity, from the township to the United Nations, is one of the greatest needs of our world. We can strengthen that faith, or we can, by loose and indifferent attitudes on constitutional questions, impair that faith.

Ours is a Federal—not a unitary—Government, and we are bound by the commitments of the past, if we believe with Edmund Burke in a "compact between the dead, the living, and the unborn." Whether the framers of the Federal Constitution were right or not, it was their decision to leave the voting qualifications to the States, and on that question there seems hardly any room for doubt.

One other question, Mr. Chairman, and this is a practical one. Every man and woman in this room knows that a simple statutory repeal will be filibustered to death and this will prove to be an empty and futile gesture, nothing more. For 10 years these gestures have been made. Surely the opponents of a poll tax can hardly ask the people to depend any longer upon this approach to the problem. The solution offered by a constitutional amendment such as I have proposed is not only the honorable and proper way, it is the effective way and it will avoid any further impairment of Federal-State relations. The provision in my resolution to make the amendment a nullity if the seven States by voluntary action abolish the poll tax is an encouragement to the States to do away with it at once and, thus, we will have preserved the wholesome tradition of leaving election machinery completely and exclusively in the hands of the States, a system in which we all have a stake, whatever our views upon the poll tax.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Post Standard of Syracuse, N. Y.

FEDERAL EDUCATION AID BACKED BY SFL

Supporting the Syracuse Federation of Teachers stand in favor of Federal aid for education are all union groups affiliated with the Syracuse Federation of Labor, it was announced yesterday.

At a recent meeting of the central labor body, the representatives unanimously adopted a resolution reaffirming their support of Federal funds for the Nation's schools, copies of which have been wired to Representative R. Walter Riehlman and Selma Borchardt, Washington representative of the American Federation of Teachers.

Representatives from the AFT and the AFL appeared Thursday before the House Committee on Labor and Education to offer testimony in support of the plan and amendments to it.

One of the amendments would require that 75 percent of Federal funds be used for teachers' salaries and that social services, such as health care, school lunches, transportation, and so forth, be made available to children in all schools.

The Syracuse resolution read: "In conformity with the long-established record of the AFL in support of public schools, the SFL reaffirms its strong support of Federal aid to education and requests its representatives in Congress to support this legislation together with amendments submitted by AFT."

United States Economic Trends

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan:

UNEASINESS NOTED AMONG PEOPLE OVER UNITED STATES ECONOMIC TRENDS—MARK SULLIVAN LISTS CONTRADICTORY FACTORS WHICH, HE FEELS, HELP TO CREATE UNCERTAINTY

(By Mark Sullivan)

The text of this article is five words uttered by the head of the Federal Reserve System, Thomas B. McCabe (quoted in the Philadelphia Inquirer by John M. McCullough). The five words are: "The American people are uneasy." Mr. McCabe is the governmental head of the country's banking system. He is speaking about the economic state of the Nation, concretely the business recession under way for some 6 months.

The over-all condition consists of business receding, unemployment increasing, prices falling. Concurrent with that broad condition are some factors which the present article lists partially. No attempt is made to arrange them in any pattern. As a rule, the true pattern of such periods as the present are not accurately recognized until years later. Far from making any pattern, a characteristic of factors in the present situation is inconsistency. It is this contradictoriness especially that causes the state of mind of the country to be uneasy and confused.

LABOR SITUATION STUDIED

At a time of receding industry and falling prices, labor leaders demand and get increases in wage rates. At the same time there is pending in Congress a demand by

the administration that the existing Taft-Hartley labor law be repealed. Argument for repeal must assume that the existing law unduly limits the power of labor unions and leaders. This is difficult to reconcile with current successful strikes.

Public service corporations seek, and agencies of government grant, increases in the cost of services which the people must have. Railroads last week asked the Interstate Commerce Commission for another increase in passenger fares. The Commission has already granted three increases during the last 7 years.

Similar steps are taken by agencies of State governments. Last week the New York Public Service Commission authorized an increase in telephone charges. Agencies of State governments have ordered increases in charges for gas, electricity, transportation. A typical pattern runs thus: First, an increase of wage rates for public utility workers, won by strike or threat of strike. Then, an increase in charges to the public, granted by State agencies to offset the increase in wage rates. This has taken place in two of the country's largest cities, New York and Philadelphia.

The Government at Washington, through the Department of Agriculture, spends billions of dollars in supporting prices of farm crops, which keeps up prices of food. During the present year up to May 1 the Government, in supporting the price of corn, has laid out some half-billion dollars. Supporting the price of last year's potato crop has cost the Government some quarter of a billion dollars The Secretary of Agriculture has proposed a new measure which, while continuing to support some crop prices by the existing methods of purchase or loans, would, as respects other crops, give direct cash subsidies to farmers. Estimates of the total cost to the Government are very high.

CITES FEARS FOR NATIONAL DEBT

There is apprehension that expenditures of the Government during the present year will exceed its income, that there will be a deficit, an increase in the national debt. The danger this would be is coming to be recognized by average citizens and contributes to the general uneasiness about the future. A characteristic of some pending proposals for new spending is that the expenditures would increase automatically in future years. Last week the House passed a bill providing pensions of $72 a month for veterans at the age of 65. The amounts called for would increase as veterans approach that age. The omen that automatically increased expenditure has been called to public attention through the careful analysis by Senator BYRD, of Virginia.

In political argument, doubt is raised whether the Administration will act wholeheartedly toward avoiding new Government expenditures. This is based largely on the fact that President Truman's campaign promises and recommendations to Congress included some 40 proposals for new spending or increases of spending under existing measures. It is true that when these proposals were made, the business recession had not got under way.

Mr. Truman promised in his campaign, and recommended to Congress, that the Government provide storage facilities for farm crops. During debate on legislation to this effect, apprehension was expressed, though denied by the Department of Agriculture, that the Government might enter into the industry of owning and operating elevators, warehouses, and the like. The apprehension had not only a chilling effect on that industry but, with other proposals from the Administration, created a broader apprehension chilling to privately owned industry generally.

People Should Demand Less Spending

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis Bromfield from the Cincinnati Enquirer of June 5, 1949:

PEOPLE SHOULD DEMAND LESS SPENDING

(By Louis Bromfield)

It seems to me that it is about time for the American people to give their representatives in Washington a going-over. Not all of them are in need of it, but some—indeed a majority—might well be persuaded that the greatest issue before the American people at this time is more economy and efficiency in government.

There is only one way of letting them know the score and that is by communicating with them—to let them know that the American people want cuts in Government appropriations, genuine unification and order brought to the armed services, and that they are urgent about putting into action the recommendations of the Hoover Commission for better and more economical government.

Both in the Senate and the House, our representatives are sensitive to the reactions of voters back home because it is the voters who put them in office and can keep them there. On the whole, these representatives, especially in the House, want to carry out the wishes of the people they represent and will do so if you will let them know.

The recent move toward economy in Washington has undoubtedly come about because there is a strong suspicion that the elections of 1950 will go to those representatives who have worked for economy and efficiency and not for pyramid-club government and more squandering of funds. Apparently this has become evident even to the stubborn Mr. Truman who, overnight, has abandoned wholesale the promises he made on his campaign tour.

The shameless performance of the Senate in passing a huge pork-barrel appropriation, the largest in our history, without any cuts whatever, is evidence of the need for pressure from voters. The pork-barrel measure (using Federal funds to build dams, dredge harbors, build post offices, etc.) is always difficult to cut because each local community thinks, because the funds are Federal, that it is getting something for nothing when Federal money comes into a State or a local area. But again that money has to come from somewhere and where it comes from is the taxpayers' pockets. It doesn't much matter whether you pay it in State or Federal taxes, you pay it anyway.

The short-sighted and ignorant pressure of local communities and States for Federal funds for local development lies at the root of some of our greatest national extravagance.

As a director of both State and National chambers of commerce, I have seen local chambers screaming about government extravagance for everybody else but their own communities. "Cut everything," they cry, "except the new post office for Bingville." Some of the local conservatives, who cry loudest over the iniquities of Government extravagance, actually exert all kinds of pressure to get big Federal appropriations for their own towns or States or local areas. They even espouse all sorts of measures which, if proposed elsewhere, would be called "Socialistic." In many cases, it is a question of the poor States living off the richer and more fortunate ones.

We are already using up nearly a fourth of national income on Government expenses, taking it in taxes from the people. Any economist will agree that taking a very little more means the bankruptcy of free enterprise and the economic freedom of the individual as well.

Great Britain takes 40 percent from her people, and every day she becomes more and more deeply mired in lower wages and income, higher and higher taxes, restrictions of every sort, masses of red tape, rationing and price controls. If it were not for the funds contributed through ECA from American taxpayers, her position today would be desperate and perhaps even a total collapse. It is possible that Britain's tragedy and disaster may operate to our own benefit as a horrible example, demonstrating immediately under our eyes what happens under the pyramid club state, where Government takes charge of all one's earnings, one's expenditures and even one's savings.

The United States Government is the biggest business in the world and among the most inefficient and sloppily run. The corrective lies in economy and efficiency, in the real unification of the armed forces and in carrying out the better recommendations of the Hoover Commission. These things could save us as much money annually as it took to run the whole of our Government in the years before the First World War. There is one way of getting these things done. Let your Congressmen and Senators know how you feel, and in no uncertain terms. There will be little help coming from the Truman administration, although even the administration is plainly scared.

To Prevent Criminal Waste

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of June 3, 1949:

TO PREVENT CRIMINAL WASTE

Over the last week end the Hoover Commission turned in its final report on reorganization of Federal administration. Judging by headlines, the American press and public gave it less attention than the latest "whodunit." Yet this effort represents a magnificent program for improving their Government. Adoption of these reforms is more than a matter of preventing billion-dollar waste; it is a matter of preventing the criminal waste of this unique opportunity to make democracy work more successfully.

When again can Americans hope for this conjunction of advantages in a plan to reform their Government: A nonpartisan project, initiated by Congress, headed by a former Republican President and endorsed by an incumbent Democratic President, representing 2 years' work by a staff of 500 people, including top-rank executives in the fields of business, public service, and the professions,

and directed by a man whose skill and experience in administrative organization has won world-wide recognition.

It is not going to be easy to simplify and dramatize this massive, complicated body of information and recommendations. This newspaper hopes to do its part in helping the public to understand the major purposes and methods. Success will also require continuing insistence on action. We intend to keep this reform steadfastly in the forefront of discussion until its principal objectives are attained.

The greatest business in the world—the conglomerate of Federal administrative agencies—has, like Topsy, "just growed." As Mr. Hoover says, it is like a forest of leantos around the presidency. In the last 20 years it has increased four times in size and 12 times in cost. Only 10 percent of it is in Washington. The Commission estimates that every present Federal service—it did not attempt to say any service is unnecessary—can be performed with a 10 percent reduction in personnel. Savings are estimated at from $3,000,000,000 to $5,000,000,000.

But any study of the Commission's work quickly corrects the impression that it was simply trying to save money. Its proposals are directed toward making government more effective. A government that will carry out the will of Congress and the people more responsibly and responsively is the aim. The Commission remarks that efficiency in itself is no guarantee of democratic government, but that "the highest aims and ideals of democracy can be thwarted through excessive administrative costs and through waste, disunity, apathy, irresponsibility, and other by-products of inefficient government."

Already vested interests are building backfires against the Commission's proposals. The battleground is Congress, and minority groups of every type are already bombarding the Capitol with pleas to make one agency or another "untouchable." One Senator had 2,000 letters objecting to any effort to consolidate the construction agencies in one place. Mr. Hoover points out that even the American Bankers Association is opposing changes in the handling of Federal finances.

Much of the necessary reform can be achieved by presidential order under the reorganization authority Congress appears about to grant. But further action by Congress will also be required in practically every field. The largest opportunity lies in the military establishment. This should be the first goal.

We do not urge blind or blanket acceptance of the Hoover Commission's proposals. They should be examined thoroughly. But on their face they offer so much in the way of reasonable, logical, and businesslike reform that the public can safely put the burden of proof on those who would block them.

Wrong Feet Forward

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Christian Science Monitor:

WRONG FEET FORWARD

The House of Representatives has just put its collective wrong foot forward. In fact, the event could best be described as an acrobatic maneuver in which 365 pair of feet straddle a street while their owners worked both sides at once. The spectacle was neither graceful nor edifying.

With the Government facing a $3,000,000,000 deficit, alarming because taxes and production are still high, and Congress hungrily eyeing foreign commitments on which rest the peace and stability of the world, 365 Members of the House voted pensions for veterans which would add $65,000,000,000 in the next 50 years to the $35,000,000,000 already anticipated for this purpose under existing law.

They even refused to require that the beneficiary be unemployable—only that he be a veteran, 65 years of age, with an annual income under $2,500 ($1,200 for unmarried). It doesn't make sense, but they did it.

This is at once dangerous and timorous legislating because it represents a bowing not to a mandate of the people or of the veterans among them, but to the persistent tactics of a well-organized pressure group. Pressure-group legislation is not a new evil. But the fact that its backers once wore the uniform does not make it a lesser one.

Washington observers say many of those who voted for the pension bill, confident that the Senate and the President will stop it, seized the chance to register a harmless vote on the right side of at least some sort of pension bill—an act of irresponsibility of which the House has been guilty before.

We believe the Senate and the President will stop it. But pension magic has a potent appeal. They will need all the backing the unorganized public can give them.

Hawaii Facing Crisis as Result of Strike of Longshoremen Now in Thirty-ninth Day—Federal Government Should Act To Bring About Resumption in Shipping

REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. FARRINGTON. Mr. Speaker, the interruption of private shipping to the Territory, as the result of a strike of longshoremen that is now in the thirty-ninth day, has created a crisis without parallel in the history of Hawaii.

The health and welfare of the people of the islands are in jeopardy.

Although the supply of food stuffs and medical supplies can be sustained, the continuation of this strike will result in the paralysis of the economy of the islands.

The situation is intolerable and is one that demands not only immediate action, but inquiry to determine what steps are necessary to prevent a similar interruption in the future.

I therefore today requested President Truman to invoke the full authority of his office to bring about the resumption of shipping to Hawaii.

I have also asked the chairman of the Public Lands Committee of the House to authorize a subcommittee on Territories to undertake a full inquiry into all aspects of this problem, including the allegations that communistic influences are at work in the Territory and that an attempt is being made on the other hand to destroy labor unionism in Hawaii.

I believe the time has come for the Federal Government to deal directly and promptly with this situation.

I include in my remarks the text of the letters I have addressed to President Truman and to Chairman J. HARDIN PETERSON, of the Committee on Public Lands:

JUNE 8, 1949.

Hon. HARRY S. TRUMAN,
President of the United States,
Washington, D. C.

DEAR MR. PRESIDENT: A strike of longshoremen at all of the ports of the Territory of Hawaii is now in its thirty-ninth day.

It has resulted in a complete cessation of private shipping. The economy of Hawaii is, in consequence, faced with paralysis. The welfare and health of the people of the Territory are in jeopardy.

The supply of foodstuffs is running short. Milk production has fallen off seriously and poultry and cattle face destruction because of the shortage of protein feeds. Stores are being placed on short hours and small merchants are being compelled to reduce personnel.

The resulting situation is a crisis without parallel in the history of Hawaii.

All attempts of the Federal Mediation and Conciliation Service to bring about a settlement have been unsuccessful. This Service has had two men in the field continuously. Two proposals for the settlement of the strike have been successively rejected, first by the employees and then the employers who are parties to the dispute. Efforts of Territorial officials to bring about a settlement have failed. Obviously, the problem cannot be dealt with successfully on a local basis.

It is clearly evident that the time has come to employ the full authority of the Federal Government to bring an end to this intolerable situation.

I therefore appeal to you to invoke immediately the full power of your office to bring about a resumption of shipping service to Hawaii.

You may be sure that your prompt and favorable consideration of this request will be very deeply appreciated by the people of Hawaii.

Respectfully yours,
J. R. FARRINGTON,
Delegate from Hawaii.

JUNE 8, 1949.

Hon. J. HARDIN PETERSON,
Chairman, Committee on Public Lands,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: This is to request that the Committee on Public Lands authorize the Subcommittee on Territories to undertake at an appropriate time an investigation of all phases of the crisis resulting from the strike of longshoremen in the Territory of Hawaii.

The strike is now in its thirty-ninth day. Efforts of the Mediation and Conciliation Service of the Federal Government to bring about an agreement thus far have been unsuccessful. The attempts of Territorial officials to achieve a settlement have likewise failed.

The gravity of the situation makes it imperative that all aspects of the problem be explored.

This inquiry should be undertaken to ascertain what steps, if any, should be taken by Congress first to meet the current emergency and second to prevent a recurrence of interruptions in shipping between the continent and the Territory of Hawaii.

UNIVERSITY OF MICHIGAN LIBRARIES

I believe also the committee should ascertain what steps should be taken to examine into the charges presented by the executive committee of the Bar Association of Hawaii that Communist influences are active in Hawaii, and likewise by the International Longshoremen's and Warehousemen's Union that the present strike is being used as a vehicle for destroying labor unionism in Hawaii.

I believe also that any other charges that may be presented should be carefully examined.

I am asking that this inquiry be undertaken by the Committee on Public Lands as it has general jurisdiction over the affairs of the Territory. The Public Lands Committee moreover is well informed on the problems of the Territory of Hawaii and already has the authority and funds to undertake such an investigation.

I wish to emphasize that so long as Hawaii remains a Territory of the United States and without either the local responsibility or the representation in Washington that is enjoyed by the States that it is the duty of Congress to be of every possible assistance in meeting problems such as that which confronts Hawaii today.

Sincerely yours,

J. R. FARRINGTON,
Delegate from Hawaii.

Two-Hundred-Year-Old State Glove Industry Deeply Rooted in Fulton County

---

EXTENSION OF REMARKS
OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the Leader-Republican, Gloversville, N. Y., on May 19, 1949:

TWO-HUNDRED-YEAR-OLD STATE GLOVE INDUSTRY DEEPLY ROOTED IN FULTON COUNTY—WHOLE FAMILIES ARE FOUND AT WORK IN SOME OF 160 MANUFACTURING PLANTS

For 200 years, glove making in New York State's famed Fulton County—recognized center of the Nation's fine leather dress glove manufacturing—has been a family affair. Glove-making skills have been handed down from father to son and from mother to daughter throughout the years. That is still the prevailing custom in the Mohawk Valley. Recruits for the industry are trained, for the most part, within the family.

Today in the more than 160 modern glove-manufacturing plants centered in Gloversville and throughout the county, whole families may be found at work at many skilled glove-making processes in various sections of a single plant. They are the men and women whose fathers and grandfathers, mothers and grandmothers were glove makers before them.

New York State's 200-year-old glove industry—one of the few remaining handicraft industries in the country—is deeply rooted in many small communities of Fulton County. Information recently obtained by the New York State Department of Commerce reveals the percentage of employees in each age group. The group aged 36 to 87 accounted for 68 percent of the men and women workers in the industry.

The glove industry was introduced into the county by Sir William Johnson, chief agent for the British Crown with the North American Indians. Sir William held some 50,000 acres in and near what is now Fulton County.

Anxious to establish local, self-sustaining industries, Sir William brought a shipload of Scottish Highlanders to this country from Perthshire, Scotland, between 1740 and 1750. These people, who belonged to the Glovers Guild of Perthshire, brought with them grooved shears to cut the skins and handmade patterns with which the skins were marked. Some of these tools can still be seen at exhibits in the Mohawk Valley.

SET UP FIRST MILL

Sir William Johnson's Scottish immigrants included a few tanners, one of whom set up the first mill in America for dressing oil-tanned glove leather. This was located on the creek bank near Johnson Hall at what is now Johnstown. Johnson Hall, now an historical showplace, was Sir William's home and headquarters and is the only baronial mansion in the United States. Other Scots settled near Perth, along the Johnstown-Vail Mills road and in the vicinity of Broadalbin and Galway.

With the development of the American Revolution, the glove industry suspended. Many of the Scots who had settled in the Gloversville area were loyal to the British and fled to Canada. The art of glove making, however, was not wholly lost to the community.

Soon after the Revolution the industry was revived, this time with the aid of tinware peddlers from New England. The peddlers took deerskins in barter and brought these back to Gloversville, then called Kingsboro, to be tanned. The skins were made into mittens in the local homes. The mittens then were traded for more deerskins. The early glove makers bartered gloves for other merchandise. When a storekeeper accumulated enough gloves for a horseback load, he proceeded to Albany and other points to trade and in this way began the mass distribution of the now famed Fulton County leather gloves.

TEACHES LEATHER DRESSING

An Englishman named Tallmadge Edwards moved to Johnstown from Massachusetts about 1800. Edwards, who had learned to tan leather and make mittens in England, taught families in Kingsboro the art of leather dressing, then a closely held European guild craft secret. Edwards' willingness to share his knowledge with his friends and neighbors made raw deerskins more usable and gave a big impetus to the local industry.

The widening of the early Indian trails into roads and the building of a plank road from the banks of the Mohawk River at Fonda up the steep hills and into Johnstown made easier carting of raw skins. The industry continued to flourish. More Yankees moved in from New England and whole families learned the trade. These have been followed through the years by glove artisans from all of the principal European glove-making countries where the craft had become an art.

Invention of the sewing machine and development of steam power opened the way to mass production and factory organization. New tanning processes for fine leather replaced the old methods. Vats were introduced for various stages of chemical tanning in the new oil, chrome and alum treatments. Special machinery was installed. Importation of the finest hides from all regions of the world became essential to compete with the best foreign products. Shaping and finishing now called for accuracy and skill. Distribution and marketing also became vital factors in the success of the industry. As the industry grew and prospered the fame of Fulton County and its fine leather dress gloves spread throughout the world.

Hand gloves, considered choice articles of apparel for aristocratic elements of society since the days of the ancient Greeks and Persians, have become an item of everyday dress for millions of wearers as a result of the spread of this pioneer home industry.

NATIONAL CENTER OF INDUSTRY

Today, New York State's glove industry manufactures 46 percent of the Nation's fine leather gloves, providing employment for more than 15,000 people. Some 160 of the 321 glove manufacturing firms within the State's geographical borders are located in Fulton County, mostly in Gloversville, which is regarded as the national center of the industry.

Knitted gloves, first made in Gloversville in 1895, have become increasingly important in the last 15 years and are now an integral part of the glove economy in Fulton County. Being well equipped in skill and facilities for the manufacture of leather products, the Fulton County industry has not sought to compete to any appreciable degree in other lines of gloves, other than knitted gloves. The production of work gloves, mostly of heavy cloth and coarse hides, sometimes a combination of both, has been left almost entirely to middle-western manufacturers. Fulton County is content to be known as the principal center for fine leather-glove manufacturing in the United States. Other important centers in the industry are New York City in the East, Chicago and Milwaukee in the Midwest, and San Francisco and Los Angeles on the Pacific coast.

Glove making is one of the few remaining handicraft industries in the United States. While sewing machines are used, glove cutting has changed little, if at all, since Shakespeare used the glover's knife as a simile in his plays. In the tanning of glove leather the greatest technological advances have been made. When World War I cut off the United States supply of the world-famed German chemicals and dyes, American tanners developed their own methods and chemicals. Today American methods for tanning and dyeing fine leather gloves are recognized as among the best in the world.

Apart from the sewing machine, no automatic tools are used. The cutting of fine leather gloves is dependent upon a long period of apprenticeship, training, and experience. It cannot be supplanted by machines, nor is the art of cutting leather itself regarded as open to technological improvement. The animal skins used preclude standardization of the raw material. Sewing, even with a machine, requires so much attention to detail as to become a handicraft operation. There are about 95 inspections required in the fabrication of a single glove.

HIGHLY COMPETITIVE INDUSTRY

Gloves are a seasonable item. The great bulk of New York State production is purchased 8 weeks prior to the Christmas season and 6 weeks prior to Easter. Pricewise, the industry is highly competitive. The industry is composed of small units, each competing with the other.

Leaders of the industry declare that a healthy glove industry is indispensible to the military requirements of the Nation. They point out that it may be possible in certain machine industries to expand quickly and train operators on short notice in time for war. But, they say, it takes a minimum of 2 years to produce an embryo glove cutter and at least a year to train a worker to sew gloves.

As international traders, leather-glove manufacturers of the Nation annually contribute $75,000,000 worth of dollar exchange to foreign countries in the purchase of raw skins. It is not generally known that nearly all of the leather used in this country for

manufacture of fine gloves is imported from abroad.

During the early development of the glove industry in America, skins of domestic animals were used, principally deerskins, which were supplied and tanned by the Indians. These skins were exceptionally adapted to the making of gloves and "Indian tanned" deerskin became known as an exceptionally fine quality of leather. The animals whose skins are suitable for the leather industry are no longer commercially available in this country. As the supply of good skins dwindled, the trade began to seek its supply from other parts of the world. The search followed very closely upon new exploration, conquest, and discovery.

The opening of Africa by the British produced both cape and mocha skins. Exploration of China, Central America, South America, and Siberia have all resulted in new glove leathers. Generally, it is found that animals native to high altitudes and cold climates, and those which have a coarse, hairy fur produce a leather of fine texture best suited to gloves. Surprisingly, animals having the finer, softer fur or wool yield poorer leathers for glove purposes.

HIDES FROM MANY NATIONS

Hide shipments to Gloversville and Fulton County today include cabretta from South America; calf skins from Poland and Russia, capeskins from South Africa; goatskins from Spain and India; jeddas from Arabia; kidskins from Europe; lambskins from Nigeria and Iceland; goatskins from Bulgaria; graindeer from New Zealand; carpincho from Uruguay and the Argentine; sheepskins from France and Turkey; buckskins from China; peccary from Mexico; mocha from Asia; together with reindeer, doeskins, horsehides, and dogskins from all parts of the continental and insular United States. Proper handling of these skins demands special knowledge extending to study of the animals of remote habitat and dietary habits affecting their health.

Leathers for dress or street gloves may be divided into two main classes—grain finish and velvet or suede finish. The grain side of the skin is the hairside and grain-finished leather usually shows a well-defined pattern of hair follicles, sometimes best observed under a magnifying glass.

Besides being the center of glove making, Fulton County is also the American center of fine glove leather tanning and a prime source of fine leather for dress gloves. Twenty-two of the 24 fine leather dress glove tanners in the country are located in the county, processing almost all the fine dress glove leather made in the United States. These work exclusively on imported raw skins, as all fine leather gloves are made from leather of imported skins.

No Excuses on Housing

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following editorial from the New York Times dated Sunday, May 29, 1949, entitled "No Excuses on Housing":

NO EXCUSES ON HOUSING

Members of the House of Representatives misjudge the temper of the American people if they think that any explanations will be acceptable for failure to pass an adequate housing bill. The people will not be sympathetic to pleas of a crowded calendar, a desire of Congress Members to escape the midsummer heat of Washington, or the recent discovery of several Members that, of all places where economy in Government might begin, sabotage of the proposed housing program is the most attractive.

Congressmen have ample evidence in the record to assure them that the American people want to be housed decently, and also that governmental encouragement of housing construction is good politics. Only the House, of the two legislative bodies, seems slow to recognize the facts. At the party conventions last summer the political appeal of housing was recognized in both Democratic and Republican platforms, and we invite the Democratic leaders in the House to refresh their memories on what their platform said.

President Truman has repeatedly called for a broad housing bill. The vote in the Senate on April 21 was responsive, we believe, to public sentiment. The margin for passage was 57 to 13, the largest ever recorded for such a bill. Of 35 Democrats voting, only 2 stood against the measure. Of 35 Republicans voting, only 11 were opposed to it.

In view of the House's lamentable record last year on housing and the more recent tendency to delay, we suggest that those who remain unconvinced of the urgent need for slum clearance as one important phase of the proposed housing legislation take the trouble to see for themselves, as a few Senators did, what are the conditions in tenement sections of Washington and New York. If they did there would be less talk of the "dangers of socialism" in public housing and less eagerness to make housing the starting point of Federal economy.

No one doubts the desirability of reducing governmental spending. But the amount of money that present housing legislation proposes to use is comparatively small against a budget of more than $40,000,000,000. It may, and should, be regarded as a sound investment in the welfare of all the people. When some of our people are living as they now are in city slums, it must be a matter of deep concern to all. It is a condition that private initiative has failed thus far to correct and which, under present costs of construction, shows little hope of correction without governmental intervention.

The Senate and House bills will not solve all our housing problems. As President Truman has said, "Most of the houses we need will have to be built by private enterprise, without public subsidy." Further steps to encourage private construction and easy availability of mortgage funds at reasonable interest, carrying out the policies already enacted in legislation, particularly as to war veterans' purchases of homes, should be steadily examined.

The House will not have met its responsibilities to the people, or fulfilled the majority party's promises, until it brings housing to a vote.

Two Distinguished Statesmen

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to avail myself of the opportunity to join in the tribute being paid to the Honorable PERCY PRIEST and the Honorable LOUIS GRAHAM, who have been honored by having conferred upon them the degree of doctor of laws.

It may be only a coincidence that two widely separated institutions of learning should have almost simultaneously selected these colleagues of ours for this signal honor, but to us the only remarkable thing is that this recognition has been so long withheld particularly in the light of the fact that their worth has long been recognized by the Members of this body.

Mr. PRIEST, the majority whip, has demonstrated on numerous occasions his tact and understanding and has brought to the floor of this House a large measure of that spirit of human kindness which has so much to do with avoiding acrimonious debate to which all too many are prone. On the other hand, his thorough understanding of the legislative process and his deep sense of public responsibility are alone sufficient recommendation for the high honor he has just received. PERCY PRIEST would be a great man in any society and in any age and we should count ourselves as privileged to travel this path in his company.

Mr. GRAHAM, who is affectionately regarded by every Member of the House, has long been counted as the sage of the Pennsylvania delegation. A man of great humility, of undeviating politeness, possessing a keen sense of humor, and of unfailing courtesy to all comers, he has long been the confidant of new Members on both sides of the aisle, to none of whom does he ever turn a deaf ear. To these attributes of true greatness there must be added the fact that he is a recognized authority on constitutional law, which of itself amply justifies his selection for the doctorate he has just received.

In accepting these honors which have been conferred upon them PERCY PRIEST and LOU GRAHAM have brought honor upon this great legislative body and as we share this accolade with them let us resolve to follow the example they set for us each day.

The Basing-Point System and the State of South Carolina—Cement-Making Materials Available in Abundance—Basing Point Prevents Building of Regional Plants—Bids to South Carolina Highway Department Show Usual Identity—Basing-Point Methods Devious and Secretive—Basing-Point Systems Do Not Benefit Small Business

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. PATMAN. Mr. Speaker, mention of the Palmetto State always creates thoughts and reflections reminiscent of

UNIVERSITY OF MICHIGAN LIBRARIES

a way of life clothed with courtesy and hospitality. Old Charleston, a flourishing seaport when our country was young, has lost neither its charm nor its progressive outlook for which it has long been famous. In the days gone by when South Carolina was young it built its wealth in the production of rice and the manufacture of indigo which, as we know, was one of the then important coloring agencies in the manufacture of all types of cloth. South Carolina's sons and daughters have contributed to our country's greatness from her earliest days. Many of her eminent citizens have reached the highest offices within the gift of the people. South Carolina's contribution to the furtherance of our aims and ideals entitles her to the affection and esteem which she has justly earned.

South Carolina today gives evidence of her progressiveness in her diversified farming and industrial enterprises. If one is privileged to travel the length and breadth of the State he will find further evidence in the splendid network of highways which are equal to the demand placed upon them by our modern automobile traffic. In building these highways and in the construction of many noted public works within South Carolina's borders, cement has been an important item. In the purchase of cement, however, South Carolina has been in no better position than the other 47 States. Until the Supreme Court decision, April 26, 1948, South Carolina contributed its proportion of unearned dollars to the Cement Trust in the form of phantom freight. Bids to the South Carolina State Highway Department showed the same identity as is always present when bids are received by public and private purchasers under the basing-point system of pricing.

CEMENT-MAKING MATERIALS PLENTIFUL IN SOUTH CAROLINA BUT NO PLANT BUILT UNTIL 1948

Until recently South Carolina did not have a cement plant within her borders. In the latter part of 1948 a cement plant was completed at Harleyville with a rated capacity of 800,000 barrels annually. This plant was built by the Carolina Giant Cement Co. of Philadelphia, Pa. However, this cement plant will account for approximately one half of the consumption of cement in South Carolina and then only if operated at its full rated capacity. Incidentally, South Carolina is well supplied with the natural resources for the manufacture of portland cement from the Coastal Plains to its fartherest western border.

In 1939 South Carolina's receipts of cement was 934,253 barrels; in 1940, 1,118,340 barrels; in 1944, shipments into South Carolina were 555,344 barrels; in 1945, 588,720 barrels; in 1946, 1,347,237 barrels, and in 1948, 1,557,617 barrels. With the exception of the 2 years, 1944 and 1945, it is evident the consumption of cement in South Carolina is steadily increasing as it has in most States. Cement, as you know, was in a tight supply position in 1944 and 1945, due principally to the policy of the Cement Trust in holding down new plant construction prior to the war.

CEMENT CONSUMPTION ON INCREASE—AVAILABILITY OF MATERIALS DEMANDS THE BUILDING OF REGIONAL PLANTS

The demand for cement as a construction material is steadily on the increase. Its utility is unquestioned; its necessity is obvious; its availability near points of consumption is of the utmost importance; and, its sale and distribution in free markets is beyond question and is a "must" of the first order. None of these objectives can be obtained if the basing-point system under any guise is again foisted on public and private purchasers by the Cement Trust. The new plant at Harleyville and others now under construction or contemplated, point the way to regional development all over the country, provided the basing-point system of pricing is not again allowed to rear its ugly head in this industry.

BASING-POINT BIDS TO SOUTH CAROLINA STATE HIGHWAY DEPARTMENT SHOW USUAL IDENTITY

As an illustration that bids to the South Carolina State Highway Department were no different under the basing-point system than to other State highway departments, I am including a tabulation of bids received December 5, 1945, on a total of 16,000 barrels of cement to 4 destination points within South Carolina. The South Carolina tabulation of bids follows:

Tabulation of bids received Dec. 5, 1945, for furnishing portland cement, delivered as specified in notice dated Nov. 14, 1945

Item 1. Prices to include costs of delivery at Greenville, S. C., 4,000 barrels, more or less, of portland cement in cloth sacks.

Item 2. Prices to include costs of delivery at Columbia, S. C., 4,000 barrels, more or less, of portland cement in cloth sacks.

Item 3. Prices to include costs of delivery at Florence, S. C., 4,000 barrels, more or less, of portland cement in cloth sacks.

Item 4. Prices to include costs of delivery at Charleston, S. C., 4,000 barrels, more or less, of portland cement in cloth sacks.

[Discount, 10 cents per barrel, 15 days]

Bidder	Prices bid, delivered, per barrel			
	Item 1, Greenville, S. C.	Item 2, Columbia, S. C.	Item 3, Florence, S. C.	Item 4, Charleston, S. C.
Signal Mountain Portland Cement Co.	$2.78	$2.86	$2.83	$2.93
Lehigh Portland Cement Co.	2.78	2.86	2.83	2.93
Volunteer Portland Cement Co.	2.78	2.86	2.83	2.93
Cumberland Portland Cement Co.	2.78	2.86	2.83	2.93
Alpha Portland Cement Co.	2.78	2.86	2.83	2.93
Southern States Portland Cement Co.	2.78	2.86	2.83	2.93
Penn-Dixie Cement Corp.	2.78	2.86	2.83	2.93
Lone Star Cement Corp.	2.78	2.86	2.83	2.93
Universal Atlas Cement Co.	2.78	2.86	2.83	2.93
National Cement Co.	2.78	2.86	2.83	2.93

BASING-POINT BIDS DIVIDED AMONG BASING-POINT BIDDERS

Inasmuch as the bids, shown in the table above, bore no resemblance to competition since all the prices bid by the 10 bidders were the same, the State highway department solved its problem in a very unique manner. The department divided the 4,000 barrels for Greenville, among the 10 bidders, and applied the same rule to each lot of 4,000 barrels to be shipped to the other destinations, namely, Columbia, Florence, and Charleston. This, I am sure, was not a happy solution for the bidders, but under the circumstances was an eminently fair method of award by the department.

It has been shown many times that the basing-point and monopoly boys have bid identical prices and then sit around after the bids are opened awaiting the joyful drawing of a number from a hat, and it is interesting indeed to see a variation of this procedure. There is one fact which most bidders do not like and that is the division of the business. On normal size purchases of material a bidder likes to get it all. In the cement industry where drawing by lot was a standard procedure in the award of bids by public agencies, to have a relatively small quantity awarded by division was, I know, not to the liking of the bidders. But, I compliment the South Carolina State Highway Department for the method used in this instance. The table of awards follows:

SOUTH CAROLINA
STATE HIGHWAY DEPARTMENT,
Columbia.

NOTICE OF AWARD OF CONTRACTS FOR FURNISHING PORTLAND CEMENT MADE PURSUANT TO THE DEPARTMENT'S NOTICE DATED NOVEMBER 14, 1945, AND BIDS RECEIVED DECEMBER 5, 1945

Award item 1, to tie low bidders, as follows:
335 barrels more or less, to Signal Mountain Portland Cement Co.
335 barrels more or less, to Lehigh Portland Cement Co.
1,000 barrels more or less, to Volunteer Portland Cement Co.
336 barrels more or less, to Cumberland Portland Cement Co.
332 barrels more or less, to Alpha Portland Cement Co.
333 barrels more or less, to Southern States Portland Cement Co.
333 barrels more or less, to Pennsylvania-Dixie Cement Corp.
332 barrels more or less, to Lone Star Cement Corp.
332 barrels more or less, to Universal Atlas Cement Co.
332 barrels more or less, to National Cement Co.

Award item 2, to tie low bidders, as follows:
335 barrels more or less, to Signal Mountain Portland Cement Co.
335 barrels more or less, to Lehigh Portland Cement Co.
1,000 barrels more or less, to Volunteer Portland Cement Co.
336 barrels more or less, to Cumberland Portland Cement Co.
332 barrels more or less, to Alpha Portland Cement Co.
333 barrels more or less, to Southern States Portland Cement Co.
333 barrels more or less, to Pennsylvania-Dixie Cement Corp.
332 barrels more or less, to Lone Star Cement Corp.
332 barrels more or less, to Universal Atlas Cement Co.
332 barrels more or less, to National Cement Co.

Award item 3, to tie low bidders, as follows:
335 barrels more or less, to Signal Mountain Portland Cement Co.
335 barrels more or less, to Lehigh Portland Cement Co.
1,000 barrels more or less, to Volunteer Portland Cement Co.
336 barrels more or less, to Cumberland Portland Cement Co.
332 barrels more or less, to Alpha Portland Cement Co.
333 barrels more or less, to Southern States Portland Cement Co.

383 barrels more or less, to Pennsylvania-Dixie Cement Corp.
332 barrels more or less, to Lone Star Cement Corp.
332 barrels more or less, to Universal Atlas Cement Co.
332 barrels more or less, to National Cement Co.

Award item 4, to tie low bidders, as follows:
335 barrels more or less, to Signal Mountain Portland Cement Co.
335 barrels more or less, to Lehigh Portland Cement Co.
1,000 barrels more or less, to Volunteer Portland Cement Co.
336 barrels more or less, to Cumberland Portland Cement Co.
332 barrels more or less, to Alpha Portland Cement Co.
333 barrels more or less, to Southern States Portland Cement Co.
333 barrels more or less, to Pennsylvania-Dixie Cement Corp.
332 barrels more or less, to Lone Star Cement Corp.
332 barrels more or less, to Universal Atlas Cement Co.
332 barrels more or less, to National Cement Co.

SOUTH CAROLINA'S NEW CEMENT PLANT

Under the basing-point system of pricing as practiced by the cement industry, it was impossible to predict with any degree of certainty whether a new cement mill would be a basing-point mill or a nonbasing-point mill. Undoubtedly the Harleyville plant was planned and perhaps construction started prior to the Supreme Court decision outlawing the basing-point system of pricing. Prior to the cement decision, there were basing-point plants at Clinchfield, Ga.; Richard City and Kingsport, Tenn., as well as at Norfolk, Va. I do not have immediate information as to whether or not one of these four plants controlled South Carolina. It may have been some more distant plant in Alabama or Virginia, or it may have been a plant as far away as Ironton, Ohio. I do know that the whole of southwest Virginia and most of western North Carolina was controlled by Ironton, Ohio, and that all plants shipping into these territories based their prices on the freight charges from Ironton, Ohio. Of course, Virginia had one cement plant in the western half of the State and several others nearby across the border in Tennessee. Nevertheless, the territory in Virginia and North Carolina, described above, was controlled by Ironton, Ohio. A small tip of western North Carolina was controlled by Birmingham, Ala., and other plants in that vicinity.

IF BASING-POINT SYSTEM RETURNS, HARLEYVILLE WILL PROBABLY BE A NON-BASING-POINT PLANT

The return of the basing-point system, should such an unhappy situation arrive, will probably find Harleyville a non-base-point mill and enjoying a bountiful return of phantom freight in its operations. The location of a cement mill in its relation to markets was no guaranty that such a mill would be the basing point for nearby territory. As I have shown previously in many other States, the reverse was more often true.

In all probability, South Carolina could be reasonably expected to continue to show increased consumption of cement and for that reason double the capacity of the Harleyville mill would not create overproduction. I desire to stress the point that under the basing-point system of pricing our regional development in the South, Southwest, and the West has been severely handicapped. This is because the monopolies using the basing-point system of pricing have made it impossible for free capital to erect cement mills, steel, and other mills of like character, through the mechanisms inherent in the system. By that I mean that under the basing-point system if, for instance, the cement monopoly did not desire a plant built at any particular point it could drive such plants out of business by cutthroat competition. The Supreme Court made it very plain in the Cement decision that the basing-point system of pricing was monopolistic and in the words of the Court:

> Thus we have a complaint which charged collective action by respondents designed to maintain a sales technique that restrained competition, detailed findings of collective activities by groups of respondents to achieve that end, then a general finding that respondents maintained the combination, and finally an order prohibiting the continuance of the combination. It seems impossible to conceive that anyone reading these findings in their entirety could doubt that the Commission found that respondents collectively maintained a multiple basing-point delivered-price system for the purpose of suppressing competition in cement sales. The findings are sufficient. The contention that they are not is without substance.

BASING-POINT METHODS DEVIOUS AND SECRETIVE

One of the difficulties which our enforcement agencies find, such as the Federal Trade Commission and the Department of Justice, is the devious and secretive manner in which some industries, such as the cement industry, practiced the basing-point system. Even when brought into the courts it is impossible to get complete information as to the division of territories among the basing points and other equally important information. Individual businessmen and a great many industries prefer to have their business policies out in the open for all to see. This has not been the case with some of our heavy basic industries such as cement, steel, and other commodities and it is because of the uneconomic distribution of these industries' manufacturing establishments. These industries have, either by design or accident, concentrated facilities in a relatively small area of our country.

The Sherman antitrust laws, the Clayton Act, and the Robinson-Patman Act, are laws for the protection of our people against monopolies of any kind or character. Despite these laws the cement industries have, in fact, created monopolies through the use of artificial pricing systems of which the basing-point system is one of the worst examples. That the Cement Trust did create a monopoly by the use of the basing-point system cannot be contradicted. A Federal Trade Commission report on the merger movement points out that in 1945 the five largest companies in the industry controlled 44 percent of cement-producing capacity and that the 10 largest companies accounted for over 60 percent of the industry's capacity. A subsidiary of the United States Steel Corp. is the country's largest cement producer, namely, Universal-Atlas Cement Co. Knowing what I do about the methods used in the cement industry to acquire, control and to destroy, I haven't the least doubt that the United States Steel Corp. through its subsidiary sets the pattern for the balance of the industry to follow.

BASING-POINT SYSTEM NOT INTENDED TO BENEFIT SMALL BUSINESS—QUALITY OF PRODUCT NOT A FACTOR

As the record shows, the operation of the basing-point system was not intended to aid the small cement dealer any more than it was intended to aid Federal, State, county, and other governmental bodies. Under the basing-point system of pricing a cement dealer was obligated to carry cement as a convenience for his customers rather than for a profit item. When the dealer sold cement he had nothing to talk about except the fact that it was cement. He had no price consideration to offer his customers. He had no quality consideration to talk about because under the basing-point system the Cement Trust set up the fallacy of standardization. Quality of product has long been a misnomer in the cement industry. Cement was cement, and the price was the price; and while the Cement Trust spent huge sums of money to induce people to use cement, its increased use did not help the cement dealer. At least it did not help the cement dealer profitwise.

Cement should be a quality product available at a low cost in a free market in every section of our country. Cement is too basic a commodity and too heavy a commodity to haul long distances economically. The supply should be close to the dealer and to the builder. I am sure that dealers, builders, and other users of cement in the great State of South Carolina will agree with this statement.

Milton Horace West

MEMORIAL ADDRESS
OF
HON. A. SIDNEY CAMP
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. MILTON HORACE WEST, late a Representative from the State of Texas

Mr. CAMP. Mr. Speaker, the sorrow we experience in the passing of our friends is one from which our hearts fail to find real surcease, for this sorrow is measured exactly by our love for them.

On the 28th day of October 1948 the great Master of the Universe called our brilliant, kind-hearted, generous, staunch, distinguished, and beloved colleague, MILTON WEST, from his patriotic and unselfish labor among us to his eternal home in that country—

> From whose bourn
> No traveler returns.

And all of us were so convulsed in an overwhelming grief that time, though a great healer, refuses to palliate. All of

UNIVERSITY OF MICHIGAN LIBRARIES

us loved MILT WEST, for he loved all of us. A scion of a strong and sturdy family, a peer of statesmen and business leaders, he fraternized with men of high and low estate, and saw and understood their best qualities, shared their joys and sorrows.

He was a strong and mighty oak in the forest of men. He was a true nobleman, in thought, in purpose, and in action, and he appreciated that quality in others as few men can do. I think the poet has expressed his conception of nobility in these words:

Howe'er it be, it seems to me,
'Tis only noble to be good,
Kind hearts are more than coronets,
And simple faith than Norman blood.

It was my privilege to know MILT WEST from the very first days of my service in the House, which began in August 1939 and our acquaintance ripened into genuine friendship by service together on the great Committee on Ways and Means. As we were drawn closer together by friendship's ties, I discovered that his genuine joy came from service he rendered his country, his State, and those about him. He loved his committee work and gave careful thought and consideration to every measure coming before it. No Member voted more intelligently nor more conscientiously, and once he arrived at a decision he was unswerving and determined in advocating his conviction.

Were I to be asked whom I considered most typical of the citizenry that conquered the wilderness of the original section of our country now embraced by the great Lone Star State and made of it the great commonwealth that it is, I would say MILTON H. WEST, who served it as a citizen, as public official, as a Texas ranger, and who died while giving his time and talents to their fullest capacity as one of its Representatives in the Halls of Congress.

MILTON WEST was one of the—

Tall men, sun crowned, who live above the fog,
In public duty, and in private thinking.

And one of those—

Men whom the lust of office does not kill;
Men who the spoils of office cannot buy;
Men who possess opinions, and a will;
Men who have honor, men who will not lie.

Human Rights in the Western Hemisphere

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Wednesday, June 8 (legislative day of Thursday, June 2), 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address entitled "Human Rights in the Western Hemisphere," delivered by Mr. Jack B. Tate, acting legal adviser, Department of State, before the sixth conference of the Inter-American Bar Association, Detroit, Mich., on May 26, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HUMAN RIGHTS IN THE WESTERN HEMISPHERE

Mr. President, ladies and gentlemen, a little more than 7 years ago the foreign ministers of the 21 American Republics assembled in Rio de Janeiro to consider what action should be taken to meet the gravest danger that had ever threatened the peace and security of the Americas. I need not recount the appalling situation of that winter of 1942, when the war lords of Japan and Nazi Germany appeared likely to crush western civilization and to substitute a new order of barbarism. Yet even in that dark hour, a distinguished statesman, Dr. Padilla, then foreign minister of Mexico, reminded his colleagues:

"We have need of such things as strategic material for war, but there is one other product that we must not overlook: free man in America, on whose brow shall shine the dignity of his manhood; man the consumer, the soldier, the custodian of liberty."

Dr. Padilla's stirring words at Rio de Janeiro serve to remind us of the fundamental heritage of the Americas. We are all the heirs of such philosophers as Jean Jacques Rousseau who said: "To renounce one's liberty is to renounce one's quality as a man, the rights and also the duties of humanity." This common love of liberty and respect for the dignity of man were voiced in North America by such men as Thomas Jefferson and Thomas Paine, and in South America by such men as Francisco de Miranda, Simon Bolivar, and Jose de San Martin. We in the Americas all share the same tradition of great independence movements, movements designed not only to win independence for our countries from arbitrary foreign rule but also to win independence for the individual from arbitrary political rule. To quote another distinguished writer of the Americas, Dr. German Arciniegas, of Colombia:

"The essential thing is to know what the Americas want, whither they are headed; and I have no hesitation in declaring that it is toward complete democracy."

"I would have the Americas judged not by Presidents, nor generals, but by the man in the street, the people as a whole. * * * In Colombia, Brazil, and the United States they speak different tongues but a common language, the same immortal accent and spirit of liberty. We are not seeking a new order to benefit a few. We offer a new world to mankind."

The importance of preserving these traditions was brought out by the events preceding and during World War II. The disregard of human rights by the Nazi and Fascist regimes outraged the conscience of decent men everywhere and made them realize that international society could no longer ignore such behavior if peace and civilization were to endure. The Declaration of the United Nations of January 1, 1942, expressed the conviction that victory over the enemy powers was essential to defend life, liberty, and religious freedom and to preserve human rights and justice in their own lands as well as in other lands."

In my own country, tremendous interest in the problem of human rights was manifested by influential private groups and organizations. In particular, the Commission to Study the Organization of the Peace, established immediately after the outbreak of the European War, devoted considerable time to the study of establishing international safeguards for human rights. The American Law Institute prepared a draft bill of rights, a very thorough project covering not only the traditional political rights of the individual but also certain basic economic and social rights, which that institute regarded as essential to ensure effectively freedom of the individual under modern conditions.

We all, of course, know and are proud of the leadership taken by the American states in the present international movement to give recognition and protection to basic human rights. Resolution IX of the Inter-American Conference on Problems of War and Peace, held at Mexico City in February 1945—while the recent war was still in full progress—called for the formulation of an inter-American declaration of the international rights and duties of man to provide standards to be observed by all the American Republics.

Pursuant to the mandate of the Mexico City Conference, the Inter-American Juridical Committee studied and reported on this problem of international recognition of human rights. In its report made in 1946 the Committee pointed out that the break-down of international law and order in 1939 could be very directly attributed to the ability of totalitarian governments to deny their peoples freedom of speech, to instill in them false ideas as to other countries, and to foment fanatical and vicious sentiments of hatred which form the psychological bases of aggressive war. Thus, the Committee observed, "the protection of the fundamental rights of men in every land * * * is an essential condition of friendly cooperation between nations. A people denied the fundamental right of freedom of speech and of the press and of access to the sources of information cannot cooperate effectively with the peoples of other states because they have no direct contacts with them, no way of obtaining an unbiased understanding of their points of view, no assurance that the policies ascribed to them represent their true attitudes."

In contrast the Juridical Committee restated the basic philosophy of the Americas, a philosophy familiar to us all, but which cannot be emphasized too much: "The state is not an end in itself; it is only a means to an end; it is not in itself a source of rights, but the means by which the inherent rights of the individual person may be made practically effective. Man is, indeed, by his very nature a social being; he finds in the state the opportunity for the development of his moral and material interests; but he does not thereby endow the state with a mystical personality of its own which justifies it in promoting its own power and prestige at the expense of the rights which are fundamental to the maintenance of the dignity and worth of the individual man himself. As expressed in the Declaration of Social Principles of America, adopted by the Conference on Problems of War and Peace at Mexico City, 'Man must be the center of interest of all efforts of peoples and governments.' Not only, therefore, are particular governments bound to respect the fundamental rights of man but the state itself is without authority to override them. The individual man is the ultimate basis of law, and he may claim his essential rights against the state itself, as well as against the particular officers of the government."

The culmination of this movement in the inter-American system was the adoption of the American Declaration of the Rights and Duties of Man at Bogota, in April 1948, by the Ninth International Conference of American States. This declaration has already taken its place among the great documents of human liberty. It will be notable in history as the first international bill of rights. It is significant that, like the experts of the American Law Institute, the framers of the Bogota declaration felt that it was not enough to restate the traditional

rights of a purely legal and political character. A new affirmative approach was demanded, with the consequence that the Bogota declaration proclaims important and basic economic, social, and cultural rights of man, in addition to reaffirming his fundamental political and civil rights.

The American states have not, however, limited their interest in human rights to this hemisphere. Even before the adoption of the Bogota Declaration, they had sought general international acceptance of American ideals of democracy and liberty. We cannot forget the important role played at the San Francisco conference by delegations of various American states, in broadening and strengthening the United Nations Charter so as to emphasize the obligation of international society and of individual states to promote respect for fundamental human rights. We may recall that, in addition, the delegations of Cuba and Panama urged the San Francisco conference to adopt immediately a declaration of the rights and duties of the individual, while Mexico proposed that a bill of human rights be included as an annex to the United Nations Charter. It was not possible, in the limited time available, to formulate such a document at that conference, but in accordance with the sentiment of the conference, the first task undertaken by the United Nations Human Rights Commission, upon its establishment 3 years ago, was the drafting of an international bill of rights. Representatives of the American point of view participated actively in this work of the Commission. Not only did Mrs. Franklin D. Roosevelt of my country preside over the Commission, but important contributions were made by such distinguished persons as Dr. Santa Cruz of Chile, Dr. Alfaro of Panama, Dr. Fontaina of Uruguay. The Commission, in addition, had before it the Bogota Declaration to aid it in its work.

As you all know, the adoption of the Universal Declaration of Human Rights by the General Assembly at Paris in December 1948 has been hailed as the great accomplishment of that meeting. The greatest significance of this event is the fact that such a large number of nations with such diversity in legal, political, social and religious backgrounds could agree to so many principles in the complex and controversial field of human rights.

It is to be regretted profoundly, however, that one important group of nations, headed by the Soviet Union, refused to accept the Universal Declaration of Human Rights. In the course of drafting the declaration, it became only too apparent that representatives of the western world and those of the Soviet bloc speak not only "different tongues" but also "different languages."

Thus, Mrs. Roosevelt has observed, on the basis of her years of experience in the Human Rights Commission, that fundamental differences between the two groups have appeared even in the use of words. For example, the word "democracy" means one thing to the Soviet Union and another to the western world. To the Soviet Union "democracy" seems to mean a system whereby the people allow their government to have certain absolute rights. In Soviet parlance a "free press" is one which the state supports but which dares not criticize the basic policies of the government. In the Soviet Union the "right to work" seems to mean that the government has absolute power to assign workers to any task without regard to the wishes of the people involved.

As a result of the debates in the United Nations on this subject, it seems clear that the Soviet bloc still adheres to the basic philosophy of Karl Marx, who said:

"Only in the collective can the individual find the means of giving him the opportunity to develop his inclinations in all directions; in consequence, personal freedom is possible only in the collective."

This philosophy was repeated by the Soviet delegate, Mr. Vishinsky, in the United Nations. Mr. Pearson, the Foreign Minister of Canada, had said:

"We do not accept and never will accept the doctrine that the rights of man include only those rights which are sanctioned and sanctified by Communist doctrine and that all other rights are to be outlawed as 'Fascist.'

"* * * We shall in the future, as we have in the past, protect the freedom of the individual in our country."

To this Mr. Vishinsky replied that since in the Soviet system the "contradiction between classes" has been eliminated, "there can be no contradiction between the government and the individual, because the government is the collective individual. The state and the individual in the U. S. S. R. are fully harmonized."

Thus, in the Soviet system, there is no such thing as individual human rights in the sense in which the western world understands this term. Presumably this is why the Soviet Union could not accept the Universal Declaration of Human Rights, since the overwhelming majority of the United Nations delegates rejected repeated Soviet efforts to recast that document in terms of Soviet ideology.

Mr. Vishinsky has frankly stated in his treatise, The Law of the Soviet State:

"In our state, naturally, there is and can be no place for freedom of speech, press, and so on, for the foes of socialism. Every sort of attempt on their part to utilize to the detriment of the state—that is to say, to the detriment of all the toilers—those freedoms granted to the toilers must be classified as a counterrevolutionary crime to which article 58, paragraph 10, or one of the corresponding articles of the criminal code is applicable.

"Freedom of speech, of the press, of assembly, of meetings, of street parades, and of demonstrations are the property of all the citizens in the U. S. S. R., fully guaranteed by the state upon the single condition that they be utilized in accord with the interests of the toilers and to the end of strengthening the socialist social order."

It is a matter of common knowledge, of course, to what extent the Soviet authorities have found it necessary to restrict these freedoms "in the interests of the toilers." They have found lurking in the symphonic notes of Dmitri Shostakovitch the seeds of "counterrevolutionary crime," and, in the study of genetics, subversion of "the socialist social order."

According to a story recently circulated in Washington it seems that two Germans were fishing on opposite banks of the River Spree, one in the Russian zone and one in the American zone. The German on the American bank pulled out fish after fish with monotonous regularity. The German on the Russian bank was not even able to get a bite. After several hours of this the man on the Russian side shouted across in exasperation: "How is it that you keep pulling in the fish over there while here I don't even get a nibble?" "Well," replied the man on the American bank, "over here, you see, the fish aren't afraid to open their mouths."

Notwithstanding or perhaps even because of this fundamental difference between Western thought and Soviet thought, developments in the United Nations show the great majority of the nations of the world are determined to press ahead with a program to promote respect for fundamental human rights.

At the Paris session of the General Assembly, which adopted the Universal Declaration of Human Rights, delegates of various countries repeatedly expressed the determination that further steps must be taken to strengthen human rights. It was the consensus that the universal declaration was not enough, since that document was admittedly only a statement of aspiration and had no legal force. Consequently the General Assembly adopted a resolution directing the Economic and Social Council and the Human Rights Commission to continue to give priority to the preparation of a covenant on human rights, which would be in treaty form and would contain legally binding obligations for the states which accept it.

Needless to say, the task of drafting a treaty on this subject is much more difficult than that of drafting the declaration. The Human Rights Commission has studied this problem with great care over the past several years, as is evident from the present tentative draft which the Commission is now considering and which was published by the United Nations in June 1948.

The Commission has been confronted with three main problems in this work. First, there has been the question of the scope of the covenant, i. e., what rights should be included. Then there has been the problem of defining these rights in a way to protect individual liberty and to give due recognition to the right of the state to maintain public order, safety, and welfare. Finally, there has been the very important practical question as to the method of enforcing or implementing the covenant.

The Commission is currently endeavoring to find solutions to these problems. We are aware of the difficulty of this task and that time is needed in all countries for study. The Commission has decided that, rather than go to the General Assembly for action next fall, the draft Covenant should be referred back to member governments for study and comment.

With respect to the scope of the Covenant, the drafting committee of the Commission has proposed—and my government concurs in this view—that this particular instrument should not attempt to include more than the civil and political rights which have been traditionally accepted in western civilization as fundamental human rights. This is the first serious international attempt to create norms of human rights as positive law. Certainly if the great majority of nations will agree to a treaty obligating them to secure to the individual the enjoyment of traditional political and civil rights, this will be an immense step forward.

If we look through the present draft covenant, we find that the rights and freedoms set forth in it are quite familiar concepts in the constitutional systems of the various American states. Among these are the right to life, the right not to be subjected to torture, or to cruel or inhuman indignity; the prohibition against slavery or forced labor; the prohibition against arbitrary arrest or detention; the right to freedom of movement and of residence; the right to fair trial; freedom of thought and religion; freedom of speech; freedom of assembly; and freedom of association.

I am sure that all of us here can agree that such rights and freedoms are the minimum and should be observed in every country, but we also know that this is not true in important areas of the world. The free nations of the world—and influential private organizations such as this one—have a grave responsibility. We have the responsibility to exert our efforts in the cause of liberty throughout the world. We have taken our stand in the Americas. We must push forward in the United Nations to bring about the enjoyment of fundamental human rights everywhere. Peace can endure only when nations respect the rights of other nations and governments respect the rights of their peoples.

UNIVERSITY OF MICHIGAN LIBRARIES

President's Committee on Religion and Welfare in the Armed Forces

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. DOYLE. Mr. Speaker and colleagues, last week here in Washington Mrs. Doyle and myself, and my executive secretary, Rene Sebring Smith, one evening attended a most important and significant conference of American citizens. The President of the United States had previously appointed a committee of distinguished Americans to consider ways and means of benefiting the members of the Armed Forces in peacetime. The President of the United States, in person, attended the evening session at which we were present and made a few very pertinent and constructive remarks.

One of the most thought-provoking and analytical talks I have ever heard in the field of armed forces in the general field of the relationship of the armed forces and the communities of America in peacetime was given by Mrs. Eugene Meyer of Washington, D. C. I obtained her consent to have the same given to you, my colleagues, and I am pleased to commend the same to your attention.

Following this speech, the committee on Housing, Health, and Family Welfare of the National Conference, agreed that:

First. Housing of the Serviceman's family must be accepted as a Federal responsibility.

Second. The committee also agreed that an over-all authority should be set up either by the Military or the Federal Government, to deal with the problem. Lack of housing for the peacetime army was conceded to be the most pressing moral problem causing many resignations among officers.

The committee also placed emphasis on the need for having in each community one place to which the serviceman and his family could go for information on all community services and for advice, on personal and family problems.

Mrs. Meyer's address follows:

PROBLEMS OF A STANDING ARMY IN A DEMOCRACY

Before I discuss the various points of view that have been presented here tonight on the relationship of the armed forces and the communities, I shall go back to some of my experiences with both groups during 2 years of almost constant travel throughout the country during the war years.

Day after day and month after month I saw Army camps, naval stations, and airfields as well as factories of every description whose orderliness, discipline, and efficiency made you proud of our country. But from those scenes of technological skill, perfect coordination, and expert leadership I walked out into a social chaos so appalling, inhuman, and disgraceful that I was ashamed of my country. Of course, there were exceptions. Some Army installations and some of the new factories were not perfection. Occasionally I found communities, especially in the later period of the war, that were struggling heroically to provide the war workers or the military personnel with the basic amenities of life. But as a rule I lived day in, day out, in war centers where whole populations were deteriorating physically and morally.

Belatedly Government and voluntary agencies did what they could to improve the worst situations. But we never learned how to handle either the mobilization or the demobilization of the home front. When the war ended we were socially as unprepared for peace as we were for war.

Now what was the basic reason for this disparity between the expert management, the conservation of human and material resources that characterized our military installations and factories and the disregard for human values, for individual dignity, and common, ordinary decency that so often prevailed at the very doors of these institutions?

As I had visited Great Britain in 1942 and studied the superb social arrangements made by the British Ministry of War for the conservation of human energy and manpower, I had a feeling as I surveyed the chaos here at home that we Americans were behaving like a lot of drunken sailors on a spree. At times it seemed to me as if our democratic slogans were sheer hypocrisy and that we had no respect for the individual, for the family, or for the children who were the most tragic victims of this social disintegration.

But those thoughts were the temporary reaction to despair. The appalling social indifference which we exhibited during the war, from whose effects we are still suffering and will continue to suffer for years to come, has very deep roots and reasons, reasons that both the military and the civilians must understand if we are now going to make a better job of improving the relationship between our peacetime armed forces and the Nation as a whole. For this problem does not merely concern the camps and the nearby communities. It concerns us all. It concerns the security of our whole people and the future of our democracy.

The contrast I have described to you between our efficient camps and factories and the social chaos that surrounded them is due to the fact that we are technologically the most expert nation in the world but we haven't begun to learn how to apply that technological knowledge to the solution of our social problems. We are a confused people because we are split personalities. We have forgotten that democracy must live as it thinks, and think as it lives. The split in our civilization between science and society, between the disciplined expert and the undisciplined civilian, between mechanical efficiency and social drift—in short, between authority and freedom—this is the gap that yawns wide between our military institutions and the people as a whole. The tensions, irritations, and open hostility, which exist wherever the armed forces and civilian communities come to grips, represent just one manifestation of this split that runs through our whole culture. It will never disappear until both sides realize what creates the impasse. The military accuse the civilians of apathy, the civilians speak contemptuously of brass hats. Unless each group realizes why their mutual prejudices are so deep, it is perfectly futile to make a purely moral and patriotic appeal to them to cooperate with each other.

To reconcile the military and civilian mentality, our military leaders must accept their social responsibilities, and the civilian population not only near the camps but throughout the Nation must develop more efficient methods of self-government. These two groups have the difficult task of bringing our technical and social sciences closer together. Since we shall be obliged to protect our country with armed might for years to come, long-term planning for intelligent, cooperative endeavor between them is essential to the safety of our country and of western civilization.

How then are we to begin the process of successful military-civilian cooperation? How are we to overcome the mutual distrust that now exists between these two radically different attitudes and disciplines? How are we going to achieve mutual understanding as a basis for constructive action?

Let us begin our analysis with the social responsibilities of the military. The greatest cause of friction in the military zones has long been the problem of housing for married personnel.

Our war experiences, our urban slum areas, and the present lack of decent homes for military personnel in many of our communities have shown us again and again that there is no other single factor which can undermine family life and the whole social order more thoroughly than bad housing conditions. In several of our camp communities during the war, babies died like so many flies, children became ill or warped in character, families were broken up, delinquency and crime encouraged merely because perfectly decent Americans were forced to live like cattle. Judging by the reports on the present military housing situation gathered by the President's Committee on Religion and Welfare in the Armed Forces, those same conditions and those same results can still be found in many of our camp communities. Insanitary housing, shacks without toilet facilities, without running water and frightful trailer slums are in use: thousands of officers commute as much as 75 miles twice a day, because there is no place to live near the military establishments. Here are some of the comments from Army, Navy, and Air Force commands: "Ten people lost their lives in Army structures last year." "Army personnel live in houses that are unsafe and unsanitary and pay exorbitant rents for them." "The divorce rate is staggering." "We send men out to fly complicated airplanes with troubled minds"—etc.

If during peacetime the armed forces are not going to provide adequate housing for their married career personnel, they might as well fold up and forget about national defense. For the married men are precisely those most important to the armed forces, junior officers and key noncommissioned officers, the professional cadre, upon whom the commanding officers must rely for the training of the recruits and for the whole discipline and morale of the ranks. They are resigning in droves and the reasons most frequently given are intolerable housing, the danger that the family might break up or the children suffer permanent harm of a physical or emotional nature. The Navy receives hundreds of requests every month for such hardship discharges, and the Air Force estimates that 59 percent of all married enlisted personnel are dissatisfied with their living arrangements.

We are spending huge sums to train new recruits to take the place of the married officers who resign. If the replacements have to face the appalling hardships of their predecessors, they too will resign as soon as their tour of duty terminates. This is sheer waste of energy, talent, and money.

But even more important is the question of morale, for this turn-over of officers is bound to undermine our whole military organization. I think it was Napoleon who said that an army cannot march on an empty stomach. It is becoming equally clear that a peacetime army cannot live without housing any more than it can march without food. If we try to build up a military force by breaking up family life, we shall soon have neither an army strong enough to defend this country nor a country that is worth defending.

And into this morally rotten situation we have the hypocrisy to send chaplains to preach the sanctity of marriage and the basic importance to society of family life. It

UNIVERSITY OF MICHIGAN LIBRARIES

would be far better if we have to choose between the two, to save the chaplains' salaries and use the money to build homes. For as one Navy chaplain said: "The primary obstacle to normal, decent living in the Navy is lack of adequate housing facilities."

It is equally futile to preach about cooperative military-civilian relationship when the competitive scrambling for the small amount of available housing space only serves to strain relationships between the two. Cupidity and rent gouging inevitably become the order of the day. The military are enraged by civilian profiteering, and the civilians are indignant because the armed forces are throwing their whole community into disorder.

This horrible impasse cannot be blamed on either one of the two groups. The local commandant and the local civilian officials are helpless however hard they may try to alleviate the human suffering that is now a commonplace in their environments. Help must come from the top echelons of the armed services and from Congressional legislation.

For the first time our military leaders are responsible for a large peacetime system of national defense. The fact that they have not thought through this totally new situation and the social responsibilities it entails can be demonstrated in many ways. The very form of the military budget reflects a lack of serious concentration upon the housing problem. For the fiscal year 1950 this budget carries an item of $430,000,000 for all construction needs, depots, air fields, administration buildings, and family quarters. The fact that housing is not a separate item is in itself revealing, especially in the light of the fact that the total sum allotted to over-all construction represents only a small portion of the funds required to meet the present housing shortage.

But Congress will have no confidence in a request for adequate funds for military housing, unless the estimates for the combined forces are made by people who know what they are talking about. The Army engineers claimed that it takes $20,500 to build a 1,080-square-foot row house until the Bureau of the Budget pared down their estimate. Why then, could the Atomic Energy Commission build excellent family quarters for $10,000, just about half as much? Moreover, each of the three services computes its estimates on a different basis, each service has a different program, and each has a multiplicity of agencies concerned with housing. Only a combined drive for housing funds, based upon careful estimates and sound principles of administrative procedure, can convince the Congress that housing is a basic need of military preparedness. Therefore, it is essential that a team of expert housing consultants be appointed to unify the housing policies of the three services and to draw up a long-range housing program for the Military Establishment. Obviously, the number of housing units now needed cannot all be built at once. But it should be possible to determine the maximum appropriation that can be expected annually and then to formulate a 5- or 10-year construction plan. The amount now wasted in automobiles for commuting officers would offset a large part of the costs.

Let us also call the attention of the Military Establishment to the fact that since their total budget of $14,765,000,000 was voted by the House of Representatives, the costs for food and clothing, for steel and other construction materials have decreased at least 10 percent. Why can't a building program for the combined services begin at once with the enormous sums that will be saved next year in the purchase of all supplies, to say nothing of the greater availability of labor since unemployment has manifested itself?

If the military began a bold and vigorous building program, it would speedily change the attitude of private capital in the adjacent communities. Local contractors and builders have been reluctant to finance construction projects for Army posts that only too often proved to be temporary. A military building program would assure the local businessmen that the nearby installations were to be permanent. Then private capital would not only feel safe in entering the field, but probably would put in competitive bids to take over as much of the program as it could get.

For the rapacity which many communities have shown in their treatment of military personnel is due largely to the uncertainty of military plans. If a town gets the feeling that a camp may be moved, the desire to profit while the going is good seizes upon everybody. Therefore, stability in peacetime military installations is a prerequisite for stability in military-civilian relations. With adequate housing for married military personnel, constructed by public and private cooperation, the most fundamental cause of friction between the peacetime armed services and the civilian communities would be eliminated.

But the local communities also have a long way to go before they can handle with maximum efficiency the numerous problems that arise when vast numbers of young recruits are added to their normal population. With the exception of small towns or cities, most American communities have enough public and private education, health, and welfare agencies to meet any problems if only these activities were skillfully coordinated with each other, with the Federal and State agencies, and with the efforts of the numerous voluntary national organizations.

This reorganization cannot take place in a vacuum. There must be a visible hub where all of your people, including the soldiers and their families, can go for help, and where the wealth of local community services, whether public or private, can be put at the service of the individual without loss of time or energy. The big communities can save themselves much work and save the soldiers many a heartache if they will establish a community service center, similar to the veterans' centers of the postwar period, where the soldier can go for any information or advice he may need, and where your citizens or agencies who want to be of help to the soldier can find out how best to do it. At the head of this community service center should be a skilled director to keep the competitive agencies and talents functioning smoothly and harmoniously, a man who knows the city, its agencies and their functions, and who can direct applicants to the agency they seek.

You will discover what an astounding job you can do for your own people as well as the enlisted men when all of your community resources are coordinated and directed toward the solution of any given problem. The acute tensions between the civilian population and the military which now frustrate both of them at every turn, seldom have their origin in a single major problem unless it be housing. The other frictions grow out of myriads of little irritations that cause frustration which becomes emotional, infectious, and generalized. An alert community can save itself a lot of big troubles, by eliminating the little troubles as they arise. Your two main objectives must be to help your own civilians and the military families work out a satisfactory program of living and to make them feel that they are not alone in this struggle. These objectives can be greatly facilitated and your community initiative reinvigorated by an efficient clearinghouse or service center, situated not in some courthouse basement but in attractive quarters on Main Street where everybody can readily find it.

Unless the communities make some such effort to create an orderly government, all the endeavors of the USO, the Red Cross, the YMCA, the YWCA, and other national voluntary organizations are just so much froth on a seething cauldron.

An efficiently organized community is, moreover, the only protection against the greatest menace with which camp communities are eternally faced. A big military establishment brings a sudden influx of wealth to the adjacent cities, towns, and villages. And wherever big sums of money are at stake, there the forces of evil collect like vultures over carrion. What's more, these dark birds of prey can cooperate instinctively with each other as good people seldom can. These evils are three in number and they always go together—prostitution, gambling, and liquor. The power and reach of these underground forces are appalling. An illustration of their long arms is the fact that the Indiana Legislature not long ago voted to legalize prostitution. Fortunately the Governor had the courage to veto the bill. Don't let anybody tell you that since prostitution cannot be eliminated it is best to segregate it in certain areas. During the war the Public Health Service with the cooperation of State and local authorities closed these houses near all the big encampments, and after a short period the venereal-disease rate dropped markedly. If you condone the existence of organized prostitution, the gambling and liquor rackets also spring up right and left. The whole community then becomes infected with vice, greed, and moral corruption. During the war, I saw such communities in which the city officials, the Army public-relations officials, even the churches were dominated by vice rings. The only time my veracity and good will were openly attacked, was by seven clergymen whose town I attempted to clean up by a detailed description of this hellhole. They were inveigled and the local Congressman was inveigled into publishing a letter in the CONGRESSIONAL RECORD stating that I was a liar whose poisonous pen had bespattered the fair name of their beautiful city. Such an attack could not be ignored. Fortunately I had as usual understated the conditions. So I wrote a real description of what went on in that city, ending with its venereal-disease rate which was four times our American average per thousand and put the article into the CONGRESSIONAL RECORD. I never heard from my seven clergymen again.

One of the many statements given me during the war by experts on the subject of organized prostitution was that of Mayor William F. Devlin, of Seattle, Wash., a former police-court judge, who fought and won a tough battle to clean up his city: "It is my contention that houses of prostitution should be closed. It is the only solution of the problem. I am mindful of the fact that many people, even some in authority in military and civilian life, are not of the same opinion, but I have yet to find the experienced man in the medical or military field who has studied this problem who takes a contrary view.

"Because of the money involved, every apparently feasible argument will be used by the profiteers to prove why houses of postitution cannot be closed, all of which are based not upon the merits or demerits of the case but upon their interest in the continuation of the practice. That leads us to a very difficult problem, namely, that good, law-abiding people are often deceived by these arguments. Such people even pass on these specious arguments to others in the belief that they are true.

"I hope that in this battle to control venereal disease by closing the houses of prostitution we shall be making a permanent contribution to the Nation's program, for in my opinion what is good for the soldier is good for the civilian too. While this problem is vitally important now, the attack on it should be a permanent program carried on to make a better civilization after the war."

You cannot achieve a solution of this problem without enforcement by an honest police force that has the power to control prostitution in taverns, dance halls, and on the streets. Nor can you rely on the military venereal-disease rate as a sign that the situation is under control. That rate, thanks to penicillin, has been lowered everywhere except in the military installations near the Mexican border. The only defense is a well-organized community that is eternally vigilant and ready at all times to defeat the scavengers that profit from vice.

The best answer to the destructive social influence with which you will have to contend is wholesome recreation that will keep down the number of street-corner soldiers—the boys who just hang around because there isn't a single thing for them to do. The first requirement is plenty of attractive, clean eating places whose sanitary conditions are under constant inspection, and where the food is decent without being exorbitant in price. Don't let the men get disgruntled because they spend most of their leisure time standing in line for a meal.

The management of the local USO facilities is the next most important item. I have been in big USO buildings that felt like a morgue and the troops hated them. Unless the people in charge of the USO recreation quarters like their work and put their whole souls into the job, the investment is a dead loss. There must be gaiety, life, music, dancing, cheerful sitting and sports rooms in these buildings and, above all, a friendly welcome if they are to be what they should be, the favorite and the most respectable meeting place for the soldier on leave and the young girls of the community.

Above all, the USO must categorically forbid the breaking up of their recreation halls into Protestant, Catholic and Jewish centers. It is deception of the public which supplies the funds for a United Service to introduce this divisive influence. In one community where this dishonesty was permitted, the GI's showed more sense than the weak-kneed authorities who wanted to separate the religious groups. The Protestant USO happened to be the biggest and the most cheerful. So the three groups all congregated there together and even admitted the Negro recruits although the city was below the Mason and Dixon's line.

It seems to me that the USO and possibly also the Red Cross should face the fact that the many small southern towns near big military installations cannot possibly afford to create an adequate, varied and successful recreation program for huge numbers of soldiers. They just can't afford it. Therefore, these communities should get the highest priority and the finest, most varied equipment furnished by the USO or any other organization. Otherwise the boys are sure to take to drink in these impoverished communities. And bad liquor at high prices leads to endless trouble.

I also recommend to the USO and the Red Cross an idea of great value which was carried out during the war by the YWCA, an organization that deserves the highest commendation for its practical social pioneering. When the soldier's wife and baby come to see him or to join him, they arrive with no accommodations and little money. Sometimes it takes several days before they find the head of the family. With crowded hotels and exorbitant room rents, these poor women are stranded unless somebody holds out a helping hand. To take care of these helpless mothers with small children, the YWCA set up hotels where they could spend one or two or three nights. They could leave the children there under supervision while the mothers were looking up the soldier husband or rushing about to find permanent quarters. I know nothing that was a more humane contribution to those first awful days of getting adjusted to a new, strange and over-crowded community and to good relations between the town and the post.

In all of these problems of adjustment to new social conditions, special consideration must be given to Negro recruits and their families especially in the South. I have seen Negro troops, nurses and other personnel spend their whole three days' leave trying in vain to get transportation.

And don't forget that in towns where segregation of our Negro fellow citizens is unavoidable, they also want to eat and to have a good time. The armed services are now meeting the problem of segregation in an honest manner within the Military Establishments. The treatment of our Negro troops outside the post is just as important to the bettering of race relations. And if, for example, the local communities are unwilling or unable to establish adequate transportation for Negro soldiers, then the camp commander should supply extra busses for them.

In other words, in this as in all other civilian efforts to make the enlisted personnel feel at home, the local community must have the constant cooperation of the local military commander. I found during the war that a few of our post commanders understood how to work with the local community leadership. Most of them did not.

All three military services should be given systematic training in the social aspects of camp-community relationships. West Point, Annapolis, and the Air Force commands should establish educational programs conducted by our most practical sociologists in the importance of the social environment to peacetime military operations. Had this been done at the close of the war, our military leaders might have learned more quickly that you cannot dump several thousand families on an already overcrowded community and expect a happy ending to the story. It only makes the armed forces look silly when local camp commanders get the townspeople together, as they sometimes do, and call them a lot of grafters. Rapacity, greed, and profiteering are inevitable when houses are few and applicants are many. I think the military leaders should remember, and our country and the Congress should remember that neither the military personnel nor the local communities are responsible for the fact that they have been forced upon each other nor for the unsanitary housing to which both the native population and the invaders are now condemned. During the war unhealthy, inhuman, and indecent living conditions could be excused. They can't be excused in times of peace. The armed forces might just as well make up their minds right now that they will never achieve good relations with the civilian population, until housing is accepted as the social responsibility of the top military commands and the Congress. But the mere prospect that this vital question is being thought through and that a program of construction has been carefully planned, will immediately bring local cooperation into play and transform the atmosphere in every military area throughout the land.

Will the Farmer Knuckle Under?

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie (Ind.) Star of June 4, 1949:

WILL THE FARMER KNUCKLE UNDER?

The farmers of America have been issued a challenge by Secretary of Agriculture Brannan. Will you be the first to surrender your liberties to the state under the Fair Deal program? Mr. Brannan has presented his farm program to Congress. He demands the power to control the production and the distribution of farm products in America. He seeks the power to tax every farmer who produces and sells more than he is told to produce and sell. He wants to be able to penalize the successful farmer for high production at low cost and to subsidize the unsuccessful farmer for low production at high cost. The bait he offers the farmers is a subsidy, a temporary bonus for the surrender of permanent freedom.

The Brannan farm program is only one step removed from the program of British socialism which not only controls production and distribution but also has the power to seize farms and oust their owners for refusing to go along with the Government program. That power will be necessary in the future if Mr. Brannan's program is going to work.

Benjamin Franklin once told the American people before the American Revolution was even started that "They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." That is the question before the American farmer today. The safety Mr. Brannan offers is certain to be temporary. The loss of liberty he demands is bound to be permanent. The subsidy he offers depends solely on congressional appropriations. What will happen if Congress is unable or unwilling to provide the money the farmers are promised? Are American farmers willing to put themselves and their farms completely into the hands of Mr. Brannan and the Congress?

If the farmer is the first to become the economic ward of the Government he will be the first to become the political prisoner of the Government. For if his livelihood depends upon government, if he loses his freedom to grow and to sell what he pleases, he has lost his political independence in the bargain.

The Eightieth Congress passed a farm program based on free enterprise with flexible price supports and grounded in freedom from Government dictation. The Democratic platform, President Truman, and Secretary Brannan himself all supported and praised that program. But now the welfare state has supplanted free enterprise in the administration councils and they seek to impose upon the American farmer a Socialist program borrowed from the harassed and poverty-stricken British, the destitute Germans, and the enslaved Russians. We don't believe the free farmers of America will ever knuckle down to that.

McGregor Will Hold Conferences in District

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. McGREGOR. Mr. Speaker, it has always been my policy to keep in constant contact with the people of the Seventeenth Ohio District, whom I represent in Congress. I am anxious to learn

what the folks back home are thinking about. In order to follow this policy, I have attempted to make myself available to my constituents so they might discuss with me their views relative to national issues and also to give me the opportunity to be of service to them as their Congressman.

In accordance with my annual procedure, during the period of our official congressional recess, I plan to visit the six counties of the district. I have made arrangements to be at the courtrooms of the county courthouses from 9 a. m. to 5 p. m., and have set forth the following schedule:

Monday and Tuesday, August 15 and 16, Ashland, Ashland County.

Wednesday and Thursday, August 17 and 18, Mansfield, Richland County.

Friday and Saturday, August 19 and 20, Mount Vernon, Knox County.

Monday and Tuesday, August 22 and 23, Delaware, Delaware County.

Wednesday and Thursday, August 24 and 25, Newark, Licking County.

Friday and Saturday, August 26 and 27, Coshocton, Coshocton County.

I have been most gratified with the results obtained in the past and interest shown by the number of constituents who have availed themselves of our conference plan.

No appointments are necessary, and I look forward to meeting a greater number this year, as I am certain we all have problems of personal and national interest to discuss, which will be of mutual benefit. I urge my constituents to confer with me on the date most convenient to them so that I may have their views, which will aid me in representing them in Congress.

Address by Hon. Stephen T. Early

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. DOYLE. Mr. Speaker and colleagues, the evening of May 25, last, Mrs. Doyle, my executive secretary, Rene Sebring Smith, and I attended the conference here at Washington, of the President's Committee on Religion and Welfare in the Armed Services. The President himself attended and spoke inspiringly to the large number in attendance. He himself had appointed this important committee about a year before. The message of the President was printed in Washington daily papers the next day.

The following address by Hon. Stephen T. Early, Under Secretary of Defense is clearly a vigorous contribution to sound thinking and national decision. Mr. Early authorized me to place it to your attention. I am proud to do so.

ADDRESS BY HON. STEPHEN T. EARLY, UNDER SECRETARY OF DEFENSE

Mr. Chairman, distinguished guests, ladies and gentlemen, your presence here in the National Capital bears witness to the magnitude of your public spirit. This is reinforced by the fact that the civic task which brings you here carries with it no shout of headlines, no great public acclaim. Your reward—for there is a reward—lies in the domain of the spirit; in the knowledge that the work to which you pledge yourselves will strengthen the moral basis of our military might by binding the military man more closely to his fellow citizen of the civil community.

Four years have passed since our great wartime forces were demobilized and reabsorbed in our national life. Four years have passed since we put the dark and bloody thought of war aside and turned again to the peaceful tasks of our fruitful land. But the brave new world of peace and brotherhood failed to materialize. Evil thrived and grew in the rubble of broken cities and in the desolation of ravaged countrysides.

Country after country drowned in the dark tidal wave rolling outward to engulf the world. Our choice was clear but, nonetheless, hateful. What remained of the free world had to be preserved regardless of cost, regardless of sacrifice. Thus, once again another generation of young America began to move to the recruiting stations. Today that number stands at the unprecedented peacetime figure of 1,600,000. It should be a source of infinite pride to all of us that of this tremendous number only 30,000 were brought in under the Selective Service Act passed by the Congress last year. One million five hundred and seventy thousand are volunteers. No nation in the history of the world has ever produced a military establishment even approaching this size on a volunteer basis. This is a matter for pride, but it is also a matter for thought.

As a people, we are agreed that we must maintain a military establishment adequate to the evils of the day. But we are also agreed that we have small stomach for compulsory military service, if it is possible to avoid it, even in this dark and dangerous time. If we would avoid compulsion, then, we would be well advised as citizens to let our volunteers realize that we are proud of them, that we are proud of their hazardous stand at the outer edges of the free world, that we are proud of the uniform they wear. But pride is not enough. We must go beyond that. We must come to grips with the traditional neglect that has always characterized our conduct toward the serviceman in time of peace. We must come to grips with the social evils that stalk him in our civil communities. If we are to succeed in our attempts to maintain our armed forces under a volunteer system and if we are to attract the high-quality men we require, the American people must realize that they are dealing with a problem unique in our peacetime history.

Before all else, they should realize that the serviceman of 1949 bears little resemblance to the serviceman of 1929 or even of 1939. In the first place, he is much younger—nearly half of our men today are 21 or less; tens of thousands are only 17 or 18. In general, he comes from a good home with a good background. His educational attainments are at least double those of his prewar counterpart. He is alert, aggressive, ambitious, and questioning. He can be led but not driven. He expects an adequate and an intelligent explanation of the reasons underlying the things he is called upon to do. He is not content to vegetate as a private soldier or ordinary seaman; he is determined to climb and climb fast and, in typically American fashion, regards the unlimited-career opportunities of today's armed forces with vast approval. He is proud of himself, proud of his uniform, proud of his service. He is self-respecting and logically expects the respect of his fellow citizens. He is unwilling to be divorced from the context of citizenship and the social fabric of his country. All in all, then, he differs greatly from the prewar professional who, all too frequently, turned to the service as a refuge from economic disaster or social failure. We would do well to make the differentiation and to keep that picture sharp and clear in our minds.

My second point, though obvious, carries with it a certain sense of shock. Personally, I think it should, for it drives home again the heavy civic obligation that rests with both our military and civilian leaders. Each year, some 400,000 men are being returned to the civil community after a substantial period of service. Last year the armed forces graduated twice as many men and women as our colleges and universities. This underlines the fact that by sheer numerical strength the National Military Establishment has become the greatest single educational force in our country. And it underlines the additional fact that we are rapidly building up a tremendous body of young citizens whose mental, moral, and social outlook has been shaped in considerable degree by the military.

This means that military training cannot be our sole objective. Our obligation to the Nation transcends that. We must make certain that these young men return to their homes better and more useful citizens, strengthened by self-discipline and fortified in the democratic faith.

Our military leaders are not only aware of their responsibility in this field but are moving with increasing vigor and imagination to meet the challenge it presents. During the course of this conference you will undoubtedly hear more of this from other speakers. My point is simply this: The problem presented cannot be and should not be met by the military alone. It is a matter of high priority concern to every American citizen, for at bottom it is their country, their freedoms, their institutions, and their sons who are intimately involved.

The opportunity for the civil community to assist in this essential undertaking are limited only by imagination and enterprise. It is not my intent to explore this richly rewarding field for Mr. Weil and his associates have examined the subject thoroughly and will present their views to you in due course. But I do wish to touch on several matters that appear to me to be of prime importance.

The serviceman is hungry for civilian contacts; as a matter of fact he has always been. But today he has greater opportunities to satisfy this hunger than ever before. In general he is free from Friday evening until Monday morning. Even the newest recruit draws $75 a month and this $75, plus train, plane, and bus, will carry him far and fast. Thus, every week end and virtually every city in our broad land is cast in the role of host to thousands of these young fighting men. For 5 days a week the military is responsible for the decent ordering of their lives; for the remainder of the week that responsibility devolves upon the civil community. If the better elements of our society fail to rise to this challenge, we may rest assured that those who batten on the young and lonely will take over. In my judgment, this moral responsibility of our civilian society should figure prominently in your counsels.

I have referred repeatedly to the great numbers of young men in our armed forces today. Therefore, it may strike you as something of a paradox when I say that a greater proportion of our servicemen are married than ever before. In 1938, 20 percent of our men were married; today that has increased to more than 30 percent. In great part these are the men who have decided to make military service a career; these are our professionals in the true sense of the word. They furnish the maturity and the stability we must have. They are our indispensable trainers. By them and through them we maintain the basic continuity of our military skills.

UNIVERSITY OF MICHIGAN LIBRARIES

Since the war's end, this group has suffered great hardship by reason of our inflated economy, by rapid and unavoidable changes of station, but above all else by their inability to find adequate housing for their families. The conditions under which thousands of these devoted soldiers, sailors, and airmen live beggar description. The result is precisely the result that could be predicted. The morale of this group is rapidly breaking down. These, the men whom we can least afford to lose, we are losing at an alarming rate. Those who are trying to stick it out are low in spirit and preoccupied with the health and happiness of their families. Men in such frame of mind can scarcely be expected to bring enthusiasm and top-flight leadership to their organizations. As a matter of national security, this situation demands immediate attention; as a simple matter of humanity, it cries for it.

I trust that this conference will face that problem squarely and put it high on its agenda. Our National Government will not be able to meet the housing needs of its military men for years; in fact, if our armed forces remain at their present size, the Government may never be able to meet it. Therefore, we must look, as always, to the public spirit of our citizens for help.

The cities and towns close to our military installations can protect our service people from the rent gougers. That alone would be a major contribution. But they can do more than that. They can plan organized drives to find modest but decent living accommodations for the families of our men in unused space in private homes. In time of disaster, we are always able to find shelter for the homeless; surely we should be able to find shelter for those whose very presence is our greatest guaranty against unimaginable disaster.

The several matters I have touched on are obviously but a part of the great task that confronts us. Every American, in uniform or out, must share in that task. The stakes are too great to risk failure. Indeed, the consequences of failure are too dreadful for the freeman to contemplate. The evils that walk the world today cannot be met by eleventh-hour expedients, nor can they be contained by military might and material power alone. Today, as always, our military strength and our civic strength reside in the human heart, in the human spirit. Our fighting men derive their moral strength and their staying power from you, their fellow citizens. A military force that trains without a deep abiding belief in the country it is pledged to defend and without a firm conviction that it is held in the esteem and affection of its countrymen, will collapse at the first shock of battle. The standards of victory are planted in the heart of a military organization before that military organization ever engages in combat—or, there is no victory. May you address yourselves to this great undertaking with that thought in mind.

An Answer to the False and Misleading Statements Regarding the Cost of the Housing Legislation

---

REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. SABATH. Mr. Speaker, for 3 weeks an application for a rule has been pending before the Committee on Rules relative to the much-needed country-wide low-cost housing and slum-clearance bill. Because of the misleading, yes, false statements issued and publicized by the real-estate lobby, the National Association of Manufacturers, and the Republican National Committee that have fed some of the Members with false, untrue, and adulterated statements as to the cost and need of this housing bill, I have been unable to report out a rule on this bill, notwithstanding the fact that the Committee on Banking and Currency of the House reported this bill by a vote of 14 to 7. All possible dilatory excuses and delays have been made, the last one occurring last week when a request was made by one of the Members for an opinion from the Bureau of the Budget.

STATEMENT FROM DIRECTOR OF THE BUREAU OF THE BUDGET

In conformity with the request as above-mentioned, I received the following statement from Hon. Frank Pace, Jr., Director of the Bureau of the Budget, which I shall include in my remarks in the hope that all the Members who recognize the needs of not only the veterans but of millions of other people seeking decent living accommodations, will read and digest it and obtain the true facts. This statement will positively refute the reckless statements made on the part of those who appeared before the Committee on Rules, expressing in the main, the opposition of all the interests against this legislation. The statement follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
June 6, 1949.

Hon. A. J. SABATH,
Chairman, Committee on Rules,
House of Representatives,
Washington, D. C.

MY DEAR MR. SABATH: This is in reply to your letter of June 1, 1949, regarding H. R. 4009, a bill establishing a national housing policy and authorizing programs for slum clearance and urban redevelopment, low-rent public housing, housing research and farm housing. In your letter you inquire whether the bill has been approved by the Bureau of the Budget and ask three specific questions related to the financing arrangements contained the proposed legislation.

With respect to your statement that "We can find no evidence in the record that this bill has been approved by the Bureau of the Budget," the following facts are deemed pertinent:

Page 35 of the printed hearings on H. R. 4009 before the House Committee on Banking and Currency contains a statement of the Housing and Home Finance Administrator that enactment of this legislation would be in accord with the program of the President. The Administrator was authorized to make this statement following a detailed review of the proposed legislation in the Executive Office of the President in consultation with other executive departments and agencies concerned. The Administrator, after similar review in the Executive Office, also advised the Committee on Banking and Currency in letters dated May 9 and May 10, 1949, that enactment of amendments transmitted with those letters (secs. 206, 508, and 509 in the present bill) would be in accord with the program of the President.

With respect to your three specific questions on financial arrangements, I have the following comments:

(1) You state that section 103 (b) authorizes the Administrator to enter into contracts to make capital grants of $600,000,000 to local public agencies for slum clearance and urban redevelopment, pledging the faith of the United States to payment of such grants, and authorizing appropriations for this purpose, and inquire whether this subsection does not "in effect constitute an actual appropriation for future years which cannot be reviewed in any way by the proper appropriating committees of the House and Senate."

First, may I point out that section 103 (b) (p. 10, lines 15–16) specifically provides that total authorizations for capital grants shall not exceed $500,000,000, rather than the $600,000,000 stated in your letter.

Second, the provisions of section 103 (b) would not constitute an actual appropriation; they would, of course, constitute a firm commitment of the Federal Government. This type of commitment is not unusual where the Federal Government's role is one of assisting State and local agencies, and those agencies need a clear and definite basis for their financing and operating plans. Federal legislation authorizing grants for public roads contain examples of this type of commitment.

In the case of the proposed grants for slum clearance and urban redevelopment, municipalities and other local public agencies must enter into land purchase programs, make arrangements for land clearance and preparation for reuse, and secure the necessary legislative authority and funds for these purposes. For local public agencies to engage in such activities successfully they must have advance assurance, through commitments of the type authorized in this bill, that Federal funds will be available.

Furthermore, while the Appropriations Committees would not review the initial authorizations for these capital grants it would be inaccurate to say that they cannot review the appropriations in any way. Payment of these grants could be made only on the basis of specific annual appropriations, hence only after review by the Appropriations Committees. This review would surely include not only an examination of the amounts needed to carry out the contracts entered into under the act, but also an appraisal of the basic policies being followed in administering the program.

(2) You state that section 205 (a) authorizes contracts to make annual contributions to local public agencies for low-rent public housing aggregating not more than $480,000,000 per year for 40 years, and inquire whether the Bureau favors making a binding commitment of this type for outright grants without any possibility of review in the next 44 years?

First, section 205 (a) (p. 41, lines 14–15) specifically limits total annual contributions authorized to not more than $400,000,000 per year, rather than the four hundred and eighty million indicated in your letter. This means that the maximum could not exceed sixteen billion.

As a practical matter, however, the maximum annual contribution would not be paid either for the maximum number of years or at the maximum annual rate. Although the maximum number of years for which the Federal Government could contract to make annual contributions is 40, the actual number of years required in most, if not all, contracts would probably be considerably less. The number of years would depend upon the amount of principal repayment which could be made if a maximum annual contribution were required to be paid every year. The lower the rate of interest obtainable on the bonds issued by local housing authorities, the larger would be the amount remaining for debt retirement, and the sooner the debt could be retired. On the basis of expected interest rates, the contributions would run for 29 to 33 years, although 40 years is permitted under the bill, if necessary to meet changed conditions.

UNIVERSITY OF MICHIGAN LIBRARIES

Moreover, the annual contributions actually paid in the average year would be substantially less than authorized in the bill. While each contract must pledge enough contributions each year to meet the debt service on the bonds outstanding the amounts of contributions actually paid each year under each contract would be limited to the cash deficits of the projects covered. In normal years the rent-paying ability of many low-income families would be higher than the minimum entrance standards, although still within the statutory requirements. The resulting higher rentals would mean higher income for the projects and smaller deficits, with correspondingly smaller Federal contributions. Under the present low-rent housing program in recent years, for example, only 25 to 30 percent of the maximum amount contracted for has been required. This is unusually low because of the war and postwar increase in incomes and rent-paying ability of tenants as compared to the increase in the operating costs of the projects. In an average year under the new program the contributions actually paid would probably not exceed 75 to 80 percent of the $400,000,000 authorized, or roughly $310,000,000. Thus, instead of requiring total contributions over the life of the program amounting to $16,000,000,000, a reasonable estimate of the total amount actually required would be $9,000,000,000 to $10,000,000,000 over the period during which the annual contributions would actually be paid.

Second, a binding commitment is clearly necessary if we are to achieve the objective of assuring construction and operation of low-rent housing at minimum cost. Such an advance commitment is necessary not only for substantially the same reasons indicated above for slum clearance and urban redevelopment, but, in addition, in order to assure private financing at minimum interest rates. The legislation would authorize the pledging of the Federal contracts for annual contributions as security for the payment of interest and repayment of principal on obligations of local housing authorities. As the Housing and Home Finance Administrator pointed out in his testimony, the legislation contemplates that the bulk of the financing will be arranged privately on the security of these contracts. Maximum private financing can be arranged at minimum interest rates (with correspondingly lower requirements for Federal contributions) only if investors have full confidence that the interest and principal will be paid when due. Important amendments have been proposed in the present low-rent housing legislation, on the basis of experience, in order to remove any doubt of such payments. Thus the pending legislation would make more effective the basic principles authorized in the United States Housing Act of 1937.

As in the case of capital grants for slum clearance and urban redevelopment, it is not correct to assume that the bill would prevent "any possibility of review for the next 44 years." Appropriations to carry out the contracts would not be automatic, but could only be made after annual review by the Appropriations Committees to determine the minimum appropriations necessary. Under the existing low-rent housing programs contracts to make contributions are similar but not identical to those proposed in this bill. Appropriations to pay these contributions have been regularly reviewed by the Appropriations Committees and the amounts adjusted from time to time.

(3) Your third question asks whether it is "in accord with the President's program that Federal subsidies for low-rent housing should exceed by a considerable margin the entire construction cost of such housing." As a basis for this question you give an example which implies that it would be less expensive for the Federal Government to construct low-rent housing projects and give them free of charge to the local housing authorities than to pay the annual contributions for a 40-year period authorized under title II.

I feel that both the example and the question result from a misconception of how the program would actually operate. The amount of the annual contributions permitted in each contract under the bill represents the maximum amount which might be necessary to assure repayment of the capital cost of the projects, plus interest at not to exceed 2½ percent. Under these circumstances, even if it proved necessary to pay the maximum contributions it would make no financial difference whether the Government built the projects or local public agencies built them (since 2½ percent, not 2 percent as cited in your example, is a proper estimate of the cost of long-term money to the Government). In other words, the maximum cost under the proposed program could not exceed the actual cost which would be involved in direct construction.

In fact, as I have already stated, the maximum annual authorizations of $400,000,000, although necessary to insure private financing at the lowest cost, would not be paid either for the maximum number of years or at the maximum annual rate. A reasonable estimate of the total amount required over the life of the program would be $9,000,000,000 to $10,000,000,000, rather than $16,000,000,000.

If these amounts are discounted at the same 2 percent interest rate employed in the example in your letter, the present value of the probable Federal contributions would not be $11,300,000,000 as your example indicates, but roughly $7,000,000,000. If discounted at the more appropriate long-term rate of 2½ percent, the present value of the probable Federal contributions would be roughly $6,500,000,000.

Thus, as indicated above, the basic premise of your question "that Federal subsidies for low-rent housing would exceed by a considerable margin the entire construction costs of such housing," is in error. One reason why this legislation is in accord with the program of the President is that the method provided for financing the low-rent housing program would result in substantially lower costs to the Federal Government than would be required by direct Federal construction.

Sincerely yours,

FRANK PACE, Jr., *Director.*

ONLY $9,000,000,000 TO $10,000,000,000

Mr. Speaker, the statement has been made to the effect that the cost of this housing legislation will be from $16,000,000,000 to $20,000,000,000, and further, that the benefits will accrue to only 10 States. Mr. Pace's statement clearly shows that the total amount required over the life—the cost—of the program might be nine to ten billion dollars for 40 years rather than $16,000,000,000, as I said before. Mind you—in 40 years, not more than $9,000,000,000 to $10,000,000,000, or approximately half of the cost as charged by the opposition.

FORTY-TWO STATES WILL BE BENEFICIARIES

The statement that only 10 States will benefit from this legislation is also untrue, unwarranted, and unjustifiable. The facts are that approximately 42 States will be the beneficiaries of this legislation. The opposition fails to state that 42 State governments, most of the governors, the Mayors' Conference, and civil and religious citizens' groups throughout the United States strongly urge and advocate the passage of this important legislation which has already been sanctioned and adopted by the Senate. The opposition has failed to point out the very significant fact that 10 States have paid into the coffers of the United States Treasury 65.57 percent, or nearly two-thirds, of the total internal-revenue collections for the year ending June 30, 1948. I insert herewith excerpts from the official Treasury Department, Bureau of Internal Revenue, report, as follows:

Total internal revenue collections for year ending June 30, 1948

	Percent of total revenue
New York, $7,975,513,000	19.06
Illinois, $3,785,815,000	9.04
Pennsylvania, $3,222,789,000	7.70
California, $3,103,679,000	7.41
Ohio, $2,665,707,000	6.37
Massachusetts, $1,347,084,000	3.22
Michigan, $2,252,280,000	5.38
New Jersey, $1,272,223,000	3.04
North Carolina, $1,238,661,000	2.93
Indiana, $1,011,921,000	2.4
Total for 10 States	65.57

Total collected in United States, $41,864,542,000.

REPUBLICANS AND REPRESENTATIVES WHO REFUSE TO SEE OR HEAR

In the House, the opposition to granting this rule on the Housing bill emanates from the Republican National Committee, the National Association of Manufacturers, the real estate lobby and from the Representatives of agricultural and rural districts, notwithstanding the fact that for the past 10 years the Congress has appropriated for agriculture and our farmers on the average of $1,500,000,000 annually, which is nine times, I repeat, nine times as much as this bill will approximately cost per year. I cannot emphasize strongly enough that we have appropriated for agriculture and the farmers nine times as much per year for the last 10 years as the Housing bill will approximately cost. I am inserting herewith figures as taken from the hearings before the Subcommittee of the Committee on Appropriations, House of Representatives, Eighty-first Congress, first session, on the Department of Agriculture appropriation bill for 1950, part 1.

Appropriations for Agriculture, 1932–49

1932	$214,000,000
1933	293,000,000
1934	626,000,000
1935	876,000,000
1936	707,000,000
1937	871,000,000
1938	936,000,000
1939	1,538,000,000
1940	1,642,000,000
1941	1,543,000,000
1942	1,603,000,000
1943	1,123,000,000
1944	1,185,000,000
1945	1,169,000,000
1946	1,251,000,000
1947	1,276,000,000
1948	1,226,000,000
1949 (passed House)	1,133,000,000

$17,563,000,000 over 17-year period.

Includes amounts applicable to Department of Agriculture, but appropriated to other departments: Appropriations, subsidies, relief appropriations, etc.

Mr. Speaker, it is indeed regrettable and unfortunate for the country, that the representatives and beneficiaries of these tremendous agricultural appropri-

ations, contributions, grants, gifts, and subsidies oppose this needed housing legislation.

FIGURES WON'T LIE, BUT LIARS WILL FIGURE

"Figures won't lie, but liars will figure." How true the words of Gen. Charles H. Grosvenor, former Representative from Ohio are, for the carefully prepared figures of Mr. Pace, Director of the Bureau of the Budget, absolutely prove the falsity of the figures used by the opposition in an endeavor to kill this much-needed legislation, as I said before.

THESE SO-CALLED DEMOCRATS

Mr. Speaker, it is to be regretted that some Members elected as Democrats have and are aiding the Republicans in not reporting a rule to provide for the consideration of this bill. I wish to say, personally, I have done everything possible to obtain favorable action for the consideration of H. R. 4009, so that the Members of the House may be given the opportunity to vote on this most beneficial and much-needed legislation.

It is not my fault that I have not been able to get a majority of the members of the Committee on Rules to vote favorably in reporting a rule. It is my observation that the Republicans have cooperated with a few reactionary Dixiecratic Members who voted adversely, being opposed to the laudable purpose of the bill, and have thus far prevented the granting of a rule to bring the bill to the floor for consideration.

However, Mr. Speaker, I want to point out that under the liberalization and modification of the rules, which amendment I submitted at the beginning of the session and which passed the House, the bill will reach the floor for consideration on June 27, 1949, regardless of the action of the Committee on Rules, upon the discharge resolution which has been introduced and which will be submitted on that day by the chairman of the Committee on Banking and Currency, Mr. SPENCE, which committee originally reported the bill to the House.

Housing Stall

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the Washington Post on June 5, 1949:

HOUSING STALL

With Chairman SPENCE of the House Banking Committee moving to bypass the obstructionist Rules Committee, a vote on the housing bill now appears to be a certainty. That is good news, for failure of Congress to pass any comprehensive housing legislation at this session would not only undermine the hope of a vast number of poorly housed families, it would also be regarded as a repudiation of the pledges made in the last campaign by both major parties and would thus be a blow to confidence in popular government.

The Rules Committee has followed its traditional head-in-the-sand policy. When it received the housing bill from the Banking Committee 3 weeks ago, any well-informed citizen on the street could have told it that this was an important measure which should be sent to the floor promptly with a rule allowing ample consideration. A similar bill had passed the Senate by a vote of 57 to 13. But the committee stalled, held hearings for 3 days, and stalled some more. Its conduct seems especially unenlightened in view of the new rule which permits the Banking Committee to take its appeal directly to the House 3 weeks hence. One can only conclude that the Rules Committee majority has learned nothing from the revolt of last January against its tyranny.

The high-handed nature of the Rules Committee's action is illustrated by its probing into cost figures and the extent of the Government's obligation under the bill. These are problems for the committee reporting the bill, the Appropriations Committee, and the House itself. So far as we can see, they have nothing to do with the Rules Committee's function of routing measures to the floor in an orderly fashion.

As to the merits of the bill, we do not think that economy is the major issue. Of course, the total amount that is to be spent under this measure must be determined by the resources available. Even for the replacement of slums with decent housing for low-income families, expenditures must be kept within the limits of a sound fiscal policy. But that does not minimize the desirability of getting this program started—of getting a sound public housing act on the books. A long-range policy is envisaged under which the Government will help local communities to meet their slum problems. We think that policy is sound and practicable even though it may have to be inaugurated on a small scale compared to the need.

Nor is socialism the issue. Americans have never regarded it as socialistic to aid families who, by reason of misfortune or low income, are forced to live in squalor or unhealthful environment. The current housing bill is merely a means of making such help practicable. It is predicated on the belief that private enterprise should provide housing for all the families that it can possibly serve. Beyond its reach, however, are vast slum areas that must be wiped out by governmental effort to save our cities from an incredible burden of crime, delinquency, disease, and social malaise. Our highly integrated society cannot neglect this problem without risking its own health and stability.

Treatment of Blind Children

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Charleston Gazette of May 25, 1949:

THAT THE BLIND MAY SEE

Bills have been introduced in the United States Senate and House of Representatives that would provide $35,000,000 in Federal aid for physical examination of school children between the ages of 5 and 17. Very good, but not good enough.

That is also the opinion expressed by Representative M. G. BURNSIDE from the Fourth West Virginia District. He thinks the bill ought to include all children, in and out of school.

Out of this stems an ambitious idea which we sincerely and enthusiastically endorse and believe can be accomplished if enough force is organized behind it. We believe from what he has said that Representative BURNSIDE would like to see repeated nationally a program for restoration of sight to blind children such as was carried out so successfully in West Virginia in 1936. Said Dr. BURNSIDE in a recent interview:

"A few years ago a program for treatment of blind children [in West Virginia] resulted in the saving of millions of dollars in the difference of cost of education in public schools and the cost in a school for the blind. These children were only discovered and treated after an intensive drive by public and private agencies. It was very simple in operation * * *

"Of 948 [blind] children found and treated only 145 were found to be incurable. It was estimated that the restoration of sight to these children resulted in a dollar saving of $3,167,900 in cost of education, $8,020,000 in relief and $16,020,000 in earning power."

The program was carried out by Maj. Francis W. Turner who at that time was director of the West Virginia Department of Public Welfare and chief of the children's bureau. Major Turner is now executive assistant to Representative BURNSIDE. The Gazette was privileged to aid in carrying out the West Virginia program. Now we suspect that Major Turner is trying again, though on a national scale this time, under the direction of Dr. BURNSIDE.

Since 1936 we have urged a number of times that the program that was so startlingly successful in West Virginia be adopted nationally, to include every State in the Union. Multiply what was accomplished in West Virginia by 66, we having about one sixty-sixth of the national population, and you begin to realize the great national possibilities. Multiply the cost in West Virginia (less than $10,000) by 66 and you wonder how any Member of Congress or head of any department of Government could hesitate for a moment to provide the money for a national program and to get the plan into intensive operation quickly.

The most priceless possession of anyone is his sight. Large sums of money are spent in this country to help the blind to care for themselves, and various agencies work through publicity to teach people to take care of their eyes, but little if anything is done in an organized way to open the eyes of the curably blind.

We strongly urge Representative BURNSIDE to bear down on this program. No more worthy humanitarian project could be conceived.

And we strongly urge every Member of Congress to not only back up Representative BURNSIDE in his efforts but to devote their own efforts to and exercise their influence in promoting the cure of sightless children throughout the United States.

Old-Age Security

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. O'KONSKI. Mr. Speaker, the plight of the old people in the United States of America is one that from all

humanitarian purposes the Congress ought to take more seriously.

Under unanimous consent, I include in the RECORD an article by Harvey Ruelle, of Haywood, Wis., who has been championing for the aged for many years. His remarks are very pertinent and I am sure that these remarks express the opinion of every aged person in the United States of America.

The article follows:

PLEADS FOR PENSION FOR "WORN-OUT" PEOPLE

Mysterious America. "No action on health plan this session," says Senate Democratic Leader LUCAS. Why? Social security? Congress in session 5 months, uncertainly driving the people nuts, the Nation in a tailspin. Why? Congress penny-wise in domestic legislation, pound-foolish in foreign affairs. Why? Social security was to be first order of business in January. Today, June, and still no action on security for the American people. Again, why?

Facts prove American people are highly interested in security; that is, at least a few of them. Let me illustrate. I, like many others, am a normal, healthy American, white, male, aged 61. I am not a Communist. Yet I believe that every person living in America and willfully doing whatever his or her Nation has required of him or her during a lifetime is rightly entitled to decent livable old-age security, as a matter of right, not charity as of today. Facts prove that many other persons are in total agreement with me in this. As an unorganized service worker, owing to environment and choice of making a living with my hands, with the exception of the time I spent in the United States Army, for 45 years I have been compelled to spend two-thirds of my annual earnings for the necessities of life, out of the profits of which pensions have been paid to industrial heads, many of whom have drawn annual salaries of $100,000 or more, labor heads with annual salaries of $50,000 or more, various private company pension plans for organized labor of all forms and grades, railroad, steel, automobile workers, miners, and others too numerous to mention.

From the other third of my earnings I have been forced to pay taxes from which pensions have been paid ex-Presidents, Supreme and Federal judges, Senators, Congressmen, Army and Navy brass hats and personnel, civil-service workers, policemen, firemen, teachers, and many others.

All of this is probably as it should be, but from the above it is quite obvious I probably have been fortunate in accumulating a small home for myself and family, though to date I have been unable to build up a retirement fund for myself. An additional fact is my earning capacity is nearing an end; then what?

There shall probably be no choice except to apply to our generous county welfare board for a so-called assistance grant. What will be asked and told? Why do I need assistance? Do I have any property? Do I have any insurance? Do I have any relatives able to keep me? Plus 50 more snoopy questions. Then, in an indirect way, I will be told, "If you are not a pauper, we shall make you one." Then they proceed to take title to my total life savings, "the little home" I acquired through a lifetime of foregoing the few commonplace luxuries such as organized laborers and Government workers take for granted. Then to add insult to ridicule I still am forced to pay taxes on "my home" out of which to pay more pensions and welfare workers. I wonder if they, too, have a pension fund.

Why must these things continue in free America?

Is this the way in which we became the richest Nation on earth?

Is this the only way in which we can remain rich?

Is this the only reward we unorganized workers, farmers, domestic workers, the Nation's mothers can expect for making this the most desired Nation on earth in which to live?

Do not the unorganized worker and Nation's mothers wear out as quickly as organized workers and politicians?

How much longer must be unprivileged groups submit to these unfair abuses?

Why must we be considered "cracked" to mention general pensions, security, for all "worn-out" persons?

These abuses do not take place in Denmark, Norway, Sweden, England, France, Australia, New Zealand, most South American countries, and yes, even much despised Russia.

Will somebody, somewhere, explain why wives and mothers must be forced into pauperism during their last few years on earth? They did their duty well and should receive better rewards from a Nation for whom they bore soldiers.

I think it is time we all told our Congressmen these things in plain words. Write your Congressmen today. A copy of this article will do.

Yours for a better America.

HARVEY RUELLE.

Indiana Congress of Parents and Teachers Supports Equal Educational Opportunity for All Children

EXTENSION OF REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. CROOK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following statement of Mrs. Joseph W. Walker, president, Indiana Congress of Parents and Teachers, concerning H. R. 4643, Federal aid to education, to the House Subcommittee on Education:

Gentlemen, as we watch the progress of the hearings on Federal aid-to-education bills before your committee, we of the Indiana Congress of Parents and Teachers, feel that we should reaffirm our beliefs and our stand on the issue before Congress at this time.

We support the philosophy of equal educational opportunity. We have seen its benefits in Indiana.

In the early 1930's our State recognized the disparity of educational opportunity offered our children. Our leaders in the Indiana Congress of Parents and Teachers worked untiringly with other interested persons for State support of teachers' salaries. At that time our teachers were poorly paid. In some sparsely settled sections of the State that have insufficient taxable wealth for school purposes, teachers went unpaid for many months.

The first efforts to win State support were difficult because of the same lack of understanding that is apparent in the national picture today. But public understanding of the basic issues has grown with the years, and we have now reached a new high in the educational history of Indiana; we have established a minimum foundation program that places the wealth of the State, regardless of where it is, back of the education of every child, regardless of where he lives.

We believe this same philosophy should extend to every child in the Nation.

Our organization, with its 158,000 members in 1,010 local PTA associations has endorsed Federal assistance to education. A belief in equal education rights for children is fundamental to our philosophy. We reiterate our belief that those rights can be secured only with the assistance of Federal funds—funds channeled to the States and on to the local communities in the same manner in which many of our other great programs for developing our national resources are assisted and subsidized.

The desperate plight of the entire Nation's public school system is entirely overlooked by a few well-meaning but short-sighted leaders in Indiana. We are ashamed to hear them state that "Indiana can look after her own schools; we don't need the Federal Government in our business of education!" Such declarations take us back many generations. They are inconsistent with our deep interest in the children in every State of the Nation. We have not conserved our greatest national asset—our children and youth—until we have educated children everywhere.

Fortune has been good to Indiana, where, by our plan of equalization for education, every child receives an education by virtue of the financial background of the taxable wealth of the entire State. We who have studied the issue through are willing to contribute from our good fortune to extend the same heritage of a decent education to every child. We are proud to share our slightly-above-average financial condition with all children. Because we have studied the national picture, our vision extends beyond the boundaries of Indiana.

Some who boast about our good condition would build a wall around Indiana if they could. We deplore their selfishness and their short-sightedness. For Indiana is already paying a dear cost in teaching talent and disruption of classroom instruction because many children have moved into the State with little or no schooling and are penalizing Indiana's children by impairing their chances for good instruction. We must start at the base of the problem and provide a decent education for all children, regardless of their race, color, geographical location, social or economic standing.

As we study the hearings on H. R. 4643, we note that there are a few who seemingly are not interested in extending the heritage of a good education to every child. Very often the privileged class seems to be blind to the inadequacies of education for some children of the Nation. Since they see only the fortunate situation close at hand, they refuse to recognize that several million children are receiving no schooling at all. That complacent viewpoint is inconsistent with the ideals and objectives of the National Congress of Parents and Teachers.

There is evidence on every hand that our democracy is threatened by certain segments of our population who have had no education whatsoever, and who fall easy prey to destructive isms. A democracy cannot remain strong unless all of its citizens have the functional education for participation in its decisions and actions. Many wonder why we have waited this long to provide the desired basic education; many think we have already waited too long to build up our school systems to the desired minimums. Certainly we cannot afford to delay any longer.

UNIVERSITY OF MICHIGAN LIBRARIES

Many so-called poorer States have made much greater effort than their richer neighbors, but they cannot hope to maintain a minimum education because of the proportion of the number of the children to the taxable wealth of the State. The Nation called forth its youth in time of war, and provided education for the illiterates at a great cost and effort. Why cannot the Nation provide the needed functional education for children and youth in their own communities at a lesser cost than in time of war, and reach them before they become illiterates? Young men from the more fortunate States were called to the battlefront to fight earlier than those who were rejected because they could neither read nor write well enough to protect themselves in battle. Let us not sit idly by and permit this situation to recur.

To cry out about Federal control merely beclouds the real issue. First of all, the fear of Federal control is based entirely upon supposition. A study of the proposed legislation makes the method of procedure clear. Those who cry "control!" merely seek to distort the issue. Secondly, predictions of Federal control cast a reflection upon the entire teaching profession of the Nation. Since we in the Indiana Congress of Parents and Teachers work closely with the teachers and educators in our State and have an acquaintance with those of other States, we have the highest confidence in their integrity and their steadfast belief in local determination of educational policies and functions. We believe that the vigilance of that profession for the local autonomy of their schools will remain ever strong. Further, we believe that any encroachment upon local control would be met with a fierce resistance by that profession. Only through strength can we maintain strength. More adequate financial support of education assures that strength.

There are those who have traveled in Europe who would liken a supposed "federally controlled" education in our Nation to the type of education now offered in Europe, which is more or less State controlled. To keep the record clear, there is little resemblance of our public education to that of Europe today. In fact, we may observe the situation in reverse with the thought, that if our education remains to be ineffective and not accessible for all children, then the Federal Government would ultimately step in with a controlled education as a last resort. Certain countries in Europe have not had free public education, and their various systems have been so archaic that, for quick remedy from a starting point of no semblance to public education, the state has taken over in time of crisis. That situation is in reverse of our system of education, and any attempt to influence the members of your committee with such confused thinking is merely subterfuge.

A certain portion of the wealth of the States flows out of those States with the taxes collected elsewhere. Therefore, real natural wealth cannot always contribute to the educational fund for the children of those States. Further, a certain portion of wealth in tax payments is collected only by the Federal Government, escaping a certain responsibility to the States' maintenance of their schools. By equalizing the taxable wealth of all States in direct proportion to the educational needs of our children, regardless of their location, we can carry forward our obligation that the Government is responsible for the education of its children according to the United States Constitution.

We appreciate the opportunity of presenting this statement to the members of your committee, and ask that it be made a part of the records of your hearings.

What Makes Them Commies?

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 8 (legislative day of Thursday, June 2), 1949

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What Makes Them Commies?" written by Benjamin Gitlow, and published in the American Legion magazine for June 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT MAKES THEM COMMIES?

(By Benjamin Gitlow)

Communism so inflames the emotions of those who fall under its spell that their entire mode of thinking is changed. Americans who accept communism are no exception, even though they live in a country of great material well-being and a very high degree of individual freedom.

Those who join the Communist movement become intolerant zealots. Idealists discard their idealism, their devotion to humanity for the rituals of Communist bigotry. Honest workers become knaves. Men, on party orders, abandon their families to live with Communist amazons. Patriots are turned into spies and traitors. In a short time they are transformed into political tricksters and hardened conspirators, devoid of all moral restraint. Once initiated, they agree that it is necessary for the Communist party to employ chicanery, intrigue, and deceit; to use force and violence and commit crimes, even murder, to gain their objectives.

Individuals who join the Communist Party are required to take an oath of allegiance to the Soviet Union as the fatherpledge themselves to give the whole of their land of the workers all over the world. They lives in working for the overthrow of the United States Government and the triumph of Soviet power.

What induces individuals, formerly loyal to America, to join a movement that is irreligious, criminal and based on treason?

Most people who join the Communist movement do so out of idealistic reasons. They represent all classes of the population. They are workers, intellectuals, professionals, teachers, ministers, businessmen, students—young and old people who resent poverty and are consumed with a passion to improve the lot of mankind. They constitute the most zealous and blind fanatical followers of communism and supporters of the Soviet Union. To them communism is a universal religion and the Communist Party holy.

Paradoxical as it seems, when idealists are transformed into cynical, power hungry, realistic Communists, not bothered by scruples or conscience, the hold of communism on them, as a goal to be obtained through force and maintained by despotism and terror, is strengthened not weakened. Seasoned Communists are much more dangerous, for in the place of honesty of purpose and the soul of idealism that was their ruling passion at the start, now reigns a calculated determination to conquer and rule, cost what it may. They have grown into cruel professional revolutionists, without compassion for the sufferings they may inflict upon mankind in achieving Communist destiny by means of a brutal and bloody ascendancy to power.

William McKie, veteran Communist leader in Detroit, strikingly illustrates what happens to the idealist in the Communist Party. A background of strong religious idealism dominated this man in his youth. His father was a devout Quaker, his mother an active member of the Salvation Army. McKie boasts of his accomplishments as a bandmaster of the Salvation Army and is proud of the fact that it did not prevent him from becoming a Communist. The poverty and misery he saw in Salvation Army shelters started him on the road to communism.

A more devout, fanatical devotee of the Communist Party is hard to find. McKie led the first strike in the giant Ford River Rouge plant. This man, whose heart once bled for the miserable wretches of the slums, used an army of thugs armed with daggers, iron pipes and baseball bats to force the automobile workers, against their will, to go out on strike. Innocent heads were cracked open. Plant machinery valued at millions of dollars was turned over and smashed. He had given orders to his gangsters to slaughter the Negro workers in the plant who out of loyalty to Ford had decided to resist the Communist pressure to force them out on strike. If the management had not induced the Negroes to leave the plant McKie would have gone through with his massacre of the blacks in spite of the professed policy of the Communist Party of friendship to the Negro.

McKie is contemptuous of our country and its flag. Proof is the following story written by McKie which throws light on how ignorant workers are recruited into the Communist Party:

"In the organization of the Ford workers we came up against the unemployment problem. One of the members of the local was being evicted. * * * He was one of those ultraconservatives who thought that the authorities were not so bad as we made them out to be.

"When they came to evict him he said he'd show us how he'd beat the sheriff. He wrapped himself in the American flag and lay down right in front of the door. Well, the sheriff just lifted him up with the American flag and took out his furniture and threw it on the street.

" 'What are you boys going to do now,' he asked us. Well, we picked up the furniture and brought it right back into the house. And when he saw that he said he was going to join the Communist Party if that's the way we did things."

But what McKie failed to add was that the flag idea was his own, not that of the unemployed worker, calculated to undermine in the worker respect for the flag and the Nation it represented. Gone in McKie are the instincts of a religious man imbued with idealism. Instead we have the saboteur, the gangster, the sinister Communist conspirator.

An important select group in the Communist movement consists of former non-Communist radicals who joined the Communist Party in order to overcome their disappointments and failures in the labor movement. Such individuals are found in the leadership of the movement, not in the rank and file. They fall into two categories. One is consumed by a burning ambition for popular acclaim and leadership among radical workers; the other, left finally to his own resources, is motivated by the desire for a well-paying job in the Communist movement which will remove him from a dismal future of an old age spent in unemployment and poverty. The latter are the "pie-card artists" among the Communist leaders, a term applied to individuals who joined the IWW in order to become paid officials of the organization.

The Communist Party purposely seeks such failures in the labor movement and entices them with lucrative offers to join the party.

Such men and women become the most servile agents of the party. In their eagerness to prove their worth to the movement they slavishly follow the party line and excel all others in their allegiance to Stalin. In them we have some of the most dishonest and perfidious tools of communism.

The portraits of two outstanding leaders of the Communist Party will illustrate each category. William Z. Foster, the party's chairman, is one. Elizabeth Gurley Flynn, the foremost woman leader of the party, is the other.

Foster was born in extreme poverty in Taunton, Mass. Of the 23 children borne by his mother only 3 survived. His father, who came from Ireland, was a livery-stable hand, more interested in watching prize fights than in earning a living, and never provided enough for the upkeep of his large family. At an early age Foster had to work at difficult health-destroying jobs, and contracted tuberculosis. The bitterness against society which marked his early youth has remained with him throughout life.

Foster is an able man. In intellectual accomplishments he towers above the other leaders of the party. He started work at the premature age of 10. He never had a schooling. By sheer grit and determination he educated himself. Early in life he concluded that his adversity was due to society, that the rich and the Government were responsible for his suffering. A Catholic in his youth and intensely religious, he early questioned the goodness of a God who did not respond to his prayers and treated him so badly. He had faith in Bryan's democracy. Then socialism captured his imagination. A career as a hobo brought him in contact with the International Workers of the World, and he joined that organization, which came to be known as the IWW or Wobblies. A trip to Europe turned him into a militant unionist, a revolutionary syndicalist, one who believed that the American Federation of Labor could be transformed into a revolutionary organization for the overthrow of the Government through sabotage, direct action, and the general strike. He wound up an anarchist opposed in principle to political action and all constituted government.

Just prior to World War I Foster made peace with the American Federation of Labor. Samuel Gompers gave him an opportunity to show what he could do by putting him in charge of the campaign to organize the workers in the steel industry. A strike called in 1919 by Foster against the advice of experienced trade-union officials who were working under him ended in disaster. Foster blamed Gompers for betraying the strike and found himself without a job and out of the A. F. of L.

He formed an organization known as the Trade Union Educational League based on a program of revolutionary syndicalism by which to build up a movement in the A. F. of L. to wrest the organization away from Gompers and make Foster its president. The organization proved a joke. Foster counted his followers on the fingers of one hand. He brooded over his failures. It seemed to him that just as whatever King Midas touched turned to gold, whatever he touched turned to dust and failure.

At the time of his greatest despondency, when the leadership he sought seemed unattainable, a Soviet G. P. U. agent named Carl E. Johnson, operating under the alias of Scott, contacted Foster. With money supplied by Russia, Foster, no longer penniless, made his first trip to Moscow in 1921. There plans were worked out by which Foster, with the aid of the Communist Party and huge subsidies from Moscow, was to capture the American Federation of Labor and put the Communists in control. In Moscow he joined the party, became a full-fledged Communist, and was co-opted into the top leadership of the underground Communist Party. But he kept his Communist membership a secret up to 1924 and operated in the United States as a progressive trade-unionist who sought to improve and reform the trade-union movement.

No other leader in the Communist Party has been abused and utterly abased by Moscow leaders of the Communist movement as has Foster. Stalin has taken a special delight in putting the frightened, cowardly Foster in his place. When Foster won a majority of the membership of the party in this country and laid claim to the top leadership of the party in 1925, Gusev, Stalin's personal representative to the American Communist Party, beat him down, took the leadership away from him and made another man the boss of the party. At the Sixth World Congress of the Communist International in 1929 Stalin promised to make Foster the boss of the American party, then reneged on the promise. In Moscow in 1929 Stalin and Molotov pounced upon Foster, gave him a political tongue-lashing under which Foster quailed, called him a liar, a speculator, a man who deliberately misrepresented what Stalin had promised him. Foster, pale as a ghost, quaked in his seat and muttered not one word in reply, even though he had Stalin's cable in his pocket ordering the Communist Party in America to make Foster its boss.

Foster is in mortal fear of another failure. He is the ideal Red quisling. He will eat Communist crow as long as he lives, for his soul belongs to Stalin.

Elizabeth Gurley Flynn also typifies a tragic figure in the radical movement. Fear of economic insecurity and lonesomeness forced her to join the Communist Party. American-born, of Irish parents, her father was a right-wing Socialist who believed in the ballot box and reforms, not in revolution. He opposed the Communists up to the day he died. As a young girl of 15 Flynn created a sensation in radical circles as an oratorical firebrand. The Socialist Party proved too tame for her. She craved excitement and action. She found it in the IWW. This slim, prim, exceedingly beautiful stormy petrel of the IWW gained wide renown as an organizer and leader of violent strikes. Out of her first romance with an IWW leader a son was born, but the romance did not last. When the tall, charming Italian anarchist, Carlo Tresca, who in 1943 was assassinated by the Communists, crossed her path she fell madly in love with him.

World War I marked the disintegration of the IWW as an important organization. Its leaders were indicted, found guilty, and imprisoned. Flynn and Tresca escaped the dragnet. The Communist Party put the finishing touches to the organization and smashed it completely. Flynn no longer organized workers and led strikes. Instead, she got herself a desk job raising defense funds for radical workers of all shades of opinion who ran afoul of the law.

On a tour for the International Labor Defense, a Communist organization, Flynn, who then was not a Communist, took desperately ill and hovered for a number of years between life and death. At this time, too, Tresca left her. Upon her recovery she did not join the Communist Party, even though she was badly in need of a job. She could not stand Communist regimentation and discipline. She disapproved Stalin's actions in 1929 in imposing his will against the majority of the American Communist Party, and publicly said so. She maintained friendly relations with Communist opposition elements in the radical movement and associated with leaders of the Trotsky group, against whom Moscow had declared war unto death.

When Stalin purged his former associates Flynn privately declared to a friend that she was outraged by what was taking place in Russia. But a few days later she joined the Communist Party. She was no longer the charming girl of 30 years ago. The party membership wildly acclaimed her. Earl Browder, at the time the leader of the party in the United States, kept his part of the bargain and saw to it that she got a job and a position as a recognized leader of the party.

The Communist Flynn for years kept up a correspondence with Tresca, even though she knew he was against the party.

The Commies forced her to write articles denouncing Tresca in the foulest terms. Flynn was forced to pay for her communism by demonstrating to the party her willingness to debate herself on party orders. She repeatedly engaged in self-flagellation to prove her Communist integrity. Browder had been the agent who got her into the party. They became close friends. Then came Stalin's order removing Browder from the leadership. Stalin cracked the whip and the American Communists had to denounce Browder or be expelled from the party. When at a meeting of the national committee of the party it came Flynn's turn to do so, she got up crying and accused the others of not letting her know what the score was. Shaking like a leaf and crimson in the face, she shamefully denounced the one man who had befriended her. Flynn, the pie-card artist, whose inner soul revolts against communism, eats its messy pottage and dishes it out also.

The Communist Party combines organizational skills with a wonderful understanding of mob psychology and how to exploit it. Those who join the party soon lose their inferiority complexes; the nobodies become somebodies. Into each Communist is drummed the idea that he or she is the vanguard, the leader of the working class. Each Communist looks upon himself as an important leader. Communist indoctrination accomplishes much more. Communists are impressed with the fact that they belong to an organization that is connected with a powerful government, the Soviet Union. Party members look upon themselves as recognized members of the ruling class of that government. The attraction of Soviet power in the Communist movement is tremendous. It acts like a powerful magnet drawing the members of the party into the Soviet orbit and gives them a feeling of strength and self-reliance that goes with belonging to the ruling class of a mighty government.

Once little people, nobodies, are given such a sense of superiority they become obsessed with a power mania and a leadership psychosis. This power mania and leadership psychosis is exploited by the party to turn the little people into bold leaders, but puppets nonetheless, who yield to every order and direction from the party leaders on top. And some of the nobodies do acquire the qualities of real leadership.

Such an example is Comrade Rizak. A diminutive, cautious, shy, unattractive weasel, the lad Rizak who joined the Communist Youth League in 1927 never dreamed at the time that 10 years later under the alias of John Steuben he would be the Communist entrusted with the organization of the workers employed in Little Steel, the man destined to bring the mighty industrial giant Tom Girdler to his knees. Steuben in 1937 gave the country a taste of Communist unionism in action. On May 30 of that year, known as bloody Sunday at South Chicago, Ill., pickets directed by Steuben defied the police. When the riot ended four pickets lay dead in the grass stubble and over 100 were groaning from bullet wounds.

The pigmy Steuben in 10 years had learned much. With the backing of the Communist Party machine, following the advice and orders of party leaders and trade-union experts from Moscow, Steuben acted with audacity, confident that he could defeat the "tsar" and "tyrant" of Little Steel.

UNIVERSITY OF MICHIGAN LIBRARIES

Steuben today is top leader in a union of the A. F. of L. that has jurisdiction over the gigantic hotel industry of New York. Under Communist domination, the union is a natural for the use of Soviet espionage agents, for it gives the MVD agents access to the hotel rooms occupied by important delegations to the United Nations. Control of this union gives the Communists through Communist waiters and other hotel employees entree to gatherings and conferences where trade, industrial, political, and diplomatic matters are being considered. And the little Steuben, without a formal education, who since the age of 16 has been working steadily for the Communist Party, is the important man in a Soviet espionage nest, smug and confident of his own power. There are thousands of John Steubens and semi-John Steubens in the Communist Party.

The depression of 1929 opened up new fields for the Communist Party. They conducted a very effective propaganda campaign contrasting unemployment in the United States with full employment in the Soviet Union, where the Government had embarked on a grandiose 5-year plan for the building up of Socialist economy. At this time the party gathered in Communists by the thousands. For the first time middle-class elements, hard hit by the depression, came into the party in large numbers. They were businessmen, intellectuals, and professionals—lawyers, doctors, actors, writers, teachers, professors, engineers, technicians, executives, social workers. These elements were exclusive of the unemployed workers who came into the party in droves, including the stumble bums of the skid rows and the Bowery. These middle-class elements were exceedingly important to the Communist movement. They gave the Communist Party an educated, trained army of people, intellectuals, and specialists who gave the party prestige and wielded considerable influence.

Out of these elements came the artists of the poison pen and the polluters of our cultural life.

These elements were used by the Communist Party to set up a sinister and dangerous organization which was affiliated with the CIO when the body was formed. Marcel Scherer, who organized the group, went to Moscow to get special training from the OGPU on how to set up the organization. Upon his return to the United States, Scherer, who never went to college, got together the unemployed architects, scientists, chemists, engineers, and research workers and organized them into an independent union. The union organized, controlled, and financed by the Communists gave the OGPU contact with individuals having knowledge or access to valuable scientific projects. From Canada's experience with Soviet spies we have learned how such scientific people were engaged in getting top Canadian security information for the Soviet Government. The Communists in the United States did identically the same thing. It is well known that much of the knowledge which the Soviet Government obtained of our atomic secrets came from this source.

We have seen how many factors make up the human elements in communism. But we have not dealt with its most important section, the trade-unions. The Communist Party has no illusions on how it is going to conquer the United States. They will do it with bullets and not with ballots. However, they realize that before they can use bullets decisively they must cripple the American economy by stopping the wheels of industry. That can be done only through Nation-wide strikes during which sabotage is practiced extensively. That is where the trade-unions come in. For that important reason, the Communist Party concentrates its major effort on bringing the trade-unions under its control.

In addition, by the Communist participation in strikes, Communist agents and organizers find out who are the trade-unionists who are not afraid to fight, the union gangsters who can wield the blackjack, the dagger, and the gun. Every effort is made to recruit these strong-arm elements into the Communist Party, where they receive special training and are put into Communist mobile, strong-arm guards. During the Spanish Civil War thousands of them were sent to Spain to get military combat experience.

The Communist trade-union cadres, together with the mobile strong-arm guards constitute the iron core, the power potential and military arm of the Communist Party.

In the party are also to be found a goodly number of formerly frustrated females. Through party activity and its social life, free from all moral restraints and no longer bothered by inhibitions, they find a new, exciting life. In the same category are the individuals who crave excitement as an escape from a life of boredom. They are generally recruited from the wealthy classes. They are often drawn into conspiratorial activities, tied in with the Soviet Government and its agencies. Many work for the OGPU. They generally become so involved with the Communist Party that they dare not break with it, desire as they would to return to a life of normalcy.

The last group's importance consists in the fact that it includes a majority of the present party leadership. To illustrate: The Communist Party of the United States is essentially a Soviet Government party. Its leaders are Soviet agents. Communists consider themselves an integral part of a powerful state. They are confident that history is on the side of the Soviet Union, that it will soon dominate the globe. Many of them are looking forward to the day when they will be the rulers of a Soviet America. Opportunists, job seekers, men and women with no particular avocation, because they sense that a party connected with a great foreign power offers opportunity for political leadership and good jobs.

The Communist Party is aware of the inducements it has to offer those who will serve it. The party is built around the principle of professional revolutionists, its members giving their entire time to the party and getting paid for doing so. The party, therefore, is an organization of men and women thirsting for power, who are eagerly awaiting the day when they will be pivoted into control of the Nation as their Communist compatriots were in Poland, Czechoslovakia, and the other countries absorbed by the Kremlin.

The leaders of the party that constitute this group, men like Robert Minor, Jack Stachel, the confidant of Stalin, James Ford, Eugene Dennis, and others have had close contacts with the power machine of the world Communist superstructure. For years they have been working here and abroad directly and indirectly for Stalin. Awaiting them they hope, should the Communists succeed in the United States, is the power and the glory that goes to those in on the ground floor. That prize of being considered pioneers they definitely know can be obtained only with the assistance of the Soviet Union. They have seen how it worked out successfully in Europe and how it is working in China. Without Soviet assistance and guidance the Chinese Communists would not now be poised for the conquest of China and Communist domination of the continent of Asia.

The Communist leaders of the United States are gambling for the biggest stake in the world—control of the United States of America.

The World's Greatest and Most Wasteful Spender

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include an article entitled, "The World's Greatest and Most Wasteful Spender," from the May 31, 1949, issue of the New England Letter, published by the First National Bank of Boston, in Boston, Mass.

The article follows:

THE WORLD'S GREATEST AND MOST WASTEFUL SPENDER

Government expenditures of all kinds—Federal, State, and local—now aggregate in the neighborhood of $60,000,000,000 annually. This is equivalent to $1,500 per family, while governmental debt amounts to $6,291 per family. The heavy debt and the large Federal budget, as well as staggering amounts spent during the war, have created the impression among many people that the Government has an inexhaustible reservoir of funds that can be drawn upon for any and all purposes. But the cold facts are that the Government has at its disposal only those funds obtained from taxes or from borrowing. There is no other source. Consequently, we find that one-fourth of the total income of the American people is being siphoned into the coffers of the Government, which proceeds to distribute the money through its manifold spending channels.

Since the amount of money now collected from the people in the form of taxes constitutes such a large portion of their incomes, it should be wisely spent and accurately accounted for. But what do we find? The most authentic and objective source of information on this subject is the nonpartisan Hoover Commission which was authorized by Congress to make an exhaustive study of the organization of the executive branch of the Government. The findings of this Commission were a shocking revelation of the waste, overlapping, duplication, and gross inefficiency of the multitudinous Government agencies and commissions. If any private business had carried on its affairs in as slipshod a manner as the Federal Government is doing, it would have gone broke and been subject to prosecution for juggling figures in its system of accounting.

The Hoover report is replete with examples of waste, inefficiency, and loose accounting. The cost of operating the United States Forest Service is listed in the budget as $26,000,000 a year, but by receiving appropriations from various sources its actual expenditures amount to $43,000,000. Unused appropriations of the various Government departments at the year end are not turned back to the Treasury but are generally used to load up on supplies. Since 1923, the number of employees in the Department of Agriculture has increased nearly fourfold, while its expenditures have increased more than thirty-twofold. In some counties there is 1 Agriculture Department agent advising 36 to 38 farmers, but the number of farms has declined by approximately 6 percent in the last two decades. The Government offers medical care to 24,000,000 people, for which an estimated billion dollars will be spent in 1949. As of a year ago, the Government's

UNIVERSITY OF MICHIGAN LIBRARIES

hospitals had a capacity of 255,000, with only 155,000 patients. Yet the Government is planning on spending a billion dollars on the construction of new hospitals. Employees in the Veterans' Administration handle on the average only about one-fourth as many insurance policies as are handled per worker in private insurance companies. The Federal Government carries excess supplies roughly estimated at $2,500,000,000, but the actual amount is not known as many Government departments maintain no inventories of stocks on hand. The cost of paper work exceeds the cost of individual items that go to make up one-half of the 3,000,000 purchase orders each year. The Government's budget system is antiquated and there is no uniform classification of items. Consequently, the actual cost of a project or service cannot be ascertained.

Not only is there much waste and inefficiency in the conduct of governmental affairs but also various agencies of the Government vigorously lobby for the spending of public money for housing, social medicine, public works, and the like. A member of the Hoover Commission has pointed out that the Army Corps of Engineers and the Bureau of Reclamation are engaged in bitter rivalry as to which agency shall construct the various public works projects in the Missouri River Valley and elsewhere in this country. The cost of these projects in the construction and planning stage is placed by those Government agencies at more than $52,000,000,000, but based upon past experience these estimates are grossly understated and would likely run to $100,000,000,000 should all of the plans materialize.

When a business firm undertakes any project or plan for the spending of money, it is taken for granted that careful consideration has been given to the ultimate cost and the annual outlay for operations. In the case of the Federal Government, these simple practical considerations are often ignored or lightly brushed aside. The usual procedure is to ask for a relatively small amount of money to launch the project, and then because of pressure for expanding coverage and more liberal payments the appropriations grow in snowball fashion. This is particularly true of any broad long-range program designed for the general welfare of the people. It has been estimated by the Baltimore Sun that the administration's Fair Deal program would in the course of the next 50 years cost in the aggregate $1,250,000,000,000. This is an amount so great that it staggers the imagination. As a matter of fact, it is about equivalent to the wealth that the world has accumulated over the centuries.

The social planners tell us that the grandiose welfare plans are a mandate from the people and that their wishes must be respected. But this contention rests on a spurious premise. The demand for social medicine, for instance, was not initiated at the grass roots but was spearheaded by the Federal Security Agency under whose jurisdiction this project would be handled. Furthermore, these programs are presented with sugar-coated slogans and in such a way as to hypnotize the public into believing that the Government has some magic means of providing something for nothing. Instead, as everyone should know, the beneficiaries will pay the freight.

Burdensome taxes and a huge public debt are as much the concern of Main Street as of Wall Street. They touch the pocketbooks of all. None escapes. Taxes of all kinds are passed on to the consumer through the food he eats and the clothes he wears, in fact through all the necessities of life as well as luxuries. It should be obvious, therefore, that the more the Government takes in taxes, the less there will be for each individual to spend according to his own discretion.

But when the Government spends the people's money, it collects a toll on every dollar in order to maintain a swollen and sprawling bureaucracy. The number of civilian Federal employees in this country exceeds 2,000,000, while the total number of Government workers, including those in State and local governments, aggregates more than 6,000,000. This is equivalent to about one Government worker for about every six families in this country. The estimated Government pay roll is in the neighborhood of $14,000,000,000. In fairness it should be said that there are many highly competent Government workers who render valuable service, and many of them are underpaid. But reliable authorities have estimated that by placing Government activities on a more businesslike basis, at least one-fourth of the Federal civilian employees could be released without impairing in any way the essential public services.

Not only is the Federal Government spending a large proportion of each person's income but also it now takes about 75 percent of all taxes collected, leaving only 25 percent for the State and local governments as compared with 66 percent for these units in 1928. The Federal Government has invaded so many tax fields and is taking such a large portion of the funds available that State and local governments are hard-pressed to finance their regular activities. To relieve the situation the Federal Government provides grants-in-aid, which funds, according to the Hoover report, now represent 40 percent of all money spent by the States. These grants cover such items as highways, public welfare, schools, health, and the like. The Federal administrators dictate how this money is to be spent, and specify standards to be met. So here we have a system whereby the money is collected from the people of the States, part of which is returned to the States, with strings attached. But as this money circulates in merry-go-round fashion, the overhead costs of Federal administration, according to Senator BYRD, take a toll of 15 percent. Many States are opposed to this system and would much prefer to finance their own activities according to their requirements but feel compelled to dip into the grab bag in order to get back part of the money contributed by their own citizens. The system is not only demoralizing but also it is making the State and local governments vassals of the Federal Government, thereby threatening the existence of self-government.

With the pressure for expenditures increasing while revenues are declining, Federal finances enter a crucial stage. The day of reckoning is near at hand unless the budget is balanced through a reduction in nonessential expenditures. If the budget cannot be balanced when the national income is running in excess of $200,000,000,000, there is grave danger that the Government may never again be able to get its financial house in order.

Readjustment Allowances for Unemployed Veterans

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. MULTER. Mr. Speaker, following is a resolution forwarded to me by the Raymond Lupia Memorial Post, No. 1111, of the American Legion, which was unanimously adopted by its membership at its last meeting:

Whereas the veterans of World War II made great sacrifices and endured unusual hardships in defense of their country; and

Whereas they face difficult problems of an economic and financial nature as a result of the sacrifices and hardships endured by them; and

Whereas the people of the United States are vitally interested in affairs affecting the interests of its veteran citizens; and

Whereas it is the duty and obligation of a grateful citizenry to make restitution to its veteran citizens insofar as possible for their sacrifices and hardships; and

Whereas the Servicemen's Readjustment Act of 1944, Public Law 346, as amended by Public Laws 190 and 268, Seventy-ninth Congress, which in part provides for readjustment allowances for unemployed veterans, and which part is due to expire July 1, 1949: Now, therefore, be it

Resolved, That the Raymond Lupia Memorial Post, No. 1111, Department of the State of New York, the American Legion, favors and supports the continuance of readjustment allowances for unemployed veterans, as provided by the Servicemen's Readjustment Act of 1944, as amended; and be it further.

Resolved, That a copy of this resolution be submitted to the Honorable Congressman ABRAHAM J. MULTER, of the Fourteenth Congressional District, city and State of New York.

This is to certify that the foregoing is a true and correct copy of resolution passed unanimously at the regular meeting of Raymond Lupia Memorial Post, No. 1111, Department of New York, held on Thursday evening, May 19, 1949, at its headquarters, 243 Avenue U, Brooklyn, N. Y.

JOSEPH J. MORAIS, *Adjutant*.

Are We Losing Our Basic Freedoms?

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following oration delivered by John William Kruse, 2313 South Royce Street, Sioux City, Iowa. This oration won Mr. Kruse first place in a recent high school forum contest sponsored by radio station WNAX at Sioux City, Iowa. Mr. Kruse represented East High School at Sioux City, and was well deserving of the honor conferred upon him. His oration is thought provoking and very timely in these times, when the creeping type of socialism is encompassing most of the world. It follows:

Down by the river is a half-finished auditorium. In a few weeks voters of our host city will go to the polls to decide whether or not this auditorium should be finished or abandoned. One of the arguments against its completion is, of course, the increased taxation. Sioux Cityans are not alone in worrying about the excessive cost of government, whether on a municipal or national scale. Taxes have skyrocketed until today we have this startling situation: The average cost per capita for food is $330; the average cost per capita for taxes is $371. All of this has been necessary to support a Government

which, in this vaunted land of free enterprise, now exercises some 57 controls over industry. Price subsidies, rent controls, interstate-commerce regulations, social security—all have extended Government control and increased taxes. Aid to Europe is costing billions. Many fear another depression. Socialized medicine and health insurance may soon be realities. Is it any wonder that we are today discussing the question, Are we losing our basic freedom? which, as one Leeds High student put it in a discussion group this morning, are just the things we do in everyday life.

Certainly we don't want to lose them, but economically it appears that we may be doing just that. Politically the picture is gloomy, too, with increasing fear of communism. Militaristically we are still far from the dove-and-olive-branch stage. Socially our basic freedoms are being violated. It would be easy to generalize on intolerance, to become emotional over the prejudice that shouldn't be, but somehow is. The fact remains that we have neglected human rights to such an extent that civil-rights legislation is considered the biggest job confronting the Eighty-first Congress.

Who is to blame for this state of affairs? I'm afraid it is "We, the people." Too many of us make the mistake of thinking of government as something apart from ourselves, removed from us, possibly antagonistic toward us. How often we hear the Government spoken of in this way: "They're making a big mistake. They're taking away freedom of enterprise." It seems to be the popular fallacy to think of government in the third person. Actually, it is a first-person proposition.

We Americans aren't little Milquetoasts who are dominated or preyed upon by our own Government. If we develop a persecution complex, it's our own fault. If we have price subsidies, social security, rent controls, regulations governing industry, it's because we as a people have found these measures to be effective and necessary. If we realize the importance of civil rights, we have the power to change the situation. If we believe in our democratic form of government, we will combine our efforts to make it work—and to make it stronger.

So my answer to the question, Are we losing our basic freedoms? is "No," but a conditional "No." We can't lose our basic freedoms so long as we exercise them. Psychologically we know that we lose the skills we don't practice. Indifference, apathy, inertia—these are the dangers—not dictatorship, bankruptcy, or communism. We live in critical times, no one will deny that. But these times offer us, as young people, a greater challenge than ever before. The Chinese word for "crisis" is made up of two characters signifying "danger" and "opportunity." We must focus on the second word.

We must remember not to confuse liberties with obligations. Every right carries an attendant duty. If we don't perform our duties, we lose our rights. It won't be a dramatic loss, a front-page story, a sudden change, it will be a gradual transition brought about by an indifferent attitude. To illustrate this point, a few weeks ago a school election was held in a city with a voting population of 40,000. There were 12 candidates for the board; interest should have run high. Even the weather cooperated. But just 4,000 people bestirred themselves enough that Tuesday to get to the polls. This is only one example of the apathy we must guard against. If on April 26, the people who have ideas about the auditorium, one way or another, do not express them, they have no right to criticize. We have the foundation of a building down by the river, but unless we finish the job, it is worthless. We have the foundation of good government, but unless we finish the job, it is worthless. We have the foundation of good government in our basic freedoms, but unless we build on this foundation, it will deteriorate. It is up to us individually to make this choice. Through understanding, through education, through forums such as this in which we are brought forcibly face to face with basic issues, we can preserve our freedoms. All we have to do is to remember that government isn't "they" or "it"—government is you and I—a first-person affair.

Commencement Address at Northeast Junior College

EXTENSION OF REMARKS

OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1949

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following commencement address delivered by me to the 1949 graduating class of Northeast Junior College—Lousiana State University—June 2, 1949, at Monroe, La.:

Dr. Cline, graduates, members of the faculty, honored guests, ladies and gentlemen, it is a high honor, a genuine pleasure and a very great privilege for me to be afforded the opportunity of addressing the graduating class of 1949. In venturing to address the graduating class of this fine college, I am fully aware that I am addressing many of our outstanding leaders of tomorrow, and many of you, no doubt, will have much to do with shaping the world in which future generations will live.

At the outset let me hazard a word in favor of the age in which we live. Notwithstanding the problems which beset us, and without closing our eyes to existing abuses, many of which call loudly for remedy, still we live in a great age, to the struggles and contests of which I am designated to be a spokesman to bid you welcome.

He would be a vain man indeed who professed the ability to furnish you with a formula which would insure success and happiness. These elusive things are not bound up in formulas or found in prescriptions. They are the substance of our dreams—the occasional realities resulting from hard work, good fortune and honesty. But he would be an empty and uninformed man indeed who had not gained some notion of the fundamentals upon which success and happiness depend. If I am able to put any new life into truths with which you are already familiar; if I should succeed in setting on fire some slumbering or dying ambition; if I can help to make you yearn for success and long for happiness, with a yearning which reaches out tirelessly toward success and happiness, I shall have rendered you a worth-while service and I will be content.

In seeking success you will be subjected to criticism. It has been said that if we are not to be criticized we have but three simple things to do, and they are: do nothing, say nothing, be nothing. Never permit yourself to fall into that category, because it is better to be criticized for some of the worthy things we accomplish than to avoid criticism by failure to achieve worth-while accomplishments.

Ambition is the dynamic power of man. It urges him on against all obstacles. It assures him against all dangers. It sustains him against all fears of failure. It is the light burning in the bosom when all else about him is dark with depression. But it must be subjected to discipline. As a light it must be trimmed with prudence. As a power it must be guided by intelligence. It must not overleap itself. Nothing is so pathetic, nothing so tragic as a consuming ambition without enough fuel for consumption; no failure so inconsolable as the failure resulting from a vaulting ambition without adequate ability or training to guide or restrain it. This has been said for all the ages by philosophers and students in one way or another, but in the finanl form it really means, "Know thyself"; and this signifies that in your preparation for a career you must study your abilities, you must discover and recognize your weaknesses. You must be able to detect and estimate your shortcomings. You must have a serene and safe knowledge of your strength. In effect, you must ascertain your limitations. Do not leave that definition for others but find it for yourself. You owe it to yourself, your family, your community, your country, and your God to be honest, to keep your mind clear, your heart pure, and your body healthy. Countless careers have ended in failure and immeasurable unhappiness has been entailed by the failure to determine early the real fundamental limitations. One of the continuing tragedies of civilisation is the great number of wrong men and women in the right place, and the great number of right men and women in the wrong place—the misadventure of the misfits—the man or woman striving for something which no amount of ambition, work, or time will bring to them. On the other hand there are men and women content to do those things which scarcely keep their brains awake—fitted for larger tasks and vaster enterprises, they stand still in front of opportunity and finally pass out in the darkness of their own stagnation.

Therefore, with all the sincerity at my command, I warn you: "Know thyself!" Be fair, relentless, and penetrating in your desires; be merciless in criticism; be rigorous in your test; let no false pride, no audacious ambition, no cultivated conceit hinder you in your study of yourself. This searching insight, this dwelling on your hidden powers as well as weaknesses, this turning of the searchlight into the heart and soul and mind and body will enable you to find your real strength and to know your real weakness. This accomplished, you may turn your face toward higher education which you seek and should have. Ultimately you will face the world where the battle of life is to be fought; and as you will, with knowledge of your own powers, enter upon a new phase of life, you will encounter the serious and never-ending question of your right relation to your fellow man, to your family, to your community, to your Nation, and to our Redeemer. These have now become the natural objectives of your contemplated conquests.

There you meet the first problems of human diplomacy to which you must adjust yourself in the proper measure to the world about you and the new environment which will be strange to you. Without a surrender of these essentials, you must discover the fine method of contact which will enable you to join the noble procession of men and women intent upon honorable conquest. Therefore, you will be required to study the world with the same caution, the same searching insight, as you employed in the study of yourself. You approach the world and its problems resolutely bound for the goal which your ambition has set, but between you and that goal are problems of human contact. It has been said: "The proper study of mankind is man." This study is not for the purpose of enabling you to take advantage of him, but rather for the purpose of enabling him to appreciate, to understand, and to accept you.

If you are to be successful, if you are to be respected, and if you are to be accepted into our world society, you must be honest, you must be honest in every respect. Certainly that does not merely mean that you must be financially honest; it does not merely mean that you must know the difference between "mine and thine" and respect that difference. It does not merely mean that you have to have skill enough to keep within the law. It has a deeper significance. It has so much meaning that an entire discourse might be devoted to it without developing its full and essential points. First, by a full measure you must be honest with yourself. No deceit or dishonesty is more fatal than that which you practice upon yourself, for that deludes you by alluring falsehoods into places from which you cannot withdraw yourself. By being honest with yourself you will apply the same treatment to your fellow man. The obligation of honesty is so strong that it requires that you shall speak the truth, and the truth always spoken is not always a means of success. It is your duty to speak the truth when, by moral obligation, you are required to do so; and not being bound by moral obligation to speak, you can and should remain honorably silent.

Vhatever profession you choose, resolve now that you will be honest and honorable in every undertaking. If you choose to be a lawyer, doctor, an educator, or a businessman, you will encounter many difficult problems in maintaining the standard which honesty requires. You will be sworn in and accepted as members of the profession or business of your choice, and you are bound by statute or principle to confidential fidelity to your fellow man. You become the repository of vast confidences. You must not connive at falsehood; you must not tolerate perjury. Honesty requires that you must not only refrain from conniving at falsehood and perjury, but you must conscientiously abide by the accepted rule and honorably protect your fellow man. There are times when you must remain silent. The primary duty of any profession or business requires a certain honesty which, if really lived up to, almost approaches nobility.

These are but flashes touching on the general subject as it relates to professions or to businessmen. The instances could be multiplied in relation to commerce, to agriculture, and to all the pursuits of man.

If you should be fascinated by the problems of politics and come to believe that for your country and for yourself you could construct a joint success by giving your time and your ability and your enthusiasm to a political career, again you will be met by the problem of honesty in varied and multiplied ways. Many men and women have stood the acid test in high public place and where honesty prevailed, these individuals have stood out like beacons. In public office you will be required to speak out concerning the problems with which your country and your community are concerned. You should speak only after you have thought long and deeply on the problems, fully cognizant that the complex problems of modern society—whatever they are—can only be solved after long study and hard work upon them. There is no substitute for knowledge of these problems and no short cut to that knowledge. Once you have arrived at your conclusions, while preserving an open mind as to possible developments, you should take your stand without regard as to whether your position will be popular or unpopular, because anything less than this is intellectually dishonest.

Dishonesty has often led public officials to appear both for and against controversial issues. This is dishonesty because when a public official knows that he is right he should speak out and make his position known. It is politically dishonest to be for something that is not right. It is politically dishonest to be against something that is right.

If you should be elected to hold office under one of the several branches of government available, you will be required by the true rule of honesty again to ponder long and well the problems before you, and when you have reached a sound conclusion which your study and reflection lead you to, it will be your solemn duty to stand forth for that against everybody, including your constituency; because your obligation when you take public office is to support and defend the Constitution of the United States and that Constitution is the guardian of the welfare of the whole country and not the special solicitor for any particular constituency. And if you should be carried further into politics or public service, where those who have chosen you have made up their minds that, on public matters, they are no longer in accord with your views, your intellectual honesty must be of such high order that you will sacrifice the public station to which your ambition and labor have carried you, rather than to sacrifice or compromise principle and to become the demagog of either a majority or a minority when you know their views to be selfish and dishonest.

My dear young friends, do you not understand that honesty is not such a simple problem after all? Next to honesty comes still another important matter which, in many instances, is the difference between success and failure, and that is courage—and if we do not define it, it remains commonplace. Not the physical courage which resents instantly the insult, though that is not without its values; not merely the courage which comes with bodily vigor and inherited health; not even the courage which is caught up in the thrill of martial airs and lured by the colors of streaming banners. Perhaps it is well to say that courage is not geographical, because, after all, the people of every country throughout the world have demonstrated the beautiful qualities of courage when it relates to the things which they have come to estimate as the most sacred things to them. However, I prefer rather to speak of that courage which belongs in civil, professional, and political life—the courage to wait our turn; the courage which upholds patience; the courage applied in your everyday lives and still that courage which leads you to take up whatever pursuit you may have chosen, fired by the ambition upon which I have touched. Many of you will have rough and rugged roads to travel, but with courage, no obstacle will stand in your way, because the combination of courage and honesty is almost unbeatable.

Confidence is a virtue by which many difficult problems have been accomplished. You must approach your future studies and the world with confidence and with a firm belief in the final fairness and justice in mankind, until that belief is overthrown by irresistible and accumulating evidence.

You must also approach your daily problems with humor, for humor has been said to be almost akin to genius. With humor you soften your daily problems; not humor which laughs with an empty mind and does not appreciate the serious problems of life and the tragic difficulties of others, but that sympathetic humor, that atmosphere through which the sun of your personality shines and reveals to all the world that you are willing to take the chance with your fellow man in the common struggle, based upon the principles of honesty, confidence, and courage.

You have had a quick survey of honesty, courage and confidence, but you have yet to consider the one thing which to some of us is uninviting, and that is work—made of energy and industry—but called in homely speech, work. Here again we touch the very quick of the problem of success so let us be ever mindful. If we are to be a success in life, we must train ourselves to work, we must train ourselves to like our work. Work is not slavery, work is not tragic. Work can and should be just as interesting as play.

It should be remembered that achievement in any field of endeavor depends on a certain integrity of mind and character and upon continuous study and work within that field. Whatever the work or whatever the profession one chooses to follow; whatever the specialization in which he is ultimately to be engaged, he should seek to be acquainted broadly with the world in which he lives. Never before in the history of the world has such knowledge been required, for never before in the history of the world have problems been so complex or been so heavily fraught with human destiny. Never before, therefore, has the responsibility of each individual to know and to be able to judge these problems in a democratic society, been so utterly serious.

I realize, of course, that I am only speaking a truism when I say all of these things. I realize that in laying stress upon courage and honesty and confidence, I am only saying what others have said before. Yet it is often true that we neglect to stress these very points and fail to realize how very vital they are in the everyday business of living. But there is another thing that I should like to emphasize in this whole matter of education, and particularly to those who do work hard and are seriously concerned in a much-troubled world, with their own future. No one, I think has expressed better my own philosophy as to education for future work than the great American philosopher, William James, in his celebrated chapter on habit:

"Let no one have any anxiety about the upshot of his education, whatever the line of it may be. If he keeps faithfully busy each hour of the working day, he may safely leave the final result to itself. He can with perfect certainty count on waking up some fine morning, to find himself one of the competent ones of his generation, in whatever pursuit he may have singled out. Silently, between all the details of his business, the power of judging in all that class of matter will have built itself up within him as a possession that will never pass away."

In facing the future, be determined. When you have set your goal, work untiringly to reach that goal. Be not discouraged when obstacles are placed in your pathway. Devise an honest plan by which to overcome any obstacles that would appear sufficient to separate you from your goal. Success will be yours if you continue to employ honesty, confidence, courage, and determination.

You are of Christian parents. If your life is to be spent most beneficially, you should at all times consult with our Redeemer because when the hour is the darkest you will find that an honest word in a lonely place to our Blessed Redeemer is of inestimable value. In your daily contact with your fellow man maintain the proper relation with God and man so that at life's end you will know you have made this world a better place in which to live by your having lived in it.

My dear young men and women, I commend you for having attained your diplomas from this great college. When you have completed your education, go out into life's battle with big courageous hearts and take with you my sincere congratulations on all the honors you have worthily won, and my best wishes for your well-being and for your well-doing. May you grow in favor with God and man as you grow in years. Work

UNIVERSITY OF MICHIGAN LIBRARIES

faithfully for your God, for yourself, and for your country. Employ at all times honesty, confidence, courage, and sincerity, and your reward will be rich and bountiful.

Urge of Its People To Seek Freedom Spells Failure for Red Regime

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the Brooklyn Eagle of June 6, 1949:

URGE OF ITS PEOPLE TO SEEK FREEDOM SPELLS FAILURE FOR RED REGIME

In their diplomatic discussions, spokesmen for Soviet Russia and the satellite nations customarily attribute all differences and failures to the unreasonableness and the low motives of the western powers.

The forces of reaction, as symbolized by Wall Street and the National Association of Manufacturers, are at the source of all opposition to the political faith and the purposes of the Kremlin, according to Radio Moscow and the Politburo.

It is rather significant of frustration, however, that Moscow does not attempt to explain the desperate eagerness of so many of its own people and those of its satellites to escape from behind the iron curtain into some land that holds the promise of freedom.

Athletes permitted to go abroad for participation in international competition refuse to return to the zone of Soviet control. Families risk the dangers of the long Atlantic crossing in small boats in the hope of finding refuge in a free land. Germans swarm across the border to the western zones to escape the oppression of Soviet occupation. Russian, Czech, Hungarian fliers, military commanders, diplomats desert their home lands through whatever means may be available to them in the hope of freeing themselves from the iron rule and the hardships of life within the shadow of the Kremlin.

The long list of high-ranking officials of Soviet satellites who have sought freedom through flight is now supplemented with the name of Dr. Bedrich Bruegel, acting chief of the Czech military mission at Berlin, who has resigned and disappeared because he could no longer endure life "under a corrupt police dictatorship."

He was the seventh member of the 10-man Czech mission to quit since the Communist coup in Prague in February 1948. His former superior, Brig. Gen. Frantisek Dastich, fled 8 months ago.

It is fair to assume that among those who remain there are many who do the will of Moscow against their own desires and convictions, who are held at their places and tasks by circumstances which they cannot alter and whose loyalties are with the principles and ideals of democratic government.

The desertions, accordingly, are revealing as to a fundamental weakness in the structure of Soviet power over the people of Russia and those of Poland and the other lands under Moscow's subjection. When the people are under the urge to run away whenever the opportunity presents itself, the regime, notwithstanding its ruthlessness, is feeble and the record, viewed by any standards of enlightened government, is one of failure.

Philip B. Perlman, Solicitor General of the United States

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, June 9 (legislative day of Thursday, June 2), 1949

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD an article showing the outstanding service rendered by Philip B. Perlman, Solicitor General of the United States, in the performance of the duties of his high office. The article was written by Frank R. Kent, Jr., and was published in the Baltimore Evening Sun of June 8, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PHILIP PERLMAN'S SCORE PERFECT FOR TERM OF SUPREME COURT

(By Frank R. Kent, Jr.)

WASHINGTON, June 8.—Philip B. Perlman, Solicitor General of the United States and a Baltimorean, has a perfect average with the Supreme Court this term.

To date, in the 1948 term, the Court has found in favor of the Government in every case argued personally by Perlman. The Baltimorean has argued 13 cases in this period. The Supreme Court has handed down decisions in 10. Each time the decision has favored the Government.

The tenth decision was given Monday. This was a case between the Federal Communications Commission and a Detroit radio station.

EISLER CASE RULING

One of the remaining three cases is that of Gerhart Eisler, who has been rated the No. 1 Communist in the United States. Eisler was convicted of entering this country on false pasport information. His attorneys appealed and the Government filed a motion to dismiss the Eisler petition. Perlman argued the case.

Meanwhile, Eisler escaped to England on the Polish liner *Batory*. He was released by the British courts and promptly took off for Czechoslovakia. Should the Court grant the Government's motion to dismiss the petition, however, it would be another victory on the Perlman score card.

The score of 10 straight wins for the current term already has surpassed the Solicitor General's record for 1947. In that period, Perlman personally argued 12 times before the Court. The Supreme Court handed down eight opinions in favor of the Government and three against. One case was held over for reargument in the 1948 term and is included in the 13 appearances Perlman has made this term.

ALTERNATE 2 WEEKS

As a rule, the Supreme Court sits for alternate 2-week intervals from October until the latter part of June. Arguments are heard on the Mondays the Court is in session and opinions are handed down on Mondays. The Court concluded hearing arguments last month, but still is handing down opinions.

On May 9 Perlman performed a feat that some of his colleagues believe has not been duplicated, and Supreme Court attachés say it certainly is unusual. On that day he argued three cases in the 4-hour session of the Court. He argued the Government's right to sue a sovereign State against Louisiana in the tidelands oil dispute. He argued a case along basically similar lines against the State of Texas. And he argued a case involving the Federal Communications Commission.

JAP WAR CRIMINALS

Perlman's 13 appearances before the Court this term and his 12 appearances last term do not disclose the number of cases involved. In several instances an appearance may involve two or three or more cases.

One of his more dramatic appearances was last December when he argued against the motions of a group of convicted Japanese war criminals for writs of habeas corpus. Three motions were filed for seven Japanese. Four other Japanese, including former Premier Tojo, delayed filing a motion pending the outcome of the arguments. Tojo later was executed.

In this case, Perlman and his colleagues in the Solicitor General's office had very little precedent to follow. They had no documents from lower courts and had to start practically from scratch. Preparation included frequent consultations with the State Department and the Far Eastern Commission. It also involved getting the documents and information printed.

Perlman and his colleagues worked day and night. The Solicitor General himself delivered the manuscript of the Government's brief to the Printing Office at 4 o'clock one morning. A day or so later, he delivered the corrected page proofs to the Government Printing Office at 1 a. m. That was about 2 days before he was to appear before the Supreme Court to argue the case. The court denied the Japanese motions.

HIGH ON THE LIST

Perlman's personal appearances, of course, form a small portion of the number of times the Government appears before the Supreme Court. According to court attachés and colleagues however, his record of appearances stands high on the list.

Actually, about 60 percent of all cases argued before the Supreme Court in the 1947 term involved the Government. The score is not completed for the 1948 term, but it will equal that of the former period, or surpass it.

As a matter of fact, administrative legal work occupies far more of the Solicitor General's time than do court appearances. In the 1947 term, the office handled 986 cases exclusive of arguments before the Court. According to the records, briefs were filed for writs of certiorari in 46 instances. In 266 cases it was decided to let the decisions of lower courts against the Government stand. It was decided to take appeals to the Supreme Court in 226 cases and in 361 instances it was decided not to take appeals. There were 87 miscellaneous filings of motion and other actions.

NINE HUNDRED AND EIGHTEEN CASES HANDLED

With one more month to go in the 1948 term, the Solicitor General's office has handled 918 cases. These are broken down into 66 writs of certiorari, 209 instances where it was decided not to file motions for writs of certiorari, 228 appeals, 367 instances where it was decided not to file appeals, and 48 miscellaneous motions.

The score card for the office in the 1948 term reads:

The Court has granted the Government 45 petitions for writs of certiorari and turned down 10. It has not acted on the others.

Opponents have filed 238 motions and 201 of them have been denied.

Of the 37 motions granted by the Court, the Government joined with its opponents in asking for 15.

The actual number of petitions granted against the Government thus would be 22.

UNIVERSITY OF MICHIGAN LIBRARIES

BALANCE EXPLAINED

One of the reasons for this apparent lopsided score is the fact that the Government does not move for a writ of certiorari unless it feels that it conscientiously can do so. Private litigants, on the other hand, will move for writs even on an outside chance of winning.

Since he took office about 2 years ago, Perlman has gained the esteem of a large number of Government officials including members of the Supreme Court. It is understood that praise of him has reached the White House.

Both his working and personal relationships with Attorney General Tom C. Clark also have been much closer than is usual between the Government's two top legal officers. One of the apparent reasons for this relationship is the fact that the Government as represented by them does not try to win cases regardless of whether it is right. There have been a number of occasions where the Government has felt it could not conscientiously support victories won by it in the lower courts and has asked the Supreme Tribunal to send back the cases.

"FRIEND TOM CLARK"

Clark has expressed his opinion of Perlman in the inscription written in his own hand at the bottom of an old print the Attorney General gave the Baltimorean as a birthday present. The inscription reads:

"To Phil Perlman, Solicitor General of the United States, of whom I am most proud for his outstanding accomplishments in protecting, maintaining, and enlarging the concept of individual rights under our American system—from his friend Tom Clark."

Operations of General Counsel's Office of National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 9 (legislative day of Thursday, June 2), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mr. Denham Plays God," written by Paul Klein and published in the Nation for December 13, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MR. DENHAM PLAYS GOD

(By Paul Klein)

WASHINGTON, December 4.—The first emasculation of a labor union under the Taft-Hartley Act took place here 2 weeks ago. It is unlikely that the National Labor Relations Board's general counsel will do much about it, for the union is that of his own employees and it was the counsel himself, Robert Denham, who performed the operation.

Since 1938 the Board has had a working agreement with the independent NLRB Employees' Union. Although prohibited by law from the right to strike, the union has had a say in the posting of vacancies and in seniority and grievance regulations. The Civil Service Commission has taken the position that "a simple, orderly procedure should be provided within the department whereby it will be possible for the employee to present his grievances, either individually or through representatives of his own choosing."

The old Board operated under these general principles. But after the passage of the Taft-Hartley Act, and the appointment of Denham, a change in policy developed. The new law does not clearly say the general counsel shall hire, fire, or promote personnel. The Board, however, delegated those powers to him. Denham then hired several employees without regard to existing seniority practices, and without previously posting the vacancies for the information of lower-level employees.

The union protested and Denham granted its representatives a brief conference on November 17. According to the union's transcript of the proceedings, Denham began negotiations by saying, "Let's get this straight; I'll agree to nothing; there is no place for agreements in the Federal service. * * * Promotion and appointments are management prerogatives, and I don't propose, nor will I permit any of my subordinates, to agree to anything."

When the union asked if Denham intended to determine unilaterally in what instances vacancies would be posted, he replied, "Yes; unilaterally, if you want to put it that way." He added that he always seeks the most qualified person to fill a job. The union's reply was: "We want the best men in the jobs, too. * * * That is why we propose the continuation of the posting system. We hope to convince you that posting is an orderly way to achieve that end, and that selection could be based on certain predetermined standards of service and efficiency." Denham answered, "We don't have time for that. Nor for establishment of a grievance procedure," he added. "Show me where I've made a mistake," he continually said. "I haven't made any mistakes yet." He closed the meeting with the words: "I will not justify my selections to anyone, and I will not permit anyone on my staff to justify or explain their selections to anyone."

Since that conference Denham has posted some vacancies and indicated that he will listen to grievances. But he emphasizes that this does not mean an agreement to do so; he will do it only when, as, and if he feels like it. The union has now asked the NLRB either to rescind the authority it gave to the general counsel or to condition it upon Denham's consent to bargain collectively. The request will probably not be granted; even if it should be, Denham may fight the matter through to a court decision, which some legal experts here think would go in his favor. It looks as if the man selected to handle the Nation's labor affairs had succeeded in busting his own organization's union.

None of this should come as a surprise, in view of Denham's record and the new climate in the NLRB resulting from the Taft-Hartley legislation. Denham, of course, warmly advocated passage of the act. As a trial examiner in the old days, he dismissed a higher proportion of complaints than any of his colleagues. A former supervisor in the trials section of the NLRB estimated that 80 percent of the complaints brought before an examiner resulted in a finding of unfair practice, since the charges were subjected to a thorough screening before they reached him. Denham's record was just about 80-percent dismissals.

In 1943 a judge of the Fifth Circuit Court of Appeals described an action before Denham in these words: "We cannot agree that respondents have had a fair trial by a disinterested, impartial trier of facts. His general attitude was not impartial but partisan * * * (He) had a wholly improper attitude for a judge or examiner. * * * (His) remarks evidence bias and prejudice."

Since his appointment he has invoked injunctions in a relatively high number of cases, while giving lip service to the doctrine that injunctions are dangerous. In one of these instances Denham's legal staff argued, in a district court in Kentucky, that an injunction must be issued, without a hearing on the facts. The court replied that under this reasoning the next step would be to order injunctions over the telephone, and subsequently to omit the court altogether and issue injunctions at the whim of the labor board.

Complementing Denham's general attitude is his fondness for a highly technical administration of the labor act. He has kept his promise to Congress to fill every vacant regional director's post with an attorney. I heard here that he requested the resignation of one experienced west coast director on the grounds that he didn't "want a layman at a post so far from Washington."

Orders issued from the general counsel's office have emphasized this trend, particularly the notorious general counsel field order 15, which provided that all unfair-labor-practice charges would be dropped unless a prima facie case were brought in and witnesses produced within 72 hours. Perhaps the best comment on the new legalistic regime was made recently by Dr. William Leiserson, a former member of both the NLRB and the National Mediation Board, who said the only helpful labor law is one which operates "in such a way that employers and workers or their ordinary bargaining representatives can present their cases in laymen's language, tell their stories, and question each other without legal technicalities * * * The injection of lawyers * * * promises to retard * * * amicable settlements by collective bargaining, cooperative compromises, and mutual give and take." Yet the NLRB's current budget request calls for 50 new positions for lawyers.

Although as a trial examiner Denham often refused to apply the Board's previously expressed rulings, and although as an employee of the NLRB under the Wagner Act he felt justified in offering Congress suggestions for the new legislation, he testified before a congressional committee that he would discharge anyone who opposed his administration: "If there is anyone on that staff who is unwilling to subscribe to the principles and policies and theory of the act as I conceive it to be, I don't want him around."

Many of Denham's decisions, in cases where racial questions have been raised, have been subjected to criticism. This feeling is based on such judgments as the one in which, as a trial examiner, he ignored the testimony of several Negroes and accepted that of a white witness. In his written draft report, in words later deleted, he explained this by saying, "Close and intimate contact with the Negro has taught the white [man] to recognize when a Negro is lying."

The hostility he has aroused among associates was revealed when one said as he passed, "You've heard this before, but there, but for the grace of God, goes God."

Construction of School Facilities

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, June 9 (legislative day of Thursday, June 2), 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a state-

ment on the proposed school-housing legislation made by me before a subcommittee of which the present occupant of the chair, the distinguished junior Senator from Minnesota [Mr. HUMPHREY], is chairman.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the committee, you have before you a number of bills proposing Federal aid to States for construction of school facilities. Among them is a bill introduced by the chairman, Senator HUMPHREY; one sponsored by Senator NEELY, nine other Senators, and myself, S. 287; and S. 834, which I introduced with the cosponsorship of seven of my colleagues. Each proposes that the Federal Government recognize in a financial way the responsibility it has to the school children of the Nation—children who are, and will be, citizens of the States in which they live and also citizens of the United States.

Historically and constitutionally, education is the prime responsibility of the States. All of the bills before you recognize this fact. At the same time, however, the Federal Government has a legitimate interest in the educational opportunity afforded all its citizens. In my judgment, it has a responsibility to implement this interest as the need arises. It can legitimately do so by rendering financial assistance if at the same time proper safeguards are adopted against encroachment upon this special prerogative of the respective States.

From the classrooms of today will come our workers, our legislators, and leaders of tomorrow. Learning can take place under adverse physical surroundings. I doubt anyone will contend, however, that the clock should be turned back to that day when the ideal classroom consisted of Mark Hopkins on one end of the log and his student on the other. Today, America is going to school. From this fact we, as a Nation, derive our greatest source of strength. From this fact, also, is created the problem confronted by school districts throughout the country—a problem which many are unable to solve and will be unable to solve without Federal assistance.

As a cosponsor of S. 287, I naturally believe the principles it incorporates and the pattern of Federal aid it proposes, represent the framework within which Federal aid should be extended. This bill proposes a first year's appropriation of $150,000,000. Of this amount, $5,000,000 would be allocated to the States as an encouragement for making an inventory of their school construction needs. $145,000,000 would be allotted to the States for actual school construction.

In my judgment, it is wise to provide for an inventory of needs. Various estimates of need on a Nation-wide basis have been made. These range from $7,000,000,000 to $10,000,000,000. The States and the Nation should know as accurately as possible the size and the magnitude of the problem we confront. The survey will provide this answer.

While we are getting this answer, however, I see no reason for delay in enactment of legislation authorizing appropriations for actual construction. I am certain that every State knows now the school districts within its boundaries where the need is most critical. S. 287 provides that these most critical needs be met first out of whatever construction funds are allotted under the bill.

S. 287 places Federal responsibility for this program in the United States Office of Education. It directs that Office to work through State departments of education and prohibits Federal interference with State plans and programs.

With this general endorsement of S. 287, I wish now to direct the committee's attention to the amendment which I introduced on May 6 for Senators NEELY, MORSE, KERR, CHAVEZ, DOWNEY, TAYLOR, MCFARLAND, AIKEN, KILGORE, HILL, and myself. This amendment is designed to meet a special problem wherein the Federal responsibility is clearly demonstrable—a problem which has been created, or seriously aggravated, by activities of the Federal Government itself. I think I am safe in saying all the organizations and Senators who support S. 287 also support this amendment. By wording and intent, it is in harmony with the principles and pattern of the bill itself.

Let me review briefly evidence and circumstances which contributed to the introduction of this amendment. Toward the end of the second session of the Eightieth Congress, the House Public Works Committee requested the Federal Works Agency to conduct a Nation-wide survey to determine the extent to which Federal activity in particular school districts has created or seriously contributed to the inadequacy of school facilities. During the recess FWA, in cooperation with the United States Office of Education and State Departments of Public Instruction, conducted such a survey. Tabulation of results show that there are approximately 395 school districts in the Nation seriously overburdened by Federal activity within or near their boundaries.

It was further determined that the estimated cost of needed facilities on the part of these 395 schools totals approximately $350,000,000. As nearly as could be estimated $171,000,000 of this cost is legitimately attributable to Federal activities. FWA estimated from the facts at hand that the school districts themselves could raise approximately $212,000,000, leaving a balance of $136,000,000 which would have to be obtained from outside sources.

I might say in passing that the validity of this survey has been questioned by a number of people. I have done some personal checking on facts and am convinced that the survey does present—if not an accurate picture—at least a workable indication of the impact of Federal activities upon those school districts in the States which responded to FWA's request for information.

Based on the facts developed by the survey and on requests of many affected districts in the State of Washington, I introduced S. 834. For similar reasons Senators KERR, CHAVEZ, DOWNEY, TAYLOR, MORSE, MCFARLAND, and HILL joined me in sponsoring that bill. After the bill was introduced, individuals and organizations supporting S. 287—including our State superintendent, Pearl Wanamaker—came to me with constructive criticisms of the pattern of Federal aid incorporated in S. 834. They expressed the conviction that this emergency program should be synchronized with long-range Federal aid legislation. I and other cosponsors came to the conclusion that we could and should bring this phase of Federal responsibility into harmony with permanent legislation you now have before you. I believe we have accomplished this objective in the amendment to S. 287, about which I am now speaking.

The amendment provides that in the first fiscal year $65,000,000 of the funds which become available under the act shall be set aside for use by the Commissioner of Education in assisting school districts overburdened by Federal activity. The remainder of the funds appropriated in the first year would be available for allotment to the States under the regular formula provided in the bill. The Commissioner would use the $65,000,000 for grants to school districts where he determines that the Federal Government itself is wholly or partially responsible for the acute shortage of school facilities. The amount of the grant in each case would be proportionate to the Federal responsibility "as determined by the Commissioner in cooperation with the State agency responsible for administering or supervising public elementary, and secondary school education, the responsible officials of school districts involved, and the Federal department or establishment whose activities created or aggravated the shortage of school facilities."

S. 287—I'm speaking of the substitute introduced on May 6—requires that State allotments made for the first fiscal year in which funds become available shall be limited to critical projects. Therefore, those funds remaining after the $65,000,000 is deducted, will be allocated to the States on a formula basis, and the States would use these moneys to meet problems in those school districts where need is most critical. I have no doubt that the States themselves will find that some, if not all, of the critical projects are in school districts where activity of the Federal Government is heaviest. The combination, therefore, of my amendment and the provision of the bill itself, which I have referred to, will insure that most of the first year's funds appropriated under S. 287 will be utilized to construct facilities in those school districts where Federal responsibility is most clearly demonstrable.

Since the Federal Government is extending, under the bill and amendment, financial aid to the States for school construction, I think it reasonable to require that maximum attention be given to school districts where the Federal Government itself has the greatest responsibility. As the initial emergencies are met, the program envisioned by S. 287 would begin to operate on a straight-formula basis.

I think I can demonstrate in another way the justification for placing in the Commissioner's hands $65,000,000 for use in the first year without regard to the formula. The FWA survey in the State of Washington was well done. The Agency had the full cooperation of the State Department of Public Instruction and the school districts involved. There are 34 schools in the State seriously affected by activities of the Federal Government. Collectively these districts need additional facilities at an estimated cost of $48,562,000. Taking into account State matching funds, special levies and additional bonding capacity, these districts could raise $38,254,000. This leaves a balance of over $10,000,000 required from the Federal Government. This sum does not cover the full Federal responsibility as estimated by FWA, but it does represent the difference to the school districts involved, between going ahead with needed construction or continuing present wholly inadequate arrangements.

If the formula contained in S. 287 were applied to the total funds authorized in the bill, our allotment would be roughly $2,500,000. My amendment will enable the Commissioner of Education to dip into the $65,000,000 exempted from the formula, to the extent he determines necessary to make up the difference—or to meet the Federal responsibility in these districts.

Before I close I would like to present to the committee a few examples which demonstrate the problem activities of the Federal Government have created in certain school districts. I think I can best do this by quoting from a few of the letters I have received from school districts in Washington State. I quote first from a letter written by Mr. E. S. Black, superintendent of Kennewick public schools. Kennewick is a city in Washington, located about 10 miles from the Atomic

Energy Commission's town of Richland. Mr. Black states:

"While Kennewick was enjoying a normal growth of approximately 5 percent a year, the influx of atomic workers has brought into the community a surplus student load of 546 students whose parents are primarily doing service or concessionaire work for the Atomic Energy Commission's employees, plus 1,637 students whose parents are on the Hanford pay roll. Our enrollment in 1943 was 772. The normal growth from 1943 to 1949 would have added 240 students, for a total of 1,012. Enrollment in 1949 is 3,195. The difference—2,183—represents the increase we have experienced as a direct result of Federal activity in and adjacent to our district."

I have next an excerpt from a letter written by Ralph J. Werthmann, principal, Whitstran School District, No. 36, Benton County, Wash. This is what he says:

"We have a serious educational problem here. In fact the situation has become so extreme it is just a question of time as to how long we can continue school.

"In 1909 our present school was built, a two-room school that has been adequate, with the emergency measures we could manage, until the present time. Up until 1942 the school was sufficient. The population continued growing, an annex was added. Population continued normally until 1944. That year the Hanford expansion began showing in our school. All that year population increased abnormally. In 1945 Hanford practically doubled and our attendance jumped from 40 pupils in 1942 to 90 in 1945. We were crowded at that time, but supposed, as did everyone else, that the extreme increase had ceased with the termination of hostilities.

"In 1946, however, production started again at Hanford, with the result that when school started in 1947 we opened doors to 92 students in spite of the fact that the seventh and eighth grades were sent to Prosser. Fortunately, that summer we had erected two quonset huts. Immediately they were bisected, an extra teacher was hired. Even that wasn't sufficient, another teacher had to be hired. The situation was once again under control.

"This past summer we couldn't do anything, we had no funds. September came and we opened our doors to 150 pupils, and there seems to be no relief from increase in the years to come."

This is a small school district. Its resources are limited. Without Federal aid commensurate with the additional load thrown upon it, the school board and citizens cannot hope to provide even semiadequate facilities for the children they serve.

In considering the question of Federal aid to school districts, the question is inevitably and appropriately asked: "What effort are the local people themselves making to meet the problem?" I assure the members of this committee, the schools I am talking about are doing everything within legal limits to raise funds for needed construction. Typical of this effort is the statement by Mr. D. W. Buchanan, superintendent of Bainbridge Island Public Schools at Winslow, Wash. He says:

"Just as a reminder of the effort being put forth by the local district, we are bonded to the legal limit, had a special building fund levy of 20 mills in 1948, 28 mills in 1949, and have already voted a 28-mill levy for 1950. This means that we have had a total tax levy in 1948 for school purposes of 33 mills, and 41 mills for 1949, and millage already voted which will make a total levy of 41 mills for 1950."

Let me give you just one more example to illustrate the deep concern of a community itself over this problem of school facilities and its willingness to put forth extraordinary effort to finance a minimum program. I refer now to a letter from Mr. Carl G. Johnson, superintendent of consolidated schools at Battle Ground, Wash. He says:

"Ours is perhaps a typical rather than an extreme case of war and defense disrupted school districts. Though our total valuation is only slightly over $2,000,000, we have had to absorb a war-incurred enrollment increase of from 990 to over 1,700. Federal assistance for maintenance and operation, which you have consistently supported, has made it possible for us to keep the schools in operation, but the question of providing added facilities for this increased enrollment has proved a serious one, a burden that has fallen heavily upon the small farms and businesses that comprise this district. Twice within the last 4 years the voters have bonded themselves to the legal limit in addition to recently voting a 30-mill special levy in an effort to provide additional classrooms and educational facilities for the children that have been brought into the district because of the war-born influx of defense workers. It is reasonable to conclude that the residents of the district have shown a willingness to do their share; but it is also reasonable to assume that we have about reached the limit of local financing.

"Meantime, our most serious concern is to house nearly 1,000 junior and senior high-school students who are being jammed into a building intended for only 500."

I have in my files information on each of the 34 schools in the State of Washington where Federal activity is heavy. I think examples I have given you, however, illustrate the problem. The Federal Government would be derelict in its responsibility if it fails to shoulder its fair share of this problem load.

Generally speaking, Federal responsibility arises from two separate types of Federal activity in or near a school district: In the first instance, additional population brought into the area with a resultant drastic increase in enrollment. In the second, the Federal Government either holds or has recently acquired title to a substantial part of the taxable wealth of the district. I have in mind a case where the total property valuation in a Washington school district is approximately $7,000,000. During the war the Federal Government acquired and now holds on a tax-free basis property amounting to almost $5,000,000. Through this activity the Government itself has removed from the rolls over two-thirds of this school district's tax base. It is true that some new wealth may have been created as a result of the Government's presence in the district. In the main, however, the ability of the district to finance the additional school facilities needed has been seriously impaired.

Later, your committee will hear from school men themselves on this problem. In my judgment, you will not be able to hear their testimony without coming to the conclusion that financial aid from the Federal Government is imperative, and that, as a matter of simple justice to the school children affected, it should be immediately forthcoming.

S. 287 and my amendment will establish a sound, uniform Federal policy concerning extension of financial aid to States and districts for school construction. At the present time, there is no uniformity, no well-established policy on this important subject.

Some Federal agencies like the Atomic Energy Commission, the Navy, the Corps of Engineers, and the Bureau of Reclamation have authority to enter into cooperative agreements with school districts to provide both operating and construction aid. Among these agencies, however, there is a wide diversity of practice and legislative authority. Other agencies of the Federal Government have no statutory basis for extending aid. I will not go into this phase of the subject in detail—rather I refer the committee to a study made by Carl A. Quattlebaum, educational analyst for the Library of Congress. In his analysis entitled "Education of Children Living on Federal Reservations and in Localities Particularly Affected by Federal Activities," he outlines the confusion, nonuniformity, and, in certain instances, the downright disregard of Federal responsibility which now obtains.

In summary may I reiterate, S. 287 and the amendment I have discussed represent sound legislation in this field. Together they provide assistance to the States in making a Nation-wide inventory of construction needs. They insure that Federal responsibility to school districts seriously affected will be met and they establish a pattern of aid to the States which is in conformity with accepted constitutional and educational philosophy concerning the relationship of the Federal Government to the States in the field of education. I hope for early and favorable action by your committee.

Death of Theopholis Bond

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 9 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent editorial from the Memphis Press-Scimitar which eulogizes Theopholis Bond, of Madison, Ark.

Mr. Bond was a distinguished Negro citizen of St. Francis County, Ark. He had a very successful career both as a farmer and as a businessman. I should like particularly to call attention to the statement by Chancellor A. R. Hutchins who said, "He was one of the finest citizens I have ever known—a credit to his race, to his State, and to his country."

In addition, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Memphis Negro Chamber of Commerce at the time of Mr. Bond's death.

There being no objection, the editorial and resolution were ordered to be printed in the RECORD, as follows:

[From the Memphis (Tenn.) Press-Scimitar of April 29, 1949]

FIVE THOUSAND AT HIS FUNERAL

The life of Theopholis Bond was proof that by industry and integrity a Negro can attain both wealth and respect in the South.

Some 5,000 persons, white as well as Negro, attended his funeral Sunday.

Who was this man whose life drew tribute from both white and Negro citizens?

He was a farmer who had helped till 3,000 acres of Arkansas soil to help feed the Nation in war and peace throughout the many years of his life.

Of this man whose father was born in slavery, Chancellor A. R. Hutchins of St. Francis County, Ark., said:

"He was one of the finest citizens I have ever known—a credit to his race, to his State, and to his country."

UNIVERSITY OF MICHIGAN LIBRARIES

RESOLUTION READ BY REV. DE WITT T. ALCORN, EXECUTIVE SECRETARY OF THE MEMPHIS NEGRO CHAMBER OF COMMERCE ON SUNDAY, APRIL 24, 1949, AT MADISON, ARK.

The 150,000 colored people of the city of Memphis, through their Memphis Negro Chamber of Commerce express their deepest sorrow and sympathy in the passing of one of our best neighbors and friends, Theopholis Bond, at Madison, Ark., where he was born, reared, and died.

The Bond family first through the father, Mr. Scott Bond, who though born a slave, worked with courage, vision, and honesty to conquer the malaria-laden wilderness of St. Francis River Valley to make the foundations for fortune and service, and then through the sons, especially, Theopholis and Ulysses, who with diligence and sturdiness worked amidst the swelling tides of prosperity and the receding waves of flood and depression to establish and maintain a record of commercial and business success that vouchsafed worth in markets at home, at the seaports of America, in the markets of Liverpool and Manchester; and

Whereas Theopholis Bond, the senior partner of the two brothers, so long associated in the propagation of the farming and business interests, along with Ulysses Bond, the junior partner, and only living son of this remarkable American family, so epitomized and personalized the traditions of hardihood, of pioneering, of business integrity and sagacity, of courage and high endeavor, has passed to his eternal reward; and

Whereas his love for his native section caused him to spend all of his life here among the surrounding made sacred by struggle and achievement, when he might ease and comfort in other sections; and

Whereas his life was characterized by soberness and humility; and

Whereas the remarkable achievement of this man and this family is a testimonial not alone to the individual qualities of industry, initiative, intelligence, and faith, but also a testimonial to the validity and abiding genius and opportunities of the American system of free enterprise and democratic principles; and while we humbly surrender to the wisdom and will of our Heavenly Father, we are nevertheless deeply grieved with the passing of our friend, Theopholis Bond.

Therefore the Memphis Negro Chamber of Commerce expresses its profoundest sympathy to the family, Mr. and Mrs. Ulysses Bond, and other relatives and friends.

Respectfully,

LOUIS A. JOHNSON,
President.

DEWITT T. ALCORN,
Executive Secretary.

Board of Directors: A. M. Walker, chairman of the board of directors; Ben G. Olive, Jr.; Dr. J. E. Walker; A. W. Willis; Colorado B. Johnson, treasurer.

Mr. Giannini's Formula

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, June 9 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Giannini's Formula," published in the Philadelphia Inquirer of June 7, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. GIANNINI'S FORMULA

In the philosophy of A. P. Giannini, founder and president of the world's largest bank, individual effort, as opposed to dependence on government, was the cornerstone of personal success.

Mr. Giannini's life, which ended yesterday at San Mateo, Calif., spanned the period which witnessed the emergence of the conception of the welfare state and the willingness of increasing numbers of men and women to transfer from themselves to their Government responsibility for their security against want.

As many another man who started life in modest circumstances and rose to the heights, Mr. Giannini based his fabulous career on the sound, traditionally American conviction that real success could be achieved only by his own exertions. His advice to ambitious young men was that they pick a business they love, save $1,000 and invest it in that business, own their own homes, and know what they want to be doing a year from today.

The value of this formula cannot be overemphasized. No system of government ever was devised which made self-reliance an obsolete virtue.

Government Reorganization

REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. LOVRE. Mr. Speaker, I listened with extreme interest yesterday to the remarks of a few of our colleagues on the Reorganization Act of 1949, as proposed by the Hoover Commission. I attempted to gain recognition at that time because I just returned from my home State of South Dakota and know from personal contact what our people are thinking and demanding in connection with the reorganization of the executive branch of our Government, which has developed into a sprawling, wasteful, and inefficient bureaucracy, which no one understands and which is gradually sapping our economic strength to the point where the rank and file are losing confidence.

The Eightieth Congress recognized what these bureaucrats or termites were doing to our economy and made possible the Hoover Commission to correct this evil and unleash us from the stranglehold which is gradually but surely bringing America to her knees.

The Hoover Commission has provided the answer which if it is adopted by the Congress and perused honestly and diligently by the President and the Congress in the spirit in which it was written will save us from this cancerous self-destruction which surely will be our lot if we permit this galloping, sprawling bureaucracy to continue unchecked.

Every day that action is delayed on this proposal means one more day of wasteful and inefficient Government bureaucracy at the expense of the American taxpayer.

My people demand action now, not tomorrow. They demand action in 1949. They demand, and I concur, that this Congress stay in session continuously until the Reorganization Act of 1949 is passed and for a period of 60 days thereafter, thereby enabling the President to submit such proposals as he may desire, and I hope in line with the Hoover recommendations, and the Congress be permitted to act.

If we do not do this there will be no opportunity for savings and correction this year. If the Government is revamped along the lines recommended by the Hoover Commission it is estimated that between three and five billion dollars will be saved. Because of the decline in Treasury receipts and the general trend of business, I believe that it is imperative that we do everything we can to bring about savings at this time. If we do not, we will find ourselves in the middle of a swirling whirlpool of deficit spending which will only mean disaster. The best insurance against a depression is a means to save the taxpayers money. The Hoover Commission recommendations for reorganization point the way. I believe Congress should do what it can to help bring this about.

If we do not lend our support to this attempt to bring order out of confusion and thrift out of extravagance, this Eighty-first Congress will have failed in its obligation to the people and will rightfully deserve the name of a "do-nothing Congress."

Rehabilitation of Shipbuilding on the Pacific Coast

REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. WELCH of California. Mr. Speaker, the San Francisco Examiner, in an editorial of recent date, reiterates its insistent demand that justice be done the Pacific coast, in the interest of national defense, through the rehabilitation of shipbuilding in the Coastal States of California, Oregon, and Washington, and expresses the unanimous appeal of the press and people of the west coast that their fine shipyards, which cost the taxpayers of this country hundreds of millions of dollars, be not permitted to go to wrack and ruin as was the case after the First World War.

All eastern shipyards are loaded to their gunwales with work, whereas there is not one new ship under construction in any Pacific coast yard from San Diego to Seattle.

There are four main links in our chain of national defense—the Air Force, the Army, the Navy, and the merchant marine. All are interdependent upon each

other. In the absence of a reasonable number of operating shipyards on the Pacific coast our chain of national defense is weakened and inadequate.

The editorial follows:

A COLOSSAL BLUNDER

Representative RICHARD J. WELCH, of California, remarked in a recent report to his colleagues in Congress on west coast shipbuilding facilities that it would be a colossal blunder if these vital installations should fall into decay.

He reminded them that the prospect of this dire event was not remote but very imminent.

"Today and for some time past," said Mr. WELCH, "there has not been one new ship under construction on the entire Pacific coast from San Diego to Seattle, with the result that our splendid shipyards are again going to wrack and ruin."

Mr. WELCH used the word "again" advisedly, for the neglect and decline of American ship construction is not a new experience.

"From the close of the First World War until 1938," he recalled, "shipbuilding had absolutely ceased on the Pacific coast."

It was not until 2 years after the passage of the Merchant Marine Act of 1936 that amendments providing for negotiated contracts permitted resumption of west coast shipbuilding.

It was, indeed, fortunate that this action was taken even thus belatedly, for it was only for this reason that the United States had any merchant ships at all when the Second World War came.

And, although the available American merchant shipping at that time was woefully inadequate, at least it was a nucleus for the great maritime establishment ultimately developed under the impetus of war, and the revival of the maritime-construction industries was more readily achieved.

Nevertheless, as Representative WELCH emphasizes, the neglect and decline of the American merchant marine and the associated shipbuilding industries, particularly on the Pacific coast, was a costly experience between the two great wars, for this reason:

"It cost hundreds of millions of dollars to rehabilitate shipyards on the west coast to meet the requirements of the last war."

Unquestionably, the country got its money's worth out of the huge sums spent on west coast shipbuilding rehabilitation, for more than 43 percent of all ship construction during the war was on the Pacific coast.

And since the war was won in major part because of the maritime superiority ultimately achieved by the United States, the west coast shipyards obviously contributed to our vitcory in a most substantial and indispensable manner.

Obviously, this same result could have been achieved more easily and at less cost if the huge expense of rehabilitation had not been necessary, and if the shipyards had been permanently and adequately maintained.

It would surely seem that the tremendous cost of our past neglect of Pacific coast shipbuilding would be a guide to future national policy in that respect, for as Mr. WELCH comments:

"To again permit these shipyards to go into decay would be a colossal blunder for which, in an emergency, we would again pay dearly."

But it is painfully evident that we have not learned much from past costly experience.

So great has the neglect and decline of all American shipbuilding enterprise already been that even now the necessity for rehabilitation is acute and the cost of it would be tremendous.

If our national policy of neglect and decline in relation to the American merchant marine and ship construction is permitted to prevail until a future war becomes imminent or a reality, the process of rehabilitation will once more have to be undertaken without consideration of cost.

Representative WELCH earnestly and urgently warned Congress that "the security of this Nation makes it imperative that a reasonable number of shipyards be kept in operation in California, Oregon, and Washington," and our very recent and very costly national experience offers irrefutable proof of his contention.

Stream Pollution

REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, my distinguished colleague the gentleman from North Carolina [Mr. CHATHAM] and I have joined today in the introduction of a bill which we believe will greatly assist in the continuing fight against the pollution of our streams and rivers. The bill strikes at one of the major problems in the prevention of pollution—the elimination of industrial wastes.

The Congress recognized the seriousness of the over-all pollution problem and took a major step forward when it enacted the Water Pollution Control Act of 1948. Valuable as this law is, it fails, however, to meet squarely the major difficulty in the elimination of industrial wastes.

That act recognizes the importance of the industrial-waste problem by providing $1,000,000 a year for research and studies related to the prevention and control of industrial waste pollution, but it contains no provision getting to the heart of the industrial-waste problem—the economic difficulty encountered in the construction of pollution treatment facilities. We feel this bill will correct that defect.

Simply stated, the bill provides that industries installing pollution treatment works which comply with State pollution laws and which are found by the Surgeon General to be in aid of the Federal pollution program shall be permitted to amortize the cost of such facilities over a period of 5 years.

The basic reason for such accelerated amortization is the costliness and nonproductive nature of most pollution treatment works. The bill recognizes that most industries, anxious as they are to abate their own pollution, cannot afford, under present depreciation laws, the construction of expensive facilities and still maintain their competitive position. The bill permits these industries to write off the cost of those works at a faster rate than normal depreciation allowances will permit. Such special treatment is more than justified in view of Congress' declaration of war against the ravages of unbridled pollution.

We believe such a provision is manifestly in the public interest. We believe private industry will recognize in it the desire of the Federal Government to cooperate in the solution of this problem. We believe it will encourage them to take these costly steps toward the elimination of industrial waste.

This vast and complex problem can only be solved by wholehearted and intelligent cooperation between local governments, State governments, the Federal Government, private industry, and civic and conservation groups. This bill is a step toward that cooperation because it provides an incentive for private initiative. We believe it will receive unanimous support, not only from those interested in public health and in the conservation and preservation of wildlife and natural resources, but from industry itself.

Barnum Festival

REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. SADLAK. Mr. Speaker, a pageantry, festivity, and fun will reign high in Bridgeport, Conn., this week end, when that fair city re-creates anew the life and times of Phineas Taylor Barnum and the history of the circus he created. The Barnum festival will bring to mind the days when the city was "home" to the "Greatest Show on Earth." For it was in Bridgeport almost a century ago, that P. T. Barnum started his great institution, which until its removal to Sarasota, Fla., in 1927 brought cheer and laughter to millions and prosperity and fame to the city itself.

In commemorating Mr. Barnum, who was also the city's "first citizen" and its mayor, the people of Bridgeport are teeming with enthusiasm and spirit reminiscent of the great show itself. Here are some of the high lights of the week-long festival.

Friday afternoon, June 10, everyone will get in line for a real old New England clambake at Seaside Park, where a heroic-sized statue of Barnum gazes seaward. While the feast goes on, a torch bearer, after the style of the Olympians, will arrive and set a torch at the foot of the monument. Some of the finest barbershop quartets will harmonize at intervals during the bake. That evening, a Big-Top ball will be held in the armory high-lighted by the coronation of the Barnum king and queen. Block dances will be featured in other places of the city.

Saturday is fun day. The afternoon will witness a 14-division parade with 80 floats sandwiched in between bands and marchers. Evening entertainment will include a music festival at Fairfield University field.

Sunday afternoon will be family day. Sailing demonstrations and a

UNIVERSITY OF MICHIGAN LIBRARIES

Coast Guard air-sea rescue drill will keep some spectators entertained, while the Pageant of Nations and the Barnum Diary will be enacted at Beardsley Park. Later, the Ringling Brothers Barnum and Bailey band will blast out a preview of the mammoth circus which opens June 13 for a 2-day stand.

The big show will run two performances each day, Monday and Tuesday. The second show on Tuesday will end at 11 p. m. simultaneously with the closing of the progress exposition, which will be the grand finale to one of the greatest and grandest good-time efforts the city ever attempted.

The progress exposition, incidentally, will be open nightly at Pleasure Beach from 6 until 11 p. m. starting Thursday, June 9, and from 2 p. m. Saturday and Sunday. It will be in two divisions—the Industrial show, exhibiting Bridgeport manufacturers' wares and methods, and the Home show, embracing a model four-room home show, and innovations in home building and decoration.

All in all, it will be a festival of color and gaiety, fun and frolic, one which the city of Bridgeport would like to share with the rest of the country. A cordial invitation is extended to everyone to take part in the fun, to join the gala celebration, exposition, and jamboree honoring the memory of America's greatest showman and Connecticut's outstanding benefactor, Phineas Taylor Barnum.

Potato Program

REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. HILL. Mr. Speaker, I want to call the attention of the House to tables and certain information I am going to put in the RECORD. From this information and tables you will observe who is mostly to blame for the great surplus production of potatoes in the United States the past few years.

In 1948, 10 percent less acreage was planted to potatoes than the Department of Agriculture had set up as potato-acreage goals. In 1947 it was 15 percent less acreage. The potato growers seemed to know considerably more about potato production than the experts setting up goal acreages. It is time the Congress placed the responsibility where it belongs—not on the potato producers, but on those directing the program who are charged under the law with setting acreage goals.

The matter above referred to follows:

THE NATIONAL POTATO COUNCIL,
Washington, D. C., May 27, 1949.

Hon. STEPHEN PACE,
Chairman, Special Subcommittee, House Committee on Agriculture, Washington, D. C.

DEAR MR. PACE: The National Potato Council wishes to supplement its testimony of May 4, 1949, with this additional statement in order to meet the requests of the subcommittee chairman and the chairman of the full committee for more specific recommendations in regard to white potatoes in a long-range farm program.

The recommendations herein contained were agreed upon at two special meetings in Washington of representatives of potato farmers from virtually every major producing area in the Nation.

In studying the potato situation, these grower representatives were impressed by the tremendous voluntary reduction in potato acreage that has taken place since 1943.

TABLE 1.—*Potatoes: Planted acreage and decreases since 1943*

	Acreage planted	Decrease in acreage from 1943	Percent of decrease
	Thous. of acres	*Thous. of acres*	
1943	3,354.7		
1944	2,884.7	470.0	14
1945	2,765.7	589.0	17.5
1946	2,644.6	710.1	21
1947	2,135.5	1,219.2	36
1948	2,127.3	1,227.4	36.5

As you will note from table 1, potato farmers themselves have voluntarily reduced their acreage in each of the years from 1943 through 1948. This voluntary decrease in the last 5 years amounts to 36.5 percent, or approximately 1,227,000 acres.

It should be noted that this sharp voluntary decrease in acreage came in spite of the fact that during this period potatoes were supported at 90 percent of parity.

Increased per acre yields have offset, to a considerable degree, the more than one-third reduction in acreage, but, as a group, potato farmers have complied virtually 100 percent with the Department's acreage-goal program.

TABLE 2.—*Potatoes: Goal acres and planted acres, 1943–48*

Year	Goal 1,000 acres	Planted 1,000 acres	Over or under planted	Percent over or under planted
1943	3,260.1	3,354.7	+94.6	+3
1944	3,480.5	2,884.7	−595.8	−17
1945	3,137.4	2,765.7	−371.7	−12
1946	2,771.4	2,644.6	−126.8	−4.5
1947	2,517.0	2,135.5	−381.5	−15
1948	2,352.4	2,127.3	−225.1	−10

As you will note from table No. 2, the potato planted acreage in each of the last 5 years, 1944 through 1948, has not even equaled the national acreage recommended by the Department of Agriculture.

This means that potato growers, as a whole, have taken a double cut in their potato acreage in each of the 5 years, 1944–48. They have taken one reduction through compliance with the Department's acreage goal program, and a second voluntary reduction by underplanting, as a group, the total acreage that was actually allotted them.

For example, in 1947 the potato acreage goal was 2,517,000 acres, a reduction of 9 percent under the 1946 goal. Potato growers not only complied with the Department's reduction of 9 percent, but, of their own accord, underplanted their allotted acreage a further 15 percent. A similar example could be made for 1945, 1946, and 1948.

As has been pointed out, these decreases in acreage took place in spite of the 90 percent of parity price-support program which was designed specifically to encourage food production during the emergency years.

However, increased per acre yields, plus the falling off in consumption, brought about a situation where farmers were producing a surplus of potatoes on far fewer acres.

Growers themselves were prompt to recognize this situation and, in May 1948, recommended that changes be made in the potato price-support program.

Following these recommendations from the National Potato Council, the Secretary of Agriculture reduced the rate of the support price for potatoes from 90 to 60 percent of parity, and potato producers have accepted and are supporting this very sharp reduction in the support price.

The 60-percent price-support program became effective on the 1949 crop, which is now in various stages of production, depending upon seasonal activities in the early, intermediate, and late potato-growing areas.

The 60-percent price-support program is now on trial, and there is every indication that it will serve more as an insurance against price disaster than as an inducement for overproduction of potatoes.

So far as 1949 potato acreage is concerned, the 60-percent price-support program will apply to the lowest potato acreage in 70 years.

The Crop Reporting Board of the Department of Agriculture has estimated the 1949 acreage at 1,980,000 acres, a decrease of 7 percent from the 1948 planted acreage.

Consequently, the National Potato Council believes that reduction of the price support from 90 to 60 percent of parity has automatically removed the important factor which has contributed most to a surplus of potatoes—an unusually favorable price support.

A support level at only 60 percent of parity, in most States, lowers the price of potatoes under support approximately one-third. Noncomplying growers should have little interest in taking the risk of growing a costly crop like potatoes with such a low support.

The council would like to point out that in only three of the years since 1930 have potatoes been below 60 percent of parity (see table 3), and these 3 years, with other low-priced years, were disastrous to potato farmers.

TABLE 3

	USBAE average farm price received by farmers per bushel	United States parity price per bushel	USBAE average farm price received by farmers per hundredweight	United States parity price per hundredweight	Percent price received by farmers is of parity United States figures
1930	$0.91	$0.94	$1.51	$1.57	97
1931	.46	.81	.76	1.35	57
1932	.38	.72	.63	1.20	53
1933	.82	.83	1.37	1.38	99
1934	.45	.88	.75	1.47	51
1935	.59	.85	.98	1.41	69
1936	1.14	.91	1.90	1.51	125
1937	.53	.88	.88	1.47	60
1938	.56	.84	.92	1.40	67
1939	.70	.85	1.17	1.41	82
1940	.54	.87	.90	1.45	62
1941	.81	1.02	1.35	1.70	79
1942	1.17	1.13	1.95	1.88	104
1943	1.31	1.21	2.18	2.01	108
1944	1.50	1.24	2.50	2.07	120
1945	1.43	1.31	2.38	2.18	109
1946	1.24	1.36	2.07	2.27	91
1947	1.62	1.67	2.70	2.78	97
1948	1.54	1.83	2.57	3.05	84

Percentage of parity received: 1930–34 average, 71.4; 1935–39 average, 80.5; 1940–44 average, 94.6; average, 19 years, 1930–48, 84.9; highest 5-year average, 1942–46, 106.4.

For these reasons, the National Potato Council feels that support at 60 percent of

parity, which is now on trial with the 1949 crop, will take care of most of our surplus production problems, if given time to prove itself.

If a fair trial of the 60 percent price-support program should fail to reduce sharply the cost of the program to the Government, potato growers will unite in urging a stronger restrictive program to the Congress, just as they led the way in asking a lowered-support program.

In the meantime, the National Potato Council recommends that Congress enact legislation instructing the Secretary of Agriculture to apportion potato production goals to the several States on the following basis:

The national production goal for potatoes shall be apportioned each year by the Secretary of Agriculture among the several States in proportion to the 1949 production goal of potatoes which was established for each State, provided:

1. That 1 percent of the national production goal in 1950 and one-half of 1 percent of the national production goal in subsequent crop years shall be set aside each year and shall be issued annually by the Secretary to new growers, new areas, or for the purpose of correcting any inequities in the distribution of acreage among States.

2. That, beginning with the crop year of 1950, the definition of a commercial potato farm shall be changed from 3 acres or more to 1 acre or more of potatoes, and the base acreage for the purpose of establishing goals for growers planting one to 2.9 acres of potatoes shall be the planted acreage in 1949.

3. That, unless there is an increase in the national production goal from the preceding year, the commercial acreage goal for each State shall be limited to not more than the average planted commercial acreage during the most recent 2-year period, adjusted for nonplantings due to disaster, provided the State planted less than 90 percent of its commercial acreage goal during the preceding year.

This proposed legislation would write into the law a base period for the determination of commercial potato production goals for each of the potato producing States. It would set aside a small specified percentage of acreage to be allocated by the Secretary. It would define a commercial potato farm, and provide limitations in States where the allotted acreage is not planted.

Legislation of this type would limit the scope of administrative discretion by the Department in the future apportionment of goals. Other factors in determining State production goals, such as determining national requirements, determination of yields, and the handling of noncommercial acreage, must necessarily be subject to administrative control in order to reflect current conditions. The National P.tato Council respectfully urges that the above recommended changes in the law be made by the Congress.

Respectfully yours,

JOHN C. BROOME,
Secretary, Southeastern Potato Committee, Elizabeth City, N. C.; Chairman, Special Legislative Committee, National Potato Council.

W. M. CASE,
Executive Secretary, Red River Valley Potato Growers Association, Grand Forks, N. Dak.

CLIFFORD G. MCINTIRE,
Assistant General Manager, Maine Potato Growers, Inc., Presque Isle, Maine.

JOHN J. PETERS,
Potato Grower, Shafter, Calif.

FAVOR H. SMITH,
Executive Secretary, Long Island Agricultural Council, Riverhead, Long Island, N. Y.

Newspapers on CVA

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. MITCHELL. Mr. Speaker, a pertinent explanation as to why some of our local newspapers are opposed to CVA is contained in an editorial in the May 12 issue of Western News, Hamilton, Mont., published by Mr. Miles Romney. The institutional advertising campaigns against CVA, MVA, and public power, conducted by private utilities and charged to consumers of electricity, provide considerable revenues to newspapers and a corresponding influence on their views, according to Mr. Romney.

A resident of my district who criticizes the Seattle Times editorial policy on CVA has some very good advice for the Times in a letter which, though written in a humorous vein, points up the serious shortcomings of newspaper editorials which deal in slogans rather than in careful analysis of important public issues.

I include with these remarks a portion of the editorial in the Western News and a letter to the Seattle Times by Mr. Stanley J. Erickson.

[From the Western News, Hamilton, Mont., May 12, 1949]

SKELETONS COME OUT OF THE CLOSETS

The outright purchase of publications, as was the case in Illinois, is no more injurious to the public than the circuitous method, indulged in by some special privileged interests, such as the private electric-power monopoly. For a number of years in Montana, for example, the Montana Power Co. has been running a series of institutional advertisements in most Montana newspapers. These advertisements are not designed to sell electrical energy or gadgets, etc.; in fact, the Montana Power Co. has in some instances—as in the case of heating homes with electricity—discouraged the use of electrical energy. These advertisements have often garbled the sacred truth. They have persistently misled newspaper readers concerning the truth about the TVA and similar public-power programs. I figure that the annual campaign in a normal Montana weekly newspaper aggregates some 1,040 inches of display advertising per year at a cost of in excess of $500 per paper—all for propaganda purposes, not for selling the public a gadget or a nonexistent kilowatt. Taking the one-hundred-odd newspapers in Montana, some of which no doubt charged more than the 49-cents-per-inch figure used in computing above, and applying that low figure, we arrive at a cost of some $50,000 per year that the Montana Power is expending for the purposes noted above. I know personally that among the newspapermen of Montana there are many of talent and I am convinced there would be few, if any, of them who would ever accept an outright bribe, but I am not unmindful that the pocketbook nerve is the most sensitive nerve in the human anatomy, and I have observed that few Montana newspapers are advocating CVA or MVA or the proponents of the public-power program which can, and will, in the days to come mean as much to the Northwest and to the Missouri Valley States, as has the TVA meant to the seven States of the Tennessee region. I have also noted that publications which are against CVA, MVA, or public power, or are at least quiescent on the subject, receive Montana Power Co. advertising, whilst those few among us who favor public power and development of the regions through MVA and CVA, receive no Montana Power Co. advertising. This, of course, is pure coincidence, and has no bearing on the matter at hand. For 2 years the Western News received Montana Power Co. advertising. Then, when the policy of the Western News continued to be favorable to public power, the advertising of the Montana Power Co. was withdrawn from this publication. This, of course, is plainly coincidental, with the discovery that it is good business to run such institutional advertising in 98 percent of Montana's newspapers who are good and bad business to run such advertising in papers which—well, I'll leave that up to the gentle reader.

Have you noticed there is no pro-CVA advertising? You ratepayers are not being forced to pay for it, either.

In Illinois the taxpayers paid for the discoloration of news in the corrupted press. In Montana the rate payers of the Montana Power Co. are paying for the "institutional" advertising campaigns of that utility monopoly because advertising costs are taken from the gross receipts as a business expense by utility corporations, before their net allowed by the Montana Public Service Commission is figured upon a valuation basis which for rate-making purposes is approximately twice that which it is for taxpaying purposes. I guess the other Montana taxpayers are paying as well as the rate payers. I also hazard the viewpoint that perhaps we of the Treasure State need not travel to Illinois to view with dismay the peculiar peccadilloes of the press.

GIVE US CAREFUL ANALYSIS

BREMERTON, WASH., *April 3, 1949.*
EDITOR, THE SEATTLE TIMES,
Seattle, Wash.:

Permit me to contribute some observations and a suggestion relative to your editorial treatment of the CVA issue and your exchange of views on the subject with Congressman HUGH MITCHELL. When Congressman MITCHELL complained that certain declarations antagonistic to the President's CVA program were "outside the bounds of propriety," he was referring, in part, to those all-inclusive, either-or, nothing-proved, and logic-skipping platitudes and generalizations that are beclouding the CVA issue.

In his article the Congressman specifically pointed to an editorial appearing in your Sunday edition a fortnight or so ago, which consisted merely of citing a dozen leaders and organizations who have either released statements that they are against a CVA or who have invoked the twin maledictions of socialism or dictatorship upon the idea.

Now I submit, and I am sure that I am not alone among your readers in this belief, that mere denunciations from the mouths of councils and governors, or from the pens of great editors that a CVA means Federal dictatorship do not produce the effect evidently intended; when you likewise editorialize thusly, your readers, instead of rushing home to board up the bastion against the onslaughts of the collectivists, only stifle tired yawns. And when you seek to influence us by warning that no less authorities than the Seattle Chamber of Commerce, the seasonal get-together of the region's State Governors, and the Pacific Northwest Association of Dill Pickle Processors have all overwhelmingly balloted against the idea, and you thus attempt to impress us on this basis alone that the Authority would be an evil thing, I am sorry to inform you that some of your readers put down your paper, escape to the radio and seek more profound truths in such items as the one hundred and eighth episode of the story of

UNIVERSITY OF MICHIGAN LIBRARIES

Madeline Muddlesex—one woman's love for two men.

My suggestion to you is this: instead of only quoting dubious welders of public opinion on the subject, give us some serious and objective analysis of the issue—not merely generalizations and conclusions. Now that the CVA bill is about to be introduced into Congress, a splendid opportunity will confront you to do something unique and outstanding in these days of lazy boiler-plate journalism—a thorough job of objective reporting and inductive analysis on the subject. I do not think this is asking too much of you. I am sure that hidden in your editorial room is any amount of latent talent just waiting for the chance to do such a job of research; I have heard that such clear-eyed pundits from your paper are often seen in public, at the Press Club crying into their milkshakes and chewing their nails in frustration after a strenuous day battling the words socialism and dictatorship back and forth over your editorial page.

Please give one of these young men his chance; you may be amazed at the scholarship that may turn up and this is the stuff that Pulitzer prizes are made of. And after reading and printing his findings you are still convinced (who knows, maybe we will become convinced too) that the CVA is a supergovernmental socialistic monster, why bless you sir, and the more power then, to your mighty pen, press, and editorial.

STANLEY J. ERICKSON.

Pacific Northwest Trade Association Stand on CVA

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a portion of a letter containing my reply to the Pacific Northwest Trade Association concerning its negative attitude toward the proposed CVA.

MAY 24, 1949.

Mr. D. C. KNAPP,
Executive Secretary, Pacific Northwest Trade Association, Seattle, Wash.

DEAR MR. KNAPP: * * * I wish to express the frank opinion that the constructive work of the Pacific Northwest Trade Association is vitiated to a considerable extent by the poor advice it has received regarding the proposed Columbia Valley Administration. In the statement of facts, principles, and recommendations unanimously adopted by the association appear some misstatements of fact and some recommendations not in accord with the facts.

The statement purporting to describe the proposed CVA is rife with prejudicial comments, for example, that the CVA Board will have "broad, conclusive powers to dictate decisions regarding the economy of the region." The following appraisal also is included:

"The Federal Authority has the dubious advantage of possessing the final authority to crack the whip and compel compliance, so essential in making quick and essential decisions. But it smacks of totalitarianism and injects exclusive Federal control when voluntary cooperation as between sovereign states and a Federal government is more in keeping with our democratic tradition."

A careful reading of the CVA bill and a little reflection on the nature of our governmental system will hardly support the emotional criticism of CVA expressed in the above-quoted paragraph. Congress doesn't abdicate its functions under the CVA and the extent to which the Federal Government exercises control is determined by the matters properly within its jurisdiction, as sanctioned by the courts of the land. Why a CVA operating in the Columbia Valley region would be less in accord with democratic tradition than the Bureau of Reclamation and the Corps of Engineers, with their far-flung responsibilities in a score or more of States and their important decisions made 3,000 miles from the field of operations in the Pacific Northwest is a question which is not answered in the statement of the association.

The adoption of the interagency procedure for the coordination of Columbia River development is recommended by the association partly on the ground that it "is working successfully on the Missouri River Basin." The chairman of the task force on natural resources of the Hoover Commission, in an article in the May 14 issue of the Saturday Evening Post entitled "The Battle That Squanders Billions," wrote: "The most shameful example of piecemeal planning, wasteful competition, and political compromising on the part of both the engineers and reclamation is the Missouri Basin story." The task force has amply documented this story, and consequently I am surprised to read the following statement of the association: "The procedure here suggested is in line with, and makes use of the same machinery of Government as is now being recommended by the Hoover Commission on organization of the executive branch of the Government for river basin development." The Hoover Commission, quoting with approval many of the findings of its task force on natural resources, recommended that the river development work of the Corps of Engineers and the Bureau of Reclamation be consolidated. The proposed CVA does likewise, with the important difference that the work of river development under CVA would be oriented within the region rather than in Washington, D. C.

The role of the interagency committees in this field appears to be misunderstood by the association. The Columbia Basin interagency committee has no statutory authorization, appropriation, or regular staff. Each component agency has absolute veto power. The interagency committee cannot follow up its recommendations to Congress with budgetary requests. In general, such committees, as the task force noted, "have failed to solve any important aspect of the problem * * * because the dominant members, the Corps and the Bureau, have been unwilling to permit interagency committees to settle their differences. The result has been neglect or avoidance by the committee of virtually all major areas of interagency conflict, and concentration instead on technical studies and publicity."

The association refers to a recent agreement between the Corps of Engineers and the Bureau of Reclamation purporting to iron out the differences in their respective reports on Columbia River development. I call your attention to the fact that Secretary of Interior Krug, as one of the signatories to the agreement, advised the Commissioner of Reclamation on May 6 as follows:

"Despite the excellence of these reports, I do not believe, however, that they present as effective a plan for accomplishing and administering a comprehensive program of resource development as that proposed by the President in his recommendation for the establishment of a Columbia Valley Administration. This recommendation has my whole-hearted approval and support.

"Accordingly, my approval of your report is not to be construed as implying that it is a satisfactory substitute for a Columbia Valley Administration."

It is my sincere hope that the association will reconsider its statement and recommendations on Columbia River development and make a more realistic appraisal of the proposed CVA legislation. The enactment of this legislation can be of enormous benefit to our region, and industry and trade groups stand to gain along with the people generally.

Sincerely yours,

HUGH B. MITCHELL.

The Anatomy of a Lobby

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. WALSH. Mr. Speaker, a revealing picture of the false-front grass roots lobby being conducted by the American Medical Association against President Truman's health-insurance program is carried in the May issue of the Progressive. Because it may be of interest to Members of Congress who are feeling the effects of this lobby, I include the Progressive article in the CONGRESSIONAL RECORD.

THE ANATOMY OF A LOBBY

(By Nathan Robertson)

Until recently the railroads and the insurance companies were generally regarded to have the slickest and best organized lobbies in Washington. Both were powerful and effective because they could operate behind the scenes, without too much open activity in Washington. By turning on their propaganda faucets, they could pour into Washington a tremendous amount of pressure from back home—pressure which didn't seem to be inspired by any central directing propaganda agency.

But the American Medical Association now has them both beaten. It has taken their idea and improved upon it. The backbone of the AMA lobby is the 140,000 member doctors scattered throughout the country, most of whom have the highest standing in their communities, are in close touch with important people, and sooner or later are in touch with almost everybody.

This army of physicians has now been tightly organized into an efficient lobby by the AMA under the skilled direction of past masters in the game, the public relations firm of Whitaker & Baxter. It is armed with several million dollars contributed by the doctors themselves under the AMA's assessment of $25 a head.

The firm of Whitaker & Baxter, which has handled many such lobbying campaigns in the past against a whole series of progressive measures in California, has set up a general in every State who works through the State medical society and the 3,000 county societies organized throughout the country to keep the drive rolling. The propaganda themes are developed by Whitaker & Baxter and passed down to the doctors in every community through this distribution machine. The doctors feed it to their patients, to their local organizations and papers, and to their Congressmen.

Like that of the skillfully planned railroad and insurance lobbies, the aim of the AMA campaign is to make the resulting pressure on Congress seem like a grass roots revolt,

without directed inspiration of any kind. This is done by getting other people to front for the organized profession in applying pressure on the Congressmen. And at the heart of this program is the "scare" technique.

A doctor, talking to a patient, may quietly slip into his conversation a warning that if "socialized medicine" is adopted by the Government, he is going to stop practicing medicine. The patient, who has depended upon that doctor for years, is quickly alarmed and writes his Congressman an angry letter about "socialized medicine," although in most cases neither he nor the doctor could even give a rough outline of how the proposed national health insurance program would work.

Another doctor, who is one of the most popular members of the local Kiwanis Club, or chamber of commerce, arranges for a prominent speaker to tell that group how "socialized medicine" would lower the standards of medical care, create a tremendous bureaucracy, and perhaps wreck the Treasury. The alarmed club members rush through a resolution opposing socialized medicine and send it off to Washington.

Usually this club or group has never entertained the idea of hearing a speaker present the other side, to learn whether the "facts" it has been given are authentic. The speaker has been provided by old Dr. So-and-So, who is one of the finest guys in the world, and no one doubts that he is an authority on the subject.

If you want to know how little most doctors know about the terms of the bill, write to the Committee for the Nation's Health, Kellogg Building, Washington, D. C., and get material describing the legislation. Then try it out on your doctor. Agree with him that you are against "socialized medicine" and then start discussing a plan that you think he might like. Go through the provisions of the proposed national health insurance program [outlined in the February issue of the Progressive by Senator JAMES E. MURRAY, of Montana] and see if he doesn't think most of them are pretty good. You will be surprised how many thoughtful doctors will go for the program without realizing it is what they have been damning as "socialized medicine."

But this has nothing to do with the influence of doctors in their communities. They have more influence on this subject than anyone else in the community. Even in a debate, the public is likely to take the side of the doctor regardless of the merits of the argument—unless there is a doctor opposing him. And, of course, there are tragically few doctors who will stick their necks out unnecessarily to buck the AMA on this issue, even if they have grave misgivings about the position the powerful AMA has taken. A doctor who thinks maybe health insurance would be a good idea keeps quiet because he knows most of his colleagues feel otherwise and may begin to shun him if he talks too much.

I know a young, forward-looking doctor, who has set up practice in a new community as a specialist. He is dependent for business entirely on the good will of his fellow practitioners, who must send him his patients. He has just joined the local medical society. One of the first communications he received from the society was his bill for the $25 AMA assessment. He didn't want to pay it, but he did, with apologies to me because he knew how strongly I felt on the subject. But he explained, and I agreed with him, that he didn't have a chance in that community unless he paid the assessment.

Or take the case of a more prominent doctor—one who was well enough established to speak out. He was a professor of pediatrics at a State university. Early this year, this doctor joined with a group of 130 prominent doctors all over the country, headed by a noted physician at Johns Hopkins, in a public protest to the American Medical Association over the collection of the $3,500,000 lobby fund. They urged that the money be used by the AMA to work out a better medical system, rather than be spent on lobbying against the President's health program.

The AMA did not like this one bit. It cracked back at the group publicly in the sharpest terms. But it did its dirtiest work privately. The pediatrician, for instance, had been invited by a professor at the University of Arkansas to give a postgraduate lecture to practicing physicians at Little Rock on the subject of the feeding and immunization of babies. As a pediatrician, he was an expert in the field.

A few days after the public protest signed by the doctor and others was made public, the announcement of his forthcoming lecture was published in Arkansas. One of the leaders of the Arkansas Medical Society is a member of the AMA Committee handling the $3,500,000 propaganda campaign against the President's health program. Within a few days, the pediatrician got this letter, signed by the State Health Officer of Arkansas:

"DEAR DR. ———: This letter is being written to you as a result of a special request made by the Arkansas State Medical Society and the Pulaski County Medical Society, with reference to your appointment as a special consultant in pediatrics for the Arkansas State Board of Health for the postgraduate pediatrics course to be conducted at the University of Arkansas School of Medicine, Little Rock, during the period March 10 to 12, inclusive, 1949.

"The Arkansas State Medical Society and the Pulaski County Medical Society have been advised through authoritative sources that you were one of the 136 signers of certain papers and documents severely criticising the American Medical Association. Through this action on your part, the Arkansas State Medical Society and the Pulaski County Medical Society request that you not appear on the postgraduate pediatric course to be conducted on the above-referred-to dates.

"This department sincerely regrets that this most embarrassing situation has arisen and further regrets that it is necessary to cancel your appointment as special consultant for the Arkansas State Board of Health."

That is a profoundly disheartening commentary on the way the AMA is conducting its political campaign. That professor was saying, in effect, that because he exercised his right of free speech to protest an action by the AMA, he was barred from giving the public and the profession the benefit of his professional training and experience on a scientific subject.

This doctor did not even come out for the President's program. All he and his associates did in their protest was to object to the fact that the AMA, a professional and scientific society, was getting mixed up in politics—particularly in emphasizing a negative position without offering a constructive alternative. What would have happened to the doctor if he had publicly espoused the President's health program?

II

The AMA has sent a mission to Great Britain to study the medical-care program in operation there. Undoubtedly it will return with an unfavorable report because AMA propaganda about the failure of the British program has been backfiring. Too many independent journalists have reported just the opposite. The AMA is determined to attempt to repair the damage with its own special report.

The AMA will have difficulty, however, answering this report from the official British medical journal called Lancet:

"Both doctor and patient are pleased with their new and easier relationship. Before July 5 (when the plan went into effect) doctors were unhappily familiar with the words of the less well-to-do uninsured patient, 'I think I'll get along all right now, doctor,' meaning that the family wished to be spared further fees. This is ended. Patients are also gratified to observe that the new service is truly comprehensive. • • • Complaints are few."

Even tougher for the AMA to overcome will be this final observation by Lancet, in connection with the AMA's claim that the program was creating a nation of hypochondriacs: "Practitioners, whether in town or country, agree that they are making hardly any more, and sometimes fewer, visits than they usually do at this time of year. Every account agrees that frivolous complaints are no more common than before."

III

Now the means by which the AMA raises its funds is not so important as the uses to which the money is put. The whole story on that will not be known until there is a Senate lobby investigation. Much of the money is being used for distributing propaganda. Much is being used to train community speakers to flood organizations and newspapers with speeches against the President's legislation. Much probably will be used in advertising to soften up further the already overwhelmingly sympathetic press.

The firm of Whitaker & Baxter got its present assignment as a result of its success in beating similar legislation on a State basis in California. The firm was employed by the State medical society which financed the battle on a comparable assessment plan.

One of the most significant disclosures on the tactics of Whitaker & Baxter in defeating Gov. Earl Warren's medical program in California came from the doctors themselves.

Boasting of how his State medical association had crushed a health-insurance program sponsored by Republican Governor Warren, a spokesman for the organization recently told a national conference of medical society editors this story:

"We went to the California Newspaper Publishers' Association and said: 'Gentlemen, we are going to spend a lot of money with the newspapers. We are going to advertise in every one of the 700 papers in the State.'

"Each of the 700 newspapers received a minimum of 100 column inches of advertising in a period of 12 months. We found that the response from editors in publicity has been far beyond anything we expected when we started the campaign."

Whitaker and Baxter will have $3,500,000 to play around with for the AMA's national campaign. So don't be surprised if your paper blossoms out one of these bright spring days with a great blast against socialized medicine. The AMA lobby has mastered the technique of letting others front for it.

Kid Killers at the Wheel

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the REC-

UNIVERSITY OF MICHIGAN LIBRARIES

ORD, I include the following by Ralph Wallace from Collier's for May 28, 1949:

KID KILLERS AT THE WHEEL

(By Ralph Wallace)

Early one morning last fall a car careened around a curve on Indianapolis Boulevard in Hammond, Ind. For one paralyzed moment a gasoline truck driver saw a glare of headlights as the approaching machine bore down on him.

Then came the impact and an unearthly scream of steel on steel. Skulls burst against the automobile dashboard like overripe fruit. Blood gushed, lungs collapsed, bones snapped. Smothered hearts lurched into another beat and died.

The car ricocheted off the heavy truck, its left side ripping off and spewing bodies out through the torn steel like figures from some gory slaughterhouse. Other motorists could see it all too well. For, simultaneously, 8,000 gallons of gasoline in the ditched truck burst into glaring flame.

Even before the uninjured truck driver leaped from his cab, it was all over—all over except for extinguishing the fire; all over but police investigation, and the funeral bills for four dead persons.

Behind this terrifying tragedy lies a new form of mass murder and self-destruction known increasingly as "teenicide." Any driver under 25—insurance companies generally believe the recklessness of the teens extends to that age—is a potential teenicider. Illice L. Copeland, operator of the car in the Hammond accident, was 19 years old. What impulse or fault of immature judgment brought him speeding around the Hammond curve to death no one will ever know.

The appalling fact stands out that in many such teenicide accidents no one does know what causes them, even when there are survivors. Can 5-year-old Ila May Van Kampen of New Sharon, Iowa, tell what caused her 16-year-old sister, Helen, to lose control of the family car when it stalled on a hill last summer? One moment Ila May was looking serenely out of the window—the next, she was in a terrifying world of wet blackness, with a momentary wild threshing of limbs of her drowning companions. The car had rolled backward and overturned into a deep water-filled ditch. Somehow Ila May escaped through a partly opened window—but she could not tell what had caused Helen to lose control.

And neither could Helen. For, like five of her passengers, the four McMahon sisters (15-year-old Geraldine, 14-year-old Rowana, 12-year-old Ruth, 6-year-old Caroline) and their 15-year-old cousin, Mona McMahon, she was extremely dead.

Once every 2 minutes, day in, day out, some such teenicide accident will kill or maim a victim somewhere in the United States. In 1947 the figures spiraled to a shocking 7,500 dead for the under-25 group, with an estimated 275,000 injured. These figures represent 10 times more casualties than the United States suffered at Iwo Jima, or the British suffered in the bombing of Coventry.

In almost every case the Nation's automobile insurance companies have to foot the bills for these spine-chilling accidents. What do they think should be done? James S. Kemper, chairman of the Lumbermen's Mutual Casualty Co., one of the nine companies comprising the Kemper Insurance Group, and one of the largest insurance underwriters in the country, believes that only by changing the irresponsible attitude of youth can the present death and accident rate be cut.

"It is a simple statement of fact," Kemper told me recently, "that the 7,500 annual traffic deaths in the under-25 group each year exceed the death toll of the Johnstown flood, the San Francisco fire, and the sinking of the *Titanic* combined—and the majority of these traffic deaths are a direct result of the frivolous or careless attitudes of juvenile drivers.

"Even in terms of money, drivers under 25 probably cost the Nation almost as much as the $600,000,000 yearly cost of all fires. Parents must accept the major responsibility for this tragic situation."

Kemper was an early exponent of accident prevention. His company founded the Central Automobile Safety Committee more than 30 years ago to encourage better driving. He firmly believes—and the American Automobile Association and other insurance companies in general share the same belief—that the problem of irresponsible youthful motorists must be attacked on three general fronts.

First, youths must have sound educational programs, preferably in the schools, to teach better driving. Second, stricter police enforcement of traffic rules and stricter license requirements must be established (eight States, for example, still license 16-year-olds, and four States require no license at any age). Third, and most important, parents themselves should not only teach the technical points of good driving but should set an example themselves.

"The 18-year-old boy who sees his father or mother driving 50 miles per hour in a 40-mile zone—and getting away with it—can almost invariably be expected to drive 60 miles per hour under the same conditions from sheer youthful exuberance," Kemper says.

Just how bad are the records of youthful drivers? Out of 32,500 traffic deaths in the United States in 1947, the last year for which there are figures, nearly 25 percent of the victims were in the teenicide age range, although that doesn't show the mature drivers and pedestrians killed by the under-25 group. The pay-off is that scores of insurance companies have a fixed, appreciably higher premium if a driver under 25 is to operate the car. In fact, more than a year ago 40 States raised the premiums insurance companies were allowed to charge if anyone under 25 acted as driver. This was not mere whim, but a question of cold, deadly statistics.

A car in the hands of a teen-ager is, roughly, twice as dangerous as a car driven by a mature adult. The Inter-Industry Highway Safety Committee reports that the 16-20 age group is involved in 5 times as many accidents as the 45-50 group; and that 16-year-old drivers are involved in accidents 9 times more often than the 45-50 group, although both groups hold a proportionately small percentage of driving licenses. In brief, driving ability is directly related to maturity and judgment.

Yet it is also true that maturity and judgment in driving can be taught, just as politeness, algebra, or ballroom dancing can be taught. In cooperation with the American Automobile Association, for example, 11 of Cleveland's high schools several years ago instituted a safety course, using a fleet of 25 cars equipped with dual controls.

Besides classroom instruction, students obtained 6 hours of driving instruction and 18 hours of observation in cars driven by instructors. Roughly, 1,800 students took the course. Results? Checked against an almost equal number of students who failed to take the course, the trained students had only half as many accidents. The same ratio has proved true among the trained and the untrained high-school students at State College, Pa., and a number of other cities.

"Experience shows that casual driver training does not produce safe driving," Ned H. Dearborn, president of the National Safety Council, says. "Safe driving is a skill; it should be learned by thorough and organized instruction, plus actual behind-the-wheel experience under expert supervision."

The lamentable fact remains that out of 20,000 United States high schools, behind-the-wheel driving instruction has been conducted in only 600. Surveying 10,000 high-school students last year, the Chevrolet Motor Co. found that at St. Paul, Denver, Des Moines, Nashville, and Terre Haute "clowning" was rated as the chief cause of accidents, then speeding, "dreaming," and disregard of traffic signs, following in that order.

Clowning with a speeding motorcar, even to a 15-year-old, would seem to combine the mentality of a cobra and a cockroach. Yet in California and other parts of the West a new teen-age game involves piling half a dozen boys into a car, holding it to a speed of 60 miles per hour, and then releasing the steering wheel. The first one who touches the wheel or brake is—you've guessed it—"chicken." Compared to Russian roulette, which is played by having one bullet in the revolver and hoping it won't be in the chamber when you pull the trigger, "chicken" has the advantage in that if you win, you take your friends with you. This game has killed an estimated 30 in the past year.

A slightly less lunatic "sport" has three teen-agers crouching on the floor to operate clutch, brake, and accelerator at the command of the driver. This is known as "spider," not only for the obvious reason, but because the players may be squashed.

Around Chicago a commonplace is the "dip-thrill" ride: kids driving a car over a pronounced dip in the road at 60 miles per hour to get the thrill of a roller coaster. How many have been killed and injured as a result of this game no one knows, but last October 18-year-old Everett W. Jasper set something of a record by smashing his car so tightly under a freight train which was standing at a crossing that firemen had to use jacks to pry it out. Three were critically hurt, including Jasper, but by some miracle the other two were able to walk away.

A similar accident—although this time apparently "dreaming" was the cause—occurred not long ago in a southern city. Here a 17-year-old boy was driving several companions home from a sorority dance. Ahead, on an empty boulevard, other teen-agers who had bumped fenders had drifted to the center of the road to discuss the accident. They apparently were invisible to Jones and his companions. The toll? One dead. One amputated leg. One fractured jaw. One case of multiple fractures.

The father of the dead boy died of a heart attack when he heard the news.

What happened in a certain section of Greater Boston, however, in the late twenties takes the prize for teen-age motoring madness. Acting as if they had been injected with Gila-monster venom and a few syringes of Al Capone, a teen-age tribe suddenly sprang, motors bellowing, upon the town. They called themselves the Charlestown Loopers, Charlestown being a section of Greater Boston. All a kid had to do to achieve membership was steal a car and then hurtle it, lights out and horn blaring, at 60 to 70 miles per hour, up Bunker Hill Street to Sullivan Street, and then reverse the machine and roar back over the steep grades to the starting point.

The game was begun by a 16-year-old fugitive from the Lyman Reform School named James T. Sheehan. Sheehan went beyond endangering lives and stealing cars; he added paranoiac exhibitionism. With the rigid code of a participant in a duel, he phoned the police, sternly announced in advance his itinerary and dared them to stop him. Sheehan said he would make his appearances in

broad daylight in order to give the police officers more of a sporting chance.

Greater Boston had seen no excitement equaling Sheehan's mad exploit since the Boston Tea Party. Fourteen traffic-squad motorcycles, plus carload after carload of police, threw a cordon around the area and posted police at strategic points. This proved ineffectual. While thousands watched, Sheehan made several wild sorties in stolen cars up and down Bunker Hill Street on a Saturday, and repeated his performance four times on Sunday. Despite rifle and pistol shots and police blocks at intersections, Sheehan escaped. Later he gave himself up and was returned to the reformatory.

Sheehan's exploits encouraged teen-agers for nearly two decades. The behavior of succeeding loopers sounds like the record of a Chicago gang war: Four teen-agers kill a 22-year-old pedestrian and are sentenced to the reformatory. Three "teeniciders" kill two of their number in a Bunker Hill crash. Eighteen-year-old looper steals 11 cars and makes the dash over Bunker Hill 15 times before being caught. The climax of this activity, however, was probably reached in 1942 when Patrolman Martin Burke leaped into a doorway to escape a looper car which had crashed over the sidewalk. Burke could see no one in the machine. It was as if the car were being driven by spirits until he looked closer and saw a boy—fully 9 years old—crouched behind the wheel.

The loopers ran up an impressive aggregate of seven killed, scores injured, and uncounted property damage. Even long reformatory sentences for more than 100 youths—plus penitentiary terms in some cases—failed to halt them, although in recent years "looping" has become less prevalent.

SIX DIE ON ONE-WAY STREET

Throughout the Nation, blood spurts increasingly from the growing number of under-25 accidents. They are both sickening and appalling because they are so needless. What justification was there for the New York accident one night in the spring of 1948 when a young driver roared the wrong way up a one-way street near Queens Boulevard and crashed head on with a machine, killing a total of six? The driver of the wrong-way car—22-year-old Peter Motola, of Brooklyn—and his two female companions could neither justify nor explain their actions. For all were corpses before police arrived.

Sometimes, of course, the drivers can explain—like 17-year-old Nick Bianconi of Chicago Heights, Ill., arrested once and warned innumerable times for speeding. A few years ago Bianconi, in a noontime crush of traffic, speeded up crowded Sixteenth Street in Chicago Heights and killed 6-year-old Rosalie Klimas. Her body was knocked 50 feet through the air and rolled another 100 feet after it landed. Bianconi, meanwhile, skidded 135 feet and rammed into three parked cars.

What happened in court? Bianconi was sentenced to 60 days in jail for reckless driving.

Even a fragmentary sampling of such cases reads like a roll call of doom. In Milwaukee in a single day last fall, six teen-agers killed themselves in two accidents. In one they collided with a city bus, and in the other with a tree. In Highwood, a Chicago suburb, two babies were mangled when a car, being parked by a 16-year-old girl, slipped into gear and shot forward over the sidewalk, crumpling the infants' carriages. Such accidents can be counted not in the scores, or the hundreds, but in the tens of thousands.

POLICE MAKE A SAFETY DRIVE

Thus—blood-greased—the teenicide cars go. Meanwhile, scores of agencies—unfortunately uncoordinated—hammer at better driving habits for the young. In Los Angeles alone the city's police department, frantic over teenicide, has graduated 21,000 teen-agers from its juvenile traffic schools, and last year placed about 500 columns of safety articles in the local newspapers.

In Chicago, Lumbermen's Mutual Casualty Co. grinds out tons of safety literature and advertising annually, mainly aimed at teeniciders—a word, incidentally, which Lumbermen's created and used as a basis for a $2,000 prize contest among college newspapers last fall. The company also paid about a third of the expenses of Northwestern University's famed Traffic Institute, where policemen from all over the world are taught how to curb the more deadly manifestations of the teen-age group.

In Washington, D. C., the headquarters of the American Automobile Association is prepared to lend staff educators who will train high-school teachers in driver education. Similar programs and aid are offered by the following organizations: New York University's Center for Safety Education; the National Conservation Bureau, New York; the National Safety Council, Chicago. All are eager to help. If only all the school boards in towns and cities would vote for school-safety programs there seems little doubt that 3,500 lives in the under-25 group—not to mention $300,000,000 of property damage—could be saved each year.

Meanwhile, parents can try to teach their children to drive well—both by training and example, and by firmly suppressing the take-a-chance attitude which is nearly always due to youth's natural vitality and fearlessness.

If they don't, gallons of blood, a freight train full of brains—not to mention 7,500 funeral bills, personal tragedy and agony—will be largely on their heads.

Stock-Piling Purchases Urged To Help Metals Industries

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an article from the Salt Lake City Tribune by the Shift Boss:

STOCK-PILING PURCHASES URGED TO HELP METALS INDUSTRIES

(By the Shift Boss)

What has been puzzling domestic metal producers is why last year, when the demand for copper, lead, and zinc far exceeded the available supply; when consumers were paying up to 26 cents per pound for copper, 25 cents per pound for lead and 19 cents per pound for zinc, at a time when producers were trying to keep these prices at 23.5, 21.5, and 17.5 cents, respectively, the Munitions Board forced producers to set aside portions of output for national stock pile each month—all of which meant that 100,000 tons of copper and 70,000 tons each of lead and zinc bought by the Munitions Board forced these metal prices to their peaks.

The editor of Daily Metal Reporter, observing that the incomplete stock-piling program involves the contemplated acquisition of 120,000 tons of copper, 95,000 tons of lead, and 95,000 tons of zinc, asks the following pertinent question:

"If that is the program, why isn't the Government buying these metals now when they are going begging? The Munitions Board was not only willing, but anxious, to buy copper at 23.5 cents per pound. Now it is available at 18 cents per pound, a saving of 5.5 cents per pound and on 120,000 tons that means a saving of some $13,200,000. It can buy lead at 14 cents per pound, or 7.5 cents per pound below the price it paid previously and, on 95,000 tons that would have saved $14,250,000. The Board can now buy zinc at 12 cents per pound, 5.5 cents per pound below its postwar peak, at $10,500,000 cheaper than it would have had to pay several months ago.

"The Government apparently is so accustomed to thinking in terms of billions, that a saving of about $38,000,000 on the three metals alone is mere chicken feed. But to the metal industry, Government purchases for stock piling would come as a welcome relief if it were done now when metals are freely available, when the supply is in excess of what consuming industries need."

Pertinent question—pertinent comment.

Baltimore's Busiest Couple

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. BOLTON of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to present the following statement entitled "Baltimore's Busiest Couple":

BALTIMORE'S BUSIEST COUPLE

In the city of Baltimore on Station WCBM every day from 9 to 9:30 a. m., there is a program called Baltimore's Busiest Couple. I think that name is a gross understatement. The program is broadcast by Ian Ross MacFarlane and his charming wife, Louise. It is a homey program, devoted to subjects of interest to the housewife, and to current events. It is an extremely popular program and one of the things Mr. and Mrs. MacFarlane do is to invite any of their women listeners who would like to see the Congress in action, to write them and they will be given a free trip to Washington for that purpose. So, every week the MacFarlanes bring a group of women to Washington. Sometimes it is just one station-wagon load but on many occasions it has required several trips to Baltimore to bring all of one group to Washington. While talking to Mr. MacFarlane recently about these trips, I asked him why he did it. I think his answer is well worth repeating: "I am a foreign-born Scotsman; I have lived and worked abroad a great many years and I feel that I truly realize what a great blessing and godsend it is to be an American citizen. This is my way of expressing, in a small way, my appreciation of that great privilege. I want everyone to know and appreciate just what it really means to live in this great democracy and I am willing to contribute my time and what little it costs to help a small segment of Marylanders to learn a little more about their form of government. The experience has been a real pleasure to Mrs. MacFarlane and me and we hope to continue the program for some time to come. To date we have conducted 50 tours and brought 250 women to Washington." During the trip from Baltimore to Washington and on the return trip, Mr. MacFarlane delivers a talk on the Ameri-

UNIVERSITY OF MICHIGAN LIBRARIES

can Government, on the Maryland Legislature, and the current activities of the Baltimore City Council.

Everyone knows the time and study necessary to prepare a half-hour program on the radio every day, but one wonders how the young mother of two fine children finds the time to keep house, cook, and do all the other chores demanded of the modern mother and to still carry on this arduous task and, in addition thereto, gather news for the broadcast and act as chauffeur to her husband, whose sight was seriously impaired in World War II.

In addition to his work as a news commentator and broadcaster, Mr. MacFarlane is quite active in veteran affairs and has been largely responsible for the success of a business venture owned and operated by GI's. Mr. and Mrs. MacFarlane are both members of the Senate Radio Gallery and accredited White House correspondents.

This is truly the busiest couple in Maryland and the extent of the good they do by their program and these tours to Washington is truly immeasurable.

Would that we had more young couples like the MacFarlanes in America today.

The Stamp Nuisance

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. MICHENER. Mr. Speaker, I dare say few Members of Congress have not been importuned by individuals, community groups, or municipalities to secure the issuance of a postage stamp commemorating some outstanding event in which the petitioners are primarily interested. Most of these celebrations are noteworthy and steeped in American tradition. There was no difficulty in having one of these postage stamps issued a few years ago, because the requests were few and far between. Things have changed, and the thinking of the people has also changed.

Illustrative of this thinking and pursuant to permission given to me, I am including in these remarks an editorial from Adrian (Mich.) Daily Telegram of June 6, 1949, which reads as follows:

THE STAMP NUISANCE

Isn't it about time for the Government to stop—or at least curtail—the nonsense of a new postage stamp every couple of weeks?

Yes, every couple of weeks. That is literally correct, for in the 52 weeks of 1948 the United States actually put out 29 different new stamps. Some of them could be called proper and appropriate; some tolerable, many trivial, and even ridiculous. Anyway there were too many.

Nine of them were in honor of individuals—from Abraham Lincoln to Editor William A. White, Will Rogers, and the ladies who started the Girl Scouts and the memorial poppy idea.

Centennials got seven stamps, including several States, Fort Kearney, Nebr., and Fort Bliss, Tex. There were also stamps commemorating centennials of the Swedish pioneers, the Indian tribes of Oklahoma, the firemen of New York, and the American Turners (Turnverein) which has about 30,000 members. Another rather vague centennial was 100 years of progress of women, and still more vague was the centennial of the American poultry industry.

Among the rest were stamps for the Rough Riders, the Gold Star Mothers, Youth Month, and the Palomar Observatory.

If the Government is going to keep on filling stamp albums with new stamps every fortnight, there still are plenty of subjects. As regards individuals, there are at least a thousand as deserving as some that were commemorated last year. There still are numerous States and hundreds of towns and cities to have centennial anniversaries. If the Turnverein with 30,000 members should be honored, why not the Elks, the Eagles, and a dozen other fraternal groups? Why not the labor unions, the farm organizations, the veterans' organizations, and the retail druggists? And when it comes to issuing a special stamp for the poultry industry, why ignore hogs, cattle, lumber, oil, gas, coal, and a hundred or so of manufacturing industries?

The whole business is juvenile—not in good taste, not up to the dignity of the world's greatest nation. It is a nuisance for the postal people to keep track of so many new stamps—so confusing that in some cases letters get by with Christmas seals and other stickers.

The reform probably will have to start, not with the Post Office Department but with Congress. It isn't the Post Office Department that gets up all that flood of stamps; it regards them as a nuisance. It is Congressmen trying to win public applause in their States or districts, or trying to butter up some groups of voters like the Swedes, the Turners, or the poultry raisers. It all costs money, and it can't be so very important even to Members of Congress. Why can't they act grown-up and stop it?

Dedication of Theodore Roosevelt Park

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1949

Mr. LEMKE. Mr. Speaker, we just returned from dedicating the Theodore Roosevelt National Memorial Park—a park of some 70,000 acres of extreme beauty and charm. It has been estimated that there were between forty and fifty thousand people from many States and from Canada participating in this dedication.

Among the many distinguished guests was Secretary Krug of the Interior Department. He gave a splendid address, which I feel should be read by everyone who believes in national parks.

I, therefore, include in the extension of my remarks, the remarks of Senator YOUNG and myself and the address of Secretary Krug.

They are as follows:

Mr. YOUNG. Mr. Chairman and listeners on the air, today we dedicate a great park to an American immortal. But this day must not pass without fitting tribute to a man among us. The unflagging diligence and long-continued efforts of such men as Congressman WILLIAM LEMKE and a host of others have made possible this happy hour.

I have always believed that this brawny area of ours—these Bad Lands—this sweep of land—this kaleidoscope of blazing colors—shaped and colored the philosophy and personality of Teddy Roosevelt. Here about us is no placid landscape. It is a scene of vigor, and the Rough Rider was a man of vigor. We see no pale and timid shadings here nor was Roosevelt a pale philosopher, dabbling with impossible ideals. He was instead a man of action. Forthright. Bold—and with a breadth of view like the stretch of our horizon here.

This land stamped its personality indelibly upon him, as his personality was indelibly stamped on this country for all time to come.

Because he knew the West so well, he was among the first to see its possibilities. He was among the first to think in terms of soil conservation and of reclamation. He was among the first of our national leaders to look upon the West as more than an area to exploit. To him, it was a building site.

It is not difficult to understand why his administration saw the birth of the Bureau of Reclamation. We would not adorn the facts if we endowed him simply and concisely as the father of the principle of conservation and reclamation.

We have done well to heed his example on that score. We might have done well to have heeded him in every way. For we recall his masterful conception of a proper foreign policy for America. "Talk softly but carry a big stick," said Teddy Roosevelt, and sometimes since then we have shamefully yelled at the top of our voice, but carried a twig.

We think of Teddy Roosevelt as a son of North Dakota. Today, I can tell you that he thought of himself the same way. In possession of a North Dakota friend of mine in Washington is a letter from the late Teddy Roosevelt, Jr., who so tragically died in World War II.

The letter says, in part: "It was interesting to hear from a North Dakotan, for you know, that until the day of his death father always spoke of North Dakota as his home."

And on this day his love of North Dakota is made a part of posterity.

Mr. LEMKE. Mr. Chairman, friends, and listeners, we are gathered here today from all parts of North and South Dakota, Montana, Minnesota, and other States, and Canada. Among us are Members of the United States Senate and the House of Representatives.

We are here, representing the entire Nation, to participate in the dedication of the Theodore Roosevelt National Memorial Park. We are here not only to perpetuate the memory of one of our Presidents but to give renewed strength and courage to unborn generations to perpetuate the lofty ideals for which he stood.

It was here that Theodore Roosevelt spent 3 years as a rancher—as a cowpuncher. It was here that he regained his health and strength. It was here that he wrote many of his books. It was here that he laid the foundation for his future greatness.

It was here where he communed with nature and roamed among the scenic beauty of the park that we are today dedicating to his memory. It was here in the wide open spaces that he learned of the rugged honesty of the men of the West. It was here that he discharged one of his men who had attempted to rustle other ranchers' cattle. It was here that he used the words: "He who steals for me will steal from me."

It was from his associates here—from the cowboys with whom he was in daily contact—that years later he got the idea of the "Rough Riders." It was here among pioneers and adventurers that he got in touch with and

learned to understand the common people—the men and women who constitute the overwhelming majority of our Nation.

Years later, as ex-President, I heard him express that sentiment at Fargo in these words: "I never would have been President of these United States but for having lived in North Dakota." We feel that but for his having lived here the Nation would never have had a President of his energy, courage, and determination. The Nation would never have had a President that would have corrected some of the evils that had crept into our public life.

We would not have had a President that would have dared to defy corporated wealth and monopoly. It took real energy, strength, and courage to do that. Theodore Roosevelt got that strength, that vision, and courage here in the park that we are today dedicating to his memory. May this park be a constant reminder to future generations of the work and worth of former President Theodore Roosevelt.

This park is different from other national parks. It consists of some 70,000 acres of subdued and fantastic beauty. It is a park of amazing magnificence and constant surprises. Most of our national parks consist of mass grandeur. Most of them display their glamorous beauty above the horizon. The Theodore Roosevelt National Memorial Park is more modest. Its charm and beauty is below the horizon.

You do not know it is there until you are upon it. Then in place of looking up to admire its beauty, you look down upon what seems to be a sunken city of fantastic configurations of various forms and colors. For an instant you hold your breath in bewilderment, and then you determine that you are going to wander among these strange formations. You wonder what happened in ages gone by to produce such a strange and beautiful spot so different from the others you have seen.

Secretary Krug, to you, as the Secretary of the Interior and custodian of the national parks of the United States, it gives me great pleasure to present, on behalf of all the people of North Dakota, this beautiful park—the Theodore Roosevelt National Memorial Park. This is a perpetual playground for the present and unborn generations to visit and enjoy—a park for old and young to come and get the inspiration that made Theodore Roosevelt one of the great Presidents of this Nation.

Mr. Krug, it gives me double pleasure to present this park to you as the custodian for the United States, because I know the great work that you have done in recent years, in collaboration with Congress, and especially with the Public Lands Committee, in developing the West—in improving and establishing national parks for the enjoyment and health not only for our generation, but for future generations. I know the great impetus that you have given to further the development of irrigation and reclamation and the development of hydroelectric power for all the people.

Therefore, on behalf of the people of North Dakota, I present this park to the United States of America, into your custody, for the people of the United States to enjoy.

Mr. KRUG. Governor Aandahl, Congressman Lemke, Senator Young, distinguished guests, ladies, and gentlemen, it is a real privilege to join with you today in dedicating this park to the memory of Theodore Roosevelt, a great President, a great conservationist, and a great American. During his Presidency he made the administration of the natural wealth of this Nation the concern of all our people. Some of the influences which shaped his outlook came from his experiences among you.

Many memorials have been erected to our twenty-sixth President. But I am sure that none will serve better than this to commemorate his monumental contribution to the sound conservation of our natural resources.

It is not possible to name all of the persons who have so effectively fought to create this park during the last 20 years. The Greater North Dakota Association, the press of your State, your Senators and Congressmen have been encouraged, I am sure, by the rank and file of citizens in Billings and adjoining counties as well as by residents in neighboring States.

We in the Nation's Capital know that Congressman LEMKE is an ardent and forceful advocate of your interest in this park. Special recognition should also go to Mr. Russell Reid, Superintendent of North Dakota State Parks and the State Historical Society, whose leadership in State conservation work is outstanding.

Theodore Roosevelt believed his link with the Bad Lands of the Little Missouri a vital one in the chain of experience that led to his success. He often avowed his great debt to the West, particularly to its men and women. Once, he said he would never have been President had it not been for living in North Dakota and for his North Dakota experiences. In 1900, he told citizens of Medora that while he had studied intensively, it was only when he came here that he began "to know anything or measure men rightly."

Mingling with the pioneers and building a new settlement on the range gave him an insight into the real functioning of democracy not to be found in books or in lecture halls. Here he stepped down from the isolated peaks of philosophical abstraction. Here he found democracy in all the glory and vigor of its youth—on the round-up, in the hunt, and in his associations with the stockmen. Here he found a wilderness laboratory where he could observe nature in her original design. Here, also, he saw an example of the extravagant waste that for many decades had accompanied the exploitation of our material resources.

The little Missouri country was rudely awakened in the 1880's by the coming of the railroad. Quickly the hunters all but exterminated the grizzly bear, the elk, the buffalo, and the mountain sheep that roamed the region. The longhorns and mixed-blood stock left little room for the antelope and deer.

Then drought, low prices, followed by the severe winter of 1886–87 brought disaster to the open-range industry. Theodore Roosevelt, too, counted his losses. The gruesome scene was as disheartening for him as for everyone else. Nevertheless, he continued his ranching operations and returned at intervals to Elkhorn when seeking respite from his public duties.

The disaster here forcefully dramatized one aspect of our history—that our forests and agricultural lands are not inexhaustible. He became a fervent conservationist. Therefore, this year, when we are observing the one hundredth anniversary of the Department of the Interior, the dedication of a memorial to Theodore Roosevelt is most fitting.

The Department's centennial is of importance to all the Nation, for Interior is the custodian of the largest part of our mutually owned material wealth—resources which are vital to our future welfare. Preservation of the resources that God placed here for all our people was not and is not always a popular Government policy. In 1852, 3 years after the Department was founded, a Delegate to Congress from one of the Territories, said: "The Government has watched its public domain with jealous eye, and there are now enactments upon your statute books, aimed at trespassers upon it, which ought to be expunged as a disgrace to the country and the nineteenth century. Especially is he pursued with unrelenting severity, who has dared break the silence of the primeval forest by blows of the American ax." Some years later another westerner argued the affirmative in a community debate on the question "*Resolved*, That timber stealing is morally right."

A false tradition lingered on that the exploitation of the public domain for individual benefit, on a first-come first-served basis, was the sound American way and added to the aggregate wealth of the Nation. But, gradually, laws for the protection of our resources were made effective. During our century, and particularly beginning with the administration of Theodore Roosevelt, the conception of public responsibility for the public domain has changed. It is no longer something merely to be sold or given away; it is now a tremendously valuable national inheritance to be husbanded and prudently managed for the continued support of our economy and our material well-being.

We have drawn heavily and extravagantly upon our resources in building a nation and in winning titanic world conflicts. We are still a rich nation. Yet, if we are to maintain the peace in an uncertain world—help other nations, feed our own hungry industrial machine, keep improving our standard of living, and support the ideals and institutions which guarantee our way of life—if we are to do these, then full and efficient use of our natural resources is mandatory.

To this full and efficient use, the States of the Missouri Valley can contribute vastly. Farm production can be increased by adding to the valley's irrigated lands and by providing additional water where light rainfall makes the yield of cultivated lands uncertain. Industrial productivity can be accelerated and the domestic work load on the farm greatly eased by more hydroelectric power. Grasslands, forests, and streams can contribute more efficiently to our present needs and enjoyment through wise use and development of their potential resources.

Full utilization of our natural wealth, so as to provide plenty for the present and guarantee plenty for the future, is the aim of the Department of the Interior. Today, there is a growing need for recreational opportunities. The National Park Service, which administers this area, takes a principal part in working out the use of lands for this purpose.

The area we dedicate today is our sole national memorial park, and it is unique not only in name. But in the national park system there are several areas similarly combining scenic, geological, and biological qualities in regions distinguished by less tangible human associations. Death Valley in California, Jackson Hole in Wyoming, and Lava Beds National Monument in California, are good examples of such areas.

The policies which have been proven in establishment of the older national parks are just as sound for these newer of parks. The objective stated in the 1916 law, which created the National Park Service, cannot be improved upon: they shall be made available for human enjoyment by such manner and such means that their values will be unimpaired for future generations.

Theodore Roosevelt, who was keenly aware of the priceless character of natural phenomena, such as the scenery of Yosemite, the aged giant Sequoia trees, the rugged beauty of the Grand Tetons, the wonders of Yellowstone, and the remarkable Grand Canyon, urged that they be spared the vandalism of internal development. He expressed the view of many conservationists when he said, concerning the Grand Canyon, "Leave it alone. You cannot improve upon

UNIVERSITY OF MICHIGAN LIBRARIES

it. The ages have been at work on it. Man can only mar it."

Here in western North Dakota we have an opportunity to develop a great new park in accord with this creed and, further, in accord with newly tested methods of making park values available to the public.

The many business improvements and installations which inevitably follow the creation of a new national park should be located in existing, nearby communities. In some of our parks the surrounding topography is so rugged and the settlements so few that we have had to grant hotel, cottage, cabin, souvenir, and many other kinds of concessions within the park boundaries. This has not been good for us. It has put us in the unpleasant business of supervising business, when we would far rather concentrate our efforts on our primary objectives.

Last Saturday and Sunday I was in the Great Smoky Mountains National Park which rides the crest of the mountain range separating North Carolina and Tennessee. The businessmen of those two States have had the wisdom and enterprise to provide marvelous tourist and visitor facilities at the gateways to the park. The city of Gatlinburg, Tenn., which I knew 10 years ago as a sleepy mountain town with an unpaved main street, is now a thriving, prosperous, progressive, and aggressive city with a dozen modern hotel installations and probably three dozen more motor courts and many other tourist facilities. Everything else in the surrounding area has grown similarly. To me, the best part of this was that the development has all been local. The owners of these new hotels, stores, and service facilities have lived all their lives in that area. They and the businessmen of the other nearby communities in both Tennessee and North Carolina are now providing southern hospitality for more than a million visitors a year.

You people who are here today will share in the inevitable economic progress of this area as it develops to take care of the inevitable stream of visitors which will grow each year as the fame of this beautiful and unusual park spreads throughout the Nation.

I hope you will share in it and I pledge that, so long as you build to keep pace with the tourist demand with the charm and dignity which is traditional in this region, the Department of the Interior will not grant concessions in the park to compete with you. I think that your businessmen or chambers of commerce would benefit by sending representatives to see how successfully that little Tennessee town has accomplished this result in a short period of time.

One aspect of our nationally held lands, not peculiar to the national parks but particularly striking in them, is the function they serve as a cohesive force among our people. The Statue of Liberty, Gettysburg National Military Park, and Glacier National Park belong to the people of North Dakota as well as to the citizens of New York, Pennsylvania, and Montana. Conversely, the residents of Florida, Texas, Washington, and all the other States also have a real ownership interest in this park. The unifying force of this trusteeship of a common heritage is enhanced by travel to the areas.

In such a large Nation our citizens must daily pursue lives widely separated by distance, by difference in occupation, race, and religion, and by varied national background. But individuals from all walks of life seek inspiration and understanding at places of natural beauty and at the scenes of national history. Travel to such places becomes an integrating influence which broadens local and class loyalties and links them more vitally to a common heritage—the Nation itself. All kindred measures that contribute to a deeper understanding of American history and democracy have become peculiarly important today when our national ideals are being tested throughout the world.

The administration of this park in accordance with the highest principles of conservation and the ideals for which Theodore Roosevelt stood is a challenge in which your help is needed. In this spirit and with the hope that the area we are now dedicating will be forever a source of enjoyment, education, and inspiration, the Department of the Interior accepts the trusteeship of this memorial park.

The Fundamental Objective

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following splendid editorial which appeared in the New York Herald Tribune of June 9 entitled "The Fundamental Objective," commending favorably upon the action of the 91 Members of the House of Representatives in introducing resolutions in relation to a world federation:

THE FUNDAMENTAL OBJECTIVE

Ninety-one Members of the House, including representatives of both parties and a majority of the House Committee on Foreign Affairs, have introduced a resolution which could scarcely have been imagined a decade ago and which even today seems astonishing for its boldness. The resolution urges, in brief, that it be a fundamental objective of our foreign policy "to support and strengthen the United Nations and to seek its development into a world federation." Thus there is set down on the record one of those long-range goals which have sometimes an unexpected and incalculable role in shaping the future.

Needless to say, the transformation of the United Nations, with its veto power and with its preservation of sovereignty to all members, cannot be effected overnight. As Representative HAYS declared on behalf of the sponsors, an improvement in world economic conditions, as well as in relations between Russia and the West, must precede the formation of a Federal union. An excess of zeal at this time could damage the UN and play into the hands of those who are basically opposed to the international cause. In the end the path toward world government will probably be accomplished by several major steps; and the UN will be seen to have represented one distinct but necessary stage, as the Articles of Confederation were one stage in the development of our Constitution.

Nothing should be attempted at this time which weakens or discredits the United Nations. But a restatement of the ultimate goal need not have this effect; on the contrary, it can encourage those who are engaged in today's necessarily limited efforts. In this spirit, we welcome the resolution of the 91 Representatives.

Mr. Speaker, it was not so long ago that I made an appointment for a group of very prominent citizens of Massachusetts to see Secretary Acheson, of the State Department, on this subject. Several years ago I made a speech in which I stated, in part, that in the establishment of an international legislature or body to legislate or promulgate or act for permanent peace through the outlawing of war or through other means, it would be necessary for the governments of the world to delegate to such international agency so much of the attributes of sovereignty as are necessary for such international agency to act effectively in legislating or acting for permanent peace. In my address I also stressed that a police force or military force would be necessary to enforce the laws, promulgations, or acts of such international body.

Extreme Right Wingers Are Giving Our Governmental Processes a New and Very Un-American Twist

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. O'SULLIVAN. Mr. Speaker, for some months now certain big-business institutions, some few radio commentators, and many big newspapers have been seized with ballot phobia. They have cried out "Copy or clip out our ballot and send it to your Congressman. Put the pressure on your Congressman if you want to get our way about it."

Under our form of government, both State and national, the people by public voting at elections, duly called in accordance with law, vote their choice in reference to who their public servants are to be for a definite term, and also may vote upon many other questions presented to them by either initiative or referendum and the will of the majority actually voting control.

Contrary to the belief of many people neither the National Government nor any of our State governments are democratic forms of government. The form of government which we of the United States of America have always enjoyed has been a republican form of government. Nationally, we are now, and have always been, a republic and not a democracy, and the strange anomaly about it all is that we have 48 limited sovereign republics within one limited sovereign Republic. Of course, the term "a limited sovereign" is quite contradictory, as the word "sovereign" ordinarily means supreme, unlimited.

In a democracy the people vote on everything in the old New England town meeting fashion. In a republic the people elect public servants and leave it to them to use their best, honest judgment about appointing lesser public servants, and about discharging the duties of their offices. Votes of confidence or of direction between public elections to avert a

resignation or for any other purpose or purposes are not known or recognized by our laws.

Of course, the people have reserved the right, always, to petition their Government and all of their public servants, and I am a firm believer in the thought that every type of a communication from a constituent, regardless of his or her politics, race, creed, or color, should be welcome to an officeholder, and should be honestly and fairly considered by such officeholder, and that is not only a belief of mine, but I have carried same out on all occasions during my public service.

When a national election has been held on a definite party platform, and a Congressman has definitely committed himself in preelection statements, to a definite course of action, and he has been elected on that platform and his preelection statements, every elector I am sure, feels that the issues have been settled until the next election, and would not insist upon a subsequent private election, or have the faintest hope of bringing about an ignoring or a reversal of preelection promises.

A voter's own good judgment would dictate the utter futility and impropriety of holding succeeding private elections to nullify the definite commitments or directives to an officeholder, arising out of a public election.

No voter would, on his own accord, be guilty of such a senseless and brazen course of conduct.

Such a movement would naturally not come from the fair American voters, but would have to be motivated and urged by some shameless and brassy source, which, to apply and add to the words of another, must have leaped from the lobby alley to the people's boulevard in one bound, and brought with it all of the tastes, manners, and instincts of the lobby alley.

By making this statement I do not wish to be understood as denouncing all lobbying activities. I feel that under our American way and business, any group of individuals, and any person has the right to present legitimately and properly their views to any public officeholder in the legislative, or any other branch of government, upon any matter which may concern their business, profession, religion, or any other thing in which they have an interest, financial or otherwise. I have no complaint whatsoever against proper lobbying, but I do say that the lobbying activities of some extreme right-wingers have become so unthinkably un-American, so offensive and improper, that the hand of tar is a clean and desirable thing in comparison with their unholy, besmirching touch.

Drastic laws have been passed by Congress to stop their manifold political perversions, and their bribing, corrupting, and debasing of people in public life. Like Communists and other un-American "isms" and cults they, the extreme right-wing lobbyists, have been driven underground also and have been forced to adopt undercover methods to gain their ignoble and un-American objectives.

We should always remember that in a republic at least two strong political parties are not only contemplated but are an absolute necessity, and that an elected member of a political party ordinarily should be held accountable to his party, and a political party should be held accountable for the actions and conduct of its elected members. Elections are thus simplified by voting for the candidates of a party, all things being equal. If, however, a better and more competent man is on some other ticket, or is an independent candidate, then, of course, a voter is justified in abandoning and should perhaps abandon his party ticket, as all of us, I am sure, have done on many occasions. The thought, then, is to vote your party's ticket, but not blindly, and to try to secure the best available men for the public office to be filled and then let them do the best they know how unharassed by unlawful pressure groups.

The foregoing is perhaps common knowledge to everyone, but it is well to reflect that today and in the immediate past corroded hearts, scheming brains, and "artful dodger" hands are, and have been, at work throughout the length and breadth of the Republic, in a frantic and frenzied, feverish effort to bring their unholy cause "dolled up" with a saccharine coating—supposed to be 100 times sweeter than sugar—to the people. These master un-Americans are indeed at their very wit's ends, because the President of the United States, Harry S. Truman, and the executive heads of the Government departments have barred their forward passage. They have found State executives either turning a deaf ear or damnably impotent. The Federal courts have been renovated and cleansed by retirement and death of many reactionaries and at last after many years of cave thinking the realization dawns upon a crooked, forlorn lobbying group that they will soon be as impotent as a gelding, steer, or barrow, and maybe as dead as a dodo bird, unless their last avenue of succor is also probed and experimented with.

That last avenue is to take their cause not directly to the voters at a public election, not directly to the public servants, but to the people themselves at a private election, and hence the phenomenal birth from the ashes of the now dead Phoenix, the debunked pollsters, comes the newspaper and other ballot hounds. You see in the case of the pollsters they collected their own ballots and did their own counting, but the new technique lets the individual, regardless of whether he is man, woman, or child, or a citizen or a rightful voter, vote a carefully worked out propaganda ballot—a trick ballot prepared by the now lobbying propagandists—which people then mail to a public servant, and which that public servant is required to count and report upon, in spite of all of the other public duties he has been by law required to perform. You can readily see that such scurrulous plans make the innocent populace and public servants a part of a sinister lobbying set-up, cogs in a lobbying gear, and the wonderful part about it all is that the innocent populace and the public servants are all working for nothing, working without costs to these lobbyists, and are required to spend their own money for envelopes and stamps. No pay is given by the hidden lobbyists for use of the time of Government employees who were required to open up, count, and tabulate those ballots, and if extra help is needed the public servant, and not the hidden lobbyists, must pay for that extra help, or if no extra help is procured the public servant must press his family into service and also do some of the work himself, perhaps after working hours. One can readily see that many man-hours are "mooched for free" from the populace, the Government, the public servants, and their families.

By employing this propaganda technique its promoters do not and are not required to register as lobbyists in Washington, D. C., and do not come under the present United States laws pertaining to lobbying and lobbying activities.

Instead of taking a direct route now, the lobbyists are taking a circuitous side road. If they traveled the direct route they would be readily observable and branded, but if they went the roundabout course it would be hard to observe their devious, crooked, and winding way.

From lobbyists to pollsters to balloters are indeed three interesting cycles in the life of our most un-American group, the extreme right-wingers. By giving some thought to the foregoing you will readily realize that lobbyists, like many of the other insects and mammals, pass through interesting cycles in the enjoyment of full and fat lives. The larvae—worm—has gone into the cocoon and in due time out comes the beautiful, sight-dazzling butterfly, the product of a crawling, slimy worm. The life of the Chambered Nautilus, as portrayed by Oliver Wendell Holmes' poem, has now chambered off his recent past, cycle by cycle, and now is in a new home more wondrously secret than the previous one. Verily worm to butterfly life, and poetic history has repeated itself, as far as the changing appearance and activities of the extreme right-wing lobbyists are concerned.

The things I have been wondering about is how much some of the radio commentators, who act as "stirrer-uppers" for the hidden lobbyists, and some of the newspapers and pamphleteers, who act as the "whooper-uppers" for the lobby-law evaders, get for their ignoble efforts. Would not all the people casting private ballots be sick if they really knew how they had been used by wood-pile lobbyists. Their faces would be still more henna-colored if they also knew who paid these commentators and newspapers for their efforts and how much was paid therefor.

From the study I have given of this new lobbying technique I am of the opinion that this course of conduct amounts to a criminal conspiracy to violate the United States law relating to lobbying activities, and I shall certainly probe same and see what can be done about bringing these offenders to justice.

UNIVERSITY OF MICHIGAN LIBRARIES

As I think the matter over now I realize that all the people who in the past have been induced to cast private ballots, unwittingly, I am sure, became a part of that conspiracy, and that my office force and my family and myself by counting and tabulating past ballots and certain recent ballots sent out by the Omaha World Herald of Omaha, Nebr., also, unwittingly, became a part of this illegal conspiracy, but of course neither the people balloting nor those counting same and tabulating them have committed a crime, because at the time we had no knowledge of the existence of this criminal conspiracy. We were merely dupes for undercover, illegal, extreme right-wing lobbyists.

I am now convinced more than ever that by proper resolution of the House of Representatives a committee must be appointed to investigate the criminal un-American activities of the extreme right-wingers. They must not be permitted to escape detection and prosecution by pointing and palavering, like Pharisees, at their less dangerous extreme left-wingers.

I wish that every true American would do his part to get this matter moving so that the real dangerous enemies of our Republic, who are seeking to destroy our form of government and put in its place and stead a golden empire of greedy, bad big business would be brought to a halt.

I assure you people are thinking seriously about our greatest enemies. I have received many letters supporting this statement.

The following is typical of many of these letters:

You certainly touched the right chord when you said investigate the big extreme right-wing fellows for un-American activities. We rave about the cartels of Germany when we have the Steel Trusts, Oil Trusts, Medical Gougers, Drug Trusts, Food Trusts, and many others. Some of these companies would steal all in the world if they could. If the doings of these crooked big extreme right-wing fellows are not stopped we will leap out of the frying pan of communism into the fire of fascism.

As I stated heretofore, the latest private balloting from the Second Nebraska District was sponsored by the Omaha World-Herald, which on two occasions ran full-page advertisements asking the readers to cast private ballots on the following questions and then mail these properly marked private ballots to one of their Senators and their Congressman:

How do you feel about—

	For	Against
A straight 10-percent cut in all Federal expenditures that can be cut?	☐	☐
Secretary of Agriculture Brannan's farm plan, the cost of which Secretary Brannan himself is unable to estimate? (Senator BYRD did not estimate the cost, but others have suggested figures up to $10,000,000,000 a year for this subsidy)	☐	☐
The so-called national health plan? (This calls for increased pay-roll taxes. Senator BYRD, referring to it as socialized medicine, estimated a $10,000,000,000 cost)	☐	☐
The Federal housing program recently enacted by the Senate? (The cost of the low-rent feature alone amounts to a possible $20,000,000,000 over 40 years, according to Senator BYRD, even if it is not later expanded)	☐	☐
Federal aid to education, costing $300,000,000 the first year? (Senator BYRD doesn't believe the cost would ever be that low again)	☐	☐
The ECA program costing $5,500,000,000 for the coming year? (This is chiefly aid to Europe under the so-called Marshall plan)	☐	☐
Arms for the North Atlantic Pact, to cost something over $1,000,000,000 in the coming year? (Mr. BYRD thinks that estimate is too low)	☐	☐
Increased income and pay-roll taxes that Senator BYRD says will be necessary to carry out the President's many recommendations for more spending?	☐	☐

I believe that this course was pursued for no other purpose, except to club Nebraska Senators and Congressmen into the extreme right-wingers camp.

Labor unions in Omaha, who rightfully feel friendly to President Truman's program, and bitterly against the Omaha World-Herald, refused to even use the World-Herald ballot and had the following very similar ballot, and the attached explanation, mimeographed and distributed to their membership and other people in my district:

FOR YOUR CONGRESSMAN

Sign and return to your union officers or mail this ballot to Congressman EUGENE D. O'SULLIVAN, at the House Office Building, Washington, D. C., after you have marked it as to how you feel about each piece of projected legislation.

How do you feel about—

	For	Against
Secretary of Agriculture Brannan's farm plan? (Would enact President Truman's recommendation)	☐	☐
The Federal Housing Program recently enacted by the Senate? (A program to assist in providing low cost housing facilities and slum clearance throughout the Nation)	☐	☐
Federal aid to education? (To provide equal educational facilities for all areas of the Nation)	☐	☐
ECA program? (Our major effort in building a sound basis for peace among all nations)	☐	☐
National health plan? (A system of health insurance designed to provide adequate medical care for all citizens)	☐	☐
Increased taxes on an equitable basis? (Necessary to carry out the President's many programs which were his campaign promises to the people)	☐	☐
Arms for North Atlantic Pact? (The first line of defense for the preservation of our Nation and our American way of life)	☐	☐
A straight 10 percent cut in all Federal expenditures which would prevent necessary Government activities?	☐	☐

BULLETIN

The World Herald's ballot on May 11, which carried the opinion of Senator HARRY F. BYRD, prompts us to sumbit the following facts surrounding these issues as stated by the President of the United States in his state of the Union message to Congress on January 5:

SECRETARY OF AGRICULTURE BRANNAN'S FARM PLAN

President Truman says: "Our national farm program should be improved. Our goals should be abundant farm production and parity of income for agriculture." (Secretary Brannan's farm plan guarantees parity prices to farmers and a saving to the consumer of millions of dollars a year.)

FEDERAL HOUSING

President Truman says: "Five million families are still living in slums and firetraps. Three million families share their homes with others. As an immediate step, the Congress should enact the provisions for low-rent public housing, slum clearance, farm housing, and housing research which I have repeatedly recommended."

FEDERAL AID TO EDUCATION

President Truman says: "It is shocking that millions of our children are not receiving a good education. I cannot repeat too strongly my desire for prompt Federal financial aid to the States to help them operate and maintain their school systems."

THE ECA PROGRAM

President Truman says: "We are doing what we can to encourage free states and free peoples throughout the world, to aid the suffering and afflicted in foreign lands, and to strengthen democratic nations against aggression. The heart of our foreign policy is peace. To it we have pledged our resources and our honor."

NATIONAL HEALTH PLAN

President Truman says: "Our health is far behind the progress of medical science. We must have, without further delay, a system of prepaid medical insurance which will enable every American to afford good medical care."

TAXES

President Truman says: "I recommend that the Congress enact new tax legislation. This should come principally from additional corporate taxes. Consideration should be given to raising personal income-tax rates in the middle and upper brackets."

ARMS FOR NORTH ATLANTIC PACT

President Truman says: "We are following a foreign policy which is the outward expression of the democratic faith we profess. Until a system of world security is established upon which we can safely rely, we cannot escape the burden of creating and maintaining armed forces sufficient to deter aggression."

BUDGET REDUCTION

Senator Harry F. Byrd proposed reduction of 10 percent in the appropriation for administrative costs which would seriously impair the important Government functions and would be a false economy. Congress has considered this proposal unsound by their refusal to cut the budget for such essential departments as Labor, Agriculture, Social Security, etc.

On May 28, 1949, 12,924 votes had been cast and I made the following press release to many of the newspapers:

A few weeks ago the Omaha World-Herald of Omaha, Nebr., a very reactionary newspaper, conducted a poll which asked for its

UNIVERSITY OF MICHIGAN LIBRARIES

readers' views on the following items of President Truman's program, and the result of the ballots which have been sent to my office to date is as follows:

No. 1. A straight 10-percent cut in all Federal expenditures that can be cut. In favor, 8,055; against, 9,197.

No. 2. Secretary of Agriculture Brannan's farm plan, the cost of which Secretary Brannan himself is unable to estimate. (Senator BYRD did not estimate the cost, but others have suggested figures up to $10,000,000,000 a year for this subsidy.) In favor, 9,140; against, 3,155.

No. 3. The so-called national health plan. (This calls for increased pay-roll taxes. Senator BYRD, referring to it as "socialized medicine," estimated a $10,000,000,000 annual cost.) In favor, 9,153; against, 3,131.

No. 4. The Federal housing program recently enacted by the Senate. (The cost of the low-rent feature alone amounts to a possible $20,000,000,000 over 40 years, according to Senator BYRD, even if it is not later expanded.) In favor, 9,241; against, 3,015.

No. 5. Federal aid to education, costing $300,000,000 the first year. (Senator BYRD doesn't believe the cost would ever be that low again.) In favor, 9,415; against, 2,783.

No. 6. The ECA program costing $5,500,000,000 for the coming year. (This is chiefly aid to Europe under the so-called Marshall plan.) In favor, 9,745; against, 2,391.

No. 7. Arms for the North Atlantic Pact, to cost something over $1,000,000,000 in the coming year. (Mr. BYRD thinks that estimate is too low.) In favor, 9,769; against, 2,270.

No. 8. Increased income and pay-roll taxes that Senator BYRD says will be necessary to carry out the President's many recommendations for more spending. In favor, 9,132; against, 3,136.

I think that the results of this poll was about as revolting and surprising to the Omaha World-Herald as the results of the last election.

The popularity of our President and the popularity of his programs are gaining by leaps and bounds in my congressional district of Nebraska, and I am indeed very happy about it.

Today the House appropriated additional sums for congressional help and expenses and the extreme right wing lobbyists and their employers, and some radio commentators and some newspapers are responsible for the necessity of this additional appropriation, and yet they will blame Congress for not practicing economy.

In a succeeding article I shall endeavor to give more minute attention to the business of the Omaha World-Herald's private balloting venture and discuss its unfair attitude after it was roundly trounced once again by the people of my district.

Housing and Slum Clearance

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. DAVIS of Georgia. Mr. Speaker, adequate housing, low-rent housing, and slum clearance are problems which vitally concern all of us. The housing problem affects many groups and reaches into nearly every section of our country. It affects not only city dwellers, but residents of the small towns and rural areas. It affects industrial workers, white-collar workers, veterans, and farmers.

Need of housing existed when Capt. John Smith landed at Jamestown, and when the early settlers landed at Plymouth Rock. In those days, without Government aid of any kind, the individual supplied his own housing. Need for housing has continued in a greater or lesser degree throughout the intervening years, down to the present moment.

Up to this time the American people have not taken the position that it is the responsibility of the Federal Government to build homes for the citizens. We have felt that the Government should, within reasonable bounds, lend a helping hand to the citizen who aspires to build or buy a home, and this has been done to a great extent by making credit available to the prospective home owner. This method encourages individual initiative and thrift on the part of the citizen. He has the prideful feeling that, being a home owner, he has a stake in the United States of America, its present, and its future. The phenomenal growth of America, and the high standard of living we have achieved, have centered attention on the housing problem.

There is great room for improvement. As one who desires to see this improvement take place, I feel that it is an impossibility for the Government to meet the expense involved, should we embark upon a Nation-wide public-housing program such as is contemplated in House bill H. R. 4009.

Our public debt is now approximately $252,000,000,000. We are threatened with a deficit in this year's budget. Revenues are likely to decrease with decreasing business.

Individual experience has shown that frequently one must deny himself greatly needed articles, when his financial condition will not permit their purchase. A man who is greatly in debt, and whose income is diminishing, cannot always buy everything he and his family would like to have. To do so often means bankruptcy. The same is true with a Nation.

I am firmly convinced that we cannot embark at this time upon a new program of long-term lavish spending. I fear we have already made more commitments than our resources and our economy will support in the years to come.

I feel that we need a decrease in spending instead of an increase. I feel that we need a decrease in taxation, instead of an increase.

Economy and thrift are just as much virtues today as they have ever been, and these virtues are sorely needed in our Government at this moment.

While I would like as much as anyone to see modern housing provided for everyone who needs or wants it, the first question is, "Are we able to do it?"

I do not believe the taxpayers of America can finance the nearly $20,000,000,000 spending program which is called for in House bill 4009.

As an alternative, I have introduced today House bill 5085, which is a comprehensive housing bill to provide Federal assistance for slum clearance; provide housing for families of low income; provide for veterans' homestead associations; provide for housing research; provide for loans and grants for farm housing, and provide for the orderly disposition of war housing. A short analysis of H. R. 5085 is as follows:

Title I, Slum Clearance: This title provides for grants and loans to States for the acquisition and clearance of slum land for redevelopment. The loans will be limited to estimated reuse value of the land, and are to be repaid out of the money realized from the sale of the cleared land. The grants are limited to one-half the difference between acquisition cost and reuse value, with the State supplying the remaining one-half. The cleared land is to be sold or transferred to private or public ownership in accordance with a redevelopment plan which recognizes the highest and best land use, including commercial or industrial uses, housing, parks, and playgrounds. The program would be administered by the Federal Works Agency. Total loans, grants, and expenses of not more than $350,000,000 are authorized under this title.

This slum-clearance title has these following merits: (1) It is direct and straightforward in the amounts to be spent and does not involve long-term commitments or continuing contributions; (2) continuing jurisdiction of Congress is maintained. Congress can periodically review this program and exercise its judgment in continuing or expanding the program; (3) it separates the administration of the slum-clearance program from the agencies involved in the public ownership of housing and apartments ideology controversy.

Title II, Housing for Families of Low Income: This title presents a plan to obtain production of rental housing in volume for lower-income families by private capital. The plan has two features: (a) It requires the State or city to abate all real-estate taxes on the improvements made under this title, that is to say, the taxes are "frozen" at the current level for a period of at least 10 years; (b) the Federal Government permits an increase up to 10 percent for a period of 10 years for depreciation deductions which it allows for Federal income-tax purposes.

The plan is available only in cases where the Federal Housing Administration issues a certificate certifying that the project will be available at rents suitable for families of low income, and to further assure this result it is required that tenants be limited to families who are certified by local authorities to be eligible because of the fact that they are either receiving rent relief or are not able to afford to pay an economic rent. It is believed that under this plan private capital can provide housing at rents ranging from $50 a month downward, even at present cost levels. Under the plan preference in occupancy is given to veterans.

Title III, Veterans' Homestead Associations: This title provides for the formation of veterans' homestead associations with the assistance of Federal loans in the amount of $250,000,000. It is similar to the Veterans' Homestead Act,

H. R. 4488, proposed last year and sponsored by the American Legion.

The veterans' associations formed under this act would obtain long-term loans from the Veterans' Administration at very reasonable rates for the construction of low- and medium-priced homes for sale or rent to veterans of World War II. Individual purchasers would finance their homes through local financing institutions and the homestead associations could finance cooperative or mutual housing for veterans of World War II over a 32-year period. The Federal Works Administration is authorized to make 50-percent grants for streets, water, and sewer facilities where these are not available in a total amount of $50,000,000.

Title IV, Housing Research: This title provides for an extensive program of housing research pointed toward development of improved construction materials and methods and the reduction of housing costs. The program would be conducted in the Department of Commerce, with the cooperation of other Government and private research agencies.

Title V, Farm Housing: This title provides for grants and loans for farm housing to be administered by the Secretary of Agriculture. Three types of assistance are provided: (1) For self-sustaining farms, 33-year, 4-percent loans, where adequate private financing is not available; (2) for potentially self-sustaining farms, 33-year loans, with supplemental annual contributions available for not more than 10 years; (3) for farms with no practical prospect of being self-sustaining, grants and loans to repair, and rehabilitate the farm housing. Loans of $325,000,000 and grants of $75,000,000 are authorized.

This title is similar to title IV of H. R. 4009, but provides slightly larger authorizations and contains some minor improvements recommended by the National Grange.

Title VI, Disposition of War Housing: This title provides for the orderly disposition of war housing and the return of this housing to private, tax-paying ownership as contemplated by the Congress in Public Law 671 (Lanham Act). The net proceeds from the sale of this housing would become available for further slum clearance under title I.

David Marcus

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. MULTER. Mr. Speaker, on June 10, 1948, a brave American soldier gave his life in the State of Israel defending there the principles of liberty that all true Americans cherish so dearly.

The following articles appear in the current issue of the Light, a magazine published by the Wall Street Synagogue of New York:

IN MEMORY OF COL. MICHAEL DAVID MARCUS

(By Yan Kov Dory Rav Aluff, Chief of Staff, Israel)

I vividly recollect my first encounter with Colonel Marcus. It took only a brief introduction to plunge us into a heated discussion on military problems; it seemed to me then that I had known him for years. I was impressed with his friendly eyes and his jovial face. Such a fellow's heart, I thought, must be radiating kindness and overflowing with human understanding.

I wondered at the time what brought this remarkable personality, bordering on military genius, to our comparatively little country. He certainly could not have been looking for a more ambitious career, or for a larger halo of glory than he had during the Second World War. Among his many vital tasks in that global struggle he had been a member of the Allied Staff which drafted the German surrender and also served as adviser to President Roosevelt at the Yalta Conference. What greater fame could there be for him?

No, Colonel Marcus had an inner call which urged him to come here. I knew from the first meeting with him on Israeli soil that this was no adventurer merely looking for new outlets for his boundless energy. A long dormant sentiment for his people was awakened in his heart with the outbreak of war on the Judean hills. Actually, he had only a vague idea of what had been achieved here during the last 30 years. Zionism was an abstract term for him. Brought up in the military tradition, both through his father and grandfather, as well as through his own studies at West Point, he was unlike so many other military men, imbued with romantic intuition.

In his youth, his grandmother taught him how to pray. She asked him to insert a coin every Friday evening into the blue box for charity purposes in the Holy Land, and finally she made him promise that he would bring her over to Jerusalem toward the end of her life in order that she might die there. These comparatively minor aspects of the Jewish ritual imprinted themselves indelibly on his mind.

Endowed with imagination, he could secretly cherish in his heart a dream of a people yearning for independence and freedom.

Then he suddenly realized that he had something to contribute to his people's regeneration in the historic fatherland. His imagination was enkindled with the past. He felt proud that he would be following in the footsteps of Joshua, the son of Nun, Samson, David, and Bar Chochba. It was apparent that he felt proud to be supreme commander on the Jerusalem front than he would have felt had he been appointed as supreme commander of any other part of the world.

I was privileged to meet Colonel Marcus many times during his short period of service with Israel. He was my closest adviser in many occasions, and in informal discussions. I admired his judgment, vision, and inspiring way of argument. With those personal attributes and his realistic approach to military problems, he made an outstanding contribution to the perfection of Israel's war machine.

Colonel Marcus made himself one of the most popular commanders among the rank and file, endearing himself to all those who came in contact with him. He brought with him the liberal tradition of American fraternity among comrades-in-arms, as opposed to the strict military regime of the Junker's pattern. His prestige was thus enhanced sevenfold. His men knew him by his nickname—Micky. Although a complete blackout was imposed at the time on all matters relating to high-rank officers, especially as far as "foreign" officers were concerned, Colonel Marcus was universally known as the legendary American Colonel Stone.

During his comparatively short stay in Israel he concentrated his efforts on two different fronts. At first he served with the "Negev Rats" down south, but his military stature was mainly revealed through the campaigns on the Jerusalem front, which aimed at opening the Jerusalem-Tel-Aviv road.

Colonel Marcus loved the country and its youth. As it will be remembered he obtained formal leave from the American Army before arriving in Israel. After a few months stay here it was necessary for him to return to the United States of American and Mr. Ben Gurion, the Secretary for Defense, was afraid that he might be unable to come back to Israel again. Colonel Marcus assured him: "Don't worry. I shall return even if I have to swim back."

He became deeply attached to the youth of Israel. He learned to admire their courage, devil-daring, and perseverance. He was reputed to have stated that such human material could not be found anywhere else in the world. He saw Jewish youth fighting against tremendous odds with fortitude, valor, and utter self-confidence. He had absolute faith in them. Once he said: "If there were enough war material, we could be in Amman within the next 24 hours." He was no mere dreamer. He based his conclusions on what he had seen; and when he saw our youth in battle he understood what Dr. Herzl said in his play "The Ghetto: My Jewish brethren, they will let you live only when you learn how to die."

Nobody has as yet sung the hymn of praise to Israeli youth. They are awaiting a Hebrew to rise and record their heroic epopee in the struggle for independence.

Nor has the time come to evaluate the extent of American Jewry's contribution to Israel's war effort. But I can state with confidence that one of the greatest contributions to our mutual cause was Colonel Marcus himself, whose services will forever be remembered in Israel.

It was with the deepest regret that we faced his sudden death at his post. He was only 37 years old, and his brilliant career was cruelly interrupted. One's only consolation is that he has not fallen in vain, and that thousands of the Jewish youth, who admired him and served under him, are carrying on his uncompleted task.

When full freedom dawns on the rejuvenated Israel, and when the national Pantheon for our heroes is erected, the people will create a worthy monument for that unforgettable commander—Col. Michael David Marcus.

DAVID MARCUS

(By Arthur H. Schwartz)

David (Mickey) Marcus was born in New York City on Washington's birthday in 1902. He died in Palestine on June 8, 1948. In a 46-year span, he had a most varied and exciting career. His friends were many—from every walk of life and from every creed and faith. No one friend will ever be able to report all the facts of his life or claim knowledge of all the innumerable things that he did, but every friend can amply report his virtues and traits of character, for those permeated everything he did.

One hardly knows where to start a David Marcus biographical sketch within the limits of the space allotted. One could write of his early childhood on the lower East Side to which his parents came from Rumania; his early life and education in Brownsville, Brooklyn; of his rearing by a loving mother in a home where the Hebrew ritual was observed and where respect for the orthodox Judaism was most deep-seated.

One could write of his early training at the Hebrew Educational Society Gymnasium

where he first developed extraordinary skill in gymnastics; of his education at Boys High School where he became a schoolboy star on the football field and the baseball diamond and yet excelled in his studies.

One could write of his career at West Point, which he attended after spending a year at City College. His genial spirit, his warmth and love of humanity endeared him to people of all faiths. He made lifelong friendships wherever he went. Once met, he could never be forgotten. In passing, every friend he had always felt that he was the closest. His magnetism was limitless.

At West Point, he was one of the most popular men. Everybody knew him because of his boxing fame—he won the intercollegiate title. His deep interest and his desire to help underclassmen made him known to every cadet at West Point. His reputation became known to every graduate of West Point, and every general in the United States.

After graduation from the Academy, he was assigned to Governors Island. While there, he studied law. He finished his Army career and became a member of another branch of the Government service; namely, the Treasury Department, where he served as a Treasury attorney under Charles H. Tuttle. When the late George Z. Medalie became United States Attorney in 1931, I was assigned the task of hiring people to serve as assistants and I suggested Dave's appointment to Mr. Medalie.

I casually mentioned the fact that he had studied Hebrew at West Point during his free hours—with a rabbi in the nearby vicinity. Mr. Medalie thought that Dave's Hebrew was probably limited to what the average Jewish boy picks up in a cheddar. When I brought Dave in, Mr. Medalie tested Dave by speaking to him in Hebrew. I must confess that my knowledge of Hebrew is not as good as it might be and I cannot report the nature of the talk between them. But I do know that they conversed for quite a while. Mr. Medalie, at the conclusion of the conversation, said to Dave: "Although Hebrew is not a necessary prerequisite to appointment as an Assistant United States Attorney, any man who can use his time as you did, is worthy of consideration for a post which requires interest, exactitude, and integrity." David was appointed. That was the beginning of a very close friendship between George Z. Medalie and David Marcus. The story of that friendship would furnish a separate chapter in the life of Mickey Marcus.

Dave continued in the United States attorney's office under Thomas E. Dewey, then the acting United States attorney and now the Governor of the State of New York. A lifelong friendship followed. In 1933, La Guardia appointed him as deputy commissioner of correction. Later he became the commissioner of correction. One could write about the raids on Welfare Island during his service as commissioner. Movies have been made of that story. It has been told many times and there is no need to repeat it here.

A time came when war seemed imminent. Even before the United States entered the war, Dave Marcus resigned as commissioner, thereby waiving important security benefits, and entered the service of the United States—first as a member of the National Guard and later in its most vital services.

He was practically in every theater of operation. The letters I received from him and the orders that I saw, disclose that he covered the globe. He started at Anniston, Ala., then went to the west coast, Hawaii, to the islands in the Pacific, China, then back to the United States. He went everywhere. He was with the President at the various international conferences—at Dumbarton Oaks, at Cairo, Yalta, and innumerable other places.

He jumped with the paratroopers in France on D-day. He was active in drawing the surrender terms for the Italian and German governments. He then went to Europe to arrange and participate in the military government of Germany. While there, Dave became intimately acquainted with what had happened to the oppressed minorities in Europe. He returned and organized the plans for prosecuting war crimes and recruited the staff therefor. His activities will be told some day when some careful researcher has the time to collect all the material.

Despite the medals, ribbons, and awards that were showered upon him, his uniform was always bare of any such decorations.

He had a chance to remain in Government service but decided to retire—with his rank as Colonel. There was a person who had sacrificed much. She was Emma Chaison Marcus whom he had met early in his career and whom he had married over 20 years before. He felt that he could neglect her no longer. During his 6-year absence, she was engaged in teaching in the New York City elementary school system.

He was back in the United States a short time—practicing law—when Israel required help. The United Nations seemed to be indecisive. He felt that the fate of Israel would determine the fate of law and order for the America he loved and for the entire world. David Marcus undertook to aid Israel in its fight. He went to Israel and took the highly diverse elements and welded them together so that they fought in unity and with power. His knowledge of Hebrew and his understanding of the psychology of his people helped him train these independent groups with the result that is now a historical phenomenon.

On the eve of the truce, David Marcus died, in a manner typical of his career—in action and among his men.

Prime Minister Ben Gurion, on the occasion of David Marcus' death, said:

"He succeeded in making outstanding contributions to the building up and perfecting of our war machine which has secured for him a place of honor in the momentous phase of our history during which the state of Israel came into being.

"As a man and commander he endeared himself to all those who came into personal contact with him and his fame spread through all the ranks of our armed forces. They all admired his superb courage, his remarkable military devotion and his natural spontaneous fellowship. He was appointed supreme commander of our forces at the Jerusalem front and became immediately the moving spirit of that campaign—the most difficult and far-reachingly important of all those we have had to fight so far. His name will live forever in the annals of the Jewish people and we feel confident that American Jewry will be proud of its great and gallant son who has given his life for the liberation of Israel."

United States Coast Guard Auxiliary

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. MULTER. Mr. Speaker, earlier in this session Senator MYERS, of Pennsylvania, introduced S. 1001, a companion measure to H. R. 2204, providing for the delivery to the United States Coast Guard Auxiliary of materials and equipment which could be used by the Auxiliary in its educational and training programs. In our House the bill was referred to the Committee on Expenditures in the Executive Departments, and there referred to the subcommittee of which my distinguished colleague the gentleman from North Carolina [Mr. BONNER] is the chairman.

I was delighted to have the opportunity to appear before the committee and urge the enactment of H. R. 2204. I was, indeed, pleased to learn that the subcommittee unanimously favored reporting my bill, H. R. 2204.

I was even more pleased to learn from my distinguished colleague the gentleman from California [Mr. HOLIFIELD] that his bill H. R. 4754, enacting the Federal Property and Administrative Services Act of 1949, had not overlooked the desirable result sought to be accomplished by my bill and that encompassed within the terms of the Holifield bill are provisions which make the enactment of H. R. 2204 unnecessary.

Any doubt as to that was completely eradicated by the colloquy which ensued on the floor of the House during the course of the debate on H. R. 4754 when in unmistakable language both the gentleman from North Carolina [Mr. BONNER] and the gentleman from California [Mr. HOLIFIELD] made it clear that the United States Coast Guard Auxiliary would be qualified to receive materials and equipment upon the enactment of H. R. 4754.

As you probably know the Coast Guard Auxiliary is a civilian organization sponsored by the United States Coast Guard. It is organized to (1) promote safety and to effect rescues on and over the high seas and on navigable waters; (2) to promote efficiency in the operation of motorboats and yachts; (3) to foster a wider knowledge of and better compliance with, the laws, rules, and regulations governing the operation of motorboats and yachts; and (4) to facilitate other operations of the Coast Guard.

Not only does the auxiliary conduct public-lecture courses on a national scale, but gives to interested individuals instruction and training.

Auxiliarists render a very valuable service to the Coast Guard without compensation. They help man Coast Guard stations and vessels and render invaluable public service in aiding in rescue work. Thousands of vessels were inspected during the calendar year 1948 as a courtesy service to boat owners in order to bring about voluntary compliance with the laws of the seas and to improve the safety of persons and property. During World War II the auxiliary was an invaluable reservoir of experienced men who had an intimate knowledge of the ports of the United States who became temporary members of the Coast Guard Reserve and in that military capacity served with distinction in the Coast Guard as a part of the United States Navy. The auxiliary has always been ready and willing to assist the Coast Guard and the Nation in any emergency.

The enactment of this bill will be another step forward in implementing the capacity of the auxiliary to further render further public service.

UNIVERSITY OF MICHIGAN LIBRARIES

Slap on Wrist With Velvet Hammer for Antitrust Violators—Amendment to Sherman Act To Increase Fines for Violations of Antitrust Laws—Atlantic & Pacific Tea Co. Case Outstanding Reason for Amendment

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. PATMAN. Mr. Speaker, I should like to explain briefly the provisions of the bill which I have just introduced to amend the Sherman Act by increasing fines for violations of the act from a maximum of $5,000 to $50,000. The present fine of $5,000 is a completely inconsequential amount in comparison with the vast profits which are made by violating the act. Yet this is the maximum fine now permitted by the 60-year-old Sherman Act, which authorizes a fine not exceeding $5,000 or imprisonment for not more than one year, or both. To date, no businessman has been imprisoned for violating the antitrust laws; therefore, the only punishment is a $5,000 fine—perhaps a few weeks' salary to a corporation official or 1 hour's profit to a corporation.

What could be more inequitable than sending a veteran to jail for stealing $10 perhaps to feed his family and then levying a fine of $5,000 on corporations for derelictions involving millions of dollars? Two hundred and forty-seven firms were charged with price-fixing during 1948 by the Department of Justice on products ranging from abrasives to milk. While the public forfeits huge sums to these price conspirators, what happens if these corporations are convicted? They are fined $5,000. This is little more than a slap on the wrist to a corporation with millions of dollars in assets.

The complete inadequacy of the fine which can be imposed under the present law has been pointed out by officials of the various courts and by representatives of the Department of Justice. What could be more frustrating to a prosecutor who has obtained facts proving flagrant violations against a corporation possessing incalculable resources than to have that corporation punished by a fine of $5,000? Here is a statement made by Judge Simon Rifkind on March 1 of this year, when he imposed fines on six defendants in the case of the United States against the National Lead Co. in New York:

> I cannot even go through the formula of looking the defendant in the eye and saying, "Is there anything you wish to say before I pronounce sentence?" But I must confess that these amounts being substantially the maximum allowed by the statute, there is very little I can do or very little reflection that I can give this matter except perhaps to make the inevitable comment that a violation of the antitrust laws which persisted from some time in the early twenties to the 1940's, with respect to which the criminal liability is discharged by the payment of $5,000 a count, hardly seems to me to be the nature of penalty which is likely to discourage violations of the antitrust laws as far as the criminal laws are concerned, but that is a problem for the Congress.

I agree with Judge Rifkind. The meager fines which can be imposed are a problem for Congress to solve, and this bill which I have introduced will set up standards for punishments of antitrust violations which will more adequately fit the magnitude of the offenses.

Assistant Attorney General Herbert A. Bergson, in charge of the Antitrust Division, in testimony before the House Committee on Appropriations in January of this year, recommended that the amount of fines that may be imposed under the Sherman Act be substantially increased to the amount which I have proposed in my bill—$50,000 on each count. He had this to say about the present fines:

> I think some of them (monopolistic groups) just consider them license fees for doing business in an illegal way.

A prime example of inadequate fines is the Great Atlantic & Pacific Tea Co. case, in which after years of litigation 25 defendants were convicted of major violations of the antitrust laws. Ten fines of $10,000 (two counts) and 15 fines of $5,000 were levied against the defendants. Can anyone seriously consider that to be an adequate punishment for unfair competitive practices committed by a corporation handling about 10 percent of the retail grocery business of the entire United States? Since 1925, the Atlantic & Pacific had sent its buyers into the field to get goods at the cheapest possible price. The sellers were forced to pay a commission to the A & P which enabled A & P to reduce prices further and force competitors out of business. After the passage of the Robinson-Patman Act in 1936, that practice was outlawed; and A & P turned to other methods. Their lawyers induced the sellers to reduce their price further to the A & P in an amount equal to what the commission had been. The allowance thus became a mark-down on the price shown on the invoice, and this was called net buying. The Federal Trade Commission issued a cease-and-desist order outlawing that practice. Then the Atlantic & Pacific bought directly from the suppliers and refused to buy from suppliers who sold to any other firms through brokers. The A & P continued as usual to get its usual lower price, and the supplier had to make his profit out of his other customers at higher prices. The competitors of A & P had to pass their disadvantage in wholesale buying on to their customers in higher prices.

In the A & P case it was shown that A & P bought, sold, and distributed to the American people each year $1,750,000,000 worth of food—billions, not millions. In my opinion, a $5,000 fine figured on this turn-over is even less than a license fee for the criminal actions of which A & P was found guilty. It is a pauper's penny contemptuously tossed out by the bloated offender.

It was shown in the case that A & P had 6,412 stores located in 3,436 cities. Thus a $5,000 fine was less than $1 a store, and hardly more than $1 per city in which A & P operated. Could there be any more effective demonstration of how much a mockery of justice it is for the Government to be held down to the imposition of a $5,000 fine in cases of this nature?

And do not be misled and think that the convictions in this case were just technical convictions and that the actions of which A & P and its backers were found guilty were not morally reprehensible. I ask you to read the court decisions both in the trial court and in the court of appeals. Incidentally, there were no dissenting opinions, and the defendants did not even attempt to take the case to the Supreme Court.

A & P had a racket, the impunity and ingeniousness of which, in my opinion, is absolutely shocking and demoralizing. I use the words "shocking" and "demoralizing" deliberately, because the A & P racket, criminally enriching its promoters, was also cunningly devised so that the customers of A & P, to the extent that they obtained cheaper prices, were really made parties to the crime to the extent that they shared in the criminal "take."

The average housewife may say, and the A & P promoters expected her to say: "What is wrong with A & P if I can get something cheaper there, or if an A & P store is satisfied with a profit of 1½ cents or one-half cent on a dollar?" Of course, she does not know that very often, through one device or another, through selling her company brands, for instance, instead of standard brands, she may be paying more than she might pay elsewhere.

But more important, does the housewife who got something cheaper at the A & P know that, as shown in that case, the A & P, in giving her reduced prices and operating on the barest percentage of profit in many instances, and even losses, was simply sharing with its customers ill-gotten gains, criminally obtained by A & P?

Let me quote here, in this connection, something that the court said, in the A & P case:

> One cannot escape the conclusion on the very substantial evidence here, as one follows the devious manipulations of A & P to get price advantages, that it succeeded in obtaining preferential discounts not by force of its large purchasing power and the buying advantage which goes therewith, but through its abuse of that power by the threats to boycott suppliers and place them on its individual blacklist, and by threats to go into the manufacturing and processing business itself, since it already possessed a considerable establishment and experience that would enable it to get quickly and successfully into such business if a recalcitrant supplier, processor, or manufacturer did not yield. The A & P organization was urged to keep secret whatever preferences it received. These predatory discounts and other preferences amounted to 22.15 percent of A & P's total profits in 1939, 22.47 in 1940, and 24.59 percent in 1941.

It is with all this in mind that I say to the gentlemen of this House that the amount of fine now permitted under the Sherman Act should be $50,000, not $5,000, and this, I am sure, is why the Department of Justice feels the same way.

Let this crime have a real fine attached to it. Let the courts know that Congress means business and that Congress regards this crime as a real crime. I prophesy that, if my bill is enacted into law, then not only will we see substantial fines imposed by the courts, but prison sentences as well, under the present 1-year provision which the courts, up to now, have not been disposed to use.

The Atlantic Commission Co., otherwise known as ACCO, was one of the subsidiaries used by A & P to do much of its dirty work in forcing suppliers to sell to it at grossly unfair prices and in violation of law. Profits made by ACCO and by other A & P subsidiaries or divisions would be assigned to A & P's various retail stores in varying percentages, depending on how hard competing stores were to be hit. Thus certain A & P stores could continue to operate without any actual profit of their own, or almost no profit, or even with a loss. A & P did not care. The more stores A & P had, and the more merchandise it sold, the more ACCO or its other agencies were in a position to buy from suppliers. This simply meant a bigger stick which ACCO and the rest could wield in coercing suppliers, which would then have to pass their losses on to independent grocers in the form of higher prices, which their customers would have to pay, provided these independent grocers did not go out of business.

Does the housewife know, for instance, that A & P, as shown in the court records, did not depend upon its retail stores to make more than 10 percent or so of its entire profits? Does she know that A & P depended upon its retail stores not so much to make profits as to build up a huge purchasing power which it could use and did use to blackjack suppliers into selling to A & P at less than reasonable prices, prices that were discriminatory as against independent grocers, and at reductions that could not be accounted for solely by reason of volume? Does she know that A & P was able to purchase, for resale to its customers, at these lower prices only by threats of putting recalcitrant suppliers out of business, of boycotting them or adopting other illegal methods, as found by the court?

Does the housewife know that, even though she, under this dishonest system, may at times obtain cheaper prices, by reason of the fact that the suppliers of A & P were forced to sell to A & P at too cheap a price, other housewives purchasing at other stores must make up the difference? Does she know that the suppliers who are forced to sell to A & P at too cheap a price must then charge other grocery concerns higher prices to make up the difference, and that these other concerns must then pass on the difference to their customers, who are the other housewives of America?

If the American housewife would realize all this, she would see that the A & P method of doing business, which was found criminal by the court, was so devised as to gain nothing for American consumers as a whole, but that all A & P did was, temporarily at least, to let its customers in on some of its illegal profits.

I say "temporarily" because it is obvious that, if A & P is permitted to continue in these operations, there will soon be no more competing grocery stores at all, and then A & P and chains like it, would not even have to pretend to keep their prices low in order to attract a tremendous number of customers. The obvious reason is they would have the customers anyhow and they would be able to wield a "big stick" so as to club suppliers into giving them cut-rate prices, even without dividing any of the profits with their own retail customers. Once monopoly is really in the saddle, all incentive for "passing on" such profits, or a share of the profits, is removed.

ACCO did not buy cheaper, or get the merchandise to A & P cheaper, just because it bought more at a time, or A & P could use more at a time. The court decision makes that clear. Suppliers were forced to sell to A & P, or for the use of A & P, at cut-rate prices—"or else."

As the court said:

It is probably true that many actions of defendants of which the Government complains, standing alone, are devoid of wrongful character, but when the fabric woven from them is considered as a whole and it appears contaminated by a corrupt thread running throughout the completed texture, the whole become a tainted product and all partaking in its creation, having voluntarily contributed to the structure, are charged with responsibility for the fabrication. The conduct of ACCO is the rotten thread of the fabric, and it so permeates the entire texture and ties together the other threads as to result in an imperfect, an illegal product—unreasonable interference with competition and power to monopolize. With the flaw of ACCO's tainted record permeating all the operations of A & P's integrated system, the activities of A & P other than those directly involving ACCO take on a polluted colored light. Manipulation of gross profit rates, at times sufficiently to do away entirely with retail profit, in competition, procurement, and enjoyment of buying preferences heretofore discussed, whether in the form of discriminatory discounts, advertising allowances, or otherwise, supplementing retail earnings, or overcoming deficits with earnings of manufacturing subsidiaries, the coffee department and ACCO, and other actions heretofore mentioned, even though some one or all of them standing alone might not amount to a violation of the law, when coupled and inextricably interwoven with the activities of ACCO, reflect inevitably the misuse of defendants' power in competition with others to such an extent as to create undue interference with commerce—undue restraint of trade—of such character as to result in monopoly.

A & P had been engaged in its criminal acts for some 20 years before the Government caught up with it. It was making its criminal profit on these criminal acts during these 20 years. The expense to the Government in prosecuting A & P and in obtaining conviction can hardly be estimated. Yet, when it was all over, and after the courts had fully spoken and had found the defendants guilty "in manner and form as charged in the information"—and I respectfully refer the Members of this House to the extensive contents of that information—the maximum fine that could be imposed on any defendant was $5,000 for each of two counts.

I submit that the law cannot continue in this state and that the Congress has the duty to increase this amount to a realistic figure. I respectfully recommend the adoption of the bill, as introduced by me.

Preserving a Sound Tradition

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the Brooklyn Eagle on Sunday, June 5:

PRESERVING A SOUND TRADITION

It is altogether fitting that Brooklyn, the City of Churches, should have as one of its best-loved celebrations, Anniversary Day, the annual Sunday school parade. This is a festival peculiar to Brooklyn, one that has been continuing for 120 years, ever since the first few starched and scrubbed youngsters marched proudly down the streets of Brooklyn Heights in commemoration of the founding of Brooklyn's first Sunday schools in 1816. There has never been anything quite like it anywhere else in the country.

There were only four Protestant churches in Brooklyn in those days. Now there are 300 Sunday schools sending about 90,000 youngsters to the parade which has to be held in 27 divisions throughout the sprawling borough. But the basic spirit remains the same—it is a tangible expression of the interest in religious teaching of our Protestant churches and their pride in the youngsters to whom they impart that teaching. As it has for a century and two decades, the parade cuts across denominational lines to stress the common faith.

It is little wonder, therefore, that Anniversary Day has attracted the attention of the most distinguished persons of their time. Presidents have not thought it beneath them to review the upright little boys and girls taking part in the parade. The mayor, the borough president, and the governor traditionally appear. This year Governor Dewey's trip abroad will keep him away, but he will be ably represented by Acting Gov. Joe R. Hanley. The rest of this year's roster of notables is as distinguished as last year's, when Gen. Dwight Eisenhower led the list. Dr. Ralph J. Bunche, the United States mediator, one of the truly great men of our day, and Harold Stassen, a noted religious leader and political figure, in addition to being president of the University of Pennsylvania, will be among the guests. As he has for many years, former Ambassador to Germany James W. Gerard will stand beside his old friend, former Supreme Court Justice Charles C. Lockwood, in the parade reviewing stand. And these comprise only a fraction of the distinguished men and women from Brooklyn and elsewhere who will be present.

We are proud of this notable array, but it must be stressed that we are prouder still of the parade whose progress this newspaper, as an institution only slightly younger, has recorded and applauded through the decades. Today, more than ever, in a day of shifting and sometimes confused values, we welcome its message of good will, cooperation, and ever-renewing faith.

UNIVERSITY OF MICHIGAN LIBRARIES

Postal Salaries

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. CORBETT. Mr. Speaker, I am pleased to present here for the more certain consideration of the Members of Congress an important statement of Edward G. Coll.

Mr. Coll is the capable and aggressive president of branch 20 of the National Association of Postal Supervisors. He is an example of the excellent kind of leadership that is coming to the front in our postal organizations.

Mr. Coll's testimony before the subcommittee of the Senate Post Office and Civil Service Committee emphasizes a situation in the postal pay schedule that merits prompt attention.

The statement of Mr. Coll follows:

I am Edward G. Coll, president of the Pittsburgh, Pa., branch of the National Association of Postal Supervisors.

Compensation in our economy is based on ability and responsibility, and compensation ordinarily is increased in direct ratio to the growth in ability and responsibility.

However, the present Reclassification Act of 1922, as amended, and the enforcing regulations concerning overtime, penalizes the postal supervisor in every grade, regardless of his greater ability, more exacting duties, and heavier responsibilities.

Statistics compiled in Pittsburgh on the earnings of 100 employees in all types of assignments at the $3,550 grade indicate the average annual wage was $3,482.29 in 1948. Compare this with $3,836.98, which was the average compensation of his supervisor, the clerk in charge. The employees, it is readily seen, earned $5.31 more during the year than their supervisors.

Four thousand and fifty dollars grade foremen were slightly more fortunate. In Pittsburgh they earned 3.8 cents per hour more than the $3,550 employees. Consider this: Foremen with at least 20 and as many as 100 men to supervise; the complete responsibility for the operation of a section; an intimate knowledge of the section and its related activities, as well as the ability to move the work load along smoothly and efficiently—all this for 3.8 cents more per hour.

The glaring inequalities of the present act are nowhere more in evidence than in the station supervisory field. Here responsibilities are varied and arduous. In addition to being personally responsible for well over $120,000 annually in cash and cash items, the $4,250 grade superintendent must supervise the work of from 16 to 25 employees; meet the public in the station and still keep upwards of 30,000 patrons satisfied with their mail service. This he must do at a salary which, in Pittsburgh, is only 6.3 cents more per hour than that of his top grade employee.

Ironically, the station superintendent at $4,150 in Pittsburgh received $27.78 less last year than his associate superintendents and foremen at $4,050.

The local station superintendents at $4,250 received only $6 more per month than the foremen and station superintendents at $4,050, although their base pay alone entitled them to a differential of $16.65.

Naturally, these differences are based primarily on the overtime compensation received by employees and supervisors at and below the $4,050 grade. Overtime compensation to all supervisors would eliminate this obvious injustice.

Longevity compensation is recognition of meritorious service over a period of time. Justice demands that the supervisor be given full consideration in any longevity measure. Congress has recognized that clerks, carriers, and mail handlers are entitled to it. Supervisors should also be recognized based on their years of faithful and efficient service.

It is the belief of our organization that fair and equitable compensation schedules should include:

(a) Five-hundred-dollar differential between the top-grade clerk and the lowest paid supervisor.

(b) Overtime compensation to all supervisors regardless of their designation.

(c) Longevity benefits be extended to all supervisors based on their total years of service.

Revision of the postal pay schedules as proposed will raise the morale of the postal supervisors and serve as an inspiration to achieve maximum productivity. It will produce a better type supervisor, in that other highly capable and efficient personnel will aspire to the position, and it will attract to the post office the highest type of personnel in view of the greater rewards offered for advancement.

I thank the committee for the opportunity you have given me to present this testimony.

Beloved Professor Passes

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. DONOHUE. Mr. Speaker, recently Dr. Walter Elmer Ekblaw, professor of geography at Clark University, in my home city of Worcester, Mass., passed to his heavenly reward.

Dr. Ekblaw was a beloved citizen, an eminent scholar and an exemplary teacher.

Widely known in the scientific world as a geographer, biologist, and botanist, he was chosen, in 1913, botanist and geologist for the MacMillan Crocker land expedition.

Also an ornithologist of wide repute, he had conducted for many years, under the name of Wake Robin, the Worcester Sunday Telegram column on birds and other nature topics. He contributed to the local and national newspapers many articles on world geography, history, and peoples.

His varied career included a keen interest in politics and civic affairs.

Our community mourns the passing of a beloved, distinguished citizen; the Nation has lost a champion of American democracy; the world will miss an energetic advocate of honorable peace.

Dr. Ekblaw's loss is paramount to his family but his multitudinous friends and admirers sincerely share their great sorrow.

The following editorial, which appeared in the Worcester Telegram of June 6, 1949, appropriately presents the sentiments of Dr. Ekblaw's fellow citizens:

DR. W. ELMER EKBLAW

Dr. W. Elmer Ekblaw, long professor of geography at Clark University, was a man of remarkable knowledge and a citizen of the highest type. Although geography was his main field, he was also an explorer, geologist, archeologist, botanist, and ornithologist. His fund of information about the structure of the earth and its effects on the history of mankind, about trees and flowers, about birds and other wild life, was amazing.

He was an able writer, as readers of his Wake Robin articles in the Sunday Telegram and his Monday column in the Telegram well know. In the classroom and on the public lecture platform he had the true scholar's gift of explaining things in simple, clear and interesting fashion.

There was nothing cold or aloof in his interest in his profession. His love of nature and of the beauties of the earth, was deep-rooted and sincere, and he was the friend of man in all lands.

He was a strong advocate of peace, but he was no pacifist. He was quick to denounce evil, and he was ever the champion of the enslaved and the oppressed. He will be sadly missed, not only at Clark and by all who knew him, but also by countless others who got pleasure and inspiration from his writing.

Memorial Day Address of Hon. Ralph Harvey, of Indiana

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. HARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. RALPH HARVEY, of Indiana, at the Memorial Day services at Centerville, Ind.:

Those who made possible this gathering are to be complimented. They are ever mindful of all we owe our heroic dead. They are likewise aware of the responsibilities that weigh heavily upon the living.

On this Memorial Day we take solemn recognition of our estate—our individual welfare, our position as a society, and our purpose as a Nation of free people. In mind and spirit we offer simple thanks for the goodness that still prevails in the world. We acknowledge, with like humility, our debt to the departed legions of the grave who sacrificed their lives to drive back the forces of evil and tyranny.

In this hour of international stress, when so much of the world is suffering and is enslaved, we must not despair. We would do better, in tribute to our dead, to keep sight of the cause they served, the high hopes that gave them courage, and the way of life they so valiantly defended. We, in the course of our daily living, must keep aflame and inviolate the torch of freedom that they preserved through the dark tragedy of battle. The battle for freedom never ends. It dates back to man's earliest hour as a civilized being; it will date onward until all mankind dwells harmoniously in the fulfillment of Divine teachings.

The twentieth-century world we share is now engaged in a fateful struggle. Great areas of land and many millions of people are involved. At stake is the basic issue of whether free men shall rule themselves by consent, or the totalitarian state shall stand

UNIVERSITY OF MICHIGAN LIBRARIES

supreme and inflexible. Not until that fundamental question, encompassing the destiny of whole nations and peoples, has been resolved shall we attain the difficult goal of peace and security. In the interim, whether a matter of weeks or of years, the world is subject to an uneasy truce and we of America must tend the peace or find ourselves embroiled in war.

Our meeting here may seem less important than a recent one at Lake Success. To us, too, this must seem a far less auspicious occasion than the present session of the Council of Foreign Ministers in Paris. But for us the meaning of recent history should be no less clear than to those who represent us in the work of the United Nations, and the realities of world affairs should be as accurately appraised by us as by those chosen to explain our aims at any international conference.

Our country, twice caught up in the holocaust of a world-wide conflict, has emerged as the strongest single political power existing on the face of the earth today. This is the No. 1 fact of world life. It may disturb some capitals, please others, and irk a few, but it is understood by all of them. It must be accepted, too, by all of us, for American decisions, American purposes, and American actions constitute the main thread as developments and events weave the pattern of current history.

As a rival in the world arena, America faces Russia. This again is a hard and undeniable fact. Between these giants, their actual and potential powers, hangs the ultimate fate of many lands. Between these giants, too, is no forthright difference of ambitions, but a crucial one of clashing ideas and ideals. From this basic and irreconcilable conflict of ideologies—whether men are masters or servants of the state—emerges the narrow bedrock upon which all nations of the world must strive to build the peace.

Since we, as a people, are bent upon peace rather than war, this is an appropriate interval for stock taking. Here in an atmosphere of calm and quiet, we would see ourselves as others see us.

Four years ago the war-weary nations of the world set out to organize an international agency. Their best efforts to lay the cornerstone for the future peace and security of all were achieved by the ratification of a Charter of the United Nations Organization—known throughout our universe today as the United Nations. It, on that day 4 years ago, was our best hope for peace; it remains that today, our best instrumentality for the avoidance of war.

In volunteering to help establish the United Nations, we reversed the stand we had taken after World War I. Then, as a major world power, we withheld a binding sanction of the League of Nations, and today we recognize that our forbearance left that agency incapable of exploring the field of international adjustment, compromise, and arbitration necessary to the maintenance of peace.

Our positive aid to the United Nations is not all we have undertaken in the quest for a lasting peace. Less than 2 years ago we conceived the Marshall plan. More recently we have joined the signatory nations of the Atlantic Pact, though our adherence to this mutual defense pledge awaits approval of the United States Senate. Finally, we are engaged now in a study of whether we should arm western Europe and this problem will soon be acted upon in Congress.

Within our ranks, as honorable and conscientious citizens, are those who would see this country stand apart from, rather than take a part in, the complexity of world affairs. For us, however, who stand at the brink of the atomic era, the age-old barriers between countries and continents are disappearing. Distances are measured in minutes rather than miles, and by land, sea, and air science is closing the chasms of time and space into the corridors of convenience. Our productive genius, as reflected in output of farm, mine, and factory leaves us, too, with more than we can consume, so that markets abroad are vital to keep us abreast of a world geared to keen competition and revolutionary advancement.

Whatever may be the errors and shortcomings of America's present foreign policies, there is the inspiring realization that we have placed patriotism above party politics. Since the hour of Pearl Harbor we have stood before the world as a bipartisan entity, our broad commitments subject to debate and no new step taken without a pooling of our thoughts.

A few months ago, for example, we had a Republican Congress, while today that body is controlled by Democrats. Even so, on important questions of foreign policy our chosen lawmakers have acted according to their individual consciences. To deal with problems beyond the Atlantic and Pacific, the House and Senate have cooperated with the President to distinguish themselves as an American Congress. This display of unity does not preclude the right of a minority to air its grievance, but when a course of action is approved, it bears but one name—American.

The making of peace is a less spectacular feat than the waging of war, but in terms of effort, determination, and skill, it calls for a similar outpouring of resources. Thus may be answered in the briefest possible way not only those who are losing patience with the labors of the United Nations, but those, too, who entertain grave misgivings about our gifts and grants under the European recovery plan. Let us consider for a moment the dual job that America is executing to help others attain peace and at the same time preserve the blessing without which peace itself is meaningless—the freedom of men.

Surely no impartial and objective witness to the tortuous progress of the United Nations would be at a loss to explain its frustrations. An unbiased review of its long deliberations—the sessions of the General Assembly, the powerful Security Council, and a dozen specialized subagencies—makes emphatic a single fact: Whatever the free world proposes to insure peace, Russia and iron-curtain puppets oppose as a threat to their security. If it is not enough to analyze the arithmetic of our peace odds—America, Britain, and France repeatedly together, with Russia the lone dissenter among the allies of World War II—then the larger figures of the General Assembly are conclusive. Within the voting of this body, as many as 40 nations have seen their efforts blocked by the Soviet.

In spite of the slow progress of the United Nations, its movement is steady and its direction right. It is clearing the way for the larger tasks that await it. The establishment of a permanent headquarters, the creation of full-time secretariats, and a willingness of delegates to go back again and again to the conference table are reassuring milestones. No nation, large or small, has withdrawn its membership; additional nations are seeking seats in the Assembly, and the sharp differences of views and interests of separate sovereignties are being so exposed to world opinion that a dominant body of thought will prevail or that obstinate dissenters will forfeit their right to the friendship of neighbors.

When the American Congress, after strenuous debate, voted overwhelming approval of the Marshall plan, our Nation embarked upon the most daring venture in its 170 years of union. Here for the first time in all recorded history a nation emerging triumphant from war chose to share its material abundance with those that had lost theirs in the waging of that war. Here, too, in the most generous gesture of faith in freedom that mankind has witnessed, one people promised to hand over to half a continent as much goods and aid in dollars as they paid for the entire operation of their own national government in each of the years preceding the war. This unprecedented act of enlightened self-interest has already achieved notable results.

The European-recovery program, boldly outlined in the Marshall plan and aggressively effectuated through the Economic Cooperation Administration, has dealt the conspiracy of Communists through world revolution a body blow. Today western Europe is rapidly attaining economic stability, prewar levels of production, and with the attendant moral regeneration, a well-balanced scheme of political independence. Postwar France and Italy, dangerously close to Communism a year ago, are firmly embracing the tenets and institutions they once knew, those of constitutional democracy; and Britain, the pacemaker of European recovery, is regaining her stature as a partner in the free world despite the evolution of her empire and the realinement of her domestic economy.

In the future, I believe, Americans will hold to a critical accounting the activities of ECA, and as the recovery of western Europe gathers momentum, expect Congress and the administration to slacken our aid in order that Marshall-plan countries may cooperate in helping themselves. Nor should a lessening of the ECA investment carry with it any automatic guaranty that in place of plows we are ready to ship guns to western Europe, for the problem of arming friendly nations is one that must be weighed in the light of other international considerations.

To round out the picture of where we stand and where we are going—with due regard for the accomplished facts of the United Nations and ECA, and the pending projects of the Atlantic Pact and a rearmed Europe—we must face the crises that engulf other parts of the world. The Berlin situation, blowing first hot and then cold, cannot be eased until the Four Powers agree on peace treaty terms for Germany and Austria. In these negotiations, so long deferred, America's aim will be to help restore a German economy worthy of the name. Our Government erred in its advocacy of the Morgenthau plan and at hand today is compelling evidence that the Ruhr Valley, whatever the extent of its international control, must be restored as the industrial furnace of western Europe.

There remains almost half the globe, with its hundreds of millions in population and more billions in resources, to which our country must give more intelligent treatment in the future than it has in the past. I refer, of course, to the immense Middle East and its larger adjacent land mass, the Far East. In the next 20 years this vast domain, with untapped wealth and peoples striving for political expression, will come to play a vital part in world affairs, and America must display more wisdom and courage than has marked the shameful sacrifice of China to communism.

A reckoning of what America is endeavoring to do beyond its shores must be appraised, too, in the light of what we as a nation are doing at home.

In the face of stern realities, we are building a peacetime defense system larger than any previously envisioned. It is represented currently by an annual tax appropriation of almost $16,000,000,000. With this expansion of our armed strength, we are unifying the components of our National Defense Establishment to make America preeminent in military might. While much of the rearming now authorized is of a long-term nature, it has been initiated out of

recognition that another war, waged with weapons of incredible speed and destructiveness, may be finished in a mere 60 days. Those of us who in the Nation's behalf must act upon these costly security undertakings are fully aware that if war comes, we have spent too little; if not—as we pray—we have spent too much.

To all of us, the paramount aim of the United States should be clear: At home and abroad we shall champion the cause of freedom. We believe that liberty-loving peoples of the world must be guaranteed the right to choose their form of government, maintain the institutions they prefer, and exercise their sovereignty without threat, coercion, or fear of invasion. We have no misguided ambition to Americanize the world, but we do not propose to stand by while sinister forces of a Godless philosophy seek to bring under their despotic control those people who believe in self-government, justice and common decency.

Strong as our arms may become, mighty as is our industrial potential, and resourceful as we have always proved in meeting the test of conflict, there abides with us a strength that we must dedicate to the long and tiring search for peace. It is that intangible but hardy quality of the free man which has found its finest exponent in the American citizen. It is that inner forces of our being which gives us the will to do our best in all undertakings and to keep—against every error, every failure, and every adversity—our faith in God.

Young Men Win Honors

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a splendid editorial appearing in the Scranton Times of June 5, 1949, paying a deserving tribute to two very gifted young men of the anthracite region. I join with the Scranton Times in extending earnest congratulations to Cadet Richard T. Carvolth 3d, and Midshipman Wiliam L. Bryan, and I wish them success in their careers.

YOUNG MEN WIN HONORS

News stories do not necessarily have to be about war and bloodshed, action of the Foreign Ministers Council, debates in Congress or great strikes to arouse public interest. The best proof of that was the story in the Times yesterday about two local young men who won honors at West Point and Annapolis. It is a fair guess that the account which told that Cadet Capt. Richard T. Carvolth 3d was top man in his class at West Point and Midshipman William L. Bryan was graduated with the second highest honors at Annapolis, was as widely read as any item in the paper.

Cadet Carvolth comes from Peckville, Midshipman Bryan from Clarks Summit. Both young men had made the best of their opportunities in the service. Young Carvolth also recently received the honor of being appointed a Rhodes scholar. The honors which the two young men won reflect credit on their own ability, and the training they received in their respective schools and in preparation for entry to West Point and Annapolis. This whole region can and does feel proud of both young men.

Concordia College Choir of Minnesota Promotes Good Will in Norway

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. HAGEN. Mr. Speaker, it was indeed a great pleasure for my family and me to recently hear a concert by the Concordia College Choir, of Moorhead, Minn., which is located in my district.

This great group of singers led by Dr. Paul J. Christiansen, are now in Norway and during the next month or so, will be rendering concerts in the largest cities in that country. This is truly a good will mission.

Of interest to the readers of the RECORD, I am sure, is a statement made by the Norwegian Ambassador to America, His Excellency Wilhelm Munthe Morgenstierne, on the evening of May 25, 1949, at the concert at Constitution Hall here in Washington, D. C.

My introduction of the Ambassador and his remarks are as follows:

It is our privilege to have with us tonight the dean of the Washington diplomatic corps.

Mr. Ambassador, so much of your life has been spent among us, that it is sometimes difficult to think of you as the distinguished emissary of another nation.

As a diplomat, a statesman, a scholar, and as a friend, you have consistently demonstrated the essential harmony of two great cultures—the Norwegian and the American. Your long and outstanding career and service parallels the growth of understanding and sincere affection between Norway and the United States. Your contribution in cementing the bonds which now join our countries has been exceedingly great.

Ladies and gentleman, I have the high privilege and honor to present to you His Excellency, Ambassador Wilhelm Morgenstierne of Norway.

Mr. MORGENSTIERNE. Thank you very much, Congressman HAGEN. You know, in Norway we feel very close to Minnesota. It is a name held dear in thousands of Norwegian homes.

There's a saying that when words fail, then the language of music begins. I think the Concordia Choir has given us something tonight which words could not convey.

For those of us in the audience who are Norwegians, or of Norwegian origin, your singing had a special interest and appeal.

Concordia College was founded nearly 60 years ago by Norwegian pioneers, and we know that through the years this American college has kept up faithfully many Norwegian traditions.

And so when in a few days the Choir sails for Norway, it will take along not only its beautiful songs, but also a warm handshake from our kinsmen in this country.

I know that the arrival in Norway of the Concordia Choir is looked forward to with keen anticipation, and I can assure you that you will receive a most friendly and enthusiastic welcome. My countrymen will greet you not only as kinsmen, but as representatives of that great and generous America to which we feel closer today than at any time in history.

Nor have my countrymen forgotten the splendid reception extended to many Norwegian choruses which have visited this country before and after the war.

I am sure that I have everyone in this audience with me when I wish you members of the Concordia Choir and your eminent leader, Godspeed, and a wonderful visit to a country, which for so many of you is the country of your fathers.

Lykke på reisen—og hils Norge.

The Value of Foreign-Language Press

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which, in my estimation, renders a clear outline of the true value of the foreign language press has rendered an excellent torial appeared on May 31, 1949, in the Kuryer Polski, a Polish language daily, published for the past 61 years in Milwaukee, Wis.

For many years now the foreign-language press has rendered an excellent public service, which has not always met with due recognition. More recently, this press has become a valuable factor in combating anti-American propaganda both here and abroad, taking an indirect part in the campaign waged to the same effect by our Department of State. In view of these facts, I believe the following editorial to be most worthy of our consideration, and wish to call it to the attention of the Members of Congress.

THE VALUE OF FOREIGN LANGUAGE PRESS

Contrary to contentions of a majority of English language newspapers in the United States, the foreign language press, and especially Polish dailies in America, exert tremendous influence in shaping public opinion not only among the multimillion segment of American citizens of Polish descent, but also abroad, where English language press, except that of Great Britain, does not reach.

The loyal Polish press in America performs its task with merit and honor, teaches the newcomers to our land their duties as new citizens of their adopted country, and, above all, combats the disease of communism not only on American soil, but in Poland as well, whither, by various routes, Polish language dailies from America find their way.

We have had repeated proof of how valuable an edition of Kuryer Polski from Milwaukee is in Warsaw, Gdynia, or Cracow. From one of our readers we have learned that a copy of Kuryer Polski, which arrived in a small town in the Lublin province, passed consecutively through the hands of practically all of the town's inhabitants, who, in this manner, have learned the truth concerning the happenings in America, and were able to compare it with the lies of the regime press.

What role, in the estimation of an important American institution, the Common Council for American Unity, of New York, the foreign-language press plays in the United States, is expressed in the following excerpt from the editorial opinion of this organ:

"The foreign language press and its readers can, we believe, play an increasingly important part in combating anti-American propaganda abroad. Much already is being done,

since directly or indirectly American foreign language newspapers are reaching many editors, institutions, and individuals abroad. But more needs to be undertaken at this time if current misconceptions regarding the United States are to be corrected."

The United States spends large sums combating anti-American propaganda abroad, but it seems that it did not occur to anyone in Washington to avail themselves of so important a factor in this campaign as the foreign-language press, and, in particular, the Polish press in America.

This is a matter worthy of deeper consideration, and a fruitful topic for discussion in the Congress of the United States.

It is advisable, therefore, that the advantages of expoiting our foreign-language press be considered by our Congressmen.

Lack of Risk Capital

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Richard W. Courts of Courts & Co., Atlanta, Ga., before the sixteenth annual conference of the Southeastern Electric Exchange, Boca Raton, Fla., April 15, 1949:

LACK OF RISK CAPITAL

These days have been most pleasant—interesting and instructive. You ladies and gentlemen have had your main course, your salid course, your dessert, and now you are down to the nuts. I would not venture to talk to you people about the utility business. It would be like trying to tell Bobby Jones how to play golf. March 1948, I was permitted to appear before the Senate Finance Committee to testify why there was a lack of risk capital. I thought a similar discussion might prove of interest here.

Risk capital, venture capital, equity capital may differ in their initial uses. They all represent junior capital subject to all the risks and hazards of the business. They all represent ownership of the business, usually in the form of common stocks. So I will refer to all such capital as risk capital.

The critical shortage of risk capital is borne out by the fact that common stocks of sound companies are selling today at substantially less than book values, in many cases at and below net current assets, with no value whatsoever attached to physical properties, management, and good will. The entire capitalizations of many companies are priced in the public market at only two to five times 1 year's earnings—this at a time when business and profits have been running at an all-time high.

The day-to-day trading in common stocks provides the market place for risk securities—the prime purpose of that market is to absorb new issues of risk securities in order to supply new capital to industry. The size of the market governs its ability to absorb new issues. The principal market place for risk securities is the New York Stock Exchange. When that market is active and large, the market for over-the-counter securities and new issues is likewise active and large. When the volume on the New York Stock Exchange is low and thin, the same prevails for over-the-counter securities. For the past 11 years the average annual volume of shares traded on that exchange was less than the shares traded in the year 1901, 62 percent of 1932 volume, the worst depression year of all history, and less than 60 percent of the so-called normal year 1926. For the past 9 months the volume on an annual basis was at the rate of 92 percent of 1901. In 1901 there were less than 70,000,000 shares listed on the exchange; today there are over 2,000,000,000 shares listed. Our country has grown rapidly and tremendously, but American industry has grown even more. It is called on to supply not only our own requirements but a substantial part of the requirements for rehabilitating a major portion of the world. We are attempting to finance this great American industry of 1949 with a public market the size of 1901. It just cannot be done. In my opinion it will require a market twice the volume of 1926 to supply the new risk capital needed by industry.

Let's review the disastrous effects on the public market by recent risk capital financing. On January 2, 1948, Gulf Oil Corp., common stock sold at 75¼ on the New York Stock Exchange. Shortly thereafter it became known that the company would sell 2,269,050 of additional common stock. The market price of the stock promptly declined to 60. The new stock was offered to stockholders at 51 to induce them to take it. By February 10, expiration date of the rights, the stock was quoted at 58¾. This means the Gulf stock declined 22.43 percent, while the Dow-Jones Averages, comprising 30 high-grade common stocks, declined in the same period 8.50 percent. It means that Gulf Oil received over $65,000,000 less for its stock on February 10 than the market said it was worth on January 2. The decline of this stock pulled down all the other oil stocks—this in spite of the fact that Gulf Oil and the entire oil industry were earning at the highest rates in history. The Texas Co. and Cincinnati Gas & Electric, old established companies, had similar experiences. In January 1949, the Bethlehem Steel Corp. did bond and common-stock financing. They sold some 628,000 shares of treasury stock at $30.70 per share; the book value of that stock was $63.05 per share, meaning that the company received some $20,314,000 less than the book value for it, meaning that every share of old stock was diluted—this in spite of the fact that the company showed earnings of nearly $5 per share in 1947 and about $9.36 per share in 1948. The company received the money, but what a price they paid for it.

The American Telephone & Telegraph Co., whose common shares are widely owned by trust accounts and small investors, including employees, women, and children, faced with urgent expansion to meet public necessity, has increased the debt of its system from about $1,200,000,000 to about $3,400,000,000, an increase of $2,175,000,000, or 176 percent in the past 8 years. The system debt is now 50.5 percent of invested capital, which I would feel is dangerously high. Insurance companies and savings banks are loaded with telephone bonds and cannot forever continue to buy additional bonds. I see estimates that the Bell System will still need some $2,000,000,000 for capital expenditures the next few years; about $1,000,000,000 to come from the public markets. To complete such program and to bring the debt ratio of the system back to 35 percent of invested capital would require some $1,700,000,000 of risk capital, nearly four times the amount of risk capital raised by all of American industry in 1948 and within $200,000,000 of all raised in the past 3 years.

Let's examine the potential demand on the public markets for risk capital in the future. Able economists state that with our unprecedented national debt the gross national product must be maintained at some $194,000,000,000 per year for the next 4 or 5 years to keep us out of a major depression. At present, the gross product is running in excess of that figure, but it must be maintained. These economists say this national gross product can be maintained if American industry is willing and able to spend $21,000,000,000 per year for capital expenditure for the next 4 or 5 years. In 1946 these capital expenditures were $14,500,000,000; in 1947, $18,000,000,000; in 1948 about $21,000,000,000. To maintain this pace represents an immense undertaking by American industry. In 1938 capital expenditures were not $21,000,000,000, they were $4,700,000,000; in 1939, $8,000,000,000; in the boom year 1929, $12,500,000,000—in the depression year 1932, $1,200,000,000.

How can this $21,000,000,000 per year be raised? Economists say that some $14,000,000,000 can come from the inside, that is, from earnings and reserves for depreciation, that the other $7,000,000,000 must come from the public markets and that over half that $7,000,000,000 should be in the form of risk capital. The utilities, telephone companies, natural-gas companies alone are estimated to need over $3,000,000,000 per year, half of which should be risk capital. At no time in history have the public markets faced such a task. In the postwar period 1922 to 1927, when our Government debt was about one-twelfth of its present size and when public markets were functioning in orderly fashion, only $1,800,000,000 per year were received by the sale of new securities. Requirements for the next few years will be three and one-half times that amount. From 1931 to 1940 less than one-tenth of $1,000,000,000 per year on balance came from the public markets. From 1941 to 1946 there was no capital on balance provided by the public markets. War production was financed by the Government.

I want to give you some figures now that to me are most disturbing:

Domestic corporate financing, 1946–48, inclusive

	1946	1947	1948
New corporate financing	$6, 508, 777, 181	$6, 276, 745, 020	$5, 934, 456, 563
Debt securities	$4, 435, 961, 800	$4, 771, 309, 634	$4, 999, 071, 766
Percent of total	68. 15	76. 02	84. 24
Common stock	$804, 387, 001	$659, 154, 129	$495, 969, 073
Percent of total	12. 36	10. 50	8. 36
Preferred stocks	$1, 268, 428, 380	$846, 281, 257	$439, 415, 065
Percent of total	19. 49	13. 48	7. 40

Information taken from the Commercial and Financial Chronicle, Jan. 31, 1949.

In these postwar years new debt financing totals over $14,000,000,000, common stock financing $1,900,000,000. New debt is nearly 7½ times new common stock capital—all this at a time when business was at an all-time high in sales and earnings. That is what our tax structure has brought. If industry can't finance with risk capital in good times, it never can. The public markets have not supplied the needed $7,000,000,000 per year of new financing, meaning corporations have not only increased debt but have drawn on accumulated reserves. In the event of severe depression, the Government might well have to supply additional capital to industry not in the form of loans but in the form of risk capital, meaning Government ownership—on the other hand, our Federal Government with all of its commitments might have to resort to further

UNIVERSITY OF MICHIGAN LIBRARIES

devaluation of the currency with untold suffering to the holders of some $262,000,000,000 of life insurance and savings. Are we willing to risk such possibilities? If so, why have we fought to save Europe for democracy? If so, why the Marshall plan?

American industry in the three postwar years has not been able to pay a fair percentage of earnings as dividends. In the years 1946 through 1948 about 40 percent of earnings was paid as dividends compared to 66 percent in 1929 and about 75 percent in 1939. Managements know they face the following facts: They know that when dividends are paid out they are promptly siphoned away from the recipients in the form of taxes and unavailable to come back to corporations in the form of capital. They know that large estates forced to sell common stocks for taxes are competing for what risk capital does exist. They know that old plants must be replaced out of depreciation and earnings, otherwise corporations would lose productive capacity and earning capacity. Depreciation reserves at the allowable rates have not been sufficient to rebuild plants at present costs. Therefore, a substantial portion of earnings after taxes has had to be used or earmarked for such purpose.

So far as stockholders are concerned, earnings and dividends mean little. It is interesting to note that for each $100 earned by a corporation before taxes, after said corporation pays 38 percent tax, if it then pays 45 percent of the remainder, namely $27.90, as dividends, the stockholder in the $25,000 income bracket keeps as little as $13.41 of the $100 earned—the man in the $200,000 bracket keeps as little as $4.99, out of which State income and ad valorem taxes must be paid. Why should they want to own American industry?

Savings have reached an all-time high, but far too little has gone into risk capital. Liquid savings of individuals, including life insurance, have risen from some $82,600,000,000 in 1939 to $262,100,000,000 in September 1948, an increase of 217 percent. All stocks listed on the New York Stock Exchange had a market value in 1939 of $46,500,000,000, now about $66,000,000,000, up only 41 percent. A vast portion of our national income after taxes has accumulated in the hands of little people, paying little or no taxes. More wealth in the hands of little people is fine. It means more people can have electricity, electrical appliances, telephones, automobiles, but individuals and corporations who pay the taxes must be enabled to carry the burden. It is natural that these people should seek safety first with their first savings. However, it is most damaging that the Federal tax structure and other governmental policies have coaxed such vast sums into so-called safety first, with such little willingness of the owners to risk even 10 or 20 percent of their savings to own and finance American industry—the very industry that produced these savings. Such policies have caused a rapid flow of vast sums into our insurance companies and savings institutions. That is unfair to our institutions. They in turn must place these funds in safety-first channels. Can they continue to find safety first for such vast and increasing funds? Surely, if such trend continues, there will be no such thing as safety first, for the simple reason there will not be sufficient risk capital down below to provide the safety. Surely our great institutions should welcome a reasonable flow of savings into risk capital.

There is another hoard of safety-first people. The proportion of national income distributed as pensions and other forms of relief has increased from 1½ percent in 1929 to 5 percent at present. Such distributions now run at some $11,000,000,000 per year, nearly one and one-half times all dividends paid by all American corporations in 1948. Such benefits are fine, provided we enable industry to carry the burden. In the past, industry has been able to raise man-hour output some 2 percent per year; now it looks like they will have to raise it some 3 or 4 percent per year. Possibly they can, but it will require huge amounts of new equipment, requiring billions of risk capital. In the meantime we see our best men, many of them young, unwilling to take the risks of leaving their present jobs to take bigger and better jobs at higher salaries, simply because they have participations in pension trusts and because increased salaries mean nothing after taxes.

This goes on at a time when the American people face the greatest burdens in their history—a Federal debt of some $250,000,000,000, commitments for pensions, higher living standards, commitments to rebuild and defend a major part of the Old World, and, above all, commitments for our own national defense. I tell you no half-way effort will ever take care of those commitments. It will require supreme effort and a supreme willingness to take risks and a supreme desire to own and finance American industry. Private ownership and free enterprise working at their best can possibly carry these burdens. It is certain that no socialistic government or government ownership, though splendid in purpose, can ever discharge those tasks.

Up to some 12 years ago our Federal tax structure permitted a class of people to exist who, by hard work, ingenuity, or luck, or some of all, had incomes in excess of the amounts necessary to live and pay taxes. This excess found its way into American industry by the purchase of common stocks. This not only supplied risk capital to industry but provided private ownership of industry. The mechanic, the farmer, the day laborer, and the bus driver always had hope of, and often succeeded in, becoming owners of industry. In future the United States Government is the potential owner. Is that what we want? Let's make a decision.

Now, who is being hurt? Not the rich man—the rich man has quit; he can live on accumulated wealth. Out of taxable income he has nothing to put into industry, and even if he did, plain common sense would dictate that he would be utterly foolish to take the risks with no return. These little men who start in business with nothing but the determination to work, sweat, save, and build; the man who starts alone, works alone, saves a little, buys a new machine to increase his production, then employs two or three men; these little men who start as proprietorships, then partnerships, building out of earnings, knowing nothing about corporate structure; there are millions of them; there are some 3,700,000 tax returns of unincorporated businesses and only 500,000 returns of corporations; these little men always struggling to get big, which have proved the backbone of our country for generations—these are the men who are being hurt. They haven't a chance to build business from profits and they are unable to incorporate because risk capital is low in supply and has no inducement to go into small business. The next class of people who are being hurt are men like you—men willing to work all hours of the day to carry the burdens placed on industry and to enable the Government to meet its burdens.

What is the answer? First, Government spending should be reduced to a minimum with every dollar of waste and red tape knocked out. Second, the whole Federal tax structure should be completely revamped. The one over-all shot in the arm to be given industry and individual initiative is to limit the individual's maximum surtax rate to 50 percent, and do so immediately. According to a reliable Washington source, such limitation under present tax structure and applied to the 1948 Government fiscal year would have taken only $655,000,000 out of the United States Treasury, only about 1½ percent of total revenues. Such loss would immediately be made up by men jumping to their work with a bang; initiative and ingenuity again on the alert to create, to produce, to save and to invest, and to own and finance American industry. Men would again take risks and dispose of risks, knowing they could keep at least one-half of any dollar they made. The present maximum rate of 77 percent plus State income taxes is not helping anybody and is a danger to the national welfare. It promotes abnormal practice, unsound thinking, and dishonesty throughout the land. Corporations are increasing debts to unsound extent. We see businesses being liquidated and sold to foundations. We see individuals asking for tax-free expense accounts. We see tax evasions running as high as $4,000,000,000 a year. Such evasions are five and one-half times the amount brought to the Treasury by maintaining individuals' surtax rates in excess of 50 percent.

Dr. Willford I. King, former president of American Statistical Association, testifying before a congressional committee, used United States Treasury publications to produce a most revealing study. He produced charts that showed plainly and graphically that in peacetime high tax rates on individuals invariably brought diminishing revenues to the Treasury, that a maximum tax rate of 25 percent brought the greatest revenues to the Treasury. At the close of World War I the maximum rate was 77 percent; in 1920 it was lowered to 73 percent; in 1922 to 58 percent; in 1926 to 25 percent. From 1922 on, the result was increased incentive with increasing profits to business and individuals and increasing revenues to the United States Treasury. Here is the answer just as plain as day as to how President Truman can keep business profitable and get his $4,000,000,000 of increased revenues to the Treasury.

The present capital gains tax brings insignificant revenue to the Treasury—for 11 years an average of $155,000,000 per year, less than four tenths of 1 percent of present Federal revenues—yet this tax is having a most decided effect on the national economy. Property cannot be sold at a profit to go into new business—25 percent of the profit goes in capital gains tax, meaning the untried new business must be 25 percent better from the start. Even capital lying idle has no incentive to go into new business, because the income is taxed away and if the new business fails, only negligible credit of the loss is permitted to apply against ordinary income. Picture the man who starts young with nothing but the will to work, sweat, and risk, and finally builds a great business. In old age he decides it is time to take less risks; he is willing to dispose of his business and let younger men take over and carry on. He in turn wants to transfer his ownership of this property into United States Government Bonds or partly into a diversified list of American corporations. It is merely a transfer of property in accordance with the dictates of sound judgment and which is definitely favorable to our social order. He is prohibited from doing so, because such a transfer may take nearly 25 percent of the entire principal. Even if he could do so, younger men could not get under debt to take over his property, knowing that the high rates on earned income of individuals would prohibit them from ever paying for it.

Picture the young married couple: The housewife's first concern is to find a nice location for a home and say she buys a home for $10,000. In later years she finds that the encroachments of business are such that this is no longer a nice location for a home and in which to raise children. She changes her mind about it. She sells that home for $25,000, moves into another locality, paying $25,000 for the new home. In the meantime she has incurred a tax of $3,750 for changing her mind. Now, gentlemen, you know that any law is utterly unsound that places a tax on a woman for changing her mind.

UNIVERSITY OF MICHIGAN LIBRARIES

The present capital-gains tax freezes property in the hands of old owners, resulting in hired management and absentee ownership, distinctly not healthy to our social order. I dislike to suggest that a tax which is the most reasonable on the books should be lowered, but the fact is, this tax is not bringing great revenues to the United States Treasury and the Treasury needs the money. The fact is that corporations need risk capital. If that tax were cut in half, it would prove a tremendous impetus to the capital markets and would bring substantially increased revenues to the United States Treasury. This suggestion, combined with the suggested 50-percent surtax limit, involves less than 2 percent of Treasury revenues. These suggestions can be accomplished quickly and simply, bringing increased revenues to the Treasury and providing insurance to keep men and machines employed. We are gambling billions overseas—we had best gamble a few hundred millions at home to keep our own house in order.

What can you and I do about it? There is plenty to be accomplished in visiting with our Senators and Congressmen. They are the chosen representatives of people throughout the land. There is where the power is. It is my observation that our Senators and Congressmen are generally men of character who want to do a good job and are trying to do a good job. They are not experts in all fields; they are average citizens just as you and I. One Senator may be an expert in agriculture. On problems to do with agriculture, he knows the answers. When problems arise on highly technical questions to do with taxes, tariffs, or economic policies, he does not know the answers and we can't expect him to. He needs help and is willing to accept help, but I am afraid he receives too little practical help. Big business sends economists to Washington to read economic studies to the Senators and Congressmen. Labor sends its economists. Then the President, feeling an obligation to carry out his program in toto, which seems an unfair burden on the President never intended by our Constitution, sends economists from the Federal Reserve or Treasury to read economic studies. The Senators and Congressmen probably don't understand any of them, and I don't blame them; but it is very human for them to feel these are the Government men, we had best do what they say. If each man here would make it a practice to go to Washington three or four times a year, sit down and talk quietly with little groups of Senators and Congressmen, explaining in plain, simple, understandable language, using just common sense and plain arithmetic, showing what all these policies could lead to, you would be utterly amazed at the reception you would have and the good you can accomplish.

I have painted a rather dismal picture—that picture is based on past and present policies. Under sound policies for the future I have the most profound optimism. First, I have great confidence in the capacity of the American people to land on their feet in any crisis. True, we face our greatest responsibilities, but that means a great job to do, and in the very process of accomplishing it we can go to heights we never dreamed of. Here we are with a perfectly magnificent country, the strongest, most powerful in relation to other countries the world ever saw. We have the finest form of government the world ever saw; we have a private ownership free-enterprise system that won two world wars, has brought the highest living standards to the common man, that is now providing relief and rehabilitation to a great part of the world on a scale never known. We are a great creditor, a generous people, with a great mass of industrial engineers, chemists, industrial leaders and workers ready, willing, and able to perform. We have a tremendous productive capacity, a magnificent asset. We have now to think in terms of ever-increasing consumption. We should prepare to consume not only our own production but a great part of the production of debtor countries. Let the other countries work for us and send back some of the natural resources we sent them for some 250 years when we were a debtor. We should have blueprints ready for superhighways all over the country, greater Mississippi flood control, reclamation, and in the name of national defense tunneling of rivers, undergrounding of communications systems, electrifying of railroads. That would return sound monetary systems to debtor countries and there would be neither time nor desire for war.

It is high time that Government, industry, and labor join hands in adopting policies that will permit us to discharge our responsibilities and grasp our opportunities. It is high time that Government tax structure restored to the individual the ability to own and finance American industry. If American industry is not worth owning and fighting for, we can bank on it that United States Government obligations will not be worth 10 cents on the dollar. It is time for leaders in Government, industry, labor, and finance to join hands in restoring confidence in the public markets which supply risk capital to America industry—the public markets, particularly the New York Stock Exchange, where United States Government bonds, foreign government bonds, corporate bonds, and the ownership of American industry are appraised and accurately quoted. With such programs, we can proceed with confidence, joy, and enthusiasm, a strong and healthy people going along unmolesting and unmolested—a great people will no longer shiver at the whim of a Molotov.

In recent years our people have been led to fear free enterprise, to fear businessmen, to fear the taking of risks, to fear many of the things that made us great. We still believe in them, but we fear them. A few more years of such could provide a generation that would cease to believe in them. Throughout all history great empires have fallen because they ceased to believe in the things that made them great—they bit off more than they could chew, created vast quantities of money and failed to follow sound policies to meet added responsibilities. Our policies of recent years will not meet our future responsibilities. Sound polices can, but time is running—it is time for decision. Rome was great, but Rome fell, the Byzantine Empire, the Spanish Empire, ancient Athens were all great, but they all fell, and they never came back. Time for decision—and it may be later than we think.

Clerk Hire for Members of Congress

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. HOEVEN. Mr. Speaker, I am opposed to this resolution. There is some justification for telephone and telegraph service for Members of Congress. Also, I feel that an executive assistant could well be placed in every congressional office. However, I see no justification for additional clerk hire as such. In these times, when the people of the country are asking for economy in Government, I am of the opinion that Members of Congress themselves should set some kind of example.

Proposed Solution to the Problems of Migratory Divorce—The Utility or Futility of Legislation

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. BARING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William G. Ruymann, author of Nevada Divorce Manual, member of State bar of Nevada, and bar of the Supreme Court of the United States, and practicing attorney in Las Vegas, Nev.:

PROPOSED SOLUTIONS TO THE PROBLEMS OF MIGRATORY DIVORCE—THE UTILITY OR FUTILITY OF LEGISLATION

(By William G. Ruymann, A. B., LL. B.)

In the United States the problem of divorce has been historically considered a local matter, a question involving the spouses and the State in which they live. With the fusion of the several States into a single nation with a high degree of mobility of population across the increasing artificial boundaries, this basic premise has come into sharp conflict with reality. Interstate jealousies have created a situation in which a person may be married in one State, not married in another, and still bound to a former spouse in a third State. Whether or not such extreme situations have arisen to any important extent, the courts and the writers on the subject have loudly lamented this circumstance and have called for some relief.[1]

The most obvious remedy has been at hand throughout the entire period of the country's existence. The full-faith-and-credit clause of the Constitution[2] and the statute[3] which Congress enacted in 1790 would appear to resolve all doubts. Under that statute a judgment must be recognized by all courts of the country to the same extent as it would be recognized by the courts of the State in which the judgment was originally rendered. There is no apparent exception to this requirement.[4]

Underlying the rule, however, is the principle that a judgment is not entitled to recognition by any court unless it was rendered by a court having jurisdiction over the subject matter and parties.[5] With the idea that an action for divorce is a type of

[1] Some of the criticism suggests that the following quotation might aptly describe the situation as characterized by those factions urging a narrow policy toward recognition of divorces obtained in sister States: "Defraud ye not one the other, except it be with consent for a time." I Corinthians 7: 5.

[2] United States Constitution, art. IV, sec. 1.

[3] Act of May 26, 1790, ch. 11, 1 Stat. L. 122, 28 U. S. C. sec. 687.

[4] For a general discussion of the full-faith-and-credit clause, see Jackson, Full Faith and Credit—The Lawyer's Clause of the Constitution, 45 Col. L. Rev. 1 (1945).

[5] Restatement, Judgments (1942), sec. 5: "A judgment is void unless the State in which it is rendered has jurisdiction to subject to its control the parties or the property or status sought to be affected."

in rem proceedings,[6] the courts have decided that domicile is the essential factor for jurisdiction to divorces.[7] Therefore, if the plaintiff is not domiciled in the State where he obtained his divorce, there was no jurisdiction to grant the divorce, and it is a void judgment. From this it followed that courts of a sister State could examine the facts to determine the existence of such domicile.[8]

The confusing result flows from the interpretations place on this last statement. For example, suppose that State A grants a divorce to the husband under conditions which make that decree valid and unquestionable in that State. Suppose, further, that the wife was not in State A at the time but was given actual notice in State B where she was residing. Now, this notice to her would be sufficient to satisfy the requirements of due process.[9] That divorce would be valid If the wife should appeal from the default decree in her husband's favor, the United States Supreme Court would grant her no relief.[10]

On the other hand, if the wife should seek to attack the divorce in an original action in the courts of State B, those courts would examine into the facts surrounding the husband's domicile in State A, de novo. On that examination it might be determined that the husband was not domiciled in State A, and therefore the court rendering the divorce decree was without jurisdiction to do so. If the case were then taken to the United States Supreme Court, the latter decision would be upheld if there was any evidence in the record to support the finding of the court in State B. This would follow regardless of the previous finding of the court in State A.[11]

Does this amount to a denial of full faith and credit to the judgment of the court of State A? It is now held that it is not such a denial. Whether this is the correct answer or not need not be considered at the present time, since it seems well established. After all, that only amounts to an inquiry into the jurisdiction of the first court. A finding of such jurisdiction is the prerequisite for any application of full faith and credit. This is the reasoning, no matter how the literal wording of the constitutional mandate appears to be avoided thereby.

What, then, is to be done about this anomalous matter? The recent cases of *Sherrer* v. *Sherrer* [12] and *Estin* v. *Estin* [13] have made some progress toward a compromise solution. In Sherrer it was decided that if a court acquired personal jurisdiction by service within the State or by a voluntary appearance by the defendant-spouse, the divorce would not be subject to attack by the parties thereto. The Estin case held that an ex parte divorce acquired in the State of the plaintiff's domicile would not affect the validity of a previous award of separate maintenance obtained by the defendant wife in another State.[14]

These two cases have gone far in satisfying certain of the objections to our interstate divorce "muddle." The Sherrer case shows one way in which certainty can be injected into a divorce involving migratory parties.[15] Estin reflects the concern for the financial interests of a wife who is unable or unwilling to travel to the husband's new home to contest a divorce action.

There is some indication that even more judicial aid is about to be forthcoming. On April 18, 1949, the United States Supreme Court announced its decision in the case of *Rice* v. *Rice*.[16] The holding itself is not surprising. In fact it is not clear why the Court granted a hearing in the matter at all. Still, the fact that the case was heard, and that four judges dissented in the result suggest some reason to anticipate some further development along this line in the near future.

The Rice case involved a Connecticut couple. The husband separated from his wife, and decided to move west to Nevada or California. He moved to Reno and rented quarters. He emained for some time and obtained his divorce upon the default of his wife who remained in the East. Thereafter he married wife No. 2. He was still undecided as to whether he would remain in Nevada o.' settle permanently in California. His intention was definite, however, on the point of not returning to his former home in Connecticut. Finally he took a job in a war plant in California, retaining his rented quarters in Nevada. While thus living in California he died. His wife in Connecticut instituted proceedings in that State seeking to be recognized as his widow for the purpose of administering his estate which consisted of some property there. The Supreme Court upheld the lower court's determination in favor of wife No. 1. In other words, the Connecticut courts decided that the husband had not been domiciled in Nevada at the time of the divorce. Therefore it was a nullity and the husband was still married to his first wife at the time of his death.

As was stated, this result is not surprising under our traditional rules of domicile. Domicile means the "fixed abode" of a person.[17] In order to change one's domicile, it is necessary to meet two requirements: (a) intent to move to a location and to remain there indefinitely; and (b) the actual arrival at this intended home.[18] As a corollary to this rule, it is stated that the old domicile is retained until a new one is acquired by satisfying these requirements.[19]

Now Mr. Rice had the intention to move either to California or Nevada. He had arrived in Nevada, but the necessary intent to remain there indefinitely was not absolutely fixed. Nothing, however, appears to make this appear as a sham or quickie Nevada divorce. Nevertheless, the ordinary rules of domicile would justify the Connecticut court's finding that there was no domicile in Nevada and that the divorce was invalid.

Three Justices dissented without opinion.[20] Mr. Justice Jackson, however, included a short opinion with his dissent. Some of his observations are interesting and may be indicative of the thinking of part of the court. He stated in conclusion:

"I think the Nevada court's finding of jurisdiction was based kon substantial evidence of domicile, not overcome by any new evidence before the Connecticut court, and the Nevada judgment should be given full faith and credit as Congress has commanded." [21] If the Justice actually meant what is suggested by that statement, a new hope is born in the hearts of those who would see the constitutional provision given effect. This would mean that a finding of domicile would be conclusive as to the evidence presented to the first court. Only upon showing of substantial further evidence tending to support a contrary conclusion could a court of another State reject that conclusion.[22] This would indeed be a healthy development. First, it would tend to require a plaintiff-spouse to present full evidence of domicile to the divorce court. That court would thereby be in a better position to make a proper determination. Second, it would make the effect of divorces more certain to the extent that such full evidence had been presented.

It is thus seen that the judicial process, working its way through the annual grist of problems presented, is making some headway in solving this dilemma which has plagued the country (or at least the legal

[6] Most courts treat marriage as a status having its situs at the domicile of one or both of the spouses. It thus partakes of some of the characteristics of *in rem* proceedings when a dissolution of that status is sought. See Restatement, Conflict of Laws (1934), sec. 110, Restatement, Judgments (1942), sec. 74. See also, *Williams* v. *North Carolina* (325 U. S. 226, 229; 65 Sup. Ct. 1092, 1095; 89 L. Ed. 1577, 1581 (1945).

[7] *Le Mesurier* v. *Le Mesurier* (A. C. 517 (1895); 1 Beale, Conflict of Laws, sec. 111.1 (1935)).

[8] *Williams* v. *North Carolina* (325 U. S. 226; 65 Sup. Ct. 1092; 89 L. Ed. 1577 (1945) supra note 6).

[9] Compare the contrary views presented by Mr. Justice Jackson in his dissenting opinion in *Rice v. Rice* (69 Sup. Ct. —; 17 U. S. Law Week 4347 (Apr. 18, 1949)).

[10] See *Williams* v. *North Carolina* (No. 2), cited supra at note 8.

[11] "A finding adverse to the necessary foundation for any valid sister-State judgment was amply supported in the evidence, we cannot upset the judgment before us. And we cannot do so even if we found in the record of the court of original judgment warrant for its finding that it had jurisdiction." *Williams* v. *North Carolina* (No. 2), cited supra at note 8.

[12] 334 U. S. 343, 68 Sup. Ct. 1087, 92 L. Ed. 1429, 1 A. L. R. (2d) 1355 (1948); see also the companion case of *Coe* v. *Coe* (334 U. S. 378; 68 Sup. Ct. 1094; 92 L. Ed. 1451; 1 A. L. R. (2d) 1376 (1948)); for earlier support of the result of these cases, see *Cheever* v. *Wilson* (9 Wall. (U. S.) 19 L Ed. 604 (1869)).

[13] 334 U. S. 541, 68 Sup. Ct. 1213, 92 L. Ed. 1561, 1 A. L. R. (2d) 1412 (1948); see also the companion case of *Kreiger* v. *Kreiger* (344 U. S. 555; 68 Sup. Ct. 1221; 92 L. Ed. 1572 (1948)).

[14] The manner in which this result can be rationalized with full faith and credit has already caused some of the State courts some trouble; see *Lynn* v. *Lynn* (192 Misc. 720; 82 N. Y. S. (2d) 397 (1948)); *Rodda* v. *Rodda* (200 Pac. (2d) 616 (Mont. 1948)).

[15] Among the many cases which have applied the Sherrer doctrine since the Supreme Court decided that case, see *Heuer* v. *Heuer* (33 Adv. Cal. 241; 201 Pac. (2d) 385 (1949)), at p. 244 of 33 Adv. Cal. The Court stated: "The test is not whether the issue of jurisdiction was actively litigated in the court rendering the divorce decree. It is sufficient if the defendant has participated in the proceedings and had full opportunity to litigate the issue. If so, the decree is binding even though a relitigation of the question of jurisdictional residence requirements in an other State might result in a finding that the domiciliary claim was fraudulently asserted for the purpose of obtaining a decree which as a matter of policy could not be procured in the State of actual domicile."

That Sherrer has not solved the problem even within its limited factual scope, see *deMarigny* v. *deMarigny* (81 N. Y. S. (2d) 228 (1948)), in which a later wife was allowed to attack a Florida divorce obtained by her husband from his first wife, even though neither the husband nor his first wife could have done so under the Sherrer case. In this way, the second spouse was allowed an annulment of her marriage on the ground that the husband was still married to his former wife.

UNIVERSITY OF MICHIGAN LIBRARIES

writers) for more than a century. If Mr. Justice Jackson's approach is followed at some future date, the problem will be largely overcome.

There are those, however, who are not satisfied with the evolution of the law in this field by judicial process. They offer other solutions via the legislative route. A consideration of some of these proposals will present a study in alternatives and an example of a difficult choice in achieving satisfactory treatment of domestic relations in the law.

The first solution by nonjudicial action which suggests itself would come by way of an amendment to the Federal Constitution. Such an amendment to the Federal Constitution would vest in the Congress sole power to legislate in regard to marriage and divorce.[23] Opposition to an attempt to achieve such a result makes its realization practically impossible. Senator Capper has repeatedly introduced such measures to the Congress since 1923, but his efforts have been thus far in vain.[24]

Another legislative attack on the dilemma might come through Federal legislation under the full-faith-and-credit clause. One suggested statute under this theory would substitute residence of the plaintiff for domicile as the basis for jurisdiction to divorce.[25] Along with that change, however, it would require some minimum residence, such as 6 months. With this requirement satisfied, a divorce based on constructive service of the best possible kind would be recognized in every State under the full-faith-and-credit clause.[26]

Still another type of Federal statute has been recommended under the above power.[27] This would provide for Nation-wide service of process in matrimonial proceedings. With such service, the court rendering the divorce would have personal jurisdiction over both spouses. Under the doctrine of the Sherrer case, the decree would be free from subsequent collateral attack by either of the parties. Along with this extension of service of State process would be certain safeguards to protect the defendant in cases in which he or she lacked financial means to defend the suit in another State.[28]

Even if the constitutionality of such a statute would be upheld, the lack of national agreement on the problem would make for great difficulty in obtaining the enactment of Federal legislation effecting such an extreme change in the procedure for divorce.

A third type of Federal statute under the full-faith-and-credit clause has been recently introduced by Senator McCARRAN. The bill,[29] which has been referred to the Senate Committee on the Judiciary, provides:

"That where a State has exercised, through its courts jurisdiction to dissolve the marriage of spouses, the decrees of divorce thus rendered must be given full faith and credit in every other State as a dissolution of such marriage, provided (1) the decree is final; (2) the decree is valid in the State where rendered; (3) the decree contains recitals setting forth that the jurisdictional prerequisites of the State to the granting of the divorce have been set; and (4) the State wherein the decree was rendered was the last State wherein the spouses were domiciled together as husband and wife, or the defendant in the proceeding for divorce was personally subject to the jurisdiction of the State wherein the decree was rendered or appeared generally in the proceedings therefor. In all such cases except cases involving intrincis (sic) fraud the recitals of the decree of divorce shall constitute a conclusive determination of the jurisdictional facts necessary to the decree."

What would the proposed statute achieve? The first two provisions merely state traditional and presently followed rules. The third provision suggests a retreat to the unhappy days of Haddock,[30] where the fault of a spouse was a jurisdictional fact. This was never a satisfactory basis for jurisdiction and would not be welcomed in its new guise. The fourth provision embodies the doctrine of the Sherrer[31] case. Some people would look with disfavor upon the embodiment of that principle in such fixed forms; it has been strongly urged that the case itself should be overruled by the Supreme Court as soon as possible.[32] The enactment of the statute would mean the end of their hopes. Considerable opposition would meet the bill from those quarters.

Furthermore, the bill by inference would require nonrecognition of an ex parte divorce obtained in any State but that of the matrimonial domicile. With our present-day migratory population this would seem unwise. Many people do change their domiciles in complete good faith and should not be forced to return or remain in their old homes to get divorces, or, as an alternative, seek cooperation from the other spouse in joining in one State to get a divorce.

The final element which emphasizes the futility of Federal legislation in dealing with divorce is the lack of agreement among the several States on the proper solution to the problem. Moreover, the extreme jealousies existing between the States with regard to this question, and the theory that it is essentially a local matter to each State, would create a difficult breeding ground for any socially desirable remedy to the situation.

Still another mode of relief would come from coordinated activity on the part of States themselves. One such proposal has been recently put forth by the Commissioners on Uniform State Law. That body has drafted and recommended a Uniform Divorce Recognition Act.[33] This act provides:

"SECTION 1. A divorce obtained in another jurisdiction shall be of no force or effect in this State, if both parties to the marriage were domiciled in this State at the time the proceeding for divorce was commenced.

"SEC. 2. Proof that a person obtaining a divorce from the bonds of matrimony in another jurisdiction was (a) domiciled in this State within 12 months prior to the commencement of the proceeding therefor, and resumed residence in this State within 18 months after the date of his departure therefrom, or (b) at all times after his departure from this State until his return maintained a place of residence within this State, shall be prima facie evidence that the person was domiciled in this State when the divorce proceeding was commenced."

In considering this act several factors must be borne in mind. First, the desirability of the rules which the act sets up; second, the constitutionality of the act; and, third, the chance of any reasonable uniform adoption of the act.

In general terms, section 1 states existing law. Since the basis for divorce jurisdiction is the domicile of at least one of the spouses in the State, it is clear that a divorce rendered in State B is void if both of the spouses were domiciled in State A at the time. Thus far, the act achieves nothing under constitutional doctrine.

However, there is an exception to the above general rule. Under the Sherrer[34] case, if both spouses appear at the divorce proceedings, in person or by attorney, the divorce is not thereafter subject to attack. This would follow even though both spouses were domiciled in another State at the time. Thus, it is seen that even the general language of the act comes into immediate conflict with existing constitutional doctrine. Moreover, it might be expected that the Supreme Court will continue its recent activities in requiring a greater and greater degree of full faith and credit to the sister-State divorces. As it does so, section 1 will be whittled away until it states a broad principle, a large part of which is unconstitutional.

A further objection appears from a consideration of section 1. To the extent that it is constitutional, this statute when enacted would crystallize a legislative policy against any recognition of one-of-State divorces unless the Supreme Court absolutely required it. Present-day judicial practice indicates such a policy might be unwise. The courts of many States exercise a flexible discretion in recognition of such divorce depending upon the circumstances, the matter at issue, and the persons questioning the divorce. This discretionery jurisdiction is employed under various terms such as "comity," "estoppel," "privity," etc.[35] Serious thought should be given the matter in order to decide whether it is better to take this power from the courts under their present flexible practice, or to leave the matter where it is and can be handled with due consideration to each individual case.

Moreover, section 2 of the Uniform Act presents a serious constitutional question. Whether the presumption thereby established seems reasonable enough to satisfy the requirements of due process, the Williams[36] case might require some greater respect for the sister-State decree.

Finally, the likelihood of the act's adoption by the States to any substantial degree must be considered. More than 40 years ago a similar Uniform Divorce Act was promulgated without noticeable success.[37] While modern attention is more closely drawn to the problem, so also has today's public opinion shown an awareness to that fact that

arbitrary refusal to recognize divorces of other States is no solution."[39]

In conclusion, the situation presents an example of another of the prices to be paid for federalism. Our people are no longer connected to a single locality for life; they move throughout the country, making many places their "home" during different periods of their lives. Along with this trend has come a change in national mores, recognizing the propriety of divorce, with a few religious or colloquial exceptions. These two factors have given rise to present reality, against which some States have fought so bitterly. Until some basic change can be suggested which will be capable of recruiting some national agreement, no effective legislation, Federal or State, is possible.

In the meantime, the United States Supreme Court is making progress, wending its way between the extremely selfish interests of the litigants appearing in the controversies with which it is confronted. Its recent decisions, since 1948, have spelled out a body of constitutional law which is at once a compromise between the interests of the several States and a solution to the needs of our modern society. Future development along these lines by the Supreme Court, under the full-faith-and-credit clause, may well be the answer to the dilemma of migratory divorces. In the battleground of conflicting interests it is necessary to remember the underlying fact, as stated by Prof. Max Radin in referring to the first Williams[40] case:

"What protesting States fail to realize is that so long as we have a Federal system like ours a State is quite powerless to prevent this evasion (of local divorce law) in the vast majority of cases, those, that is to say, in which both parties are willing to cooperate in the evasion. The affront to the State is the same in any case. Does it become serious only if one of the two spouses, for reasons that are often personal and unpleasant, chooses to be recalcitrant?

"It is assumed that North Carolina gets some decided benefit from its membership in the Union. At all events, its membership is no longer a matter of voluntary choice. One of the incidents of that membership is the possibility that American citizens may utilize the laws of any State on such terms as that State may choose to make."[40]

[39] It must be noted, however, that some States are according favorable recognition to this new Uniform Act. The exact number that have considered it cannot be determined at this time. An Associated Press dispatch, bearing the date line, "Sacramento, April 26 (1949), reports that California State Senate judiciary committee sent the uniform divorce recognition bill to the Senate floor. This dispatch states the unfortunate fact that the committee so voted "without a word of discussion."

Honorary Degree of Doctor of Laws Conferred Upon Representative John Crain Kunkel, of Pennsylvania, by Franklin and Marshall College, of Lancaster, Pa.

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. KILBURN. Mr. Speaker, I know that every Member of the House will join with me in congratulating the gentleman from Pennsylvania, JOHN KUNKEL, on the honor that has been conferred upon him. Franklin and Marshall College of Lancaster, Pa., has an old and unique history among the institutions of learning in this country. Over the years it has gained for itself an unusual position not only in the manner of its founding and in its name but also in its scholastic standing. It ranks high on the list of the great colleges of our country. On Tuesday, June 7, 1949, this college conferred an honorary degree of doctor of laws on JOHN CRAIN KUNKEL. I know that we are all pleased that this old college, with its history and traditions, recognizes the integrity, high character, and outstanding ability of our colleague, which he so often hides by his quiet, unassuming, modest bearing. We all join in congratulating both Franklin and Marshall College and our friend, the gentleman from Pennsylvania.

Following is the citation from Franklin and Marshall College:

Mr. President, I am honored to present JOHN CRAIN KUNKEL, a Member of the United States House of Representatives for the past 10 years from the Eighteenth Congressional District of Pennsylvania. Born in Harrisburg and educated at Yale University and Harvard Law School, he was admitted to the Pennsylvania Bar and the Bar of Oklahoma, and has become one of the most prominent citizens of Harrisburg and our State. His civic activities have extended into every field, but especially close to his heart is the welfare of the many charitable institutions in which he holds directorships. In 1939 he entered the legislative service of his country. As a Member of the House of Representative: he has served on various important committees, including the Herter Committee, of which he was chairman of the Subcommittee for Study of the United Kingdom and Her Dominions. At present he is a member of the House Banking and Currency Committee. Throughout his tenure he has made a practice of addressing his constituents each week by radio, keeping them informed of national and international affairs and his opinions thereon. For his distinguished public service to his congressional district, to the Commonwealth of Pennsylvania, and to our Nation, I present him for the honorary degree of doctor of laws.

Salaries of Federal Employees

EXTENSION OF REMARKS
OF
HON. JAMES V. BUCKLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. BUCKLEY of Illinois. Mr. Speaker, the Committee on Post Office and Civil Service is presently considering a number of measures dealing with the welfare of our post-office and civil-service employees. I am honored by being a member of that committee, and I shall try to the best of my ability to expedite consideration and action on a number of bills which are either the subject of hearings now being conducted or will be considered at hearings to be scheduled in the very near future. Among the bills which I place high in importance are bills that would extend to veterans of World War II benefits identical with those extended to veterans of World War I in the postal service. My colleagues, Mr. MILLER, of California; Mr. TEAGUE, of Texas; and Mr. VURSELL, of Illinois, have introduced bills on this subject which would give to veterans of World War II credit for the time spent in the military forces in determining postal salaries. I heartily favor this legislation and shall vote to report it to the House at the earliest possible date and shall work for its passage by the House of Representatives.

The committee is also considering a number of bills which would amend the existing Federal and Postal Employees' Classification Acts, removing present inequities and correcting certain injustices which have arisen as a result of previous legislation on this subject. I personally feel that the vast majority of people employed by the Federal Government are grossly underpaid in comparison with wages paid in private industry. Before coming to the Congress I was both an employer and a union official, and from both standpoints I am convinced that there is a drastic need for improvement in the Federal and postal pay structures. A number of bills have been introduced for these purposes, among them H. R. 2491 and H. R. 2492, by my colleague from Minnesota, Mr. MCCARTHY; H. R. 4395 and H. R. 4495, by Mr. LYLE, of Texas, and Mr. MILLER, of California; and H. R. 4169, by the distinguished chairman of our committee, Mr. MURRAY, of Tennessee. These bills have the endorsement of such organizations as the National Federation of Post Office Clerks, the American Federation of Government Employees, the National Association of Letter Carriers, and virtually all organizations of postal and Federal employees. I favor this legislation and will do everything possible in an effort to cause its early enactment.

The World's Most Valuable Dogs

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Hygeia magazine. It is unfortunate that the pictures cannot be reproduced of these dogs which, through scientific experiments on them, have made such extraordinary contributions to human health and happiness.

THE WORLD'S MOST VALUABLE DOGS

(By Phillip S. Gelb and Thomas J. Blakley)

Eight dogs of dubious ancestry recently stole the spotlight at the Brooklyn Dog Show. One-time strays that might have been sacrificed at city pound or unofficial shelter, they are heroes of the fight against disease. Anton Rost, head of the National Canine Research Foundation, presented

UNIVERSITY OF MICHIGAN LIBRARIES

them as living proof of the care and affection they get and the services they render to human and animal health.

Four of the prize-winning dogs are pictured below. Shep is shown with a Cornell Medical College technician. The experiment in which he participates is one of the seemingly more simple but most important carried on at that important research center. Every few weeks he gets an injection of liver substance along with a measured intake of water. The fluid eliminated by Shep is analyzed by the technicians. Scientists are hopeful that these experiments will tell us much about malnutrition, cirrhosis, dropsy, and heart disease. Although Shep's pedigree is highly questionable, his value to humanity is not.

Susie comes from the Sloan-Kettering Institute, where her important job is cancer research. The project she participates in is seeking to determine why certain chemical dyes produce cancer. Why are dogs used instead of mice, rabbits, or monkeys? A technician of the Sloan-Kettering Institute replies, "Dogs are used in cancer research projects because the dog is the only animal whose body handles some chemical compounds in a similar fashion to the human being."

Ten-year-old Queenie's winning personality has not been affected by the fact that one of her kidneys has been raised to a place just below the skin so that the relation of the blood flow to kidney function can be studied. Is this an important role? In the words of a Rockefeller Institute announcement, "Queenie is making a contribution to a better understanding of Bright's disease, which ranks fifth among the causes of death."

Blackie is one of Shep's kennel mates at Cornell, where they say she probably has had her blood pressure taken more than any living creature. The project in which Blackie is working has already demonstrated new principles that play an important part in the understanding of high-blood pressure. Those who work with Blackie say that her gentleness, good spirits, and willingness make it seem as if she knew the value of the contribution she is making to human health.

A special first-prize ribbon was awarded to Beauty by John Cashmore, Brooklyn Borough president, because she was Brooklyn's own health hero. If Beauty survives an experimental operation on the chambers of her heart at the Jewish Hospital of Brooklyn, we may have a promising new way of fighting the No. 1 killer, heart disease.

They are proud of Henry at the Columbia-Presbyterian Medical Center where he has been a control dog in dietary experiments aimed at lengthening the life of the human being with diabetes. In the fight against diabetes the dog has been an invaluable aid. Less than 30 years ago diabetes was a sentence of death. Today 17,000,000 people are alive who would be dead if Frederick Banting and Charles Best hadn't developed tests on a few dozen dogs. There still is no cure for the disease and the average life of the diabetic is somewhat shorter than that of the average person. Merely by the study of Henry's eating habits, millions of years of life may be given humanity.

The newest hero in the dog-to-man discoveries is Rusty, also of the Columbia center, where he is a key figure in research aimed at cutting down the prevalence of gallstones. The accuracy of tests and the success of the treatment of Rusty was considered so good as to allow direct parallel treatment on human beings. These too are proving successful. Do research dogs live long? Well, Henry is 12 years old and Rusty is 15, and you'll recall that Queenie is 10. The figures speak for themselves.

Stevey proved to be quite the crowd pleaser at the Brooklyn show. His exciting story started some 10 years ago in bone surgery experiments at the Columbia-Presbyterian Medical Center. Stevey's right shoulder and part of his upper foreleg were removed and replaced by a nontoxic plastic ball and steel shaft, forming an artificial joint. His recovery and subsequent normal appearance helped to lay the basis for the eventual application of the technique to man. Though this work is still experimental, it offers hope to those whose limbs are diseased, deformed, or shattered.

These are the stories behind the eight mongrels who carried off honors at the show for purebred dogs in Brooklyn. They are not usual dog heroes, and they deserve to join the ranks of the medical canine great. Who are some of these great animals, whose names are remembered among the world's most valuable dogs?

There is Caesar, a brown and white pooch of uncertain ancestry, who has helped surgeons at Children's Memorial Hospital in Chicago perfect the "blue baby" operation. Scores of children owe their lives to the surgical techniques that doctors have learned from operating on Caesar and other dogs. Of course, Caesar is unaware of this, but he lives at the hospital under good conditions, appearing once in a while at fairs and shows as living proof of how animals help to save human lives.

The story of Bozo, another memorable animal, appeared in the February issue of Hygeia last year. He has probably brought more real happiness to mothers and their children than any pet. At Jefferson Medical College in Philadelphia, Bozo helped young doctors learn how to use the bronchoscope, Dr. Chevalier Jackson's great invention, which enables a doctor to reach into a child's bronchial tract and snag a button, pin, bullet, or other object that should not have been there in the first place. Bozo died of old age a few months ago.

Maggie was another famous dog hero. She was the first dog to be kept alive on insulin, when Drs. Banting and Best discovered this great boon to diabetes victims.

There are many others who have helped medical scientists develop blood transfusions, livesaving surgery of the heart, the lungs and the brain, liver extract to combat pernicious anemia, and many another achievement that most of us accept without ever wondering about the how or why.

Where do they come from, these heroes, and how do they fare as experimental animals? They come from municipal pounds, animal shelters and animal dealers. Some are raised especially, some are specially purchased purebreds but most are just strays fated to be uselessly slaughtered unless they are turned over to medical scientists for lifesaving research. They live in specially designed animal hospitals, some of them air conditioned. They are under the supervision of trained personnel whose duty it is to see that they are kept in the best possible condition.

As one scientist said, "It is noteworthy how much better these animals look and behave after they have been in our care. When we receive them from the pound, they are scrawny, frightened, half-starved derelicts, but after a bath, distemper shots and a steady diet you can see for yourself how much healthier they are."

When dogs are used for surgery the operation is performed under the same sterile conditions used for human beings with the same anesthetics and skillful handling.

Many of them, like Columbia's Stevey, become pets around the laboratory and enter into the spirit of the work. One scientist tells of one of his canine subjects who learned to jump up on the operating table and snuggle his nose into the anesthetic mask.

And while these dog heroes can never comprehend the significance of what they do, a grateful mankind can understand and honor them, as they did in Brooklyn, for their great medical contributions to man and animals alike.

The Past Week in Congress

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from my weekly column printed in the East Liberty Tribune, Pittsburgh, Pa., May 30, 1949:

This past week in Congress was highlighted by the many efforts to take stock of our economy and prepare, if necessary, an anti-slump program. It is of importance that some of my colleagues who are known for their conservative economic views are now agreed that we should be prepared for any eventuality.

Early in the week there was fear in some quarters that if you talked about what you would do when the patient got sick that this talk in itself would hasten the patient's illness. This is a do-nothing philosophy whose consequences can be fatal. As I and others pointed out, examination and prevention if done in time will maintain the economy in a healthy state and prevent any serious slump.

At this stage of our postwar existence, our production level is 80 percent above the 1935-39 average, according to the Federal Reserve Board. While this is a drop below the all-time high of October 1948, it is nevertheless equal to the mid-1947 level. Unemployment, however, is now above the 3,000,000 mark. Hence the present need to take stock and lay plans.

It is often difficult to determine what causes slumps and what causes great prosperities. Economists who have spent their lives in a study of what they call the business cycle cannot agree. I do not propose to supply the "answer." As I told my committee colleagues last week, "We must be prepared to take all steps necessary to keep the economy on a stable and progressing basis. We can leave the theories to others. We must be prepared to maintain business at a profitable level and employment and purchasing power at maximum heights."

To me a stable and progressing economy means a high standard of living, mass purchasing power, and full use of industrial equipment. A factory geared at let's say 1,000 units but turning out 200 units is a high-cost operator, in addition to being a poor employer. Our factories must be kept going at their best working levels to keep our standard of living at a high level.

But just as important to me, a stable and progressing economy means stable and progressing civil rights. We Americans love our freedom. It is our greatest heritage. The more slipshod we are in preparing an anti-slump program the greater will be the threat to our civil rights. If by our efforts today we can lay plans to handle troublesome economic problems as they arise, we will need no WPA's and NRA's. Our job ahead is to keep from sinking to regimentation and despair.

A bill will shortly be introduced into Congress to make possible quick and effective dealing with economic emergencies. In itself it cannot hope to achieve economic stability. Its purpose will be to solve the knotty problems that interfere with the general health of our free economy.

It will require a stock-piling of public-works projects on a Federal, State, and local government basis. These would include construction of schools, highways, sewer and water systems, hospitals, and other worthwhile public works. In the late twenties we

had no reserve shelf of public works, and we know what happened.

The proposed bill will also make possible the expansion of private production and plant facilities. This would be accomplished by the Government's offering incentive loans to private industry which would be repaid at a nominal rate of interest over a long period of time. In this way, private firms, unwilling to spend money on expanding their facilities in bad times, would be given every incentive to do so.

This provision is based on the following philosophy: Private industry is the American way. Private industry must continuously expand its facilities in order to produce low-cost products, and in order to maintain full employment and high purchasing power for the American people.

Internal Enemies

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article from the Boston Post:

WARNS OF INTERNAL ENEMIES — PHILBIN SPEAKER AT BARRE MEMORIAL DAY SERVICE

BARRE, May 30. — Congressman PHILIP J. PHILBIN, at Memorial Day exercises here today, called on his listeners to display the same type of militant patriotism that our honored dead exhibited.

INTERNAL ENEMIES

"Evil forces are assailing not only the doctrinal, but the institutional basis of our way of life," he said. "These men gave their lives against the enemy in war, but citizens of this country must now contend against internal enemies who work in nefarious and devious ways to sow seeds of disruption and revolution."

"Our democracy cannot live," said PHILBIN, "if it is diluted with half-baked socialistic or communistic ideas or polluted with the poison of political corruption."

MUST KEEP FAITH

"We would be faithless to these honored dead," he said, "if we do not serve now in this crisis that confronts democratic institutions with the same courage, love, devotion, and sacrifice which typified their immortal service. We cannot minimize the gravity of our present problems. The world has been turned into a vast cauldron of communistic conspiracy. Our country is seething underneath with the diabolical activities to discredit this Government, economic system, and way of life.

"Indifference at such a time is a reflection upon our patriotism. Apathy in the face of present dangers is a reflection upon our Americanism. Nothing short of stanch, constant unyielding militant opposition to every un-American doctrine, every un-American movement, every un-American practice will preserve this Nation and the principles for which these hallowed dead fought and died."

PROCEEDS UNABATED

"Let us not be lulled into a sense of security by temporary strategic retreats and diplomatic gestures calculated to deceive. The great forward march of subversion and antidemocracy proceeds unabated and will be stayed only by the determined efforts of peace-loving and liberty-loving Americans. Our Nation is the strongest bulwark against Marxist conquest of the world.

"It is a betrayal of these honored dead not to strive earnestly and work militantly for the peaceful world they fought for. We should press forward with every ounce of energy to strengthen instrumentalities which civilized, decent democratic-minded peoples have erected to guarantee security against aggression and make possible the fulfillment of our hopes and aspirations for peace.

"Let us no longer temporize or appease. Let us maintain commanding physical strength so that we may implement our moral principles, and so that we may present a strong surging, united front against those who would dismantle every vestige of Christianity, civilization, and democracy."

REVERENT TRIBUTE

"The memory of these heroes and the hallowed dead we honor today will ever remain in the minds of the American people. On every Memorial Day we will turn our minds and our hearts in reverent tribute and with deep gratitude for their peerless and unselfish contributions to America. But it is not enough that we should think of them and the principles they died for only on Memorial Day.

"We must keep these principles always with us, always foremost in our minds, because if we abandon or compromise them our democracy will be lost, can never be regained, and America and the world will be consigned to the hopelessness and servitude of the super-regimented totalitarian state and ultimately to impoverishment, poverty, and loss of all that we cherish."

PEACE IN OUR HEARTS

"We must have peace on our lips and in our hearts. At the same time we must keep this Nation in a state of preparedness to cope with any and every emergency and to serve notice upon willful and cruel Marxist imperialistic dictators that we propose not only to retain our democracy but to preserve the dignity and freedom of man in a decent and civilized peaceful world.

"If we strive toward these ends we will in that way be contributing through faith in our Government and ourselves hope in the future and willing labors for the perpetuation of our heritage to maintain America as the sanctuary of liberty which is its rightful and God-given destiny.

"Let us today be reinspired by the glowing deeds, the selfishness and sacrifice of our martyred dead and all those who have sacrificed to preserve our country. From their example we may well today rededicate ourselves with resolution and firmness to the basic principles of America, the salvation of Christian civilization, and the protection and human liberty."

Resolution Opposing Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Woman's Auxiliary to the Minnesota State Medical Association. An accompanying letter states that the association, while opposing compulsory so-called health insurance, favors H. R. 782 which would establish a Federal Department of Health headed by a doctor of medicine and independent of welfare and education:

Whereas the United States under its voluntary system of medical care has made greater progress in the application of medical and sanitary science than any other country; and

Whereas the advances in health in the United States in the past four decades do not suggest basic difficulties in the American system of medical care; and

Whereas approximately one out of every three Americans is now covered by voluntary hospital insurance, and one out of every four is covered by voluntary surgical or medical and surgical insurance, and coverage is continuing to rapidly increase; and

Whereas compulsory health insurance would necessitate a high degree of governmental regulation and control over personnel and the agencies engaged in providing medical care; and

Whereas the enactment of compulsory health insurance would destroy the personal relationship between the physician and patient, undermine the quality of medical care and produce deterioration in the health of the people; and

Whereas workers in European countries that have adopted compulsory health insurance have lost from 50 to 100 percent more days per year because of illness than American workers; and

Whereas compulsory health insurance would create a tax burden of unbearable proportions on an already overstrained economy; and

Whereas compulsion is a totalitarian concept and contrary to American principles: Now, therefore, be it

Resolved by the Woman's Auxiliary to the Minnesota State Medical Association in convention assembled in St. Paul, May 9, 10, 11, 1949, That we continue our unalterable opposition to the adoption of any program of compulsory health insurance for the American people.

Comment on Economic Conditions

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. POTTER. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I wish to include a letter written to President Harry Truman by Mr. Walter C. Wylie, of Sault Ste. Marie, Mich.

Mr. Wylie's keen insight on economic conditions should receive the serious consideration of all Members of Congress, particularly at this time when our country is going through a period of economic adjustment. I am inclined to believe that most thinking Americans concur with the views expressed in the following letter:

MAY 5, 1947.

HON. HARRY S. TRUMAN,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: I have been reading the press reports of your state of the Union and economic reports to Congress. The general outline seems to be as follows:

1. Keep production up.
2. Raise substandard wages.
3. Continue high taxes.
4. Keep up farm prices.
5. Eliminate public works.

It is not my purpose to hang crepe on anybody's door, but I am very much afraid that unless we return to the principles of reason, common sense, and economics, the results will be disastrous.

INFLATION

Firstly, we haven't inflation. And, there does not appear to be any signs of it. In 1934, the administration devalued the dollar from 26 grains to a 15-grain gold content. At the time, it was for the purpose of raising prices. Why higher prices were desired, I do not know. Certainly, those in the lower-income brackets and the unemployed could not, at that time, afford the necessities of life. It would appear that someone got the idea that high prices would create prosperity. The opposite, if anything, is true. Devaluation of the dollar did not raise prices or wages of those in the lower-income brackets. Nor did the sleight-of-hand performance put men to work, except on the WPA at, in most cases, $44 per month. In other words, the national income was decidedly low and the devaluation of the dollar left us just where we were, with this exception: When the war started in Europe we were up to our ears in debt. The war in Europe raised prices and wages, too.

Of course, one would ordinarily think that the devaluation of the dollar would immediately raise prices, for the reason that one could hardly expect 3 cents to do the work of 5 cents; 15 grains of gold to do the work of 26 grains. It so happens that the fundamental laws of economics do not work with such dispatch. Then, too, the people, from a psychological point of view, still took the dollar as a dollar, even though it was actually 59 cents. Now, had the powers that be, at the time of devaluation, decreased the dollar and announced that 59 cents henceforth would take its place, prices and wages would have increased. When you are attempting to deceive the unsuspecting public, such open tactics, of course, could not be practiced. Nevertheless, the laws of economics which have been taking effect were, even then, at work. Fortunately or misfortunately, depending on how you see it, its workings were not visible.

Today, and for some time past, prices have been going up. Although attempts have been made to increase wages, everybody knows that the dollar will not stretch. Why should it? How can you expect 59 cents to do the work of 100 cents? No one seems to know why. All we know is that we cannot have the things that we used to have at the old prices. We common folks don't know anything about economics, dollars, devaluation, currency, and what not because we have never been to college. Nevertheless, the man on the street knows something is wrong. His stomach tells him that. While the stomach tells him something is wrong, it is not able to say, "Why try to feed me on 59 cents when you formerly spent 100 cents?" Mr. President, inflation is not here, and never has been, except insofar as we have devalued the dollar and raised the taxes.

TAXES

You propose an annual budget of about $40,000,000,000. The figure is so fantastic that the average person just does not comprehend it. Not any more than he understands what was done to him when he was paid for his day's work in 59-cent dollars. The aged and the children do not pay taxes because, in most cases, they have no income, which means that the head of the family has to pay their share of the per capita Federal tax of $270. The head of the family pays therefore, $1,080 a year to the Federal Government. A large portion is deducted from his weekly pay, the balance his employer pays. In other words, if taxes were not so unreasonable, more wages could be paid to employees. After all, the man who carries the dinner pail pays the taxes, either directly or indirectly. What in the name of all that is good, is the head of the average family getting from Washington, or any place else, that is worth $1,200 a year?

No wonder labor and industry are at each other's throats. Just so long as each does not know who the unseen visitor is who is robbing his cupboard at night, so long will they continue to call each other names. No wonder there is a buyer's strike on right now on account of high prices. No wonder there is a surplus of most everything—if you want to pay the price. Sooner or later, the two groups will catch up to the persons responsible for high taxes and when they do, at least some of our labor troubles will be over. Just one illustration of a certain crane operator. He pays $8.40 to Washington per week, or $436.80 per year. In 10 years, he will have paid $4,368. For what? Enough to buy a home, a farm, or what have you. When the Federal Government via taxation, takes from a man and his family, a home every 10 years, it ceases to be a liberal government. Instead, it can only be classed as a radical one.

SMALL-BUSINESS MEN

From time to time, we read in our press and hear over the radio and elsewhere, the grand things that are being done for the small-business man. We read about anti-trust laws, monopolies, etc. So far as anyone can see, trusts are being made bigger and the small-business men are being made smaller. Of course, this is not the intention. Those who are trying to do something for the small-business men are honest and sincere folks. Be that as it may, we will be judged not by our intentions, but rather by the results of our efforts. Government efforts so far seem to be in the direction of making it possible, in some instances, for small-business men to borrow money from the Reconstruction Finance Corporation. Such actions are to be commended, and they are. So far so good. After having done that good deed and assuming that the small-business man is able to make a profit by reason of the loan, the good-intentioned Government proceeds then to take away, via the collector of internal revenue; what? The profit, of course. The small-business men, like the wage earner and the trusts, too, for that matter, are the slaves of a well-intentioned Government.

There is this striking difference, however, between the small-business man and the American tycoons of business and others of wealth. The latter were permitted to earn their dependencies under a system that did not take away from 20 to 90 percent of their earnings. How can one possessed with ambition, thrift, and skill, carrying on a small business, under such a system of confiscation, be anything but a small-business man? How can he ever create and save a surplus each year to carry him over in times of depression? How can he ever create a reserve large enough to become a big-business man? He is forever dependent on a lending institution of some kind to take care of his needs. How can there be anything under such a tax system other than trusts and monopolies? The Government is not encouraging free enterprise and competition. It is furthering, unknowingly, just the opposite. America's 60 families are sitting on top of the world. Their capital, made by pyramiding and preserving profits, under a system of taxation which encouraged such thrift, is intact. They have, in reality, a trust not necessarily of their own making, but rather a trust created by a Government which, for years, has been trying to do something for the small-business man. Is it not about time that the small-business man, including his profits, be left alone? He does not want or need help. Relieve him from a confiscatory tax system, and sooner or later he will take care of the trusts. He will give them competition that, up to now, they are free from. In passing, what small business concerns received tax refunds?

Right now we are consoling ourselves and the farmer, too, with the empty statement that floors have been put under farm commodity prices. The dollar was devalued for the express purpose of raising farm prices and wages. The Commodity Credit Corporation is expected to hold up farm prices by buying at certain prices all the grain, etc., that the farmers produce. Nothing could be more absurd. Oh, yes; temporarily the Commodity Credit Corporation may hold up prices but—what happens when the Commodity Corporation sells? Can it keep buying forever? Whatever is bought must be sold, given away, or destroyed. God forbid that we shall ever repeat the mistake of destroying farm commodities. If such commodities are given away, the man who works by the sweat of his brow pays the bill. A farmers' league in New York State attempted to keep milk prices up by buying butter, and they did succeed temporarily. In the end butter dropped. All the league accomplished was the feat of putting off the inevitable for a short period of time. In the end the law of supply and demand won out over fictitious unorthodox schemes of trying to make something out of nothing.

Hundreds of years ago when England was strictly an agricultural country, when the members of Parliament owned most of the land, corn laws, so-called (wheat laws in fact), high import duties were placed on wheat to keep up the price for the producers of wheat. A man by the name of Gregory King made a very minute study of wheat prices and he found that regardless of the import duties that were put on wheat, the price of it raised and lowered with the supply and demand. In other words, you can rig a commodity price temporarily, you can corner a market temporarily, but you cannot defy ultimately the law of supply and demand. Witness what happened to cotton very recently. The history of those who have tried to corner markets is one of disaster.

Farm prices must come down. It is better to let them come down naturally than it is to let them crash. If you are on the roof or upstairs, it is better for you to come down the stairs or ladder, naturally, than to crash down. You don't always recover from a crash. With all the new mass-production machinery coming on the market, the American farmer will produce more in the next 5 years per man-labor-hours than he ever did before. He will do it with less sweat. He will do it cheaper, and, what's more, if he is permitted to sell his crops in a free market, he will make more money. The present policy of placing a floor under certain crops, notably wheat, will just attract more persons to the production of farm produce and wheat when they are needed in other vocations. The migration to the farm, as a result of guaranteed prices, will hasten the day of surplus. Guaranteed or floor prices will do something more, it will result in the underconsumption of the very necessities of life, with all the attendant misery that goes with undernourishment. You are not helping the farmer by advocating floor prices, you are really creating the situation that will, in the end, break him. He is on his feet now, for land's sake, and the well-being of the people of America and the world, keep him in a prosperous condition.

WAGES AND HOURS

There has been a lot of talk during the past few years on wages and hours. I think some thought should be given first to the matter of hours. After all, there are, for the purpose of this discussion, two kinds of power—human labor power and capitalistic or machine power. If we must have a limited workweek for human labor in order to spread the work around, why not have a limited workweek for capitalistic or machine power. Personally, I don't believe in either. But, until such time as the two kinds of labor power are put on the same basis, I think

UNIVERSITY OF MICHIGAN LIBRARIES

human labor is getting the short end of the bargain. This limited or 40-hour week, of course, came about as a result of the Wagner Labor Act, so-called, sponsored by a benevolent Congress that wanted to do something for the forgotten man. The forgotten man fell for the bill of goods handed to him in that act by reason of the clause in that act that compelled his employer to pay him time and one-half for overtime. Labor and labor leaders hailed this act as the Magna Carta of labor. At last, so they said, labor had come into its own.

As a matter of fact, it was the greatest fraud that has ever been perpetrated on labor. It was shortly after, I believe, the dollar was devalued. The accepted workweek heretofore was 48 hours, but he could, if work was available, work longer for his employer. He was paid in dollars of a value of about 26 grains to the dollar. If he worked a standard week of 48 hours at 75 cents per hour, he received 48 times 26 grains of gold. The dollar devaluation took away from labor for the standard workweek, 48 hours, roughly 11 grains of gold per dollar. For 48 hours of work he received not 1,248 grains of gold but, instead, only 720 grains of gold, or a reduction in wages of 40 percent.

Not being satisfied with that, and believing in the old adage of "never give a sucker a chance," the workweek was reduced to 40 hours or, 16⅔ percent which, incidentally, reduced his pay by a further reduction of 88 grains of gold, which left him earning finally 632 grains of gold where he was formerly earning 1,248 grains of gold. In other words, by a simple process of devaluation of the dollar and the passing of the Wagner Labor Act, a benevolent Congress actually cut labor's wages by over 50 percent. And, what's more, the operation was performed painlessly, but not without aftereffects. There is now, at last, an empty feeling in the stomachs of labor. Let it be said here labor will never get its just dues, or the relief it is justly entitled to by fighting his employer. It should go to the surgeon or surgeons who performed the operation, sleight of hand as it was, for relief. It was fun to be fooled while the anesthetic was working. It's not working now, the law of supply and demand is. The operation was not a success, so let's do it over and, this time, let's do it right.

Suppose in order to make work for everybody, the Wagner Labor Act provided that out of every 100 pieces of machinery in operation, 16 percent will be discontinued. Ridiculous, not at all. That is exactly what labor was forced to do. In other words, labor was asked to step aside and give up the privilege of working 8 hours each week in order to make work for his fellow workmen. Capitalistic labor was not asked to lay off any machines to make work for labor's fellow workmen. You can, if you wish, put this proposition in another way. Every five men in industry were asked and in a way, actually denied the right to work 8 hours each week so some other fellow workman would be able to work 40 hours each week. The thought being that employment would be increased by 20 percent of those then employed. Capital was not asked to eliminate enough machines to create an additional employment of 20 percent. If it was the purpose of the act to make employment, why was not capitalistic labor, machines, asked to participate in the experiment.

The devaluation of the dollar and the passage of the Wagner Labor Act will, eventually go down in history as the work of men who wanted to do something but did not know how.

So much for hours. Let's now get on to wages. Volumes have been written on wages. Unfortunately no one has ever suggested any formula for determining what wages should be. All the authorities within and without the ranks of labor seem to agree that wages should be based on the cost of living. Unfortunately, again, industry and labor never agree on what the cost of living is at any certain time. Frankly, I sympathize with both groups because anyone can arrive at the cost of living at any given time, at almost any figure that suits his fancy. Some few years ago, the experts of the various groups agreed that the cost of living at that time, was up anywhere from 28 to 47 percent—really close approximation, was it not? While they were still arguing over the cost of living, an election was held in Kentucky and, the next day a wage increase was granted to the miners. On the cost of living figures? No; on the election figures.

Regardless of what the various cost of living indexes, prepared by industry, labor, and the Department of Labor, may show, there is one commodity that does accurately determine the cost of living. That commodity is wheat. Wheat is not a cost of living index merely by chance. There is a very good reason why it is, and should be, the real cost of living index. In the first place, it is the most palatable food on earth, the most economical from a calorific standpoint, and there does not exist a race of people who do not prefer wheat as a food, if it is available at the proper price. It is the standard of value on which the prices of all other foods, including beef, pork, and poultry, are based. Back so far as records have been kept on the prices of wheat, the average price has been $1, then it should follow that the right price of wheat is $1 per bushel. Certainly, in normal times, when we had a 26-grain gold dollar, the farmer was glad to sell at $1. His condition could be determined by the amount wheat was below or above the dollar average.

Common labor, based on the same gold dollar, was available and lived fairly good on a minimum hourly wage scale of 50 cents per hour whenever wheat was selling for $1 per bushel. By using the $1 (26 grains of gold) as the right or normal price of wheat and 50 cents an hour as a minimum wage for common labor, it seems to me we have at least made a start at arriving at a scientific and equitable formula for a minimum hourly wage-scale law. Based on the present 59-cent or 15-grain gold dollar, the price of wheat would normally be, using $1 as the normal price, $1.65. Just at what price it would be selling right now, were it not propped up by a farm subsidy program, I, of course, do not know. I do know that it would not remain at its present level for long. We have a situation where, on the one hand, the Government wants the cost of living down and, on the other hand, that same Government wants the cost of living up by putting a floor under wheat that keeps its price above what it would normally be, if it were being traded in an open free market. Sooner or later, the Government will have to determine whether it wants the cost of living up or down. If down, take the floor from under wheat. If it wants to coast along, then it can expect the Nation to be confronted with strikes, wage controversies, and the continual interruption of production.

Regardless of what the Government does or does not do, that is to say, if it should continue the practice of parity wheat prices for 2 years or so, wheat will come down anyway—with a crash. If the Government should encourage higher wages because of its parity wheat practice, labor will be out of work—and soon. Neither the farmer nor the industrial worker are the whole of our economic structure. They are mighty important but, there is still another portion of the whole composed of those on retirement, on fixed incomes, or limited dependencies, those in service occupations, etc., who must be considered. In times of distress, they buy sparingly. They are thrifty and they make the dollar stretch by going on a buyer's strike, not by choice, rather by necessity.

There are, broadly speaking, two classes of labor; one we know as strictly industrial, living in the metropolitan centers and, the other, rural, living and working on the farms and outside of the large cities. Any wage law must concern itself if it is to be workable, not so much with those who are represented by unions, but rather with those who are left to the mercy of competition and world markets, such as the farmer, and those not represented by any union. A wage law should be what the name implies, a wage law, nothing more, or less. The all important function of a minimum hourly wage law is, and should be, to maintain parity, as between the industrial worker and the farmer and rural worker. It matters not what the price of wheat is nor what wages are, be either high or low, just so long as they are relative. It is not the low price of wheat that makes a farmer poor, not high wages that makes the industrial worker prosperous.

It is, however, calamity and depression when neither is not in the same relative position so far as income or purchasing power is concerned. You can keep farm prices and industrial wages relative by passing a minimum hourly wage law based on the average price of wheat. As prices of wheat change, the hourly wage would change. Every 6 months, say January 1 and July 1 of each year, the Department of Labor would set the minimum hourly rate for common labor. That rate would be based on the average price of wheat for the preceding 6 months.

The last minimum hourly wage was established by Congress several years ago. At the time it was established it was outmoded in that no employer north of the Mason and Dixon's line would ask any workman to work for the minimum of 45 cents. Yet, it did become, for some employers, a standard on which to base wages, which, indeed, was unfortunate for the employee.

The above was dictated, as the first paragraph indicates, several months ago. Nothing has happened to contradict the logic outlined in the letter. The farmer is actually getting about $1.65 per bushel for his wheat based on the 1933 dollar. The wheat price is determined by the law of supply and demand. The laborer's wage is determined by—the power that be in Washington.

Best wishes for your success.

Yours very truly,

WALTER C. WYLIE.

Side Show Freaks

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. SHAFER. Mr. Speaker, there is both humor and malice in the aim of the self-styled Fair Dealers to put on a Freedom Fair in Washington, D. C., to observe the one hundredth and fiftieth anniversary of this great city's birth.

It was inevitable that the country would change and that Washington and various other cities would change as the United States developed from a small nation, consisting of 13 colonies, into a great united nation stretching from the Atlantic to the Pacific, with the greatest industrial, commercial, and cultural development of any nation on earth to date.

However, it was not inevitable that 150 years after the establishment of this city, the very men who are most noted

among intellectuals for espousing doctrines to enslave the people should be the very ones who should sponsor the Freedom Fair. There is something anomalous about an administration that sponsors bills to collectivize and socialize America, while paying lip-service in a projected fair to freedom. One wonders if he is not living in a dream world, where words are meaningless and the many of the people are just stooges walking around under the mental, psychic, or cosmic influence of factors or persons out of their reach.

If Thomas Jefferson, Alexander Hamilton, George Washington, or any of the common-sense liberals who helped to found this Republic were to come back, study the aims of this administration, then hear that the same administration was going to sponsor a Freedom Fair, they would no doubt smile in incredulous wonder. How can men who do not believe in freedom so bold-facedly sponsor a Freedom Fair?

This is not to say that I do not favor a Freedom Fair. We still have our freedoms in this country, due to the unremitting fight of men who refuse to cede away their liberties. I like to think that this Congress, along with the Eightieth Congress, has held the line in part against the loss of our freedoms to an overweaning bureaucracy. Of course, the Democratic-dominated Eighty-first Congress has fallen down in many respects and its self-styled Fair Deal Members in particular have gone down the line for totalitarianism, but I am still proud that enough patriotic Democrats will vote with enough sensible Republicans to keep socialism at the door, instead of letting it get inside to gobble up our liberties.

I am very much in favor of the Freedom Fair and I just hope that the millions who come here next year will take a little time, in connection with this fair, to study the bases on which our Nation was founded and to learn why we must be ever on the alert to preserve freedom—even from our own leaders, if they attempt to take it away.

In connection with this fair, my attention has been drawn to a rather satirical editorial which appeared recently in a midwestern newspaper. I do not know the name of the author of this editorial, but he has been able, in whimsical vein, both to expose the humor of the New Dealers to sponsor a Freedom Fair and at the same time to make some suggestions for side shows that could prove very enlightening, if used in the projected fair.

Under permission to extend my remarks I include this editorial:

SIDE SHOW FREAKS

Mr. Truman and Congress have agreed to hold a fair in Washington next year to mark the one hundred and fiftieth anniversary of the District of Columbia. There will be buildings and exhibits, and the tourists, no doubt, will flow in from the sticks to put up in a town normally so overcrowded that a hotel reservation is sometimes an empty promise.

The contemplated exhibits seem a bit on the pedestrian side. States, Territories, and foreign countries are invited to be represented. There will be a Free Enterprise Building, which is one of the first intimations that the New Deal is a patron of that concept. Perhaps it will be offset by a welfare state exhibit, where visitors from the whistle stops can get a preview of state medicine, state bassinets, and state caskets and headstones.

The record of every fair since the Columbian Exposition suggests that the midway, or carnival, side of the show has the most general appeal. In 1933 the late Robert L. Ripley did very well at A Century of Progress with his collection of freaks. It would not be necessary to go outside the ranks of the bureaucracy itself to obtain an unrivaled assemblage of the strange and marvelous.

One side show might feature a Truman loyalty board arriving at the decision that some prominent New Dealer is not a Communist. In another tent Mr. Justice Frankfurter could read a typical Supreme Court opinion, dissenting from the dissenting opinion, with a cane given away to anyone who can fathom his drift. A representative hotel room, with one wall cut away and glassed in, could be used to display the customary habitat of a real, live Wall Streeter in town to confer with his pals in the Marshall plan on where the next ladle of gravy is coming from.

As an outdoor exhibit, Mr. Truman, grasping a plow, might prove the contention in his campaign literature that he used to plow the straightest furrow in Jackson County. A barker would be in order, and Secretary of Agriculture Brannan, expounding his plan of how to sell food cheaply while the farmers collect premium prices, could handle the routine. Some exhibits would have to be caged, as, for instance, a group of Navy admirals just deprived of a supercarrier.

The Hoover Report: Action Demanded

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Hampshire Morning Union, published in Manchester, N. H., of June 8, 1949, entitled "The Hoover Report: Action Demanded":

THE HOOVER REPORT: ACTION DEMANDED

A week ago the Hoover Commission put in its final report on reorganization of the Federal administration. The lack of attention given to this final report indicates, what many of us have feared, that the American people have become familiar with the work of this Commission to the point of regarding it as just another of those things that no one can do much about.

That attitude, if allowed to prevail, may be deeply serious. For there is no question today about the need of Federal administrative reorganization. It is well known that the whole Federal administrative structure is shot through with waste, disunity, apathy, and irresponsibility to the point where Government efficiency is crippled or completely destroyed.

It has been urged for some time, by those most responsible for Government administration, that something should be done about it. Sporadic proposals and attempts have been made in that direction which have achieved nothing. The work of the Hoover Commission constitutes the first thorough, competent approach to the problem that has yet been made. If the reports of this Commission are allowed to be pigeonholed by Congress and nothing is done about them, the hope of the adoption of much-needed reforms might as well be dismissed permanently.

This commission was no fly-by-night affair. Initiated by Congress as a nonpartisan project, it was headed by a former Republican President, and had the aid and support of the incumbent Democratic President. It drew a staff of 500 workers from top rank leaders in the fields of business, public service, and the professions—men of skill and experience in administrative organization who gave 2 years of hard study to the reorganization problem.

No more thorough or businesslike examination of the government administration is possible. Surely it does not make sense to push aside 2 years work of the most capable public servants available and allow it to come to nothing. But that is exactly what will happen unless public pressure is exerted in the matter. Already vested interests are building a backfire against the report of the Commission and are doing everything in their power to defeat its purpose.

On one item alone the demand for Government reform is imperative. That is the item of government costs. Government expenditures have reached outrageous proportions and threaten to swamp our economy. On the matter of cost alone, the Hoover Commission estimates that a saving of from three to five billion dollars can easily be achieved by a businesslike program of government reform, while government efficiency will be multiplied greatly. We should demand that this is done. The continuation of democratic government may rest upon it.

Address of Hon. Chauncey W. Reed, of Illinois

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an address delivered by the Honorable CHAUNCEY W. REED, of Illinois, on Sunday, May 29, 1949, at Downers Grove, Ill., on the occasion of the dedication of a memorial honoring those who made the supreme sacrifice in World War II:

THEY MUST NOT HAVE DIED IN VAIN

(Address of Hon. CHAUNCEY W. REED, Representative in Congress, Fourteenth District, Illinois)

Throughout history men and nations have honored their patriotic and heroic dead. The annals of history record many tributes and eulogies expressed in their memory. It seems an eminently fitting thing to do. Leonidas still lives in the memory of men, although 2,500 years have passed since his heroic defense of Thermopylae. The memory of Caesar was revived 1,500 years after his death in Shakespeare's immortal oration ascribed to Anthony. Tennyson has immortalized the brave 600 in the "Charge of the Light Brigade." And the Alamo will live in the memory of men so long as they recall that "while Thermopylae had its messenger of death, the Alamo had none."

Yet, among all the famous literary masterpieces of the past in which men have sought to honor and glorify their patriotic dead, none stands out so brilliantly, especially for Americans, as the immortal address delivered by Abraham Lincoln on the field of battle at Gettysburg in the fall of 1863.

It is in the spirit expressed in that memorable address that I have accepted your invitation to be with you today, to speak to

UNIVERSITY OF MICHIGAN LIBRARIES

you, and with you to share in the tribute you would pay to these fallen heroes of our Nation. I will not attempt to repeat the words of Lincoln uttered at Gettysburg, although I wish I might repeat them, and even though it would be eminently proper and appropriate so to do. Nor would I borrow any of them. Yet I am pressed to do so; for you must know that I could not come here for this purpose without having refreshed my own memory of what Lincoln said on that occasion.

And in truth it likewise matters little what we say here or do here today. The fame of these heroes is secure. It is indeed for us, the living, to consecrate ourselves to the cause and the destiny for which they gave their lives. They responded to the call of country. They became heroes by what they did. A mysterious providence decided that they should be counted among the Nation's heroic dead. History has assigned a place to them. Today we but record it.

Again I am reminded of the Great Emancipator. And just now I am not thinking of his great address at Gettysburg which will live forever. I am thinking of some very simple words he wrote when he was a 14-year-old boy in southern Indiana, where he hoed potatoes for 25 cents a day and where he obtained all the actual schooling he was ever privileged to obtain, which amounted to about 1 year. He had a little Indian playmate named Johnny Kongatod, of whom he was quite fond. That little fellow died and young Abe wrote this epitaph which he placed upon his grave.

"Here lies poor Johnny Kongatod,
Have mercy on him, Gracious God
As he would do if he was God
And You were little Johnnie Kongatod."

Again I am thinking of Abraham Lincoln and of three or four lines of his second inaugural address—eloquent lines, noble thoughts, reiterating the plea he had made to his Creator as a boy when he had asked for fairness and mercy for his Indian playmate—words that are as applicable today as on the day they were uttered; words that have influenced our national policy as much so as if they were written into the Constitution itself:

"With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

I need but remind you that our history has been that of a nation largely free of war. It has been a history entirely free of aggression. We have conducted no wars of conquest. We fought for our independence as a free people. We have fought to preserve that independence. And we have fought for the independence of oppressed peoples. Ours has been conduct exemplary. We fought for freedom for the oppressed of Cuba. We fought for and conferred independence upon the people of the Philippines. Twice within a quarter century we fought for the oppressed of Europe. And even though we emerged victorious, we refused the role of conquerors. The conflict of arms ended, we turned to the survival of our erstwhile enemies. During the years since we have given abundantly and generously of our own means in order that those who made war upon us might again arise and become peaceful members in the family of nations. History records no precedent, no parallel, for our generous and ennobling conduct toward Germany and Japan.

Unfortunately we do not live in a peaceful world. Some men and some nations still believe in war, and prepare for it. Aggressor nations would destroy our way of life and impose their philosophies upon us. They are even now engaged in the building of armaments with which to make war upon us, even though they owe their survival to our intervention in their behalf. It is they who today compel us to arm in self-defense.

Ours has been a peaceful progress—at home and abroad. Our movement westward across the continent over mountains and plains, through beautiful and fertile valleys has been the advance of a people engaged in the establishment of homes and schools and churches. We have been building a nation in a new and a peaceful way of life. We have been building a nation of liberty-loving, home-owning, God-fearing, cultured, and enlightened men and women. That has been an inspiring enterprise. The only conquest we have known or practiced has been conquest over the forces of nature. We have conquered the wilderness. We are learning how to conquer our streams, to use their tremendous energy to light and heat our homes, and to turn the wheels of our free industrial enterprise. As a nation we are devoted to the development of the individual and to improving the lot of men and women. We repudiate and denounce statism as we repudiate and denounce war. Our only dream of conquest is conquest over the forces of evil.

Ours is the heritage of freedom, freedom of enterprise, of speech, of religion. Ours is a strong faith. It is the faith of a free people. It has been our guiding spirit. It has been developed from our own experience based upon the heritage bequeathed us by a noble ancestry. It is a part of our innermost composition.

Our National Memorial Day which we will observe tomorrow is not dedicated to the art of war. It is dedicated rather to the pursuit of peace. Although we cannot glorify those who have fallen, we can recall their valorous sacrifice in the cause of civil and religious liberty. We can be reminded that those whom we remember today gave their lives for a land worth living for, fighting for, dying for. We dedicate Memorial Day to divine providence, the destiny of the Nation, and the spirit of peace. If aggressor nations have made it impossible for us to beat our swords into plow shares and our spears into pruning hooks, they did not prevent us from carrying to our vanquished enemy the means of survival even through an airlift, the most colossal achievement of modern science and the most generous conduct in the history of individuals and nations.

These dead whom we remember today testify to the spirit of America. They testify to the strength of America. They testify to the determination of America to bring peace to a world that yearns for peace. The conflict abroad in the world today is a conflict of ideas, fantasies, and morals. Our conflict is against the deadly "isms" that pour in upon us from abroad and that threaten our national existence even as much as armaments. America must be alert to the deadly plague of ideologies that would undermine our moral fiber and prepare us for invasion from abroad. They must be fought on every front—in Washington, in Springfield, in our home communities. There can be no compromise with those who would destroy our Government by force and violence.

It is refreshing to note that these services today, this appropriate memorial, this splendid group of citizens in attendance are all the product of community cooperation. Civic organizations, churches, schools, Boy and Girl Scouts, and veterans groups have combined to do homage to your heroic dead of World War II and to dedicate to their memory a beautiful visible reminder of their sacrifice. Such organizations must remain united and function, as never before, to preserve forever the Government of the United States, and the principles of freedom and human rights for which it stands. Those whom we, today, honor must not have died in vain.

War has its horrors, its sorrows, its destruction, its sacrifices. But it also has its veterans who have seen war and know the penalties it exacts. The influence of those who have been privileged to serve with the colors has always been beneficial to our country. Veterans have always taken the lead in promoting national defense, in instilling patriotism, in combating disloyalty and subversive influences and in lending their great weight for the promotion of peace. They are the most feared by those who would tear our Nation apart.

Last September a group of six men, all from different States, met in a hotel at Grand Rapids, Mich. The youngest was 99, and the oldest 107. Yes, you have guessed it. These six constituted the eighty-second national encampment of the Grand Army of the Republic. They were all resplendent in their uniforms of blue and although their eyes were dim there emanated therefrom a luster that depicted pride and confidence—probably as much or more than was theirs when, under Grant or Sherman or Farragut, they fought to preserve this great Union of States. They met promptly at the scheduled time, noted that 22 of their comrades were necessarily detained, accepted as sufficient, the various reasons for their absences, and proceeded with the transaction of routine business. They appropriated moneys, they approved reports of their officers, they memorialized Congress. They next, reluctantly, and, I suspect, not without feminine persuasion, amended their rules and regulations to provide that their next encampment should take place this year at Indianapolis and that it should be their last. Finally, they elected their officers for the incoming year and for their new commander in chief, they selected the youngster of the group, Theodore A. Penland, of Portland, Oreg., age 99. Organized at Decatur, Ill., on April 6, 1866, the GAR held its first national encampment at Indianapolis in November of that year. It returns to that city this year with less than 25 survivors. So in the latter part of September 1949 the Grand Army of the Republic that one boasted of more than 408,000 members will hold its last national encampment and then will officially pass out of existence.

DuPage County can well be proud that Downers Grove is the home of the present commander of the department of Illinois of the Grand Army of the Republic, Comrade Lewis Fablinger, who has honored us by his presence today. Gracious God has given him strength and virility and permitted him to carry on while most of his comrades in arms have been "mustered out." It is our hope and our prayer that his vigor and his strength will stay with him for many years to come and until such time as he shall stand forth as the last survivor of that great army of Americans who fought Americans to free a race from bondage and to keep intact the Union of the States.

With the dissolution of the Grand Army of the Republic, veterans of our War with Spain must assume the role of elder comrades to those of us who served in World Wars I and II. Their ranks, too, are thinning. A few of us who served in World War I can remember 1898. We can recall the troop trains in which and on which those jolly, carefree fellows rode, and the hardtack and blouse buttons they so freely distributed to the girls at every station where the trains stopped. We can recall the envy that was ours at their good fortune to be privileged to fight for their country and how some of us, although only 8 or 9 years of age, seriously contemplated running away from home in order to get into the fray as drummer boys. We shall never forget their brilliant successes under Dewey and Sampson and Schley, and under Miles and Shafter and Teddy Roosevelt. Their service was not long. But it was deadly. They had poor equipment, bad food, and antiquated guns. True,

they were not called upon to face submarine warfare, or tanks, or machine guns, or poison gas. They did face torpedoes and mines and fortified block houses. They entered the war to fight Spaniards and they fought them well and vanquished them quickly but they also fought yellow fever, cholera, malaria, food poisoning, typhoid, and dysentery. The toll of these last named enemies was terrific. The losses in deaths from all causes were 4.3 percent as compared to six-tenths of 1 percent for the Civil War, seven-tenths of 1 percent for World War I and about 2 percent for World War II. About 458,000 were engaged in that war with Spain, exceeding in number those engaged in the Revolutionary War, the War of 1812 and the Mexican War put together. Seventy-three percent of them were sons of Civil War Veterans and 42 percent of them saw service in World War I. Yes; these Spanish War veterans remnants of the only 100 percent volunteer Army that the world has ever known, who served their country for $15 per month, have justly earned the respect of all veterans of all wars and as our elder comrades we shall ever cherish their advice, their guidance and their leadership in the great responsibilities that are ours to care for disabled comrades, to urge adequate national defense, to instill patriotism, to combat subversive activities, and to keep Memorial Day as a day of reverence for our heroic dead.

This beautiful memorial that you have erected in commemoration of your sons should ever remind you of the sacrifice they made. It should ever remind you of the horror of war. It should remind you of the moral worth and the heroism of American men and women. It should remind you of the sanctified mothers and homes of America and the ideals that have brought us so far along the pathway of progress, prosperity, and peace.

Why these particular boys should have been chosen to give their lives for humanity no earthly person knows. We do know that God gave His only begotten Son, whom He dearly loved, to make the greatest sacrifice that the world has ever known. He must have loved these boys to have chosen them to perform this earthly mission. God acts in a mysterious way. Perhaps when we, too, have gone the path of those who have preceded us we shall understand. The Saviour comforted His disciples by assuring them, saying, "I go to prepare a place for you." Perhaps the privilege that has been accorded to these honored dead, of already having been called to meet their Maker, has given them the opportunity to prepare the way for us. Perhaps because of them we shall find the road less rugged and our journey less burdensome.

An old man going a lone highway
Came at the evening cold and gray
To a chasm vast and deep and wide
Which barred his way to the other side;
But the old man crossed in the twilight dim,
For that sullen stream had no fear for him;
But he turned when safe on the other side
And built a bridge to span the tide.

"Old man," said a fellow pilgrim near,
"You are wasting your strength with building here;
Your journey will end with the ending day,
And you ne'er again will pass this way;
You've crossed the chasm deep and wide:
Why build you the bridge at eventide?"

The builder lifted his old, gray head,
"Good friend, in the path I have come," he said,
"There followeth after me today
A youth whose feet must pass this way.
This chasm that has been as naught to me,
To that fair-haired youth may a pitfall be;
He, too, must cross in the twilight dim—
Good friend, I am building this bridge for him."

Relief of Unemployment

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1949

Mr. PATTERSON. Mr. Speaker, I have received from Mr. Harold Senior, editor, publicity director, and organizer of the Connecticut State Industrial Union Council, CIO, a request to insert his views on legislative and economic matters in the RECORD. In accordance with that request, I am submitting his letter and my reply thereto:

MAY 26, 1949.

Congressman JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PATTERSON: I have noticed that you have been making a series of speeches in the House on the need for action to relieve unemployment and I appreciate your interest in this matter.

I observed among other things that you have asked Government agencies to supply you with information on the amount of public-works programs ready to be put into operation as a means of creating jobs.

The use of public-works programs is certainly one way to help relieve unemployment. In that connection, you may be interested to know that Governor Bowles of Connecticut is having a very difficult time getting his public-works program through the legislature. He also is having similar difficulty with his housing program, a primary objective of which is to provide low-rental homes to veterans.

Opposition comes from the Republican side of the State legislature. The Republicans have a program of sorts, but it is a severely restricted one, and it falls far short of the needs both in State institutional building and school building, as well as in providing low-rental homes.

I have no desire to be political in this letter, but it is a hard fact that the opposition to public works in Connecticut comes from your party. Republican Leader George C. Conway of the State legislature yesterday referred to the program of institutional and school building as "a Connecticut WPA," which apparently was intended by him as a derisive term and which should give you an indication of what the people of this State are up against in their efforts to get a sound program adopted.

While we feel public works most certainly should be utilized to help narrow the areas of unemployment, we believe that other measures are more basic to the problem. These involve the policies of industry.

As you have observed, many of the corporations which have gained the heaviest accumulations of profit, the greatest in their history, through the generosity of public buying in the last few years, are the ones which have imposed the heaviest cutbacks in employment. These also, in many instances, are the corporations which are proposing wage cuts, despite the obvious fact that both on the basis of the workers' needs and the purchasing power that is involved, wage increases are in order.

Preliminary indications for the first quarter of 1949 are that earnings of major corporations are continuing to increase, despite the drop in employment and consumer income.

A very serious imbalance exists. We feel that all possible emphasis should be given at this time to the extravagantly rich situation that prevails among the major industrial corporations as contrasted with the drop in earnings of workers and the total unemployment of large numbers of them.

Ultimately, of course, the corporations themselves will suffer if the downward cycle continues. That is why we feel so strongly that those corporations which undercut purchasing by maintaining prices above fair levels and adopting lower wage policies, are acting in a short-sighted manner.

I should be very happy to have you insert these thoughts in the RECORD.

Sincerely yours,

HAROLD SENIOR,
Publicity Director, Connecticut State CIO Council.

JUNE 9, 1949.

HAROLD SENIOR,
Publicity Director, Connecticut State Industrial Union Council,
Waterbury, Conn.

DEAR HAROLD: I appreciated receiving your letter of May 26, 1949, commenting on my continuing remarks in Congress relative to the spectre of unemployment.

Setting forth your conclusions, in order, they seem to line up as follows:

1. My request for information concerning a Federal Works program, while laudable from your viewpoint, is at variance with the statement of a Connecticut Republican legislative leader—who referred derisively to a similar State program as "a Connecticut WPA."

2. The Government's housing program is meeting resistance presumably from Republicans in the legislative also.

3. It is your belief that industrial balance is a more basic solution to the problem, and you contend that the corporations with the greatest margin of profit are those which are now cutting back on employment and wages most seriously.

My quest for information on contemplated public works was predicated upon the belief that necessary construction can and should be carried on at a time when labor is freely available, and two purposes may be accomplished at the same time; e. g., desirable project construction and employment for those in need of it. I see no need for "leaf-raking" projects of no foreseeable value. Public works of a constructive type, such as post offices, schools, hospitals, and highways are a few needed improvements in many of our communities. I am aware of no Republican resistance or outright opposition to projects of this type. As a party and as individuals, we wish our fellow-citizens to be engaged in fruitful occupations—whether they be privately or Government-financed.

Being engaged in my own legislative duties, I am not entirely cognizant of the differences in detail between Republican and Democrat programs in the Connecticut Legislature. I know for a fact, however, that the Republican legislators in the general assembly have advocated sound, practical programs on housing and public works. It would seem senseless for our State to duplicate a subsidy-type housing program which is virtually assured of enactment by the Congress.

I am in agreement with your third contention—that industry must provide the basis for accelerated employment. As Connecticut is primarily an industrial State, most of its citizens depend upon business enterprises for their livelihood. Threats of retributory taxation, reimposition of wartime controls, and general government intervention in the business system are not conducive to stable industrial relations. A reassessment of Federal and State attitudes toward the business community would allay fears of businessmen, both large and small, and bring about increased employment and production. The determination of industry profits and their disposition has long been a matter of disagreement among economists from the various strata of our economy. I do not feel

UNIVERSITY OF MICHIGAN LIBRARIES

qualified to state what is or is not a legitimate profit. That necessarily is a matter of opinion, as in a free-enterprise system a person's capacity to earn is limited only by his own initiative and ability. There may be some connection between large profits and early cutbacks in wages and hours, but I have no personal knowledge that such is or is not the case.

In accordance with your request, I am inserting your letter in the CONGRESSIONAL RECORD, and my reply with it.

Sincerely yours,

JAMES T. PATTERSON,
Member of Congress.

Protecting Democracy

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks I wish to include in the RECORD an editorial which appeared in the Los Angeles Daily News, Monday, May 30, 1949, by its editor and publisher, Mr. Manchester Boddy:

PROTECTING DEMOCRACY

The more I live, the more I appreciate the fundamental law of balance. It is a law of nature that constantly is being demonstrated for us. But I was never able to understand it until I learned to appreciate "time lag" as one of its most important factors.

Many years ago I felt the need of balancing my daily efforts in the print shop with the fun of growing flowers. One of the difficulties is that when I am in the flower garden, part of my mind is still in the print shop—and vice versa.

Today I find an excellent opportunity to be in both places at once.

In looking over the record of proceedings at Sacramento, I find that our State senator, Jack B. Tenney, is sponsoring a number of so-called loyalty bills in the legislature. These measures are aimed directly at liberals and progressives.

I have given the measures a great deal of study and what I find is distressing. With your indulgence I will return to my flower garden and explain what I mean.

During the very first month of my adventures in gardening, a choice patch of roses and other beautiful flowers withered and died on the stem. Naturally, I sought the cause. What I say was a heavy concentration of ladybugs flying and crawling about, and I immediately jumped to the conclusion that since the ladybugs were moving in on the buds and tender growth of my plants, they were destroying the flowers.

I was just about to eliminate them with a chemical spray when fortunately, and in the nick of time, a gardener stopped me.

"The trouble," he said, "is being caused by aphis. See!"

I put on my spectacles, and, sure enough, there were the aphis. The subtle little rascals were so like the color of the buds and the tender growth they lived on that my inexperienced eyes had overlooked them entirely; I thought they were part of the budding flower.

"Now these ladybugs," the gardener explained, "are the worst enemy the aphis has. They are just now moving in here, and if we leave them alone and let them develop, they will not only kill the aphis, but you will have some very beautiful blooms."

Now for the point in this story:

Senator Jack Tenney says he wants our great American democracy to come into full bloom. He points out, however, that in many instances it is withering and dying on the vine, and he says the cause is the many liberals and progressives in California. So he goes to the legislature and introduces bills calculated to destroy them just as I went to my tool shed and reached for a powerful chemical that would kill the ladybugs in my garden.

In effect, Jack Tenney says, "Kill the liberals and progressives, and the flower of democracy will bloom."

The alarming thing about Tenney's measures is that they are not calculated to kill the aphis—that is, the Communists who really destroy our flowering democracy. His measures are concocted and proposed for the sole purpose of killing the ladybugs—that is, the liberals and progressives.

Now it so happens the "aphis" in this case (i. e., the Communists) fear the "lady bugs" (i. e., the liberals and progressives) more than they fear anything else. And if Jack Tenney were hired by the high command in Moscow to render the most effective service possible he could do no better than to apply a deadly spray (his so-called loyalty measures) against the liberals and progressives.

And since that is precisely what he is doing, it is impossible to escape the disturbing thought that Jack B. Tenney himself, either through ignorance or by design, is serving the gigantic international conspiracy which is communism.

Jack Tenney's position is all the more disturbing because in the 1938 report of the United States House of Representatives' Committee on Un-American Activities, testimony was brought out that Tenney was associated with the extreme left-wing faction of California politics and spoke for this faction as a member of the State assembly.

It is always distressing to learn that a man in high public office is secretly serving a subversive group out to destroy American democracy. But such revelations have been made all too frequently during the past few years. To protect itself, the political aphis (particularly the big shots) has found it necessary to take on more and more of the color of the plant (democracy) it seeks to destroy. And it is true that since 1938 Tenney has taken on the color of democracy which keeps him on the public pay roll in a strategic position for effective work on behalf of communism.

But the time has come when we must judge all public officials by their acts. In the measures Jack Tenney is sponsoring today, he is seeking to destroy the only effective enemies that the Communists fear—the liberals and progressives of the State of California. And we cannot avoid the suspicion that he is doing this under the direction of the aphis leadership itself.

In a word, he is the most effective tool being used today by the Communist Party of the United States.

Mr. Speaker, this is what Mr. Manchester Boddy, a distinguished Los Angeles publisher, has to say about Mr. Tenney and his work in the California Legislature.

Mr. Tenney and his committee have just released another report. As was expected, Mr. Tenney attacks several outstanding liberal Democrats who have always supported the Democratic Party. But he does not stop there. He now attacks the San Francisco Chronicle, the San Francisco News, and the Los Angeles Daily News for daring to criticize him.

Mr. Tenney's remarks in relation to myself in his recent report do not come as a surprise. I abhor communism and have always fought it. But I am a Democrat and a liberal Democrat.

Mr. Tenney's remarks are typical of Mr. Tenney. I have never been able to make up my mind whether he is a crackpot or the instrument of those special interests which seek to destroy liberal thought in America. Whichever he is Mr. Tenney is undermining our form of government when he attempts to make people believe that liberalism and communism are synonymous. Communism will never take root in America as long as the Government is responsive to the needs of the people. Those who understand this are the liberals whom Mr. Tenney seeks to destroy.

Diplomatic Shadow-Boxing

EXTENSION OF REMARKS
OF
HON. PHIL J. WELCH
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herewith an editorial contained in the St. Joseph (Mo.) News-Press, on Tuesday, May 31, 1949:

DIPLOMATIC SHADOW-BOXING

Gerhart Eisler is free to proceed on his trek toward the East. It is presumed that he will accept the professorial chair offered to him at the University of Liepzig, in the Soviet zone of Germany. There he can expound at great length and without interruption the theories that prompted a congressional committee to term him "America's No. 1 Communist agent."

There has been a great to do about Eisler ever since he slipped out of our country aboard the Polish ship *Batory*. We asked the British to remove him from the ship when it docked at Southampton. This they did and the elusive Eisler immediately invoked the ancient "right of asylum" which grants political prisoners haven in England from foreign governments seeking them. He won his case in historic Bow Street Court in London; the fugitive from our authorities is now free to complete his journey to the land whose principles he loves.

Attorney General Tom Clark has commented that "we shall exert every effort to secure the return of the fugitive." We trust that these are paper words, that the effort expended is nebulous and devoid of caloric energy, that the pronouncement is so much diplomatic shadow boxing and nothing more.

We could not publicly shrug our shoulders at Eisler's sudden and unannounced departure in the midst of legal difficulties with our country. At the same time we could quietly and unobtrusively wash our hands of the whole affair. We always are stating that those who speak so highly of a foreign land and its tenets ought to go there to live. Eisler has acted upon this very exhortation. We think that our homeland is better off without this unwelcome guest. We hope that he took his baggage with him and stays away a long, long time.

Address by Vice Admiral Price at Fifty-fourth Annual Memorial Services of the Jewish War Veterans of the United States

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, June 10 (legislative day of Thursday, June 2), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Vice Adm. John Dale Price, Vice Chief of Naval Operations, at Temple Emanuel, New York City, on May 22, upon the occasion of the fifty-fourth annual memorial services of the Jewish War Veterans of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Jewish war veterans of the United States, ladies, and gentlemen, today we meet in solemn mourning to pay tribute to those who gave their lives in defense of this great Nation. Some of these men were ambushed on a Sunday morning and some died in the first counterattacks, but wherever and whenever they fell—in the vast Pacific or in Europe—on the beaches, beneath deep waters, or flaming through the sky—they took their chance to safeguard the destiny of man.

On this Sunday morning we must not forget that they placed upon us a sacred trust of their final hours; their last thoughts; their common dream, and in their memory we cannot be cheap with words. Their place in history will rest upon our actions rather than upon our words. Our goal must be their goal, our courage must match their bravery. Our devotion must equal their sacrifice. For much remains to be done to bind the wounds of this tired and confused world. Our Nation, in recent years, in its pursuit of international peace has followed the twin avenues of an adequate national defense and full support of the United Nations. Only recently we strengthened the cause of freedom by creating the North Atlantic Pact which put "teeth" into our international organization and denies any aggressor the deadly opportunity to pick off single nations one by one. We have stated plainly that the security of our Nation is indivisibly bound to the security of all free people.

In the words and wisdom of General Bradley, I quote, "We cannot count on friends in western Europe if our strategy in the event of war dictates that we shall abandon them to the enemy with a promise of later liberation. That is the only strategy that can prevail if the military balance of power in Europe is to be carried on the wings of our bombers and deposited in reserves this side of the ocean. It is a strategy that would produce nothing better than impotent and disillusioned allies in the event of war." Therefore, if we are to uphold the principles of the United Nations, enforce the provisions of the North Atlantic Pact, and at the same time prevent this Nation from being a battlefield, we must be able to carry a war to any possible aggressor on any part of the globe by land, sea, or air.

We cannot hope to sit back in this country and wage a cheap war, we cannot abandon the nations of western Europe and the free democracies elsewhere. We must back up with force the principles that the security of this Nation is indivisibly bound to the security of all free people. Their frontiers must be our frontiers—their security our security.

Our Navy's responsibility is to safeguard the sea ways, on the surface, under the sea, and in the air above, so that they are forever free to the commerce of the world. Sir Walter Raleigh declared in the early seventeenth century: "Whosoever commands the sea commands the trade—whosoever commands the trade of the world commands the riches of the world, and consequently, the world itself."

Today, the United States possesses control of the sea more absolute than was possessed by the British. Our interest in this control, however, is not riches and power. Our interest is: first, the assurance of our national security; and, secondly, the creation and perpetuation of that balance and stability among nations which will insure to each the right of self-determination under the framework of the United Nations organization.

The Navy today is based on realism and balance; realism in appraising the current world situation and the role the Navy would be called on to play in the unfortunate event of war; balance in the integration of the Navy's effort with the other agencies of Government and the elements of national defense. There is, in effect, an evaluation and a unification of effort directed largely toward the freedom of the sea in peace and toward the command of the sea in war.

The United States is on an island continent. We are separated from the other continents of the world by thousands of miles on the east and on the west. Because of this geographical fact, it has been commonly considered that we could sit back and forget what was happening to the rest of the world. That was a concept unsupported by the facts of history for today we know that no nation is self-sufficient any place on the face of the globe.

The economic health of our country in time of peace depends to a large extent on the free exchange of goods with the rest of the world. Our industries, in peace and war, depend on many critical raw materials that must be imported from across the seas. This means that our Nation, in order to sustain its internal life, must make continuous use of that broad and mobile highway which is the sea and our welfare must be inseparably bound to the possession of adequate sea power. But it is essential that this must be understood as power for peace and for the freedom of commerce.

The United States Navy is particularly well adapted to the implementation of this policy. Self-sufficient, its ships, submarines, and aircraft can move over the seas without threatening the political independence or territorial integrity of any nation. It is not in the tradition of this country to seek political domination through force. The presence of our forces is a source of confidence and comfort to traders on the sea and to peoples accessible to the sea. In support of this policy the elements of the United States Navy are committed to a series of assignments which are global in character.

Stemming from the two main fleets based in the Atlantic and Pacific, various task forces proceed in execution of multiple duties which take them all over the world. Routine exercises of the two major fleets cover areas from the Tropics to the Arctic along both sides of the North American Continent. However, since task forces are continually being detached or returned to these fleets life never becomes monotonous.

Under the administrative command of the Atlantic Fleet our forces in the eastern Atlantic and the Mediterranean act in support of our occupation forces and lend an influence of stability to the trouble spots of the world. Wherever special assignments demand the use of naval personnel, such as observers for the United Nations mediation group in Palestine, the Navy is able to provide trained men properly equipped within a matter of hours. Proceeding through and beyond those areas, our tankers go as far as the Persian Gulf in their task of obtaining oil to supplement the supply at home.

Being an aviator, I am extremely interested in the fast carrier task force principle which the Navy has embraced. Actually, the task force itself is not a new idea. One of the best ways to describe a task force is as an assemblage of naval power for the accomplishment of a specific objective. In the Revolutionary War our small Navy was organized along privateering lines since it could not hope to meet the British Fleet in open battle. In similar fashion our Navy defeated the Barbary corsairs in the Mediterranean using the same technique. Only in that instance, our naval forces were organized for the purpose of blockading north African ports and bombarding the towns fronting on them. This same principle has been applied in every war the United States has fought during its history. To attain a specific objective in World War I, we organized our convoy system in order that the tremendous quantities of men and supplies could be safely delivered to France despite the menace of the submarine. In World War II our task forces were organized around carrier-based aviation. No power on earth was able to stand against it in that war. In the Atlantic, task forces, called hunter-killer groups, broke the power of the submarine campaign aimed at the destruction of Allied shipping.

In the Pacific, task forces organized along slightly different lines destroyed Japanese power up through the island chains until they were hammering at the door of Tokyo itself.

The task-force principle has run through all the Navy's thinking from its inception. The task-force principle has helped to make the United States Navy one of the most powerful weapons on earth.

Our control of the sea and our mobile naval air force will be an important military asset in any future war for the Navy without its own air arm would, in a war of the proximate future, be bound to its continental naval bases with no immediate means either of retaliatory blows or for acquiring advance land bases from which to conduct offensive operations. On the other hand, equipped with the full capabilities of our air-sea power, we could pin an enemy's armies to his continental base and choose the time and place of our offensive.

This Nation should be capable of striking the enemy from land air bases and from mobile carrier bases. By proceeding to any launching point within the combat radius of carrier-based planes, the carrier forces have the immediate effect of dispersing the enemy's defense. Instead of concentrating them to meet land air attacks alone he must deploy them to any point of the compass from which he is vulnerable to air-sea attack as well. The final effect is to make him more vulnerable to attacks of both types. While it is unlikely that complete surprise would always be possible, it would be physically impossible, on the other hand, for the enemy to maintain an air defense capable of turning back local attack in strength from every direction. Therein the carrier force could achieve a tactical concentration which could not be effectively countered.

To better illustrate this point, consider the late war in the Pacific. From Iwo Jima on, Navy fighting planes from carriers shot down

UNIVERSITY OF MICHIGAN LIBRARIES

and destroyed over 5,000 enemy planes in the heart of the Japanese Empire. These Navy fighters cleared the way for the heavy bombers before land-based fighters could be brought to bear. This illustrates that land-based air power and mobile air power are neither duplicative nor in competition, but are complementary. The development of both types is essential to the most effective destruction of the enemy's industrial potential and will to fight. The ability of floating air power to strike suddenly from anywhere is bound to disperse, and hence to weaken, the defensive shield of the enemy, thereby enabling long-range attacks to succeed with less loss of life and material.

These carriers which support this mobile-type air power are not only the flying fields but barracks for personnel, service station, machine shops, and communication centers for air operations as well, and they mount their own heavy antiaircraft batteries. This enables great extra range for their planes as they can arrive at the combat zone with tanks full and their fliers fresh and ready.

In conclusion, we know that the economic structure of this Nation will only allow a certain expenditure for national defense, and we all realize that each dollar must be spent wisely and with plenty of forethought. We also know that we can't make a mistake and place "all our eggs in one basket," because when the next war comes we must be able to save our Nation from devastation by being able to carry the war to the enemy, and that cannot be accomplished without a modern and up-to-date naval force, nor without a modern and up-to-date air force, nor without a modern and up-to-date ground force. But with the coordination—and the integration—of all three, making use of the best and latest scientific developments, the United States can face the future with confidence for our own security—and with capacity to uphold the aims and purposes of the United Nations.

Who Is Looting Whom in Tidelands Dispute?

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by E. C. Krauss, from the Los Angeles Times of May 29, 1949:

WHO IS LOOTING WHOM IN TIDELANDS DISPUTE?

(By E. C. Krauss)

A review of the tidelands oil controversy in the June Atlantic by Robert Hardwicke, a distinguished lawyer of Fort Worth, who was chief counsel for the wartime Petroleum Administration, raises the question of whether the Federal Government can administer the tidelands efficiently.

In view of the Supreme Court holding that the Federal Government has a "paramount" interest in the tidelands because it must defend them in case of war, the judgment of a man who saw Federal oil administration close up is worth consideration.

Most of the article recites what, to Californians, is ancient history, but the recital of Federal administration of public lands is new. Says Hardwicke:

"No claim has been made by the advocates of Federal control that petroleum supplies were lacking during our two world wars because the Federal Government did not have control of oil development onshore or offshore. This brings the discussion to what might be expected if an agency of the Federal Government should be authorized to grant leases and control offshore operations.

"It has been argued that the laws and their administration pertaining to the development of the Federal domain for oil and gas for a period of 28 years (1921-49) indicate what is likely to happen if the Federal-control bill becomes law.

"The history of the Mineral Leasing Act indicates that inefficiency is inherent in an arrangement which places control of great far-away areas in a Federal agency in Washington, subject as it is to inevitable frustration and restrictions which can be blamed only in part upon inadequate appropriations. Perhaps most of the blame rests upon Civil Service laws and the volumes of regulations and rulings which govern the employment, transfer, promotion, discipline and discharge of employees * * * giving little discretion * * * to the officials of the agency. * * *

"Regardless of the ability of top-rank Federal officials, no way seems to have been found to avoid a complicated routine of red tape with little flexibility, often affecting judgment and always slowing the processing of papers and the announcement of final decisions, even minor ones. * * * The delays and uncertainties have been maddening. Moreover, Federal laws, leases, and regulations still impose upon operators obligations which are generally considered by them to be unnecessary and to confer powers upon the Secretary of the Interior which authorize arbitrary action. * * *

"This much is certain: Development of the public domain for oil and gas has not been comparable to the development of private lands or the public lands belonging to States."

State administration, the author insists, has generally been efficient and flexible. He concludes that "Federal control is bound to be a deterrent of great magnitude."

Hardwicke's article was no doubt in type before the recent hearing of the motion before the Supreme Court to permit suit to be started against Louisiana and Texas for possession of their tidelands. Otherwise he might have commented feelingly upon the charge by Solicitor General Philip B. Perlman that the States are using unfair propaganda and looting the Federal domain.

Considering that the Federal Government slept on its rights, if it has any, for nearly 150 years (from 1789 to 1937) and took no interest in tidelands till the enterprise of individuals and States proved that they were valuable, to make a charge of looting against the States takes more crust than one would expect to find even in the most Federal-minded of officials.

When States and localities, allowed to assume without contradiction that they own it, proceed to develop property and prove it of considerable worth, and the Federal Government then steps in to grab it, the charge of looting seems better founded when directed against the Federal Government.

It should not be forgotten that if the parties to these suits were private, the Federal claim would long since have been extinguished by the statute of limitations. The only basis for Federal action rests upon the technicality that the statute of limitations does not run against the Federal Government. It may be said also that mudslinging at the States ill becomes an officer of the Federal establishment. Can it be that Perlman's job is a little too big for him?

Science and the Federal Government

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. O'HARA of Illinois. Mr. Speaker, it should be of interest to my colleagues to know that in a poll taken by the Inter-society Committee for a National Science Foundation, representing societies that constitute the great bulk of American science, the demand for a National Science Foundation was practically unanimous, and the form of such a foundation as now offered by H. R. 4846 was endorsed as highly acceptable.

That which is recommended to us by the scientists of the Nation, and carries the approval of all the learned societies in the field of science, as something needed that to the fullest extent America may meet her obligation to herself and to the world, merits our most thoughtful attention.

I therefore include in my remarks, under the permission unanimously granted, and for the full information of the Members of the House, an address by Ralph W. Gerard, professor of physiology at the University of Chicago, delivered at the St. Louis, Mo., meeting of the American Association of University Professors, and printed in volume 34, No. 2, of the bulletin of the association:

THE CASE FOR A NATIONAL SCIENCE FOUNDATION

(By Ralph W. Gerard)

Why should this subject merit discussion before a group of academicians? The answer lies in the use of two words by Winston Churchill, a major world statesman, in his 1940 Quebec address, "At the end of the war the whole world may turn with hope, with science, with good sense and dearly bought experience from war to lasting peace." The answer lies in the atomic bomb, in Grand Coulee Dam, in the near abolition of typhoid fever, in nylon. Whether we like it or not, science is now in the big-time circuit, and is there to stay. It is, perhaps, the major national resource, in peace no less than war. At present its importance is mainly at the technological level, in terms of know-how, as applied in industry. It should be similarly important in terms of public education: education of citizens to the rational consideration of human problems, as of the simpler one of the material world.

We should really consider, then, the proper relations between Government and science in the areas of teaching and of research; and these, further, in terms of basic research and liberal education, contributing to the culture of a people, on the one hand, and of applied research and technological education, contributing to the productive potential and power of the Nation, on the other. Moreover, there are the separate facets of the use of science and scientists by Government, and of Government support of nongovernmental science activities. Only some of these matters can be considered in the available time, and I propose to center the discussion on what scientists should want of and offer to the Federal Government.

The present picture has been limned in by the Steelman[1] report to the President. Though produced hurriedly and admittedly based often on estimates, its figures are probably reasonably correct. There are in this country some 140,000 scientists, of whom 25,000 have the doctor of philosophy. Roughly 50,000 of the total are now in universities and like institutions, 60,000 in industry, and 30,000 in Government employ. These numbers are far from filling present needs, and, despite some 400,000 science students (not including 200,000 in engineering) now being trained, the war deficit will increase until 1953. Even now there is a shortage of 15,000 science teachers, which will diminish; and of 100,000 science bachelors, which will increase. The expected maximum deficit of doctors of philosophy will reach 8,000. Clearly Government support for education is essential, and clearly opportunities for scientists are great.

On the financial side, the support of science is increasing prodigiously. The total spent in this country in 1930 was, in millions, $150, of which 12 percent, or $18, went for basic research rather than technological development. During the war the total jumped to $600, but only 2 percent of this, or $12, was allocated to basic research. The figures for 1947 again rise for the total, to $1,000, and also for basic research, 4 percent or $40. The recommended future expenditure for science is 1 percent of the national income, or $2,000 at present, of which one-fourth, $500, should flow into basic research. With the rocketing of total funds has gone a sharp change in sources. The increases have come overwhelmingly from Government and industry, not from increased resources of academic institutions. Private philanthropy has become a trickle in the torrent, and all forces seem to be operating to further the trend.

There is more science in our future, an ever-growing role and need for it in our culture. Science as a training for specialists now occupies a considerable portion of higher education; but the recognition of its greater importance in liberal education will lead to greatly extended science teaching at all educational levels. In Government, also, the use of science and scientists is on the increase. Not only do existing research units need more staff but new ones are being created which are concerned more and more with basic research problems, ones underlying defense, agriculture, transportation, industry. And as human affairs become more intricate and dependent on special knowledge, so are scientists called more urgently into policy-forming posts and consultations. They must advise on atomic energy, on mechanized warfare, on natural resources, on new inventions, on housing and health.

Nor are these services limited to the national level. In international affairs as well, organs have been created which demand the participation of scientists. Important scientists are on the staffs of the United Nations Educational, Scientific and Cultural Organization, the Food and Agriculture Organization, and the World Health Organization; scientific attachés and missions are moving between countries; exchange of professors and students, as under the Fulbright bill, will include many in science. And the growing use of scientists in industry need only be mentioned.

Yet with these increased demands for scientists comes the increased cost of their training and activities. The easy observations and experiments have largely been made and the frontier of the unknown is more distant from our simple senses. So, more powerful and expensive instruments are required—to see further into the atom or the heavens, to measure fewer electrons or photons, to calculate with more variables. At the same time, these complex instruments require finer expertness to devise and operate, and their yield of information demands more special knowledge to interpret. As many approaches are focused on a problem few men, indeed, now find themselves in sufficient mastery of the various ones. So research teams are becoming more necessary and common, especially after the experiences of cooperative scientific effort during the war.

All scientists are aware of the need for more financial support of science, and for more trained workers in science; and many know both the need and desirability of more effective coordination. I remind you that the really seminal discoveries and insights result from the efforts of a handful of men. The great bulk of scientists work to lay the highways of knowledge into the new territories after the pioneer has shown their existence and broken trail. For most of these useful workers, cooperative effort is no circumscription but, as many found even under trying war conditions, is often a positive gain and a greater satisfaction.

II

Such are the opportunities, needs, and conditions. How are they to be met, what are the sources of support for universities and like institutions? The familiar ones are notoriously drying up. Interest rates have fallen as endowments rose. The purchasing power of the dollar has shrunk and the total purchasing power required has expanded. Large gifts decrease as large fortunes are more heavily taxed, small gifts from friends and alumni, even large ones, are lost in the cavern of annual budgets of ten or twenty million a year at the great universities. Even the old stand-bys, the foundations, are working with devalued and decreased capital and a few new ones of large means are being created. A possible exception and important source of growing support is the group of voluntary health agencies such as the National Foundation for Infantile Paralysis or American Cancer Society, supported by national public fund-raising campaigns. Patents on the fruits of their own scientific work would soon make universities self-supporting, but might put them in undesirable competition in a business atmosphere, and most universities have foresworn this source of income. Today the universities are impoverished compared to a quarter century ago. They are really insolvent and carry on only with the aid of funds from industry and especially from government. State and Federal funds have supported science in this country for the past decade. If Government aid were suddenly withdrawn, I have little doubt that our major educational institutions would collapse. The plain fact is, then, that at present and for the foreseeable future, basic science must look to government for support, abetted to some degree by industry; and ever more to the Federal Government. This is not to say that private supports may be neglected. Even if quantitatively small, such private funds and institutions must continue, as in the past, to pioneer in administrative and educational experiments. The best will always help set the standards for the bulk of more routinely supported institutions.

The situation is not without its dangers, which have been widely heralded and sometimes exaggerated. Regimentation and red tape are not unknown in Government activities. War research was sometimes closely directed, even by men with little scientific awareness, and minute accounting and reporting requirements harassed nearly all scientists serving the Government. But such liabilities are not inevitable, have caused concern, and are being ameliorated. New bills dealing with scientific activity have mostly given explicit escape from these annoyances.

If Government supports research scientists by jobs in its ranks or funds outside them, there are other potential dangers: of diverting an excessive proportion of able men from teaching, by the lure of research facilities at other institutions; of siphoning too much of the cream of young manhood into science as a whole, due to greater opportunities, so that other important needs—for humanists, statesmen, writers—are not met; of concentrating research effort in certain fields, at the expense of others in science, by disproportionate support which will attract opportunists and support the work-learn training of advanced students accepting such specialties; of fostering mediocrity in scientific leadership, though this would hardly be on a financial basis, Government and academic salaries being what they are; of diverting the whole course of research from the basic long-range effort, which maintains the water table but is rarely in the headlines, to practical short-range jobs, which flourish on the water and blossom into particular accomplishments that Congress and the citizenry understand.

There is also the danger—with classified research results, restricted interchange of knowledge, often ill-advised loyalty tests, even open witch hunting—of a black-out of the very soul of science and of the effectiveness or consciences of scientists. But this problem transcends that of science; it affects science privately pursued at universities only less than that under Government aegis, and its resolution is up to the good sense and democratic wisdom of the American people.

It is well to be aware of dangers and to attempt to forestall them; it is not wise merely to point with alarm without examining the actual facts and the alternate conditions. Most of the apprehensions concerning Government support apply equally to support from industry, some even more realistically, yet heavy contributions from industry are sought and welcomed; and, as pointed out earlier, either Government or industry must carry the load of scientific subsidies. Even foundation grants, which all have praised for their fertilizing action on research, have carried the danger, to some extent the actuality, of luring able men into science and scientists into particular fields of investigation. Conversely, it is simply not true that all Government-administrated science suffers from the many possible defects mentioned.

Many State universities in this country are now in the front rank. Their academic staffs, freedom of operation, devotion to sound scholarship and significant research place several of these on a par with leading private institutions. Educational standards and practices, at many levels, have been enviable under the governmental agency, the New York Board of Regents. I have recently returned from Australia where I found the federal agency, the Council for Scientific and Industrial Research, operating splendidly. Although created actually to produce practical results, the council supports extensive pure research, and the scientists in its employ tend to work with better conditions, salaries, and contentment than most of their counterparts in the universities. Finally, let me mention the Office of Naval Research as an example of what research administered directly by our own Federal Government, yes, even a military branch of it, can be like.

Many scientists, like myself, made proposals for ONR contracts a couple of years back, with our fingers crossed. We were a bit tired of the petty bookkeeping problems, the interminable reports, the classified handling of information, the pressure for particular studies, the need for practical orientation that we had all experienced during

[1] John R. Steelman, A Report to the President, Science and Public Policy, August 27, 1947, U. S. Government Printing Office, Washington 25, D. C.

UNIVERSITY OF MICHIGAN LIBRARIES

the war years. But we did make proposals and many received contracts. Since then we have worked with the ONR officers as contractors and a few of us as advisers as well I can report without reservation not only my own experience but that of all others with whom I have spoken (limited to the Medical Division). There has been an irreducible minimum of red tape and paper work, less than for the usual foundation grant; there has been friendly aid always available; there has been no secrecy and no inquisition; investigators have been allowed complete freedom in the prosecution of their research, and immediate or dramatically useful results have not been expected. The ONR has even taken the wise position that practical research is best conducted in its own facilities and that it prefers to support basic studies at the universities, and I can assert that contracts are awarded on the basis of such valid criteria as the scientific significance of the problem. The ONR is, in fact, in part attempting to hold the line of university science between the demise of the war agency, the Office of Scientific Research and Development, and the birth of a peace agency, the National Science Foundation.

III

A bill to create a National Science Foundation is before Congress as I write. Such a foundation is desired by 99 percent of the scientists of this country, according to the poll of the Intersociety Committee on a National Science Foundation. It is desired so much that 86 percent would find any of the proposed administrative organizations acceptable, even though scientist opinion as to the preferred set-up was as widely split as was that in governmental circles. This is really an impressive agreement when placed against the fact that only a third—of natural scientists, mind you—considered a foundation that would exclude social science as acceptable. Whether passed by this Congress or a later one and initiated under this administration or a later one, a National Science Foundation will come into being. The scientists want it, the institutions of higher learning need it, the welfare of our country demands it. The dangers inherent in greater participation by the Federal Government in the support of science are not to be met by abrogating this support but by other positive measures.

Scientists, good scientists, must be willing to help in planning and administering the Government's activities in science. They must be willing to give up some of their own productive activity to do a needed job—and their scientific colleagues must learn to respect them for doing so. Good scientists must be willing to work in Government institutions. Even now salaries and facilities in these are often superior to those in academic positions, but there is still legitimate hesitancy as to freedom of research and stability of support. Congress has had a devastating habit of suddenly cutting the budget from under great governmental institutions.

This suggests the other positive action required of scientists. We must continue to educate the public, and Congress, to the meaning and importance of basic research—the research in which you don't find what you're looking for. All scientists know that this is harder to do, more demanding of high ability, more rewarding in the long run, and incomparably more important to the ultimate welfare of the country and the world than is applied research. When Congress, as elected by an informed people, fully realizes what a priceless resource is a body of active, imaginative investigators and at what a relative pittance it can be fostered and maintained, there will be no danger of sudden cuts in research budgets. In depression periods research will be the last item to remain, not the first to be cut, for from it will come the new industries and the new prosperity. And scientists will cast their lot with Government research, secure in their freedom to follow the ideas that come and in the continuing means to do so.

Because science is becoming recognized as a prime resource in war and peace, because the changing character of research and of our institutions requires it, because the whole direction of social evolution is toward greater functioning of the Federal (and some day world) Government, it is inevitable that the Federal Government will support science on an increasing scale. Our opportunity is to guide this stream into the most useful channels so that research and teaching are maximally irrigated and minimally watered down.

Decline of Farm Prices

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, June 10 (legislative day of Thursday, June 2), 1949

Mr. THYE. Mr. President, there appeared in the Washington Post today an article by Mr. John W. Ball, Post reporter, on the announcement of the Department of Commerce concerning the decline of personal income and the lifting of export restrictions on steel.

The first statement has special significance, I believe, as showing definitely the downward trend in our economy. Especially significant is the fact that the greatest decline in income was in agriculture while nonfarm income remained relatively unchanged. This reveals again that the farmer is the first to feel the effects of a recession. It shows also that the prices the farmer receives for his products are not the major or primary factor in the high cost of living.

I ask unanimous consent that the article from the Washington Post be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The Department of Commerce last night made two announcements of striking importance to students of the present course of the Nation's economy.

1. Personal income declined between March and April at the rate of a billion dollars a year.

2. Export quota restrictions on steel, tighter than a drum 6 months ago because of domestic demand, were removed except for three comparatively minor items.

Here's what Commerce said about incomes:

Personal income in April declined to an annual rate of $213,700,000,000. In March the annual rate was $214,600,000,000; in February personal incomes were at the yearly rate of $216,300,000,000.

FARMERS TAKE ENTIRE DROP

The term "personal incomes" includes wages, salaries, income from partnerships, dividends, interest, rents—in fact, every form of income anyone can legitimately enjoy.

Figuring dramatically in these statistics is the drop in the income of the Nation's farmers. Commerce Department, in fact, credits the entire drop in income from March to April to lower prices for agricultural products.

"The decline," Commerce said, "stemmed from lower farm income. Nonagricultural income was approximately stable, with small declines in transfer payments and dividends offsetting an increase in wages and salaries."

The report added:

1. The reduction in farm income came from lower prices for meat products.

2. Manufacturing wages continued to decline at about the same rate as has prevailed since New Year's. From last November to April factory wages declined 10 percent, and in April were slightly behind the April 1948 level.

3. Increases were reported in mining pay rolls with small increases in construction, trade, and railroad pay rolls.

STEEL DEMAND EASES IN UNITED STATES

Commerce credited the removal of export quotas for steel on easing domestic demand. But industry sources reported an increasing number of furnaces closed with production that a few weeks ago was 102 to 104 percent of capacity down to 60 to 80 percent.

(The Associated Press reported from Pittsburgh that Carnegie-Illinois Steel Corp. was shutting down 1 more blast furnace and 10 open-hearth furnaces today at its Duquesne plant.)

The only iron and steel mill products now on quantity export quota are galvanized steel sheet, tin and terne plate, and iron and steel scrap. The latter, at least, is already in sufficient supply.

The Associated Press reported from Boston that employment in the woolen and worsted mills sagged to a 9-year low in April. Only 114,200 persons were employed in that industry in April—60,000 fewer than in April a year ago.

Address of Hon. Trygve Lie at the University of Chattanooga

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, June 13 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Trygve Lie, Secretary-General of the United Nations, at the University of Chattanooga commencement exercises on June 6, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad of this opportunity to visit the University of Chattanooga and to come to this city in the heart of the area served by the Tennessee Valley Authority.

It is not necessary for me to speak to you about the world-wide renown of the Tennessee Valley Authority. You know that this great and pioneering achievement in regional economic development has been and continues to be an inspiration to people in countries all over the world.

I do wish, however, to speak to you briefly about the relationship of such projects of economic development to the work of the United Nations and to its ultimate ability to preserve the world from a third world war.

There is such a relationship. It is of the utmost importance that this relationship be widely understood, especially by the young men and women who are represented here today. It is they who will be in positions of authority 20 or 30 years from now. In the meantime they can exert great influence upon those who are now in positions of authority and upon whose stewardship depends the kind of world they will inherit.

When the United Nations Charter was completed 4 years ago this month, it contained many provisions for cooperative action in economic and social matters side by side with the political responsibilities entrusted to the Organization.

Article 55 of the Charter states the main reason for this. It declares: "With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, the United Nations shall promote higher standards of living, full employment, and social progress and development."

TO PREVENT WAR NOW AND IN THE FUTURE

The business of the United Nations is to prevent wars now and to prevent future wars.

In the prevention of wars now the United Nations is working primarily with the political instruments of mediation, conciliation, and the mobilization of world public opinion.

In the prevention of future wars the United Nations is working to raise living standards by economic development, to extend human rights and to advance the freedom and well-being of dependent peoples through trusteeship and other means.

The political instruments of mediation, conciliation, and public opinion have either prevented or stopped wars in every crisis for peace during the past 4 years. They have not always been immediately successful. But in the long run they have worked in Palestine, in Lebanon and Syria, in Iran, in the dispute between India and Pakistan, in Indonesia, and above all in the Berlin deadlock.

This measure of success has been achieved in spite of the long delay by the great powers in reaching the necessary agreement on the German and Japanese peace treaties. This delay has made it impossible for the United Nations to build the enforcement machinery contemplated by the Charter.

The conflict on the peace settlements has been a major handicap but it has, at least, had one advantage. It has made clear to many people what had not been widely understood before—that the United Nations must operate mainly by means of persuasion and compromise.

The role of the United Nations as a policeman is definitely secondary. The Security Council's powers of enforcement as defined in the Charter, even if they were fully implemented, are strictly limited. On the other hand, the role of the United Nations as a common meeting ground were the greatest possible measure of voluntary agreement can be obtained, is virtually unlimited. Its powers of persuasion and compromise have already proved their paramount value in the tense political atmosphere of the past 4 years.

The work of the United Nations for higher standards of living, full employment, and social progress and development is the work of preventing wars in the future by removing in advance the tensions and injustices that lead to wars. In this work the United Nations has no powers of command. Every step of the way must be taken by the consent and active cooperation of the member governments.

This is necessarily a slow process. But it is the democratic way to bring about results. Any other way would involve imposing the will of the stronger upon the weaker.

The world does not want to go back to the days of imperialism. It wants to go forward in the development of a universal society of nations living peacefully together on a basis of equal rights and democratic cooperation.

EXTEND HUMAN RIGHTS, IMPROVE WORLD LIVING

In the first 4 years of its existence the United Nations has created a vast machinery for international cooperation to these ends. Most of it never existed before. Through the Economic and Social Council, a dozen related specialized agencies and as many commissions, the nations are working together to improve living standards and extend human rights as never before.

Merely to name a few of these agencies is to indicate the wide area of their work: Food and Agriculture Organization, International Bank, International Monetary Fund, International Labor Office, World Health Organization, Human Rights Commission, Economic and Employment Commission, the Economic Commissions for Europe, Latin America and Asia and the Far East. There are many more.

These agencies have already begun to achieve some important results in their respective fields of activity.

There is potential long-range danger to the prospects of achieving a stable peace in one of the economic trends that has persisted after the war. I refer to the growing economic gap between the countries with the highest standards of living and productivity and those with the lowest.

The peoples of the least developed countries—and they constitute far more than half the population of the world—are increasingly aware of this growing gap. To close this gap, by effective action toward raising the productivity of the less-developed regions of the world, should have a high priority in the work of the United Nations.

The self-interest of the most highly developed countries is involved equally with that of the less-developed countries. For the world has learned at last, after many hard lessons, that the only way to maintain and further develop high living standards in one part of the world is to raise living standards in other parts of the world.

Economic development in Asia and Africa and Latin America, like economic development in the region of the Tennessee Valley, or anywhere else, requires both technical assistance and capital investment. Engineers, economists, agronomists, technicians of all kinds are the first need, as well as good administrators. By making their skills available to underdeveloped countries and by planning based on their findings, the first steps can be taken and the necessary basis laid for capital investment in development projects.

The United Nations and the specialized agencies have already launched a number of technical-assistance projects. For example, a mission of specialists was sent to Haiti last fall to make a complete survey of economic development possibilities in that country and a program of fellowships to provide technical training for experts from underdeveloped countries is now in its second year.

WOULD ENLARGE TECHNICAL AIDS

President Truman called attention to the great importance of technical assistance to underdeveloped countries in point 4 of his inaugural address this year. Later the United States representative on the Economic and Social Council introduced a resolution, which was adopted, calling for a comprehensive United Nations plan for an expanded program of technical assistance.

My report on such a plan, which was prepared in cooperation with the heads of the specialized agencies, has just been transmitted to the members of the Council. They will consider and act upon it at their next meeting, which takes place in Geneva in July.

Proposals for technical assistance included in this program would cost approximately $36,000,000 the first year and $50,000,000 the second year. These costs would be borne by the member countries of the United Nations agencies participating. This program is in addition to technical-assistance programs already under way.

The projects range from comprehensive development surveys for particular countries or regions, through technical assistance in industrialization, transport, public power projects, conservation of land resources, modernization of agriculture, the elimination of such diseases as rinderpest which annually kills 2,000,000,000 cattle in Africa, Asia, and the Far East, and hundreds of other projects.

I wish to emphasize that these are proposals only. If they are to be carried out as part of a comprehensive and coordinated program, further action by the member governments will be required, both by those countries in a position to extend assistance and by those desiring to receive it.

I very much hope that such action will be forthcoming promptly, first in the Economic and Social Council and then in subsequent steps by the governments themselves to carry out the program on a United Nations basis. At best each of these steps will take time and it will be a year or more before most of the projects proposed in the program can actually get under way.

As you can see, the planning and carrying out of economic development will take years. It is necessary to make the best speed possible to get it under way. One area in which the same kind of speed, boldness, and imaginative planning that characterize the TVA is necessary right now is in the Near East.

THE FUTURE OF PALESTINE ONE OF MOST DIFFICULT

This area is the scene of what has probably been the United Nations most successful effort at mediation in one of the most difficult problems the world has had to face—the future of Palestine.

The Arab peoples have a proud history and they are rightly determined that standards of living in this part of the world be raised.

This is necessary if they are to have the position of influence in world affairs to which the traditional genius of their peoples should entitle them.

The interests of the new state of Israel, the newest member of the United Nations, coincide in respect to economic development with the interests of the neighbors with whom she has been in conflict.

Lasting peace in Palestine—and in the whole Near East—cannct be achieved by any possible political settlement alone. It will require a comprehensive economic development plan that will harness the waters and other resources of the region for the benefit of all the people living there in the way that TVA has done for the people living in this valley.

The Near East needs regional and national projects that will do for the valleys of the Jordan, the Tigris, the Euphrates, and the Nile, what TVA has done for the Tennessee Valley.

Such projects have been suggested in the past, but little has been done about them.

It is my belief that the time has come when the members of the United Nations should do something about them.

I believe that any requests which come from the nations of the Near East for help in making the over-all surveys and advance planning that are the first step toward the realization of such projects should be given high priority in the forthcoming United Nations program of technical assistance.

CAPITAL INVESTMENTS WOULD YIELD PROFIT

Capital investment on a great scale will also be needed over a period of years. I can

UNIVERSITY OF MICHIGAN LIBRARIES

think of few investments that would return greater profit, both in economic terms and in political terms, for all the member nations of the United Nations.

The harnessing of these rivers would make it possible to irrigate the desert, restore the productivity of the land, provide the power needed for industrial development, give new employment to millions, raise standards of living and income, and create vast new markets for the highly industrialized countries of Europe and North America.

It should, furthermore, provide the necessary economic and social basis for the full reconciliation in the area of Moslem, Jew, and Christian, of Israeli and Arab.

There has been much talk lately of regi nalism and its relationship to the United Nations. Whatever may be said for or against regional treaties, the kind of regional economic development exemplified by such river projects will certainly advance the cause of peace and the economic and social well-being of all peoples. By carrying out such projects through the United Nations and the specialized agencies the cost can be shared equally among member nations and they will share also in the responsibility for success.

I hope that the next 20 years will see the development of many TVA's in many parts of the world.

If this can be done, and if the work of political conciliation and mediation is carried on without hesitation or betrayal or interruption during the same perod of time, then permanent peace will be within our grasp.

Much, very much, will depend upon the kind of support that is given to the United Nations throughout this period, and beginning right now, by the younger generation represented here today by this graduating class.

The road will not be easy. It will be hard.

The time it takes will not seem short. It will seem much too long and slow.

There will be set-backs. There will be many to say "it can't be done." There will be many "ifs" and "buts."

You of the younger generation will have to answer.

I know that if you are given the facts you will know how to answer.

The peace of the world depends upon your answer.

Address by Hon. William Langer, of North Dakota, at Convention of United Labor Party

---

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 13 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered yesterday at the convention of the United Labor Party in Cleveland, Ohio.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor to be invited to address the United Labor Party assembled in this convention. It is always a genuine pleasure to be able to renew old acquaintances and to make new friends.

It is even a greater satisfaction for me to be able to be accepted as an equal by men and women who are not ashamed to work with their hands, who are not afraid to earn a living by the sweat of their brows, and who are proud of the cause they represent—the cause of the working men and women of America's factories and farms. I am grateful for the part I have been able to play in helping you to fight for the raising of the standards of living, for the improvement of the working conditions—for the extension and strengthening of the health and welfare safeguards of American labor and the American farmer, and I am also proud, as the sole farmer-labor representative in the Republican Party in the United States Senate, to have been able to join in your continuing fight for the restoration of honesty, efficiency, and selfless service in the field of government.

Nothing could be more fitting than for us to recall with pride the magnificent contribution of labor's heroic champions of the past, through the advancement of the conditions and the standards of the laboring men and women who run the farms and factories of this country.

We can well remember what a gigantic struggle this has been. We can remember the time when the American farmer was the forgotten man of this Nation. We can remember the fight against the terrible conditions in the sweatshops of the Nation, of the exploitation of American labor by vested interests in the hands of special privilege. We recall with shame those forces who bitterly sought to perpetuate their exploitation of human misery.

We also recall, however, that these great champions of American labor, who have done so much to emancipate the working men and women of this country, were also the most courageous enemies and outspoken critics of corruption and graft of public servants who were not above abusing their public trusts to exploit the common man.

This fact is particularly significant, because these farmer-labor champions fought to improve conditions, to improve the standard of living, and to secure the rights and dignity of American labor within the framework of our traditional freedoms. They knew, as every great American has known, that freedom of opportunity, freedom to defend the rights and dignities of man, and freedom to insist upon the administration of justice, could not long survive the destruction of our constitutional safeguards against the concentration and abuse of power, by any majority or minority within this Nation. They knew that the very opportunity that had been afforded them to wage their successful fight for the emancipation of American labor was made possible only because they were the beneficiaries of a constitutional Government that guarantees personal liberty under law. And they knew that to permit these legal guaranties to be abused or to fall into disrepute or disuse would pave the way for the destruction of our free society.

It has always been and must continue to be the genius of our American way of life that the American people remain free to work out their own salvation. They must remain free from the tyrannical domination of any majority or minority. They must remain free to exercise the power of self-determination, guided by the free exercise of self-criticism and self-correction.

What else could possibly explain the magnificent advancement of the American farmer and the tremendous achievements of organized labor in these United States, in the face of the most violent, greedy, ruthless, and determined opposition?

How many of us realize that today there are 6,000,000 individual farm owners working the productive soil of this Nation? These men form the backbone of America's economic system of private ownership and personal freedom.

How many of us realize that during the past two decades total union membership in this country has now reached 16,000,000? How many of us realize that the total income of the combined labor organizations in this Nation has reached the tremendous sum of nearly $500,000,000 a year? How many of us realize that the total assets of all unions in this country now may total more than $1,000,000,000, when welfare and insurance funds are included?

Time will not permit, of course, a detailed analysis of the tremendous strides forward that have been taken in the field of improvement of working conditions, of working hours, of recreational facilities, of health and welfare, and vacation and old-age benefits. It is a magnificent story of a hard-won victory.

I have recalled these facts for just one reason—to remind you that, although these achievements are already on the record, our task is not only to preserve them but to continue this fight into the future, where so much yet remains to be done. We cannot rest on another's laurels, nor can we enjoy the fruits of the victories won by others. We are confronted by so many wrongs that remain to be righted, so many injustices to be undone. In agriculture, vast fields as yet untouched by progressive and remedial action stretch before us.

We have a long way to go to improve working conditions of American labor. I need only recall to your minds the fact that experts are in unanimous agreement that nearly all of last year's 1,000 mining deaths in this country could have been prevented, yet they believe that this appalling casualty list will probably be duplicated next year. We have a long way to go to extend a system of health and welfare funds, to modernize our unemployment compensation practices, and to bring some semblance of justice into our system of old-age benefits. Probably the most challenging task confronting us is the correction of the glaring evils of intolerance and of racial discrimination which amount to the complete denial of civil rights guaranteed our people under the Constitution; and at the same time, in pursuance of these goals, as loyal Americans we must also dedicate ourselves to the continued strengthening of the basic principles of constitutional government, upon the perpetuation of which alone our economic, social, political, and personal liberties can be guaranteed. For never before in history has our form of government even been under such terrific burdens or so directly under attack by forces that are determined by fair means or foul to destroy our basic freedoms.

I continually refer to the necessity for waging our fight for the improvement of the working conditions of American labor on the basis of a respect for and adherence to our traditional safeguards of freedom, because, when any group in this country fights for a cause that is divorced from this basic necessity, our form of government and our way of life are threatened. Wherever this basic consideration is forgotten and is divorced from the causes for which we struggle, we ourselves merely add to the numbers of those who have become special pleaders for vested interests, and who, for the sake of personal or selfish gains, would exploit their power and position at the expense of others.

I reemphasize this fact because of my concern for what is happening to this country. As I see the present situation, there are only three roads which American Farmer Labor representatives can follow in pursuit of the realization of their legitimate objectives, namely, the improvement of the standards of living, the extension of the practice of equality, and the insistence upon receiving its just share of the national income that

is generated through the efforts of our magnificent American labor force, in the factories and on the farms of this country.

First: In the attainment of these objectives, we too can become victims of the modern ideology that embraces the philosophy of collectivism. This system of government preaches the doctrine that the individual is nothing but the servant of the state, and that is based, not on the principle of freedom and respect for human dignity, but on the exploitation of the individual as a puppet of political expediency to be used or abandoned at the whim and fancy of those who control this government. It lures the unsuspecting into its clutches with the siren call of utopian political promises, which are completely divorced from the principles of freedom.

This is a philosophy of domestic power politics, designed only for the purpose of perpetuating power in the hands of a few, power that can only be maintained by playing off the selfish greed, jealousies, and ambitions of one group against the other, promising political favors in exchange for political support of uneconomic, unconstitutional, and impractical ends.

Under this system, the only way these political favors can be extended is by the continued confiscation of the resources, earnings, and savings of a free people, which is the system every dictatorship has used to destroy free society. This is a one-way road to financial bankruptcy, planned scarcity, and economic, social, and personal regimentation in the hands of an all-powerful police state. I am absolutely confident that we, who so strongly champion the cause of labor, recognize that our support of such a program means the final degradation and enslavement of American laboring men and women, whom we are fighting to set free.

I know of no better illustration of what happens to labor when its leaders follow this road than what has happened in England. Back in 1944, the British Labor Party backed the issuance of a white paper on full employment, setting in motion a program of national socialization of the British economy. On February 28, 1946, Sir Stafford Cripps told the House of Commons:

"No country in the world, so far as I know, has yet succeeded in carrying through a planned economy without compulsion of labor. Our objective is to carry through a planned economy without compulsion of labor."

Yet, because the British Labor Party embraced a program of domestic and foreign power politics, forsaking its traditional safeguards of freedom, * * * just 18 months later in August 1947 direction and regimentation of labor appeared on the statute books for the first time in British history. This law provides that no man between the ages of 18 and 50 and no woman between the ages of 18 and 40 could change his or her occupation at will. Every such change had to be registered with the employment exchange and the Minister of Labor has the power to direct workers changing jobs to employment which he considered to be most in the national interest.

There is a second road we can travel toward the realization of our objectives. We can swing behind the forces of reaction. We can insist upon maintaining conditions as they are. We can remain blind to the glaring injustices, to the terrible inequalities, to the disgraceful disparity between the various income groups of this country. Content merely to enjoy the advantages we now possess, and concerned only not to lose them, we can aline ourselves with those reactionary forces which clamp the lid on social and economic progress, and build the fires of hatred, fear, and want under the inevitable economic stagnation and social unrest that follows.

This is the road to fascism. This is the breeding ground of totalitarian tyranny.

And this second road cannot help but aline us with those concentrations of power already accumulated in our midst which are rapidly getting so far out of hand that they threaten our future freedom. I refer to big finance, to the gigantic industrial monopolies, and to big government. It would be tragic if to these concentrations of power, which are rapidly destroying the American people's control over their own economic and political destinies, there should be added gigantic monopolies of organized farmers and laborers in this country. If these five groups of concentrated power should join forces and underwrite programs and policies of political expediency, both on the domestic and international scene, merely for the sake of maintaining or increasing the advantages of their present prestige and power, the freedom of the American farmer and the freedom of the American laborer is doomed.

I have presented these two alternative roads to you merely to reemphasize the real nature of the dangers confronting the working man and woman in these United States, and I am confident that you are in hearty agreement with me when I say that we are determined to follow the third alternative road of true American liberalism in our fight to protect the interests and to advance the cause of American working men and women.

The true American liberal knows that it is the right of every American to demand an honest return for the investment of his talents, skills, and physical labor in an honest day's work. A true American liberal knows that those who create and produce the products of field and factory by the toil of their hands and the sweat of their brow are entitled to a fair share of the national income thus generated to enable them to buy, own, use, and enjoy those products they have helped to create. Every true American liberal knows that a man is not only worthy of his hire but that under our system of government he is due the respect, the rights, and dignities, together with their constitutional safeguards as a free and equal fellow American, for this is the essence of our American way of life.

But in traveling this road we must constantly keep in mind the four simple basic principles to the strengthening of which we must give primary allegiance.

The freedom of our economic system is based first on the private ownership of raw materials and tools of production—a private ownership that is as widely distributed as possible throughout our whole economic life.

Second, it is based on as wide a distribution of the national income as possible—a distribution which will provide the means with which the American people can purchase the goods our economy produces, and which also provides an adequate margin of profit to make possible investment of the new wealth produced in increased productive facilities necessary to meet the needs of an expanding society.

Third, it is based on freedom from excessive Government costs and controls—it is axiomatic that our economic freedom and our social and personal liberties are dependent upon a maximum of private and individual decisions. In America there are no supermen whose wisdom enables them to supply effective mass solutions for millions of our individual problems.

The fourth principle is that the Government remains always the servant and never the master of the American people. This does not mean that we need fear Government participation in programs that are necessary to meet the changing needs of a rapidly growing society, which of the present date has reached a population of 148,000,000 people. It does mean that in meeting these needs, these new functions must be exercised within the framework of the original purpose for which this form of government was instituted.

This purpose was, and still is, to safeguard the life, property, and freedom of opportunity of the individual American citizen against all threats, attacks upon, and abuses of concentrations of domestic or foreign power, which would rob him of his property, which would deny him his personal rights and liberties, or which would destroy his freedom of opportunity.

I am confident that we shall go forward fighting side by side for the cause of the American working man and woman, determined that the very freedoms that make our fight possible shall inspire and guide our united efforts in the future.

How Much Do People Care?

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, June 13 (legislative day of Thursday, June 2), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "How Much Do People Care?" written for the Pathfinder magazine by Mr. Wheeler McMillen, publisher.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALONG THE AMERICAN WAY

(By Wheeler McMillen)

HOW MUCH DO PEOPLE CARE?

Everybody, literally everybody, has known for years that the Government of the United States is wasteful, costly, extravagant, inefficient, chaotic, full of duplication and overlapping, and shot through and through with poor management.

Those who work in governmental services can add vivid phrases to this description. They can cite facts and instances in proof. A half dozen Presidents have applied most of these words to the organization of which they became Chief Executives.

At least $3,000,000,000 a year can be saved without eliminating an essential activity. The saving could result simply from conducting sensibly the operations now conducted crazily.

For an illustration, take the process of buying an item that costs less than $10. Government makes a million and a half such purchases a year. But to buy one such item, even for 10 cents, so much procedure has to be followed that the purchase costs considerably more than $10, plus the price of the item itself.

The system has grown through long years until every Federal servant, from President to clerk, has become an almost helpless participant in waste of tax money. Nothing short of a tremendous, all-inclusive action will improve the situation.

Such an action has now become possible. Bills to make effective the Report of the Commission on Organization of the Executive Branch of the Government are now before Congress, but with no certainty of going further. This report by the Hoover Commission analyzes the immensely complex problem in masterful and complete fashion. Then it makes specific recommendations all along the line.

If Congress acts favorably on this report, the $3,000,000,000 of waste can be stopped. If Congress does not act, the waste will go on and will grow.

Which do people prefer?

UNIVERSITY OF MICHIGAN LIBRARIES

The bills, which empower the President to carry out the entire list of reorganization recommendations, are now held in conference committee, where they have little prospect for early enactment. Those who would rather see $3,000,000,000 wasted than to have their pet procedures disturbed find ways to oppose any action.

The advocates of inaction and waste will win a victory unless public demand rises. Public demand will become effective only when local civic organizations go on record and notify their Senators and Representatives, and when individual demands begin to pour in upon Congress.

Any person who wishes to become more fully informed about the report, and who wishes to know just how his money is wasted, can easily do so. He needs only to write for information to the Citizens' Committee for Reorganization, Morris Building, 1421 Chestnut Street, Philadelphia 2, Pa. This is the headquarters for a large committee of leading Americans who seek to create understanding of the opportunities offered by the report of the Hoover Commission.

The Hoover report deals almost wholly with opportunities to save through correcting the faulty systems by which the public business is managed. Except in a few instances it does not propose to eliminate Government functions or services. Essentially it offers ways to get the same things done without having them done by two or twenty conflicting agencies and without costing 10 or 20 times as much as necessary.

The field for further reducing the cost of Government by having Government attempt to do fewer things still is wide open. Other billions could be left in the people's pockets if the demand existed.

However, perhaps most people would rather work an extra half day a week for taxes than bother to inform themselves, or take the trouble to address a letter to a Senator.

The Work of the TVA

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, June 13 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a composition by Phil Whitaker, Jr., of Chattanooga, Tenn., who is a 15-year-old student at Baylor Military Academy. This paper expresses most effectively the viewpoint of the layman that refutes some of the fallacious arguments brought up by the opponents of TVA.

There being no objection, the composition was ordered to be printed in the RECORD, as follows:

THE WORK OF THE TVA

Has the Government the right in flood-control projects developing water power to sell electric power from tax-free plants at a rate that drives taxed private companies out of business? This was the question raised by the private utilities against the newly formed Tennessee Valley Authority. First presented to Congress by George Norris, Republican from Nebraska, the TVA plan was vetoed by Republican Presidents Coolidge and Hoover on the ground that it competed with private companies. When Roosevelt was elected, some thought was given to the people of the Tennessee Valley and to the betterment of the Nation, and Congress passed a bill creating TVA in 1933.

Wendell Willkie, president of the large holding company, Commonwealth & Southern, fought the Government competition from the first. Claiming that the TVA was unconstitutional, Willkie accused the New Deal agency of putting "a gun at our heads" and stated the Government attack on his subsidiary as "brutal and unfair" (Newsweek, December 5, 1938). As no private utility could meet this subsidized competition, he claimed that TVA threatened to destroy the private-utility companies.

Commonwealth & Southern was the champion of the holding companies fighting Government control in the Tennessee Valley. Having owned all the common stock in 11 operating utilities, Commonwealth & Southern had (except for TVA) the lowest rates east of the Rockies. However, when President Roosevelt put Federal companies in competition with the holding companies, squeezing down their rates, their chance of existence in Tennessee seemed slim. Roosevelt also stated that unless useful or necessary "the holding companies must go" (Fortune, May 1937). In defense of the holding companies, Commonwealth & Southern stated that the kilowatt capacity of its 11 operating utilities was 15 percent higher joined than if they were independent companies. Further advancing its argument, Commonwealth & Southern said investors everywhere were alarmed at what the Government was doing in the Tennessee Valley. To meet the subsidized competition resulting from the Government-financed generating plants and dams built by TVA, and the loans made to municipalities by the Government at low interest rates was too much for the private utilities. During the latter part of 1938, Wendell Willkie complained in one of his speeches that nothing "will bring capital into the industry as long as the TVA-PWA combination threatens to destroy private utility interests" (Newsweek, December 5, 1938).

As I previously stated in this paper, the opposition to the TVA, namely the private utility owners, raised the case whether the Government had a constitutional right to produce electricity for sale in areas already covered by private utilities. To preserve their own interests, the private utility owners said that the Government should be confined by law to the sale of electricity produced as a side line to the development of streams for navigation, flood control, and national defense.

With the hope of court relief from Government competition, 14 private power companies sought for a Supreme Court ruling. As generally expected, the decision was a severe set-back to the hopes of the utility executives. In a 5-to-2 decision the Court dismissed the suit of the private power companies to prevent the TVA from generating and selling surplus power produced at dams in the Tennessee River Valley. This decision, having cleared away most of its obstacles, the Government put ahead its plan to bring the more abundant life to the 2,000,000 residents of the Tennessee Valley. Although the Court did not rule directly whether the TVA was constitutional at this time, it did rule the flood control and the competition with private companies which would result from generation and sale of power did not violate the Constitution.

After the Supreme Court decision the private utilities realized that they would have to sell. However, there remained three difficult problems which had to be solved. They were:

(1) Recognition by the Government that it must buy properties as a whole;

(2) Willingness of the Government to evaluate the properties as going concerns and hence pay a price which would give something to the common-stock holders; and

(3) Admission by the Government that all holding companies are not bad and instead of trying for their extinction have the Securities Exchange Commission approve security issues to strengthen their financial position.

To point out how the utilities were bought as a whole, the Government bought the generating and transmission facilities of the Tennessee Electric Power Co., and the cities in the area served by TEPC bought the distribution facilities. Although the streetcar and bus properties were not purchased, all the rest of the Tennessee Electric Power Co.'s properties were bought as a whole under the terms of a single contract. As was hoped, the Government was willing and did pay private companies a price based on the value of their property as a going concern. Adding, in addition, a considerable amount for the common stock, the Government paid a sufficient amount to redeem at par all of the companies' bonds and preferred stock with accumulated interest on both. Having demanded a huge sum of $110,000,000, Commonwealth & Southern was finally paid a fair sum of $78,600,000 for its Tennessee property. To correct some misunderstanding, Commonwealth & Southern still owns many utilities in Georgia, Alabama, Michigan, and other States.

Finally, the Government does not hold the position that all holding companies are bad. Although the SEC has thought many holding companies bad and forced them to dispose of certain of their companies which do not form a closely knit system, it has not sought the extinction of all of them.

If we today should take time to look around at the improvements in the Tennessee Valley and the valuable contributions to national defense, flood control, navigation, regional development, and recreation the TVA has rendered, the change from private owned utilities to Government ownership seems well worth the trouble. To ask anyone who first opposed TVA if they would like to return to the old form, only a few would be with the affirmative.

Farm Surpluses and Their Solution

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Monday, June 13 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, in an address before the Nebraska Stock Growers' Association at Alliance, Nebr., I pointed out fallacies in the Brannan farm plan and presented an eight-point program for solution of surpluses of agricultural commodities.

A major point in this production-for-use program is diversion of surplus grains and other starchy commodities to alcohol for use as a motor fuel.

I ask unanimous consent for insertion of my address in the RECORD. It is titled "Farm Surpluses and Their Solution."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FARM SURPLUSES AND THEIR SOLUTION

Mr. Chairman, members, and guests of the Nebraska Stock Growers' Association, and fellow Americans:

It is a genuine pleasure for me to be here tonight. This is the first time I have been able to get away from my duties in Washington to come home and report to you.

Speaking frankly, all is not well on the banks of the Potomac. The pressure groups are in control of the administration and driving hard to legislate a socialistic state.

Their program, as officially presented, will cost, in addition to all existing obligations of Government, over a 50-year period, $1,250,000,000,000. This staggering additional burden is demanded by the administration, even though your Government at Washington again is operating in the red. By the end of June the deficit will be over $600,000,000; more than $3,000,000,000 in fiscal 1950, and double that in fiscal 1951.

Fellow Americans, three courses are open to us: Increased taxes, more deficit spending, or cut the cost of Government and balance the budget.

Raising taxes at a time when national income is falling would give momentum to the downward plunge, bringing on hard times and fewer jobs.

Deficit spending means highly inflated dollars, less purchasing power, and higher national debt. It is the road to national bankruptcy. The only sound, sensible course is to balance the budget by cutting the waste out of Government. This will provide ample funds to service the debt, provide a strong national defense, and preserve our economic stability—the keystone of which is a productive, prosperous agriculture.

. Now comes the most socialistic proposal of them all, the so-called Brannan plan. And let me say that I am going to keep right on fighting the poison of state socialism with every ounce of energy that I possess.

The Brannan plan would vastly increase the authority of the Secretary of Agriculture to control every farmer, all the millions of them, and to direct what shall be done with every farm product, from every head of cabbage to every head of cattle.

The plan is being sold to farmers as a guaranty of high income from unlimited production, and to consumers as a guaranty of low prices from uncontrolled production. These promises cannot be kept.

Agricultural products are, generally speaking, divided into two classes: The basic commodities, including wheat, corn, cotton, tobacco, rice, and peanuts; and, the perishable commodities, including hogs, cattle, lambs, milk, eggs, chickens, fruits, and vegetables.

Now, on the basic commodities, the bill would make no substantial changes in the way they are treated under existing law. The truth is, under his new 100-percent parity formula, wheat farmers would not get as good prices as they are now receiving under the 90-percent parity of existing law.

Under the regimented Brannan plan, the wheat farmer would receive $1.88 per bushel; under the present law, $1.95.

And, for the information of you wheat farmers, the Department of Agriculture is going to have you vote July 23 on whether you want marketing quotas and restrictions, and if you do, acreages will be cut about 25 percent.

For you housewives, there is no hope for cheaper bread, or cheaper cotton dresses, or anything cheaper under the Brannan plan for basic commodities.

It is on the perishables, including cattle, hogs, and sheep that Mr. Brannan demands new and dictatorial power, power far greater than ever been asked for, or, given anyone.

After giving the livestock farmers the magic phrase, that he would pay them high prices through 100-percent parity, his bill now provides power for him to cut his announced parity support prices by 15 percent. That 15-percent reduction would bring the support price of hogs to practically the same level as it is now.

Under the regimented Brannan plan, with strait-jacket controls it would be $16.15 per hundredweight. Under the present law, without controls, $16.10.

Another perishable, butterfats: Under the Brannan plan, 56.9 cents per pound; under the existing law, 58.2 cents. There you have it; examples of what might happen in two of the most important and volatile farm commodities produced in the country.

What is the Brannan 100-percent parity formula? Will you farmers get 100-percent parity? Or, will you get something else? Where are the $40 cattle and the $30 hogs Vice President Barkley promised you last fall?

Like all social planners, Mr. Brannan asks Congress to give him a blank check. He shies away from estimating the costs of the subsidies and their administration. Thousands of Government agents will check on every farmers' personal and financial affairs. Bootleggers will honeycomb the whole agricultural system. The plan is impractical. It cannot be enforced. Its cost is prohibitive. And yet, administration leaders are assembling this week in Des Moines to sell it to the American people. They should know it grants the Secretary of Agriculture more power than any man outside of the President's power in wartime.

And, this is the same Secretary Brannan who has been handling the farm grain-storage problem. He misled the farmers of America when he said he did not have authority, until last Tuesday, to provide crop-storage bins, although section 4, subsection (h), of the Commodity Credit Corporation charter, approved June 29, 1948, provides:

"May contract for the use, in accordance with the usual customs of trade and commerce, of plants and facilities for the physical handling, storage, processing, servicing, and transportation of the agricultural commodities subject to its control."

The bill the President signed last Tuesday continues that same authority. Mr. Brannan could have provided storage space in time to store last year's crops. He had full authority to make loans to farmers for bins on their farms.

I challenge you, Mr. Brannan, to deny publicly at the Des Moines meeting that the Department of Agriculture sold thousands upon thousands of its steel and wooden storage bins last summer for purposes other than storage of grain.

Fellow Americans, this is just another example of how the farmers' business has been handled. It proves, again, that one man cannot run the economy for 150,000,000 Americans.

The Brannan plan is not the answer to the farm-surplus problem. Under it surpluses will pile up mountain high or production payments must be given in unbearable and intolerable amounts. Either will break down the entire farm economy, bury the whole farm-support program and destroy the great help which it has brought to our people.

There is a new approach to the whole farm problem. Diversion, not destruction, is the key to the solution of farm surpluses—diversion to industrial uses in the form of alcohol and in other forms for hundreds of purposes.

During the last year the United States imported more petroleum than it exported. Conservation of our petroleum reserves is imperative in the interest of national security.

G. E. Hilbert Chief of the Department of Agriculture's Bureau of Agricultural and Industrial Research, in a report last January 1, based upon exhaustive practical tests, stated:

"It is evident that through conversion to alcohol any grain surplus that might develop in the future could be easily absorbed in the market for motor fuels.

"This market is so tremendous that a surplus would disappear, figuratively speaking, practically overnight.

"The possibility of accomplishing this without Government subsidization is very promising."

The following program offers hope and assurance of an end to the haunting spectre of bigger and bigger surpluses, and the threat of bigger and bigger Government.

1. Conversion of grains and other starchy commodities into alcohol for blending with gasoline, thereby making a premium motor fuel of low-grade gasoline, and for injection into motor, thereby adding to the power of high-octane gasoline.

2. In new industries utilizing farm products give farmers priority in their ownership and development, with such industries to be located as feasible in rural areas.

3. Stockpiling by the Government of foods, feeds, and nature fibers for national security and as a reserve to maintain the stability of livestock production. A permanent reserve of 1,000,000,000 bushes of feed grain could be a capital assets more valuable than gold in times of need.

4. Establishment of "peril points" in the tariff on agricultural commodities at domestic parity price levels to protect farmers against ruinous importations.

5. Expansion of exports of foods, feeds, and natural fibers, under a two-price system, through which countries short of dollars may buy from our surpluses for development of their respective economies. Loans of foods, feeds, and fibers to other countries enabling them to develop their own resources and contribute to world commerce.

6. Improvement of processing, storage and distribution of foods, feeds, and natural fibers through cost-saving procedures, thereby contributing to stability of farm income and lower prices to consumers.

7. When production of a given perishable farm commodity, such as fruits and vegetables, is in excess of normal demand, due to bountiful yield or other temporary cause, authorize special sales campaigns in which producers, processors, and distributors may cooperate, subject to conditions prescribed by the Secretary of Agriculture in the public interest.

8. During the period of transition away from a regimented farm economy, under a program of full utilization of farm commodities, continue provisions of existing farm-aid laws.

This is a program that opens the way for an end to the tragic, wasteful, and very expensive course we are now pursuing.

Let us turn our thoughts away from the defeatist approach of the Brannan plan which would socialize American agriculture. Let us direct our actions toward the development of policies and procedures through which the bountiful harvests may be fully utilized, and both our farmers and consumers will be given a sound basis for the enjoyment of their right to life, liberty, and the pursuit of happiness.

Farm surpluses are right at the bottom of the whole matter. We cannot afford to let this problem of constantly recurring surpluses defeat us.

The Brannan plan will produce recurring surpluses of farm products. Even with acreage limitations, our production per acre will continue to grow, because our production per acre, from the years 1923–32 (predrought years), has grown by 51 percent.

This has been accomplished through mechanization, synthetic fertilization, better seeds, and better breeds. This is bound to go on and it should go on, because all wealth comes out of the soil, and the more we can produce from the soil, the more wealth the American citizen will have.

Our job is to find a way to convert this productivity into profitable channels the

UNIVERSITY OF MICHIGAN LIBRARIES

free-enterprise, free-markets way. It is going to take the cooperation and hard work of all of us behind this constructive program that strikes at the heart of the problem.

Diversion—not destruction—is the key.

The No. 1 point in my program calls for the conversion of farm surpluses into alcohol. Oh, yes, some people will say, I can hear them now, "You cannot dispose of the surpluses of grain and other starchy farm commodities by diversion to alcohol and hundreds of other industrial uses."

But grain alcohol, as a motor fuel, is an accomplished fact. It is being blended with gasoline and as an injector in more than a dozen countries. We can do it here. There is abundant evidence that mixture of a small quantity of alcohol with low-grade gasoline results in a premium-grade motor fuel.

Used as an injector into gasoline motors, it gives high-octane gasoline more power for quicker starting, passing, and hill climbing. Engine performance in all motor vehicles is greatly improved by supplementing alcohol. This is equally true in airplanes.

The economic picture has changed since the 1930's when efforts were made to get this conversion program under way. In the thirties there was ample gasoline.

Today, consumption of petroleum products is much greater. The United States for the first time in its history imported more petroleum and petroleum products last year than were exported. We must conserve our oil reserves for national preparedness.

Once a barrel of oil is used, it is irreplaceable.

This new use of alcohol as a medium to increase gasoline octane rating is growing from day to day. In the hearings of the Senate Agriculture Committee recently a representative of farmer cooperatives said he believed this program could shortly consume up to 500,000,000 bushels of grain.

We have enough plant capacity to make about 500,000,000 gallons of alcohol today. These plants would consume 200,000,000 bushels of grain alone. It would also afford a similar outlet for potatoes. And these facilities are now available, and by spending $30,000,000 more enough plant capacity could be built to convert a billion bushels of grain into alcohol.

The Government is now finapcing pilot plants at a tremendous cost for experiments in the manufacture of motor fuel from coal and oil shales.

When used as a blend with low-grade gasoline, it is figured, the increased cost of alcohol fuel would be less than half a cent a gallon on the basis of 1 gallon of alcohol to 60 gallons of gasoline. The over-all cost is a small fraction compared with the huge outlays now being made in subsidies, storage facilities, and the loss of grain through destruction.

These farm commodities offer the best source of supply for fuel oil when considered on a basis for the over-all national interest. Under the second point in the program for diversion, not only can we use these surplus grains and other starchy commodities for alcohol, but there are a hundred other ways. They can be utilized, and industries to do the job should be brought into the farm areas to help broaden the economy of rural areas.

Each of these points offers compensations contributing to national prosperity, security, and happiness. Another point in this production-for-use proposal is stock piling by the Government of foods, feeds, natural fibers, and other strategic material.

Prudence dictates that our Government have a well-organized policy on reserves of all strategic materials to supplant the present haphazard methods.

Such a reserve of feeds could be used to stabilize the livestock market in emergencies and be available in international difficulties such as crop failures in nations whose economies affect world trade.

Food reserves are a prime requisite for national security. Point 4 in the production-for-use proposal provides that peril points be established in the reciprocal trade agreements extension bill now being considered by Congress. Some of us, a coalition, are insisting a provision be adopted to protect American farmers, businessmen, and labor against a rising tide of virtually duty-free imports. Peril points must be established below which the President cannot go or the impact of imports upon the domestic economy will become ruinous.

You livestock men know the importance of tariff protection for your industry. I am for a strong America helping other freedom-loving countries. But a weak America would be of no help to a tottering world.

We are all for reciprocal trade, but reciprocity is a two-way street, and I am against a give-away policy, that would reduce our living standards to the world level.

This brings us up to the appropriations for ECA. Do you know that under the ECA program, the American taxpayers, our national economy, are providing billions in dollars and goods to help other countries attain goals of productivity they never before have attained?

The productivity of Britain, France, and other ECA countries is now above where it was in prewar 1938. Do we have a moral or legal obligation to finance them to greater heights?

Oh, yes, I believe in feeding people and I believe in helping people to the very best of our ability, but it can be done only to the extent that we meanwhile preserve our own economy, here at home.

I disagree with Chairman Paul Hoffman of the Economic Cooperation Administration, who testified on Wednesday before the Senate Appropriations Committee, that our Government should resort to deficit financing if that is the only way the full amount of the appropriation for ECA of $5,580,000,000 can be covered.

I asked Mr. Hoffman if he was in favor of increased taxes to get the $5,580,000,000, and he said, "No." He said he would not favor increasing taxes. But think of it, here is a man who would resort to deficit spending, putting our Government in the red, to get the full amount of $5,580,000,000 for foreign aid.

I am not for increasing taxes, and I am not for deficit spending. The time is here when we must cut our appropriations to fit our current income. It is my firm contention that we can effect part of the required saving by trimming ECA spending in the next fiscal year without damaging the essential effectiveness of the European rehabilitation effort.

During the period of transition from regimentation of our farmers to production for use we should continue to operate under the existing law. And if the existing law needs amending, the only sensible thing to do is to amend it during the interim period.

The Brannan plan, even if it is assumed that it would work, would require complete regimentation of the farmers, and, step by step, extend Federal control to every processor and distributor of food products. The remainder of our economy could not withstand such a cancerous growth.

Then, the last act in the tragedy of lost freedom would be over.

The course of production for use can lead America onto the highway of independence for the farmers, free enterprise, freedom of choice, free markets, and an economy of abundance which will assure fair prices to consumers.

It is up to you, my fellow Americans, to make the decision.

America is the best country on earth, the strongest, and with most of the good things in life, all the things that people in other countries dream about, the bulwark and lighthouse for freedom-loving peoples everywhere.

With one-sixteenth of the world's population and only 6 percent of the world's area, we produce nearly half the world's goods. We own 46 percent of the world's electric power, 48 percent of the radios, 54 percent of the life-insurance policies, 85 percent of the automobiles, 92 percent of the bathtubs, and 99 percent of all the television equipment.

America has reached this great position, because America has the best system of government on earth.

Let's keep it that way.

A Perpetual Marshall Plan?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting an article by Felix Morley which appeared in this week's issue of Pathfinder, with reference to the Marshall plan.

I am glad that Mr. Morley has seen fit to present so clearly and forcefully the extent to which the administration has committed the American people. His article is as follows:

(By Felix Morley)

A PERPETUAL MARSHALL PLAN?

When the so-called Marshall plan for European recovery was first drafted 2 years ago, those who designed it voiced a clear and specific warning. They said the plan would succeed only if normal trade were restored between western and eastern Europe.

As everybody knows, commercial relationships between the two halves of Europe—divided by the iron curtain—have not been restored. On the contrary they have deteriorated, since the Marshall plan was launched.

The Soviet blockade of Berlin evoked an Allied counterblockade of eastern Germany. And while the magnificent accomplishment of the airlift served to keep Berlin alive, it could do nothing to check the development of economic strangulation. The Big Four foreign ministers—at Paris—have not relieved this situation. There is ample evidence that Soviet Russia does not want it to be relieved.

Now the foreboding of those who designed the Marshall plan is being realized. There are unmistakable signs that the plan, for all its accomplishments, is failing to make western Europe self-supporting. Most of these signs come from Britain, the great trading nation which suffers most from barriers in the normal channels of international trade.

Under the Marshall plan we are now subsidizing Great Britain at the rate of about $2,500,000 a day. But even so there is a growing shortage there of the dollars England needs in order to buy essential raw materials from this country and Canada.

Official statistics show that England is now spending about a million dollars a day more than she receives from her exports and from the Marshall-plan aid combined. This deficit has been met by cutting into the slim gold reserve of the Bank of England and by other expedients. But these will not meet the strain indefinitely.

To meet this crisis the Labor Government is doing its utmost to push exports to the United States and Canada. But British goods are meeting increasing sales resistance over here. Because of the recession, many

Americans are perforce cutting down their own purchases, and there is the further factor that British manufactures are priced too high—they are mostly luxury wares.

Probably, therefore, the British will before long be forced to devalue the pound sterling—from its present nominal value of $4 to $3 or possibly even less. That would make British goods cheaper in our stores, but it would also raise the cost of living in England. With a general election next year the Labor Government does not want to take responsibility for higher domestic prices.

Devaluation of the pound, in terms of dollars, must come because North America is now almost the only substantial foreign market left for Britain. Eastern Europe is shut off; China has gone Communist; India and Australia are developing their own industry; Japan is bankrupt; Latin America and Africa have relatively little purchasing power. And we want to export, also.

When the English pound is devalued—it is no longer "if"—Britain will be able to get along with Marshall plan aid, now scheduled to end in 1952. But British exports to the United States have been falling steadily for 4 months and it seems most improbable that by 1952 these sales for dollars can be pushed to the level where further Marshall-plan assistance would be superfluous. So we probably will be asked to continue aid.

That is one reason why President Truman is no longer pressing hard for all the expensive socialistic measures which he was advocating a year ago. There is a bottom even to the purpose of Uncle Sam. We cannot simultaneously support western Europe and carry out the Truman program here at home.

World Peace or a World in Pieces

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, June 13 (legislative day of Thursday, June 2), 1949

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "World Peace or a World in Pieces," delivered by me before the United World Federalists, at Madison Square Garden, in New York City, on June 9, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"The moving finger writes, and having writ, moves on."

So is history chronicled.

But what a record the moving finger has written in the past decade. We stand aghast as we contemplate Hiroshima and Nagasaki, the debacle in China, the chaos in and around Berlin, and the balky horse on the team of members of the United Nations Council.

As we contemplate these and other direful happenings on all the evidence we must conclude that death is taking but a very brief holiday.

So deeply moved by the serious situation we face we must arouse public opinion throughout our Nation first to a realization of the portentous seriousness of these, our days and second, to enlist a meeting of minds on creating an agency which can best meet the challenge of the world situation and third, to try and generate a mighty force of public opinion, which will compel those in government to stop, look, and listen, under conviction that in the establishment of a federation of the nations of the world to enforce peace lies the only hope of a war-torn world.

John Fiske, in his book Critical Periods in American History tells of the epoch when the fathers met in Philadephia, to frame together our Federal Constitution. That was a critical period but not more so than the situation which we face today.

The outstanding threat to world peace, lies in the balky attitude of Russia. Every effort on the part of the other members of the Council to reason with Russia has been blocked. She refuses to play ball as a part of the team of nations and by abuse of the veto power (initiated ironically by our United States) she has made that splendidly conceived agency almost impotent.

Confronted then by such an unhappy situation with world problems piling up can we be content with the status quo or shall we rise to the challenge and set up the machinery for world government which can, and will, aid in constructing a permanent peace. I do not believe that the United Nations as presently constituted can bring that objective into being.

What then is our best recourse?

I cannot do better than to cite to you the arguments embodied in an appeal to the peoples of the world which was the outcome of the conference on world government, held at Rollins College in March 1946, of which conference I was privileged to be a member:

"The United Nations as now contituted is a league of sovereign states. As such, it is not a world government and therefore cannot by law prevent armed conflict between nations, and establish justice and security. Nevertheless, it is the greatest step yet taken by mankind toward world peace. Since the charter provides for amendments every effort should be made to transform the United Nations into a world government.

"Such objectives cannot, we know, be reached overnight. The difficulty of building support within each nation, for a world government is multiplied by the diversity of cultures, governments, and institutions among the nations.

"But a start must be made. It must be made now. It must be made with the tools at hand. It must be directed, in the first instance at the removal of the haunting fear and suspicion with which atomic weapons afflict mankind. The United States has the opportunity, and duty to take the lead in proposing such constructive measures as are necessary to that end."

We would not, for a moment, abandon the United Nations.

What is clearly indicated, as I see it, is the need to give it powers to hear disputes and enforce its decrees, first making such revisions in the charter as may be necessary to accomplish such objectives.

My Republican Party embodied in its national platform last year, a quotation from Lincoln, who said:

"The dogmas of the quiet past are inadequate to the stormy present as our case is new, we must think and act anew."

That was timely advice in 1861; it is both timely and compelling in its application to the world crisis today in which we, as a nation, are inextricably involved.

In 1789 we relinquished part of our respective State sovereignties to a larger government, namely, the United States, which had the power to hear and determine issues and enforce its decrees. The principle of settling differences between the world nations could be akin to the settling of disputes between the various States in our Federal Union. The United Nations, as presently constituted, is similar to conditions existing in this country, under the Articles of Confederation. It should be remodeled along the lines of our Federal Constitution.

What motivates those of us who seek the amendment of the charter?

Not lust for power; not selfishness, but sobered and staggered by a realization of the solemnity of the hour, we prayerfully and earnestly seek permanent world peace and believe that a revision of the Charter is essential to attain that prime objective.

Wake up, America. Stand aside, partisanship. Quit jockeying for political increment.

Sense the need for living out the spirit of interdependence among nations and reverently thank the one God and Father of us all that to us is given the privilege of living in these great times and having a part in redeeming a war-sick world from the thralldom of international sin.

I hold it is a must for us to contrive to live together in peace, even at the cost of considerable material sacrifice, for the alternative is the death of our human society.

People of America, it is later than we think.

The movement for world cooperation is on. Thoughtful men and women all over our Nation have a sympathetic interest. Seventeen of our State legislatures have passed resolutions instructing Congress to consider revision of the United Nations Charter. Fellow citizens throughout the hinterlands of America, you and your children have a tremendous stake in permanent world peace.

Throughout all the dark ages of the past, there has been a spark of light, unquenchable, never failing, a source of inspiration to the world. This is the spirit of unity, of oneness among thinking peoples, the knowledge that in unity is the strength that could put down forever the terrors of wars and evils associated with wars. Throughout these ages unthinking men have endeavored to extinguish the spark of world unity, but always it has glowed again, each time more brightly. It was in evidence in the great ideal of Woodrow Wilson for the League of Nations. It was in evidence in the meeting of minds at Dumbarton Oaks; it was in evidence in the International Monetary Conference at Bretton Woods, and it glows more brightly in the efforts of the nations of the world, in the United Nations.

Some men, in a lack of understanding, claim that these attempts at world unity were failures, that they accomplished little if anything of value. But the very fact of their existence proves that the yearning for world unity is inherent in the hearts of thoughtful men and women.

In the United Nations the spark blazed up more brightly than ever before, but the abuse of the veto power has defeated the very purpose of the organization. The only hope, then, of making this great world organization the power for good that it could be, lies in using the powers under article 109, which provides for a review conference, for amending the structure and functions of the United Nations, and this cannot be vetoed once two-thirds of the nations decide to do it.

But the United Nations, as presently constituted, is too weak to cope with an actual crisis, and this very weakness tends to create crises.

To build a solid foundation for world government then the United Nations must become a strong organization with powers to build a potent and actively functioning world federation. Our duty is to keep the spark of unity alive and glowing that it may become the torch of freedom and peace for all the world to the end that men everywhere may live their lives in security and peace.

Of course, some men will belittle our efforts; critic peep and cynic bark will be heard on many sides. We will be called idealists and impractical, but we should not be ashamed of ideals, for America was founded on ideals.

UNIVERSITY OF MICHIGAN LIBRARIES

Here then these words found written on a piece of paper pinned on the shirt of an American soldier found dead after battle in World War I:

"Ye that have faith to look with fearless eye
Beyond the tragedy of a world at strife,
And know that out of death and night
Shall rise the dawn of ampler life.

"Rejoice, whatever anguish fills your heart
That God hath given you the priceless dower
To live in these great times, and have your part
In freedom's crowning hour.

"That ye may tell your sons, who see the light
High in the heavens, their heritage to take
I saw the powers of darkness put to flight
I saw the morning break."

He had a vision, a hope for better things to come, but he died in that hope. But were he alive today, how disillusioned he would be, for he would have seen the hopes and aspirations that grew out of World War I, shunted aside. He would have seen a Second World War, far more terrible than the one in which he gave his life, tearing the world apart. He would see the nations of the world quarreling among themselves and still a long way off from making a peace.

How truly Briand spoke when he said, "In modern warfare, no nation wins."

Oh, the tragedy of it all.

But you and I can keep faith with that brother-man by living today, motivated by a passion for peace, consecrating ourselves to do our best, to bring about a federation of the nations of the world for the over-all objective of world peace.

For that great objective, pregnant with peace and happiness for all mankind, and for generations yet unborn we make our earnest appeal tonight.

Let us not be idle while we pray, "Thy Kingdom come, Thy will be done."

Dedicated to this noble cause, as ambassadors of the Prince of Peace, we shall be found worthy to be called sons of God.

Ample Room Here in America for Displaced Persons—Last Congress Failed To Provide Adequate Legislation

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. YOUNG. Mr. Speaker, the Eightieth Congress failed to make adequate provisions for bringing in displaced persons to the United States. This last Congress passed a law contemplating the admission of 205,000 persons within 2 years. However, at the same time, it imposed many restrictions such as 40 percent must be from Baltic countries and 30 percent from farm sections and discriminated against certain races and religions; therefore, unfortunately, instead of more than 200,000 displaced persons entering as immigrants, only 29,000 displaced men and women have been able to enter this country to date.

Congress is now acting to correct this wrong and to enact into law a bill permitting 339,000 displaced persons to enter during the next 2 years. Entry of persons in displaced-persons camps prior to January 1, 1949, will be permitted instead of the 1945 limitation imposed by the last Congress.

If the United States, at the present time, instead of having a population of 148,000,000 had the same population density as Puerto Rico we would have within our borders 2,300,000,000 people. In other words, a total probably equal to the present population of the entire world. Obviously, there is ample room within our borders for the few hundred thousands of displaced persons and these persons can be gainfully employed as producers without any impairment to our economy.

If a neighbor tells you there is no room here in the United States for several hundred thousand displaced persons, you might mention Puerto Rico.

Legislation relating to displaced persons enacted by the Republican Eightieth Congress discriminated against Catholics and Jews. Furthermore, it permitted too few displaced persons to enter the United States.

I voted in favor of the amendment to bring in 400,000 displaced persons. That amendment was defeated. I now give my unqualified support to this administration measure which removed the discriminatory provisions of the 1948 act.

We are the Nation that has engraved on the Statue of Liberty those words:

Give me your tired, your poor,
Your huddled masses, yearning to breathe free;
Send these the homeless tempest-tossed to me,
I lift my lamp beside the Golden Door.

We liberalize our laws to permit 339,000 displaced persons to enter the United States. We propose fair legislation to take the place of flagrantly discriminatory legislations enacted in the Eightieth Congress.

Under the Displaced Persons Act passed 1 year ago in the Republican Eightieth Congress, statutory preference was given so that 40 percent must be skilled in agriculture. These and other restrictions were such that only a comparatively few displaced persons were permitted to enter our country. We now increase the total of displaced persons to be admitted to the United States from 205,000 to 339,000. Of this number, 300,000 will come from displaced persons camps and the balance will be Polish soldiers, some orphans, and Shanghai refugees.

The last Congress set up an unfair cut-off date at December 22, 1945, and imposes a racial and religious discrimination against Poles and other displaced persons. In passing this bill we extend a helping hand to the poor and unfortunate who were displaced by war.

An important feature of this legislation is that selection of displaced persons must be made without discrimination in favor of or against religion or national origin. We propose equitable opportunity for resettlement to displaced persons of all religions, races, and national origins. The requirement of assurances of employment and housing have been retained so no contention can be made that these people, all of whom are costing American taxpayers money for care and maintenance in displaced persons camps, will become a public charge in this country.

This bill, while fair to all, gives a priority to children adopted by American military personnel and orphans. One of the most tragic situations following World War II has been the plight of millions of Europeans including many, many children displaced by war.

A Release

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. REED of New York. Mr. Speaker, on Sunday, June 12, 1949, I issued the following release from my office which I am inserting under leave to extend heretofore granted:

The record of this administration has been one of business baiting, Representative REED declared. The greater part of Mr. Truman's domestic legislative program was deliberately designed to imtimidate business. To that end it has been a huge success. Business is thoroughly discouraged and impeded by threats of tax increases and unfair Government regulation and competition. The inevitable result is that business has lost confidence in the Nation's economic future. Production is being cut back; investment capital, scarce before, is practically nonexistent now; blueprints for industrial expansion have been shelved if not permanently destroyed; unemployment is widespread. According to latest Census Bureau statistics there are now more jobless people than at any period since the end of the war. Another disturbing factor is the reckless spending habits of this administration. Profligate squandering of the people's money makes it impossible to balance the budget and leaves the Nation with two alternatives—higher taxes or deficit financing with all of their attendant evils.

Unless President Truman discontinues his business-baiting policies and takes positive steps to restore confidence in our economic future the Nation is in for bad times.

Confidence can be restored if the administration will honestly acknowledge its mistakes and recall 95 percent of its domestic legislative recommendations to Congress. These recommendations include corporate tax hikes, competition by the Government in the steel industry, price controls, etc. The administration must also reassure business by promoting healthy economic aids such as tax incentives for greater production and a healthy flow of investment capital for business expansion. Above all, the administration must abandon its reckless spending and loose fiscal policies. If this is done there is no earthly reason for tax increase. The Hoover Commission, after exhaustive study, showed the President how to save $3,000,000,000 without impairing the Government service. If this Administration will practice instead of giving mere lip service to economy no tax hikes will be necessary and we will avoid an unbalanced budget and deficit financing. We could even get rid of some of our undesirable excise taxes.

It is high time that the President of the United States cease being stubborn. It is high time that the President of the United States face facts. And the facts are that his economic policies are slowly strangling our economy and throwing millions of our citizens out of work.

Marines Stress Air-Ground Team

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. MANSFIELD. Mr. Speaker, I am inserting in the RECORD a brief analysis of how Marine Corps aviation is trained to carry out its mission. Those Members of Congress who went to observe the Marine Corps' new and advanced techniques at Quantico in April of this year came away with a deep realization of the efficiency and high standards of the corps. Those of us who witnessed the parade of the Fourth Marine Division Association and who heard the remarks of Fleet Adm. William Halsey afterward are fully aware of the value of the Marine Corps.

It is up to the membership of the Congress to protect the functions of the Marine Corps and to watch for and protest against any legislation which would seek to subordinate it. The history of the Marine Corps is the history of America and the 176 years of glorious tradition and courage must be maintained at any cost. This is the least we can do for the corps and their most dependable friends—the American people.

MARINES STRESS AIR-GROUND TEAM

The principal task of the Marine Corps is to provide fleet marine forces of combined arms together with supporting air components for service with the fleet in the seizure or defense of advanced naval bases and for the conduct of such land operations as may be essential to the prosecution of a naval campaign.

The proportion of aviation to ground in amphibious operations is appreciably higher than that required in conventional ground operations. Due to limitations imposed by shipping space, capacities of landing craft, and beach conditions, the landing forces are unable to bring to bear the same weight of artillery and armor that are customary in conventional group operations. These deficiencies are offset by the employment of naval gunfire and by close air support. The landing force thus requires additional close air support over and above that which a ground force of similar size would require in conventional land operations. Furthermore, gaining control of any advanced base by assault involves the necessity of providing air units capable of operating from carriers.

The Marine Corps has learned numerous important lessons from its many amphibious operations, the most important of which is that the amphibious force must be balanced and perfectly coordinated. Marine Corps organization, ground and air, has been tailored to give it a balanced force. All of its educational and training programs are designed to obtain the highest degree of teamwork. The Marine Corps knows that the best results are obtained from workers who understand the ultimate objective and all the operations that must be performed by others as well as themselves. It envisages the Marine aviator as being qualified for shore-based operations and carrier-based operations; as knowing all the fundamentals of ground-force tactics, technique, and weapons employment; and, insofar as possible, being intimately acquainted with the ground-force personnel with whom he is going to operate.

To this end the Marine Corps is continuing to develop tactics and technique in conjunction with ground-force operations, using the latest available weapons. It is training every one of its aviators to understand the individual roles played by the naval, ground, and air forces in an amphibious landing.

Eighty-seven percent of Marine Corps pilots have either graduated from one of the Marine Corps schools which teaches tactics, technique, and weapons of its ground forces or are presently attending such schools. The remaining 13 percent will complete such schooling within the next 2 years.

The Marine Corps exchanges aviators and ground officers on the staffs of its wings and divisions in order to broaden the understanding of its officers and to insure complete coordination of all elements of the air-ground team. The Marine Corps tests its schooling and theories and perfects its teamwork in one or more amphibious exercises on each coast every year. During these exercises, its air units operating from both carriers and advance shore bases support the landing operations of its ground forces.

It might be noted here that incidental to Marine Corps training for the execution of its primary mission, it is developing air units fully qualified to replace Navy carrier squadrons in an emergency. Such use was made of marine fighter squadrons during the last war.

The Marine Corps training program also includes the Marine Corps Reserves. Under the supervision and guidance of the regulars the personnel of 27 reserve squadrons scattered throughout the United States maintain their proficiency. This training consists of weekly drills at their home bases culminated by a two weeks' annual maneuver. During the maneuver period all reserve squadrons are divided equally between the two major Marine Corps air bases on the east and west coasts and receive intensive training in all phases of operations in close support of ground forces.

The Marine Corps firmly believes that readiness to execute the complicated and vital operations implicit in amphibious warfare can be achieved only by continuous application. It is able to maintain its readiness for this type of combat only because all of its effort is directed toward perfecting an organization capable of storming and seizing enemy-held beaches.

Every flight leader knows the objective of the ground commander and the tactics and technique that he will employ to take that objective. Every ground commander knows what Marine air can and cannot do in helping him accomplish his mission. This intimate knowledge of the capabilities of the other can be obtained only after years of well-directed training, both academic and practical.

Marine aviation is the only air organization whose personnel have spent their maximum effort on perfecting the technique of close support of ground troops.

The Truman-Brannan Farm Program

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me and heard over radio station KSL, Salt Lake City, Utah, Wednesday, May 25, 1949, on the program KSL Reports the Washington Scene:

THE TRUMAN-BRANNAN FARM PROGRAM

Good evening, friends of the radio audience. Two events of vital importance to our Rocky Mountain area occurred in Washington a few weeks ago. The first was the approval by Congress of the Colorado River Basin compact, which allots the waters of the upper basin of the Colorado to the States of Utah, Colorado, Wyoming, New Mexico, and Arizona. Now, we can look forward to a truly great development of agricultural wealth and thousands of new farm homes as rapidly as many planned reclamation projects are developed and existing projects are expanded to utilize the waters which have been flowing to the ocean for hundreds of years. I believe that we are on the threshold of a new era of expanded prosperity for our region.

The second event was the proposal by Secretary Brannan of the Department of Agriculture for a new farm program which he presented to a joint meeting of the House and Senate Agriculture Committees last month.

Because of the predominant position of agriculture in the Rocky Mountain area and the outlook for greater development in the future, I should like to discuss briefly, this plan with you. A wide range of testimony both for and against the administration's proposal has been presented at the hearings now being conducted by the House Agriculture Committee of which I have been a member for the past 8 years.

Representatives of most of the national farm and agriculture organizations and of many State groups have presented well-prepared statements which set forth their views. Also, these gentlemen have made a number of recommendations for amending the present law which in their judgment would improve its operations and further stabilize farm economy. I shall summarize some of their statements a little later, but first I shall try to point out a few of the differences between Secretary Brannan's proposal and the provisions of the 1948 long-range farm program which was passed by the last Congress with the approval of the major farm organizations.

The proposal to abandon the present parity-price formula and substitute for it an annual minimum farm-income standard is the plan's major and most radical change. In other words, it is proposed to guarantee to farmers a minimum annual income, to be based on the purchasing power which the farmer obtained during any 10-year period of the 12 preceding years. To accomplish this objective a number of new farm products have been brought into the program. The products include meats, dairy products, fruits, and vegetables. Prices would be permitted to drop to any level which the market would support, and the farmer would be paid in cash by the Federal Government for the difference between the amount he would receive for his products and his share of a minimum farm income.

Compliance with soil-conservation practices, acreage allotments, marketing quotas, and marketing agreements as prescribed by the Secretary of Agriculture is a basic requirement for participation in the benefits of the program.

Storable farm crops—wheat, corn, cotton, tobacco, and the others, which are being supported under present law also would be subject to the minimum annual income formula. Existing procedures, that is Government loans, or Government purchases, as well as the new cash-payments proposal could be used in the discretion of the Secretary to support the prices of these products.

Participation in the entire program would be limited to small- or family-size farms. A

UNIVERSITY OF MICHIGAN LIBRARIES

maximum-unit formula is proposed to establish the eligibility of farmers who will be permitted to participate. Farmers or ranchers who produce more than the prescribed maximum of 1,800 units cannot share in the plan. These farmers and ranchers produce 25 percent of all agricultural products.

Many questions concerning the operation of the plan are being asked. For example: How much will it cost? So far, Secretary Brannan has failed to furnish any information concerning the cost. He presented his proposition to Congress 7 weeks ago. Without a doubt, he had been working on it for a number of months previously. The committee is still in the dark in this matter.

Now, here is another question: Will the cattle and sheep feeder who has a surplus of grain be able to buy lambs or feeder-cattle to utilize his surplus? Or, must he sell his grain outright because the livestock allotment is low or breeders are obligated to sell under some marketing agreement or distribution allotment plan? As the bill for introduction in the Congress has not been written and all of the proposed formulas worked out, these questions cannot be answered at this time.

Now, I should like to summarize some of the testimony which has been heard by the House Agriculture Committee. The American Farm Bureau Federation, the National Grange, the American National Livestock Association, the Texas and Southwestern Cattle Raisers' Association, to mention a few, have all appeared before the committee in opposition to the Truman-Brannan program. The Farmers Union is the only national agricultural organization so far to appear before the committee in support of the plan.

Mr. Allan Kline, president of the American Farm Bureau Federation had this to say, and I quote Mr. Kline: "A proposal has been made recently to this committee by the Secretary of Agriculture. So far it is a statement of politico-economic philosophy, not a farm program. The parity price approach to a fair exchange value for farm commodities is discarded. This concept has been the basis for agricultural unity for the last 20 years." I am still quoting Mr. Kline, who further said: "It means Government-administered farm prices and farm income with Government control of all land and livestock production. It introduces a cheap food philosophy. It seeks to establish the principle that taxpayers should pay a considerable portion of the grocery bill of consumers."

Mr. A. A. Smith, president of the American National Livestock Association stated to the committee in reference to the exclusion of operators who produce more than the proposed maximum of 1,800 units, and I quote: "We question the effectiveness of any attempt to control a given commodity, when as much as 25 percent of the production of that commodity is not covered by the proposed control program." He also stated, "We believe that instead of adding to the tax burden under conditions that exist today, steps should be taken to reduce it."

Mr. Bryant Edwards, president of the Texas and Southwestern Cattle Raisers' Association had this to say: I quote Mr. Edwards—"We are opposed to Secretary Brannan's program insofar as it relates to beef cattle and beef. We want no part of it."

Mr. Albert Goss, master of the National Grange made these observations concerning subsidies—again I quote: "They (subsidies) tend to make beggars of us. Subsidies would throw agriculture into politics. The annual volume would run into billions, and there would be the constant necessity to besiege Congress to make sure more funds were available for payment. The availability of funds, and their extent, would inevitably become campaign issues. Many would doubtless vote for the candidates promising the juiciest subsidies. Reckless taxation is one of the greatest threats to democracy."

The quotations which I have just stated should give you some idea of the sentiments of the agricultural leaders of the country. Secretary Brannan has stated that he hopes to increase the consumption of farm products by one-third. However, he ignores the compilations of his own Bureau of Agricultural Economics which indicate that per capita, consumption of food has not varied 5 percent in the 36-year period for which the Bureau has maintained records. Consumption will increase only as the population increases.

Now here is one final quotation from the testimony of Mr. Kline of the American Farm Bureau: "The proposal would place a ceiling on opportunity in agriculture. This, in turn, would result in penalizing efficiency. Food prices eventually would reflect this inefficiency. We view any limitation as dangerous precedent—an opening wedge which eventually would result in Government supervised and stabilized agricultural poverty."

Thanks for listening.

Persecution Suits Dismissed

REMARKS
OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. RANKIN. Mr. Speaker, Members of the House have undoubtedly noticed that the lawsuits filed against me several years ago, amounting in all to $650,000, have been dismissed. The last one for $100,000 was dismissed a few days ago.

These were nothing on earth but Communist-inspired fake lawsuits filed and prosecuted for the purpose of intimidating me, and preventing me from doing my duty as a member of the Committee on Un-American Activities.

The same procedure, and even worse, was used to persecute Martin Dies out of Congress, because he had the courage and the patriotism to expose these communistic elements that were here then, and are here now, plotting the overthrow of this Government.

They persecuted Joe Stearns, John Costello, Fred Busby, and every other member of the Committee on Un-American Activities who had the courage to expose their treasonable designs.

This gang of Reds, composed largely of a racial minority, has a gestapo, called the Antidefamation League, that is carrying on the most damnable persecution of white gentiles this Nation ever saw.

They have a file on every white gentile of any prominence whatsoever, and a system of persecution the like of which has not been witnessed since the crucifixion.

In fact, as I have said before, it is the same old gang that constituted the fifth column of the crucifixion more than 1,900 years ago. They hounded the Saviour during the days of His ministry, persecuted Him to His ignominous death, derided Him during the moments of His dying agony, and then gambled for His garments at the foot of the cross. They have been for 1,900 years trying to destroy Christianity and that glorious civilization which Christianity has produced.

They are behind this drive to wipe out segregation in the District of Columbia and force Negroes into the white schools, not only of the District of Columbia, but in all of the Southern States.

They do not give a tinker's dam about the Negro. They are just out to get their loathsome fingers on every government in the world and to force themselves into places where they are not wanted.

This same crowd constitutes the Communist Party in Europe. They have been responsible for the murder of 30,000,000 Christians in Europe during the last 30 years.

One of the main planks in their program is to stir race trouble throughout the Southern States. They tried it right after the last war and brought on a race riot in the District of Columbia. There is no telling the number of Negroes, as well as whites, who were killed here in Washington as a result of that riot. If they bring on another race riot with the agitation they are now carrying on, the people here are going to know who are behind it.

They brought on a race riot in Chicago that cost the lives of more than 2,000 Negroes. They brought on one in East St. Louis, one in Springfield, Ill., and in several of the Southern States, with the same kind of insidious activities they are carrying on today.

They were behind the persecution of Gen. George S. Patton, the greatest military leader this country has seen since the War Between the States.

Because General Patton was in line for a position that would interfere with their program, the so-called Antidefamation League dragged out, magnified, and distorted a story about Patton having chastised a little cowardly malingerer for hiding out among wounded men in a soldiers' hospital, and smeared him from one end of this country to the other.

They put Drew Pearson on the radio to broadcast the smear of Patton, and followed him up with Walter Winchell and that element of the press that is more interested in alien ideologies than they are in American institutions.

That persecution so disturbed the administration that Patton was removed from his position when he was on a drive of victory that would have brought the war to an early close.

As a result, they slowed down that victorious drive, extended the war possibly 8 or 10 months, and cost the lives of about 70,000 of our finest men.

When I found out what was going on, I led the drive in this House to get Patton reinstated. I blasted everything from the slime mongers of the air to the subsidized press, with the result that Patton was restored to his command, took his army, and with a brilliance seldom witnessed in all military history, cut the enemy lines to pieces, and fought his way up to Berlin.

But when the enemy raised the white flag and beckoned Patton and his army to come in and take over, certain insidious influences had Patton and his

army to move south and turned the victory over to the Communists of Russia.

Today this Government is spending untold billions of dollars allegedly to fight communism in Europe while it seems to run rampant here at home—with the encouragement of certain individuals in high official positions.

After the war closed, General Patton came to visit Washington and while here came to see me at my office. I am told that I am the only Member of either House that he called on. He said, "I came to thank you for defending me when I was on the battle front and could not defend myself."

I said "General you do not owe me anything compared with what we owe you." I said, "With your tactics you probably saved us a million men."

Although the war was over, and General Patton, with all of this persecution, had established one of the most brilliant military records in all history, these enemies within our gates succeeded in having him removed from his command, and continued to hound him to the very moment of his death.

Under permission granted me to extend my remarks in the RECORD, I am inserting an article by Mr. Hal Boyle, entitled "Patton Legend Lives as Guide to All Who Aspired to Leadership."

It reads as follows:

PATTON LEGEND LIVES AS GUIDE TO ALL WHO ASPIRE TO LEADERSHIP

(By Hal Boyle)

(Mr. Boyle is one of a group of American newspaper and radio correspondents who are revisiting the battlefields of continental Europe.)

HAMM, Luxemburg, June 11.—There is a grave here big enough for a man, but too small to hold a legend.

In the grave lies Gen. George S. Patton, Jr. But his legend reaches across the miles and years to all those who aspired to what he lived by and that was leadership.

They didn't bury "Georgie" here, they just put him under ground. But nobody shoveled earth on what he stood for nor can anyone as long as men put their faith in valor.

Perhaps the word is "glory." General Patton used that word often. He liked the sound of it and he believed in it. He didn't fight the system under which mankind has dwelled in worry and wonder since Cain killed Abel.

TOOK SYSTEM AS IT WAS

He took it as it has been. He said it would probably continue and he believed and lived and died in that belief—that man is born to warfare and that since his heritage is struggle, those who struggle with the firmest courage are the people who face life in the finest way.

There is probably a wisdom above war called peace—the world's unknown adventure. Whether peace is good or bad for the human race has never been fully determined because always since the Garden of Eden this race, facing life with more vanity than the insects but with fewer legs, has expressed its frustrations in a sterile pattern of weary violence.

In individual cases these outbreaks are classified as homicide, a kind of crime. In the cases of nation against nation there is the softer word, war, a kind of polite and collective murder. Under this surprising moral order you can be hanged for killing a man you have a personal grievance against or can be rewarded with a medal for killing 25 strangers you don't know.

George Patton took mankind as it is and as it always has been. His real monument was a ruthless, personal honesty. He believed that people, being what they are, made war inevitable, not just once, but over and over.

SOMETIMES IN HOT WATER

Because his courage came out of his mouth as well as his heart, because he spoke as bravely and straightly as he acted, he was sometimes in hot water with the American people. He was more honest with them than they were with him. They compromised and quibbled. He acted. He did what they wanted done.

They wanted victory and he gave it to them. There are diplomats in military as well as civilian life. Diplomats want success without the attrition and risk of gambling.

General Patton was smart enough to know that a bold general spends men's lives to save other men's lives. He hated fox holes because he really believed that digging in was wasted energy, that in attacking again and again lay success and few losses.

And when the Army needed a tough man to do a tough job there was General Patton, tough enough to order one man to his death to keep two other men alive. And that was the courage he had—a courage above military politics.

AMERICAN LANDMARK

Well, to him, to die in battle for your country was the supreme glory. General Patton didn't create the system, it created him.

And until men think of glory in other terms, General Patton will remain an American landmark.

Today he lies at the head of his troops, a silent roster of some 5,200 men. There are four gold stars on the simple white cross above him.

No general who died in Europe in the Second World War wears this rank over his grave but him. They had to set him apart in death, as he set himself apart in life, because so many people come to see him. Here he is our strong ambassador, a real symbol that Americans are here to stay.

The grave holds General Patton but his legend is world-wide—the story of courage in our time and bravery as he honored it.

Mankind may kid itself, but General Patton didn't.

What Does the North Atlantic Pact Mean?

REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. BURDICK. Mr. Speaker, while I, as a Member of the House of Representatives, will not have any voice in the approval, amendment, or rejection of the North Atlantic Pact, I still feel it a duty on my part as a representative of the people to call public attention to this document which will soon come before the Senate of the United States for approval.

Article V of this pact or treaty reads as follows:

The parties agree that an armed attack against one or more of them shall be considered an attack against them all; and consequently they agree that, if such an armed attack occurs, each of them, in exercise of the right of individual or collective self-defense recognized by article 51 of the Charter of the United Nations, will assist the party or parties so attacked by taking forthwith, individually, and in concert with the other parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area.

Any such armed attack and all measures taken as a result therefore shall immediately be reported to the Security Council. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

I think this language is very plain. It means that if an attack is made on any of the nations signing the pact, each and every other nation, so signing, will immediately, and quickly come to the rescue of the attacked nation by the use of force to restore and maintain security of the North Atlantic area. If this pact is approved by the Senate of the United States, it means that war has been declared against any country attacking, before an actual war begins. It is, in other words, a predeclaration of war that has been passed by the Senate alone.

The President is Commander in Chief of the military forces of the Nation, and also under oath to support the laws of the United States. This pact, when approved, is a law to guide our conduct. Trouble starts, and the President, in obedience to this law calls out our forces, to unite with other forces to put down the invasion. We are then at war, Congress has not declared any war. Our men are again on the battlefields and Congress is called on for a declaration of war. Under these circumstances, no Congress would refuse the declaration as that would be merely a detail to carry out after the war started. In other words, under this pact, we may have a war without any further declaration than the Senate approval of the North Atlantic Pact.

The Constitution places in Congress—both Houses acting jointly—the power to declare war, but in the case of an approved North Atlantic Pact, without amendments, one branch of Congress has declared war while the other House of Congress has not considered the matter at all. Does anyone think this is not unconstitutional?

We should never take any steps that involve us in actual war without following the Constitution.

Another thing is that if we promise other nations to fly to their relief, we must be prepared to do so and redeem our promise. This means that just as long as this pact remains in existence, this country must maintain a powerful fighting force as none of the other countries who have signed that pact are able to contribute more than a token force. The fighting and the financing will fall upon the United States. If this situation were to remain for a year or two, we could stand the strain, but when we contemplate that this situation remains as long as the pact remains, we shall have to be in a constant state of superior preparedness. At the present time,

UNIVERSITY OF MICHIGAN LIBRARIES

50 cents of every dollar of income is expended on national defense and aid to others in their defense. How long can this democracy last with such a drain and such a sacrifice for others? Every country must realize that we are capable of defending ourselves, but can we not keep on defending others until we are unable to defend ourselves?

A Rural Editor Speaks on Socialism

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. SMITH of Kansas. Mr. Speaker, we hear a great deal about the attempt to socialize this country. We hear and read about the tactics that the proponents of this way of life are using. The attempt is generally made by the back-door entrance. The forces behind this bold plan to change our way of life in America do not use the methods they use in England. In America, it is the creeping, sly approach.

I recommend the following editorial to you because it shows what socialism would mean to all the small towns and villages in this country:

[From the Natoma (Kans.) Independent of June 2, 1949]

(By Joseph R. Snyder, editor)

Would socialism contribute or take away from this community? What would become of the corner grocery, the drug store in the middle of the block, the repairman, the doctors who have brought most of the community babies into the world, if the American community went socialistic? The trend is in that direction.

Much of the advance guard of socialism is already with us—rent control, regimentation of labor by unions, Government competition in private industry, such as the manufacturing of power through dams under the guise of flood control. And it is notable that the President's recent suggestion that Uncle Sam enter the steel business did not raise a serious outcry.

But we are concerned with the "smaller picture," our community; its storekeepers, large and small; its professional people, whose influence through sheer numbers has preserved our way of life simply because they have enjoyed the freedom and will to supply us with our needs through their own resourcefulness and ambitions.

In the era which we have called the free-enterprise system the storekeeper has been the keeper of American free enterprise. He has been the life of the community's march toward progress. He has been a man of ideas and, next to the farmer, the most chance-taking gambler in the world. He has believed in his country and himself—and to him country and chance taking are inseparable.

But what happens in the socialistic period?

In the socialism era this storekeeper becomes a mechanical automaton rather than a pulsating, energetic, hard-hitting man of affairs. He will simply carry out the orders of his government and incentive will be gone.

Socialism does not reckon with personality or with ideas. Its primary allegiance is to the socialistic state what communism is to a single party. Both rob the individual of initiative because he has nothing to plan and work for but the government into whose service he is automatically pledged. No longer in his life—your life—is that incentive which for the past 173 years has made his country strong and self-reliant, eager, and unafraid. No longer has he—or you—an individual aim, a personal goal, because the first thing that is crucified in the socialistic and communistic state is individuality.

When the people become the slaves to government serving the desires of the masses, we have a welfare state or socialism. Imagine this community with its business firms, professional people, and citizens without ambition and a zest for achievement and you can see why we must check this trend through a renewed interest in government affairs. If this is not done—and soon—we face a drab existence in where there is no real future.

Liability Is an Asset

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1949

Mr. SHAFER Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Detroit News:

LIABILITY IS AN ASSET

What amounted to a defect in Herbert Hoover as President is precisely that characteristic which gives a special value to his work as chairman of the Commission on Reorganization of the Government.

Mr. Hoover had been President hardly a year when Walter Lippmann in a Harper's article entitled "The Peculiar Weakness of Mr. Hoover," pointed out his inadequacy as a politician and coworker with politicians.

He lacked entirely the political sense which was his successor's outstanding gift, and, being almost equally devoid of partisan feeling, he was a constant thorn in the side of the faithful.

He was, in short, no manipulator, but a forthright man.

His character is now as it was then, and he remains in character when he rebukes Republicans for trying to make political hay of his commission's report.

In so doing they miss completely the point and spirit of the undertaking: That it be, as Mr. Hoover says, "objective and nonpartisan." And they invite retaliation from partisan Democrats whose latent distaste for anything bearing the Hoover imprint has been kept in check by the commission's careful avoidance of anything smacking of partisan interest.

For Mr. Hoover this was easy, since the lack of such feeling is part of his nature.

He never understood politicians. Now it is politicians who are unable to understand Hoover. It is their "peculiar weakness," and one that can do incalculable damage to the country if it stands in the way of a long-recognized and sorely needed reform.

A Benefit, Not a Burden

EXTENSION OF REMARKS

OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. DEANE. Mr. Speaker, much is being said these days about the housing program. All of us appreciate the part that private industry has done to provide homes for the American people. Likewise, if we are honest in our contentions we must admit that the program of housing as promoted from the Washington level has been of incalculable benefit to many, many hundreds of thousands of people throughout the country.

One angle of the Federal housing program which has come in for what I think is unjust criticism has been the contention that the municipalities throughout the Nation where slums have been cleared away have lost much in taxable revenue. The membership, I think, Mr. Speaker, will be interested in having first-hand information on this tax angle by a careful reading of the following editorial that appeared in the Wilmington Morning Star of June 10, 1949, concerning two slum-clearance projects in the city of Wilmington, N. C.

An unbiased study of this housing program in Wilmington and others throughout the country will, I think, cancel out much of the argument that these housing projects are a drain on the taxable revenue of the communities where they are located. Likewise as this editorial points out, we must not lose sight of the fact that what really counts are the abundant contributions in the elimination of crime, promotion of health, morals, and welfare of the citizenry."

A BENEFIT, NOT A BURDEN

A more exact public understanding of the value of Wilmington's slum-clearance housing should come out of the exchange of views of Mr. Richard Shew, president of the board of realtors, and facts by Mr. Harry Solomon, chairman of the commissioners of the housing authority here.

The Star has no desire to further a controversy over public housing.

But it does believe that a summarization and expression of opinion on what has been said by both sides is in order.

The airing of public housing's relationship to the taxpayer was begun with the appearance of Mr. Shew, in his official capacity as head of the realtors, before the county commissioners May 23. He proposed to them that a movement be instituted to make slum-clearance projects taxable here. He suggested a valuation of $2,000 for each of the 462 units in the white and Negro developments. He estimated that such a valuation would bring in approximately $24,000 annually in taxes to lighten the load on private property.

Our compliments to the president of the realtors, one of the most conscientious and hard-working leaders the local board has had, but it is impossible to say that he put first things first in this proposition.

Shortly after the housing authority was organized in 1935 the Supreme Court ruled that all real property held by it was exempted from taxation and that the authority is a municipal corporation. Therefore, to levy a

tax on its projects would require enactment of legislation by both the North Carolina General Assembly and the Congress. The members of the former body completed their 1949 session weeks ago and it is unlikely that they will meet again until 1951. As to the latter, there is scant possibility that it will take up such a matter any time soon.

It seems that the president of Wilmington's realtors should have concentrated on restoration of the former right of local housing authorities to make contributions to local governments in lieu of taxes. This was done here until prohibited by the 1948 Government Corporation Appropriation Act. Since that time, both the authority and city officials have opposed that act, the housing board going so far as to request that, should Congress remove the restriction on payments, that it be permitted to make a retroactive one for 1948.

But the big question is: Has the authority paid its way?

We are convinced—by facts—that the answer is an emphatic yes.

Before the two projects were built, the taxes on their tracts amounted to only $1,500 a year. And when the authority took over the sites unpaid back taxes amounted to approximately $8,500, which it paid.

In addition, until the voluntary payments in lieu of taxes were halted by national legislation, the authority had paid the city and county governments $35,250.34.

In other words, the local governments have received $43,750 because these two slum-clearance projects were erected whereas had they not been built the amount coming in from taxes on the property they now occupy would have been but $10,500—had the taxes been paid.

Instead of being a burden on the taxpayers, as Mr. Shew charged, slum clearance has actually helped financially the taxpayers of the city and county. Had it not been for the taxes paid by the authority from both the emergency war housing and the low-rent projects, tax rates would be much larger than they are today.

When the two projects are amortized they will become the property of the city of Wilmington. They will make a return not only in better living standards here but will provide approximately $34,000 annually in rents. This is about $10,000 a year more than if the taxation plans Mr. Shew suggests were effected.

Instead of Mr. Shew's attack upon slum clearance here damaging the program, it has actually benefited it in providing opportunity for its numerous favorable features to be presented again for public examination and appraisal. This is especially true as to the more tangible factors, such as payment of funds in lieu of taxes and the fact that the city will eventually own the two developments. Other factors—and they have been found by the North Carolina Legislature and courts to exist most prominently—are abundant contributions in the elimination of crime and promotion of health, morals, and welfare of the citizenry.

If Mr. Shew's precipitation of a contest over public housing was prompted by the National Association of Real Estate Boards, as Mr. Solomon charged in his statement to city council Wednesday, then the score of the game should read something like this:

	R.	H.	E.
Association of Real Estate Boards	0	0	1
Wilmington Housing Authority	1	1	0

Meanwhile, the president of the Wilmington Board of Realtors deserves the thanks of all proponents of slum clearance for his action in giving them another chance to state publicly its advantages, both from standpoint of money in the Public Treasury and otherwise. That, we know, is not what he intended to do. But that, we also know, is what happened.

Economy

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, June 10 (legislative day of Thursday, June 2), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address entitled "Economy," which I delivered over radio station KSL June 8, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ECONOMY

For over a month the Senate has been discussing but one subject. Various Senators have said many things and anyone who listened did think that many subjects were being talked about. But in reality there was only one theme. That theme hinges around the word "economy."

A group of Democratic Senators joined hands with most of the Republicans in attempting to make an issue out of our changing economic conditions. One thing all of our thoughtful economists are united on is that we are on a verge of change. A change for the better or for the worse no one dare say. If we could get a reduction in prices it would surely be better for those who buy. But if a reduction in prices causes business failures then that is another question. All that is said by those driving for "economy" sounds so good. It is all just as patent as President Coolidge's, "They hired the money, didn't they?" when we talked of Europe's debts to us after the First World War.

No one yet has seen the real picture of our economy. I cannot paint it completely in these few minutes I have, but I want to show one aspect of our American economy that has not been mentioned in connection with this supposed money-saving scheme. It is purely a sentimental one. Business is not wholly efficient because it thinks of other factors besides efficiency. Our Government has never been efficient because it is a "government of, for, and by the people," and people are just people and for that reason the human factor looms large in our national economy. Life is not built upon efficiency. Probably it would have been more efficient if only half of us had been born, or more efficient if twice as many had been born. Efficiency must be measured in relation to general objectives. What is life's general objective? Why are we here?

Some say that man never learns from experience because each generation gives us another group of men and that therefore each generation seems to have to make the mistakes of past generations. That, of course, is not wholly true any more than the statement that history repeats itself is true. There are no real repetitions in history because the factors are always different. Nevertheless, history does have its lessons.

Actually the last thing these proponents of economy are thinking about is this thing which is called efficiency or economy. I will prove it. There are nearly 4,000,000 various kinds of business concerns in the United States ranging all of the way from General Motors down to a shoe-shining parlor. There are probably 2,000,000 other entities that employ people such as the Federal, State, and city governments, police departments, schools, and so forth. There is not a single one of these 6,000,000 concerns that cannot do without at least one employee. Congress is talking about boiling the fat out of Civil Service. Everyone knows that if they start the process the fat will be more tightly entrenched than ever. Just the same with all business which attempts to reduce never fire the ones who should be fired because of sentimental reasons.

If all of the 6,000,000 employing powers decide to get along with one or two less employees we will have unemployment in staggering proportions. We would have 2,000,000 more unemployed than we had in 1930 which marked the beginning of the unemployment effects of the greatest depression the world ever saw. Little things lead to big things and I wish we could be thoughtful about end results. The causes of all of our national panics and depressions have been different; sometimes the aftermath of war; sometimes overspeculation in land; sometimes overextension of railroads; sometimes, as in 1929, overspeculation in the stock exchange; and sometimes overproduction causes recessions. Generally speaking, in all of our past economic troubles, unemployment was a secondary factor. Now we have the chance to create a greater depression than the one in the thirties and start it as an unemployment depression and we can do it by just simply removing the sentimental aspects of our daily economic life. Do you want that to happen? It is going to happen if these men who are persisting in attempting to arbitrarily cut our appropriation bills and the budget figures so that unemployment will be forced. What if all of the States do it? What if all of the cities do it? What if industry does it? They did it in 1931 and 1932.

The biggest forest fire I ever saw in Utah was caused by a man who thoughtlessly threw his cigarette from an automobile to some dry grass. A short time ago the whole country extended its sympathy to a baby girl who fell down a pipe and lost its life. Hundreds of people tried to save the child and thousands of cubic feet of dirt were removed in this effort. The child's life could have been saved and all of the energy which was expended saved also, when sympathy gripped the hearts of neighbors, if someone had been thoughtful enough to have covered the open pipe. We used to read as kiddies that Abraham Lincoln was shot in the back of the head because the man who was supposed to have been guarding the President left his station so that he could see the play a little better. I wish that the homely statesmanship of Benjamin Franklin could become our guiding star and that his "stitch in time saves nine" might be used more often.

Why do I say all of this? Under the leadership of the Republican Party and their Southern allies these so-called economy forces are reviving the very technique used by our Congress after the depression of 1929 started.

In the State of Utah alone, where the unemployment figure is already over the ten-thousand mark, an arbitrary 10-percent cut in all Federal budgets would mean that nearly 1,800 more would be added to the ranks of the unemployed. Can industry absorb these people? According to the March 25 issue of the United States News and World Report steel and automobile production is still at a high peak, but the total output of industry is down 2 percent. Total personal income is down 0.1 percent. Wages and salaries are down 1.4 percent, while all personal income is at high. The wage earner is already the hardest hit by this downward trend. Unemployment throughout the country is at a postwar high—3,400,000. One of the hardest fighters for this arbitrary 10-percent cut in Federal appropriations announced that he wants 500,000 fewer Federal workers. That would boost our unemployment to 3,900,000. All of these proposed

UNIVERSITY OF MICHIGAN LIBRARIES

cuts hinge around the word economy. But will this kind of economy bring about a healthy state of the Union if it results in 3,000,000 unemployed American citizens?

This is not an essay against efficiency and economy. No one wants waste any place in our economic structure. It is merely a discussion of our economic life as it stands. I cannot remove from my memory the fact that Mussolini, Hitler, Tojo, Lenin, and Stalin all talked about efficiency. Some of them went so far as to say that we must remove entirely from Government thinking the human processes or human factor. One gentle soul so mad at Russia the other night remarked that we will not have peace in the world until we kill fifteen or sixteen million Russians. I am a firm believer that if we followed that logic our problem would only be intensified. Cain thought he would be free if he got rid of Abel. Cain's real problem came after he killed Abel. Yet, think of the efficiency of 100 atomic bombs.

It is strange that at a time when the world is thinking and acting along humanitarian lines, probably more so than it has ever acted before, that along comes these persons who want to nullify all of the good we are trying to do in the world by restoring and establishing law and freedom, by attempting in the name of economy the very thing which will destroy happy living in our own country. An arbitrary, uniform slash across the board can bring disaster to us all.

There are other ways of creating efficient operation in government. But those constructive moves take time and are the hardest fights we have in Congress. I started working on the unification of the armed services while I was chairman of the Military Affairs Committee back in 1944. Only in this session of Congress have we passed a bill that is workable.

If I have not made myself plain, please let me become openly politically minded and say that I am unalterably opposed to what Senator BYRD and his Democratic colleagues on our side of the aisle and what TAFT and his Republican colleagues are trying to do to the economic life of our country. I have seen enough of depressions and wars in my lifetime. I would hate to live over again the years from 1929 to 1935 and see repeated that suffering from unemployment. I do not want to have to live through another world war.

Fiftieth Anniversary of Muncie (Ind.) Morning Star

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. HARVEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I take this opportunty to note the recent fiftieth publishing anniversary of one of the leading newspapers of central Indiana.

Having issued its first edition on a Monday in 1899, the Muncie Morning Star fittingly commemorated its golden anniversary by providing its readers a special edition of 108 pages on Sunday, May 29, 1949.

On that occasion, I am sure, Star readers shared the newspaper's happiness as expressed by its president and editor, Eugene C. Pulliam:

Any person or any institution that has reached a fiftieth milestone and is still going at full vigor has cause to do a bit of rejoicing.

Aside from its impressive size and quality, the Star's fiftieth anniversary edition carried the greetings of numerous notables, including President Truman and Vice President Barkley. The sentiments of those who comprehend the importance of a free press were ably set forth by two Cabinet members, whom I wish to quote.

In his congratulatory message to the Star, Attorney General Tom C. Clark observed that the life and strength of our democracy depend upon a well-informed citizenry.

Similarly Secretary of Labor Maurice Tobin declared:

Freedom of the press is a heritage of our American democracy. It was embodied in the Constitution of the United States, it has prevailed down through the years and it is my firm conviction that we will never know anything but a free press in this country.

A newspaper such as the Muncie Star, devoted for so many years to the objective of accomplishing greater good for the greater number in the community is symbolic of the importance the press plays in the daily life of the people it serves.

For itself and its associates of the advertising, printing, business, and circulation departments, the Star staff under the guidance of Managing Editor John O. Ferris editorialized on A Day of Pride. In conclusion that editorial gave the essential meaning of the newspaper's anniversary:

Today we look back and we look forward. We see 50 years of service and accomplishment and we hope for another half century of service. We expect to carry on the job that has been so well done for a half century; we hope to do an even better job and we are aware this must be done every day in the year. We will continue to take our responsibilities seriously and it shall be our policy to produce a good newspaper and serve our field today, tomorrow, the next 50 years.

Federal Grab of Coastal Lands

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. HÉBERT. Mr. Speaker, I am submitting two editorials from New Orleans newspapers relating to the proposed Federal grab of the coastal lands adjacent to Louisiana which are owned by the State and which the Federal Government is now trying to usurp for its usage.

As so adequately pointed out by William H. Fitzpatrick, editor of the New Orleans States, this fight is not just an oil fight, it embraces far more than that erroneous impression.

In the second editorial which I call to your attention which appeared in the morning contemporary of the New Orleans States, the Times-Picayune, the method being used by Secretary Krug and Attorney General Clark to confuse the issue is exposed.

The first editorial, Tidelands: Not Just an Oil Fight, is from the editorial page of the New Orleans States; and the second editorial, Divide To Conquer, is from the editorial page of the New Orleans Times-Picayune:

[From the New Orleans (La.) States]

TIDELANDS: NOT JUST AN OIL FIGHT

The States that are fighting the tidelands steal ought to bring to the attention of their sister States the inherent danger in the proposed compromise by which the Federal Government would give a quitclaim on inland waters to the States but would take over jurisdiction of offshore oil developments.

The reason for the compromise offer in a bill backed by Secretary of the Interior Krug and Defense Secretary Louis Johnson is to split opposition to the Federal tidelands grab by satisfying inland States that the Government does not intend to claim their river bottoms, bays, harbors, and river mouths.

If these inland States are lulled by this narcotic premise, and their Senators and Representatives support the Government proposal, they will again be selling their birthright for a mess of pottage.

If they allow the Federal Government to dissuade them from the fight to retain what is rightfully the responsibility and property of other States, can they expect the tidelands States not to quit the field in some future battle against centralized government?

For that is what it all comes down to by realistic analysis. If they allow themselves to be bought off, they are giving up more than they will retain in this one skirmish. They will have acquiesced in a further diminution of the rights of States—among them themselves—and an increase of Federal bureaucracy and power.

In a learned essay on the loss of power by States and local governments Donald A. Kepner, assistant professor of the University of Louisville, has written:

"The States have lost powers because they have encouraged rather than resisted the interference of Federal agencies in local affairs."

Mr. Kepner may have added that even when encouragement was lacking, in many instances, there was somnolence; our rights were encroached upon and stolen away while the States were sound asleep. And, as in the present attempt, they were bought from some of them.

Louisiana, Texas, and California are leading the fight for tidelands oil rights to be retained by the several States. These States are most interested because they are the major oil-producing States on the littoral.

But other States with coast lines are Maine, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Oregon, and Washington. All of them are interested, or should be. For if the Government can assume powers over tidelands, for oil, isn't it by the same measure granted powers for everything else in or over those same tidelands?

By what reasoning can Pennsylvania, New York, Ohio, Michigan, Indiana, Illinois, Wisconsin, and Minnesota feel secure in what rights they may now have to police, or tax, or regulate their shores, washed by the waters of the Great Lakes, if they support this proposal?

Finally, if any State agrees to this proposition, it is only agreeing that the Federal Government can give it rights which are inherently its own. And if it agrees that a Federal Government can give it such rights, it is also agreeing that a Federal Government

UNIVERSITY OF MICHIGAN LIBRARIES

can take those rights away any time the Congress wants to do so.

[From the New Orleans (La.) Times-Picayune]

DIVIDE TO CONQUER

Interior Secretary Krug and Attorney General Clark presented Congress Tuesday with a brand-new tidelands bill. As summarized in Washington press dispatches, the new measure proposes in effect to confine the Federal confiscation to the coastal States and renounce Federal claim to like confiscatory powers in the fresh-water Commonwealths. In effect, it would concede and confirm to one State group the practically identical rights taken away from another State group.

The several States have enjoyed, up to this time, equal rights in these matters under the Federal Constitution. The proposal to divide them and destroy that constitutional equality of rights will impress many Americans as cockeyed. But there is method in its cockeyedness.

With one or possibly two exceptions, the States through their governors and attorneys general stand united in the common defense against the Federal attack delivered by the tidelands grab. If that defensive unity can be broken by the Krug-Clark division of the 48 into nonright and conceded-right groups, Congressmen from the favored States may be persuaded to vote away the rights of the State group for which the Federal administration is gunning at this moment. Once that were accomplished the others could be dealt with later if and when, for example, oil is discovered under the bottoms of the Great Lakes or other fresh-water lakes, or the Federal authorities plan other encroachments upon State rights in other fields.

The Krug-Clark bill, if accurately summarized in dispatches, bases upon the ancient and cynical maxim: "Divide to conquer." Once the solid front of the States in defense of rights enjoyed, exercised, and judicially affirmed for more than a century were broken and the principle of equality of State rights destroyed, the drive for further Federal seizures and expansions of power would be given greater leverage and impetus.

This is so obvious that the State representatives composing the National Congress should hold their common-defense line solidly against the divide-to-conquer strategy and send back the Krug-Clark tidelands bill defeated to its collaborators.

Welfare Board of Henry County, Ind.

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from Dr. W. U. Kennedy, of New Castle, Ind., in which he sets forth the reasons why the Welfare Board of Henry County has not been able to function economically or efficiently. Dr. Kennedy has served as president of the board for many years and has an excellent understanding of the problems.

MAY 21, 1949.

STATE BOARD OF PUBLIC WELFARE,
Indianapolis, Ind.

GENTLEMEN: Four of the present members of the Henry County Board of Public Welfare have served continuously since the appointments were made by the judge of the Henry Circuit Court shortly after the welfare act was passed by the general assembly in 1936.

We believed then, as we believe now, that the general assembly intended that county welfare boards should exercise considerable authority over the welfare program in its own county, that it should determine who was eligible for assistance under the law, and, if eligible, how much assistance each recipient should receive based upon the peculiar situation in its own county.

This board has been willing to make reasonable provision for the various items of the standards for requirements which have been determined by the State board to be essential to a reasonable subsistence compatible with decency and health.

Through the years, this board has seen the gradual usurpation of its authority by the Social Security Board and the State department of public welfare, until it appears that the county boards now have no other function than the selection of a county welfare director from a list prepared by another agency, and acting as a rubber stamp for the actions of the county and State welfare departments.

The procedure suggested by the State Department in the setting up of a standards for requirements in the county, has changed from a procedure of good judgment and reasonableness into a complicated mathematical and statistical procedure which has wholly failed to take into consideration the available personnel of the county department not now engaged in carrying heavy case loads. Evidently whoever is responsible for the procedure and content of the suggested standards has only one purpose in mind, and that is the setting up in every county in Indiana a standard of living for aid to dependent children families which is higher than is enjoyed by the family of the average working man or woman with a like number of children. Such a procedure when it becomes generally known, will be bitterly resented by the public in any community.

This board believes that a grave and lasting injury can be done to the children of any family when such family is provided with everything it needs in the matter of food, clothing, shelter, etc., without such family being required to make some effort to help itself. Experience has shown that the most useful and successful men and women of any community are those who, as children, have had the incentive, through necessity, of helping to make their own way.

This board hopes that its views as expressed herein will receive the sympathetic consideration of the State board of public welfare, but it will offer vigorous objection to any effort on the part of any agency to further encroach upon its statutory authority.

By direction of the Welfare Board of Henry County.

Very truly yours,

W. U. KENNEDY, M. D.,
President.

Graduation of Indians at Cass Lake High School

EXTENSION OF REMARKS

OF

HON. FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. MARSHALL. Mr. Speaker, I would like to call to the attention of Members a recent editorial by Mr. Grant Utley, of Cass Lake, Minn., on the occasion of graduation exercises in his community. I think his editorial regarding the position of Indians in Cass Lake is a most remarkable statement of the basic principles of race relations. As a veteran editor he knows of what he is speaking and his words are a fitting tribute to all of the people of his community, particularly to his Indian friends and neighbors:

SO WHAT?

Someone remarked that the Cass Lake Times should make a special mention that six Indians are graduating tonight from the Cass Lake High School, and there are many who will be disappointed that we did not take advantage of this publicity.

To a man who has spent 50 years among these so-called Indians, it would be like calling attention that six Swedes or six Norwegians graduated. We have watched Indians graduate from Cass Lake High School for 30 years, and every year we have been roundly criticized for not calling attention to the claim that some boy or some girl "was the first full-blooded Indian to graduate from Cass Lake High School." It would make a good story, but it just wouldn't be so. In the first place, there are no full-blooded Indians. In the second place, Indians have been graduating from our high school for 30 years—many with honors.

And what makes it so wonderful for an Indian to graduate? What makes anyone think that the Indian cannot be as good a student, if not better, than the Anglo-Saxon, Nordic, Slavic, or the Finnish? The Amerindians were a great people. They had many great leaders. They gave to the world the greatest food crop of all history—corn. They gave the world the potato and tobacco. The Indian had a communal democracy and a planned economy long before the New Deal was formulated. There are a great many things of which the Indian may well be proud. It is not strange that in a village such as Cass Lake, where one-third of the population is of Indian blood, that there are six Indians in the graduating class.

There is altogether too much of a tendency to emphasize the outmoded European idea of the red man: Lo, the poor Indian, whose untutored mind.

We, in the north woods, have become so used to seeing Indians in responsible places, that when anyone calls our attention to the fact, we naturally say: "So what?" same as we would say if anyone would call our attention to the fact that a man was Irish.

There is no racial prejudice in Cass Lake, as far as the Indian. What prejudice there is, is a healthy personal prejudice, held by both whites and Indians. It has been a healthy contempt of people who do not try to be decent; it makes no difference what may be their race. A man is a man, and a woman is a woman in Cass Lake when they conform to the code of a civilized community, nationality notwithstanding.

There are men and women in Cass Lake, whose ancestors, in their dragon-prowed ships, spread terror from Ultima Thule to the Sicilies. So what? There are Cass Lakers, whose forefathers conquered with William the Norman. So what? There are men and women who are Sons or Daughters of the American Revolution. So what? There are men and women in Cass Lake, whose great grandfathers discovered the water roads and used them before history was written. So what? There are Indians in whose veins runs the blood of the noble Wah-we-yay-cum-ig, Waub-O-Jeeg and Na-Sho-Tah, as brilliant leaders of men as history records. But, again, so what? Every man and every woman, whether they be of Nordic, Gaelic, Latin, Slavic, or Indian descent, must take their place either in the up-building or the destruction of their country. It is not what your forefathers did. What will you do?

When an Indian gets into trouble, we do not mention his race, as many newspapers do, nor do we think it is necessary to mention his or her race when they do something outstanding, as many of them do.

Economic Disaster Is Ahead Unless the Light of Reason Guides Our Policies Both at Home and Abroad

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. GROSS. Mr. Speaker, slowly but surely, as some of us have warned since the opening of this session of Congress, an economic strait-jacket is being prepared for the people of this country.

In our haste to do good in almost every nook and corner of the world, our foreign commitments are leading us into free-trade agreements which can only mean a lowering of the standard of living in this country. It follows that any lowering of the American standard of living means less tax revenue, greater deficits and steadily increasing debt.

A recent radio broadcast, in which I participated with Mr. Edward Wimmer, vice president of the National Federation of Independent Business, points up the views held by a great many with respect to foreign and domestic policies. The broadcast follows:

Mr. WIMMER. This week, ladies and gentlemen, I am speaking to you from Washington, D. C., where I have the pleasure of bringing to our Nation-wide audience an interview with the Honorable H. R. GROSS, a Member of Congress from the Third District of the State of Iowa.

If you have been a regular or periodic listener to these weekly talks and interviews sponsored by the National Federation of Independent Business, or if you are acquainted in some other way with the activities and objectives of the federation, you know that our paramount interest is the preservation of the American system of free, competitive, independent enterprise, in all fields, and at all levels of trade and commerce. After talking to Congressman GROSS, I am sure that his interests lie in this same direction.

Although our interview with the Congressman will be in keeping with our general theme, we are going to look into the problems being created on a swiftly growing scale by the import into our country of foreign goods, which we are convinced is adding greatly to the threat of unemployment and the possible liquidation of a large number of independent businesses. I discussed this danger in a recent broadcast and now Congressman GROSS is going to throw some more light on the subject.

Congressman, you have expressed yourself quite freely as someone who believes that we must move quickly if our system of free enterprise and free government is to survive the rising tides of socialism and communism now spreading throughout the world and taking root in our own country.

Last evening I spoke at a joint banquet of the Institutes of Technical Schools and the Home Study Council, held at the Mayflower Hotel. One of the things I tried to bring out as strong as I could is the complacency and indifference of so many business and professional men in our country today. You know and I know that the average business and professional man, even in these critical days, is little different than the German who sat in his beer garden and laughed at the cartoons of the little paperhanger who would some day hang them. It was the same way with the British enterpriser. No one could make him see that socialism could ever come to Britain, but all of a sudden, they had it.

Congressman, do you think that we are right when we say that the group that needs to be aroused more than any other segment of our economy, are the business and professional men?

Congressman GROSS. First of all, Mr. Wimmer, I want to thank you for the opportunity to appear on this program. I have heard your broadcasts many times and I have great admiration for your ability and the work you are doing. Let me say that we do face a very serious situation in this country from the standpoint of encroachment of socialism, and you have very substantial support in the statements which you have just made.

I should like at this time to quote Mr. Eric Johnston, who is no stranger to the people of this country. He is a former president of the United States Chamber of Commerce. Listen to what he says:

"European businessmen must bear the lion's share of the blame for socialism's sweep over Europe. There were other reasons, of course, but my repeated visits over there convinced me that capitalism went under in Europe, not because capitalism as a system failed, but because European businessmen failed capitalism.

"When British voters kicked out the Conservatives and put in the Socialists, 3½ years ago, they were not choosing between free enterprise and socialism. They didn't have any choice. Free enterprise as we know it, didn't exist in Britain. The voters had to make a choice between monopoly and cartels versus nationalization. It was a Hobson's choice and the people chose socialism. Monopoly has been the great curse of British industry for generations, like upper-crust titles, the principle of it was handed down from father to son. It permeated every phase of industry."

Mr. WIMMER. I am glad you used Eric Johnston's statements to declare your own views. I do the same thing often, because I have found that it takes the warnings of outstanding businessmen to give credence to what a commentator, economist, educator, or other person may say, even though said person may be far better informed. Businessmen are so ready to brand the warnings of those who can read the handwriting on the wall, as crystal ball gazing, pessimism or a false prophesy of doom. Recently, I have detected a change of attitude on the part of business and professional men, which is a very encouraging sign.

The things that I want to discuss with you, for the benefit of our audience, are the dangers inherent in our foreign trade agreements. I wish you would touch on some of these dangers, or weaknesses which you mentioned to me earlier in the day.

Congressman GROSS. Well, you know, Mr. Wimmer, it was the fine broadcast which you recently made on reciprocal trade agreements that caused me to write to you and which resulted in this interview.

I came to this Congress believing that I could and would support the reciprocal trade agreements but when this subject came up in Congress, I voted against extension of these agreements. I voted against extension because I am convinced that if the present policy is continued, it will break the backs of labor, business, and agriculture.

We can get at this thing in the best possible way by quoting from a statement by Congressman WOODRUFF, of Michigan, which he made on the floor of the House during debate on the reciprocal trade agreements. This is what Mr. WOODRUFF said:

"Essentially what the President and his leaders in the Congress are asking us to do is to rubber stamp one-man authority to negotiate and consummate treaties with other nations respecting the raising or lowering of tariff rates on goods shipped in from abroad. The President, and the President alone, would be given the power of determine how much goods shall be imported into this country; the amount of the tariff the importers will pay and the extent to which these cheap imports will compete with American goods in American markets.

"Abuse of this power, wittingly or unwittingly, could destroy much of American industry and cause widespread unemployment among our workers. I submit that no one man should possess such unlimited power."

So you see what we have done and are doing in these reciprocal trade agreements, is, in effect, to abrogate the Constitution of the United States. Certainly we abdicated from the power which the Constitution gives the Congress to regulate foreign trade. We have now essentially given this power to the President and the State Department, with virtually no check at all upon what is done in the matter of foreign trade relations.

I should like to point out too, that this whole thing is tied irrevocably to the ECA, otherwise known as the Marshall plan. In all too many cases, in our lavishment of money upon foreign countries under the Marshall plan, we have permitted use of these funds to purchase supplies from foreign countries which were available and in surplus quantities in the United States.

Under past performances of reciprocal trade we have, for instance, imported shirts from Haiti with the cuffs and the collars detached, therefore not a complete article, and as such they escape duty and are sold in competition to American labor.

We have imported shoes from Czechoslovakia with the heels off. These shoes come into this country, the heels are nailed on, and another product is sold in competition with the products of American workers.

The Swiss made a watch movement that could be delivered to this country and sold for approximately $8. It costs from $15 to $18 to produce the same movement in this country.

American manufacturers and workers cannot compete with such conditions unless standards of living in this country are reduced accordingly. I well remember that in your recent broadcast, you brought out the fact that we imported hundreds of millions of pounds of fats and oils into this country during the past year, at a time when we had a tremendous surplus, and at a time when the lard market was being broken from 28 to 11 cents a pound. So we piled surplus upon surplus. Instead of those fats and oils going to the hungry people of foreign lands where they were needed, we brought them into the United States and proceeded to further demoralize our markets. This sort of program cannot and will not work.

Mr. WIMMER. In other words, we supplied the money needed to produce the foreign fats and oils; put up more of our money to purchase some, and in the process knocked the props out from under American farmers, businessmen and workers.

The other day I received a letter from a manufacturer of willow baskets. The poor fellow related how he had been in this business for 26 years; foreign-made baskets were being sold 50 percent below his cost of production and the brokers who were selling him supplies were also brokers for the foreign baskets.

Congressman GROSS. The answer to all of this, in my opinion, is that we must have a tariff differential representing the difference between the cost of production in foreign countries and our own cost of production. Either that or we exploit the people

with whom we deal in foreign countries, or they exploit us.

Mr. WIMMER. Very true. Just a short time ago I was in Massachusetts and the entire textile industry seems to be near collapse in that State as a result of British woolen worsteds coming in here far below our cost of production. Something will have to be done about this whole situation.

Congressman, there is one thing in which we are very interested, and that is a bill to separate manufacturer ownership or operation of retail outlets, patterned somewhat after the consent decree entered into by the big meat packers several years ago. Mr. George Burger, our Washington representative, who is with us here in the studio today, has testified on this legislation and worked for it over a period of years. His rubber-tires bill, designated to achieve this end in the tire industry, is known to all Members of Congress. Do you believe, Congressman, that such legislation should be adopted?

Congressman GROSS. I certainly do, Mr. Wimmer. We must have something of that nature to protect independent business, which is, in my opinion, along with the independent farmer, the backbone of this Nation. We've got to protect both if we are to retain our American way of life.

Mr. WIMMER. I am glad you recognize this truth, Congressman. You hail from the greatest agricultural State in the Union, and the independent farmers of Iowa have made it the greatest agricultural State, just as the initiative and enterprise of thousands of independent businessmen built up the early industries of your State. Iowa needs more of these independent enterprisers if it is to remain a great State, and that goes for the rest of these United States.

This concludes our interview, Congressman GROSS, and I hope, and I am sure, our audience will be looking forward to hearing from you again in the near future.

Compulsory Medical Insurance

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

PHYSICIAN VETERANS OF WORLD WAR II,
Washington, D. C., June 4, 1949.
